**R**EPORTS have been received of four cases recently settled by the Canadian National Railways Employees' Board of Adjustment No. 2. Outlines of previous cases were given in the LABOUR GAZETTE, February, 1934, page 103, and in previous issues. The issue of August, 1930, contained a general summary of the proceedings of the Board, covering the period from January 1, 1928, to December 31, 1929; and a similar summary of proceedings from September 1, 1925, the date of the inception of the Board, to December 31, 1927, appeared in the issue of October, 1928, page 1060. The text of the memorandum of the agreement made between the railways and the employees concerned for the establishment of the Board was given in these summaries.

The Canadian National Railways Employees' Board of Adjustment No. 2 was established for the purpose of disposing of outstanding grievances or disputes that might arise from the application, non-application or interpretation of the schedule of working con-

ditions for "Clerks and other Classes of Employees as herein named," which are not adjusted between the officers of the railway and the representatives of the employees. The members of the Board are appointed for a term of one year, subject to re-appointment. The Board is composed of four members selected by the management and four members selected by the representatives of the employees concerned. The decisions of the Board are binding upon the parties to the agreement. Provision was made in the agreement constituting the Board for the appointment of an arbitrator in any case in which the Board might be unable to agree upon an award.

**Case No. 141.—Operating Department, Central Region**

A man who had worked for the Railways in various capacities from 1927 was discharged early in 1933 from the position of station cleaner at Montreal, which he then held. The employees considered that the reasons given

by the company for his discharge were unfair to the man, and they claimed that he should be reinstated in the service and paid for lost time at the rate of 42 cents per hour. It appeared that the employee on being laid off on account of reduction in staff obtained from the company transportation from Montreal to Kedgwick. While on the train to the latter point it was alleged that he attempted, in an offensive manner, to read to passengers from a book, and a fellow passenger snatched it from his hand. On the arrival of the train at Kedgwick it was met by a crowd of people who made a demonstration against him and on the advice of a police constable he returned by train to Montreal. The employees contended that the gathering of people at Kedgwick had been organized beforehand, and that misleading accounts of his conduct on the train had been sent to headquarters. They maintained his innocence of any offence, and asserted his rights as a Canadian citizen.

The management stated that the man was a religious fanatic, that he had at various times created dissension among his fellow employees during working hours by voicing his views in respect to religious bodies, and that it was not considered in the interests of the service to employ him again.

The Board found that, according to the evidence, the man had not been given a fair and impartial hearing in accordance with Article 4 of the schedule, and recommended that he be reinstated and given a hearing accordingly.

#### **Case No. 145—Sleeping, Dining and Parlour Car Department, Montreal**

A porter made a round trip between Montreal and Moncton, occupying three days, for which he received payment. The employees claimed he was entitled to lay-over privileges at Montreal, his home terminal, and that he should be paid five days' wages for each round trip and layover at the home terminal, in accordance with Article 4, Rule (a), section 2 of the schedule.

The management stated that the basis of the payment made to the porter was proportionate to the payment made to regularly assigned porters on service on this run. Article 4, cited by the employees, had reference, it was pointed out, to services regularly performed by sleeping car porters, but did not apply to extra car movements on trains in service only one way; the porter in question did not return from Moncton to Montreal in service, being "dead-headed" to his home terminal, and he was therefore not entitled to additional rest for that portion of his trip.

The claim of the employees was denied by the Board.

#### **Case No. 146—Sleeping, Dining and Parlour Car Department, Montreal**

A porter made a round trip between Montreal and Winnipeg, and on his return, instead of being allowed the layover period of 48 hours alleged to be due to him he was required to make a trip to Quebec. The employees contended that under Article 6, rule (d) this man was entitled to pay at the rate of time and one-half for the layover period he had lost.

The management pointed out that the porter had been returned "dead head," or not on duty, from Winnipeg to Montreal, and had been allowed pay for half a day on his return; and being then an unassigned man he was off the payroll after that period. He was then assigned to a train to Quebec. If he had been entitled to layover at Montreal, as claimed, he would not have been called upon to do "stand by" duty as the next spare porter junior to him would have been called for this service.

The claim of the employees was denied by the Board.

#### **Case No. 147—Sleeping, Dining and Parlour Car Department, Montreal**

A porter was assigned to operate a sleeping car from Montreal to St. Hyacinthe to pick up a party at that point to take them to Prince Albert, Saskatchewan. On his return to Montreal he was allowed only two days' lay-over at the home terminal, no lay-over being allowed at the distant terminal at Prince Albert. The employees contended that under Article 4, Rule (a), sections 12 and 65 of the schedule, the man was entitled to a total lay-over of six days at the home terminal, and claimed for him four days' wages.

The management pointed out that the movement of the car in question from St. Hyacinthe to Prince Albert was not a regular movement, and did not call for regular assignment of any employees, and for this reason the movement was not covered by provisions of the schedule in connection with regularly assigned employees on regular runs. The porter, it was stated, gave service to passengers from St. Hyacinthe to Prince Albert, but the rest of the time he was "dead heading." As he was to "deadhead" back from Prince Albert, the company considered that there was no object in giving him one day's rest at that point.

The claim of the employees was denied by the Board.

## STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1934

THE following table shows the number of disputes, workers involved and time loss for April, 1934, as compared with the previous month and the same month a year ago:

Date	Number of disputes	Number of employees involved	Time loss in working days
*Apr., 1934 ..	21	5,282	78,128
*Mar., 1934 ..	32	7,275	91,332
Apr., 1933 ..	4	370	2,270

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time is frequently not received until some time after its commencement.

The numbers of disputes and workers involved, as well as the time loss in man working days, in April, 1934, were less than during March but considerably greater than in April, 1933, when only four disputes were recorded with a relatively small number of workers. During April, 1934, three strikes, namely lumber workers in Vancouver Island, B.C., coal miners in Pictou County, N.S., and coal miners at Minto, N.B., accounted for 3,100 employees out of the total of 5,282 involved during the month and also for 67,000 days' time loss out of 78,178, and these were terminated early in May. The other disputes involved relatively small numbers of workers.

Thirteen disputes, involving 4,155 workers, were carried over from March, the dispute involving twenty employees in one shoe factory in Toronto recorded as unterminated in the April LABOUR GAZETTE having been settled on March 21. Eight disputes commenced during April. Of these twenty-one disputes, twelve terminated during the month, five being in favour of the employer, two in favour of the workers involved, compromise settlements being reached in four cases, while the result of one is recorded as partially successful. At

the end of April, therefore, there were nine disputes in progress recorded as strikes or lockouts, namely: loggers, Vancouver Island, B.C., coal miners, Stellarton, N.S., abattoir and meat packing workers, Winnipeg, Man., compositors, London, Ont., automobile washers, Toronto, Ont., restaurant employees, Toronto, Ont., pulpwood peelers, Hearst, Ont., coal miners, Minto, N.B., and cap factory workers, Toronto, Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information had been received indicating that employment conditions are no longer affected, but which the unions concerned have not declared terminated. Information is available as to five such disputes, namely: photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; lithographers, Toronto, Ont., April 15, 1932, one employer; women's clothing factory workers (cloakmakers), Toronto, Ont., March 22, 1934, several employers; and moulders, Peterborough, Ont., Feb. 27, 1934, one employer, the last two being added this month.

A one day strike of employees in one dress-making establishment in Montreal, P.Q., about April 15, 1934, has been reported but particulars have not been received. It is reported that twenty-three workers were involved and secured increases in wages and recognition of their union.

A minor dispute, regarding the dismissal of two workers, involved nine employees in one musical instrument manufacturing establishment in Toronto on April 26. The workers involved were replaced immediately.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistence for which work is performed or may be required, are not included in the record, no relation of employer and employee being involved.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

LOGGERS, ETC., VANCOUVER ISLAND, B.C.—During April no settlement was reached in this dispute, which commenced in January, affecting one employer, but spread during February and March to involve at least fourteen other employers and a total of approximately 3,000 workers. In a few instances, however, work was resumed, so that approximately 2,300

## STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1934\*

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
<b>(a) Strikes and Lockouts in Progress prior to April, 1934</b>			
<b>LOGGING—</b> Loggers, Vancouver Island, B.C..	2,300	45,000	Commenced Jan. 27, 1934; for increased wages and recognition of union; untermi- nated.
<b>MINING, ETC.—</b> Coal miners, Stellarton, N.S....	1,300	15,000	Commenced Feb. 28, 1934; against reduced wages; unterminated.
<b>MANUFACTURING—</b> <i>Animal Foods—</i> Abattoir and meat packing workers, Winnipeg Man.....	40	900	Commenced Mar. 7, 1934; for increased wages, reduced hours, improved conditions and recogni- tion of union and shop committee; untermi- nated.
<i>Boots and Shoes (Leather)—</i> Shoe factory workers, Tor- onto, Ont.....	10	100	Commenced Feb. 27, 1934; for increased wages and improved working conditions; lapsed by April 30, 1934; in favour of employer.
Shoe factory workers, Tor- onto, Ont.....			Commenced Mar. 6, 1934; for recognition of union and increased wages; terminated Mar. 21, 1934; in favour of workers.
Shoe factory workers, Kitchener, Ont.....	29	650	Commenced Mar. 26, 1934; against discharge of workers, for increased wages, and recognition of union and shop committee; terminated April 28, 1934; compromise.
Shoe factory workers, Kitchener, Ont.....	32	100	Commenced Mar. 30, 1934; for employment of union members only; terminated April 4, 1934; in favour of employer.
<i>Textiles, Clothing, etc.—</i> Women's clothing factory workers (cloakmakers), Tor- onto, Ont.....	120	500	Commenced Mar. 22, 1934; for union wages and working conditions; working conditions no longer affected by April 30, 1934; in favour of employer.
<i>Printing and Publishing—</i> Compositors, London, Ont....	77	1,800	Commenced Mar. 1, 1934; for renewal of union agreement; untermi- nated.
<i>Other Wood Products—</i> Furniture factory workers, Kitchener, Ont.....	160	960	Commenced Feb. 16, 1934; alleged violation of agreement; terminated April 7, 1934; partially successful.
<i>Metal Products—</i> Moulders, Peterborough, Ont..	11	100	Commenced Feb. 27, 1934; against increase in amount of work required; working conditions no longer affected by April 30; in favour of employer.
<b>CONSTRUCTION—</b> <i>Buildings and Structures—</i> Plumbers, Saskatoon, Sask....	6	120	Commenced Mar. 1, 1934; against reduced wages; terminated April 25, 1934; compromise.
<b>SERVICE—</b> <i>Custom and Repair—</i> Automobile washers, Toronto, Ont.....	40	960	Commenced Mar. 26, 1934; for increased wages and against dismissal of worker; untermi- nated.
<i>Business and Personal—</i> Restaurant employees, Tor- onto, Ont.....	30	700	Commenced Mar. 1, 1934; for increased wages, reduced hours and recognition of union; untermi- nated.

\*In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which working time was lost to an appreciable extent.

STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1934—*Concluded*

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
<b>(b) Strikes and Lockouts Commencing during April, 1934</b>			
<b>LOGGING—</b>			
Pulpwood peelers, Hearst, Ont. . . . .	75	1,800	Commenced April 3, 1934; for increased wages; un-terminated.
Pulpwood cutters, etc., Kapus-kasing, Ont. . . . .	500	1,500	Commenced April 5, 1934. for increased wages and reduced hours; terminated April 7, 1934; in favour of employer.
<b>MINING, ETC.—</b>			
Coal miners, Minto, N.B. . . . .	400	7,000	Commenced April 3, 1934; for increase in wages, reduced hours and recognition of union; un-terminated.
<b>MANUFACTURING—</b>			
<i>Vegetable Foods—</i>			
Bakers (Jewish), Toronto, Ont. . . . .	53	350	Commenced April 7, 1934; for increase in wages and against alleged violation of agreement re 8-hour day; terminated April 15, 1934; in favour of workers.
<i>Fur, Leather, Etc.—</i>			
Tannery workers (leather moulders), St. Hyacinthe, P.Q. . . . .	19	38	Commenced April 19, 1934; for increase in wages; terminated April 20, 1934; in favour of workers.
<i>Textiles, Clothing, Etc.—</i>			
Cap factory workers, Tor- onto, Ont. . . . .	20	60	Commenced April 27, 1934; alleged violation of agreement; un-terminated.
<i>Miscellaneous—</i>			
Automobile accessory fac- tory workers, East Windsor. Ont. . . . .	30(a)	480	Commenced April 6, 1934; for increase in wages, reduced hours, shop committee and recognition of union; terminated April 21, 1934; compromise.
Mattress, etc., factory workers, Windsor, Ont. . . . .	30	60	Commenced April 6, 1934; for increased wages, reduced hours and recognition of shop committee; terminated April 7, 1934; compromise.

(a) 70 indirectly affected.

employees were involved on April 1. It was reported that in some camps the strikes were sympathetic, while in other cases the employers closed the camps in anticipation of a strike. The cause of the dispute was a demand for increase in wages and recognition of the Lumber Workers Industrial Union, affiliated with the Workers' Unity League, improvements in camp conditions, etc. Early in the dispute the Deputy Minister of Labour for British Columbia interviewed the representatives of both parties and proposed a scale of wages which was accepted by the employers but refused by the strikers. As stated in the LABOUR GAZETTE for April, page 307, and elsewhere in this issue, page 419, under an amendment to the Male Minimum Wage Act of the Province of British Columbia, a Board of Industrial Relations was provided to administer this Act as well as the Female Minimum Wage Act and the Hours of Work Act. Early in

April the new Board met with the Deputy Minister of Labour as Chairman, and heard delegations from employers and employees with reference to the establishment of minimum wages in the logging and sawmilling industries. The minimum scale for the western part of the province announced on April 7, effective from April 26, provided for 40 cents per hour in logging work, 37½ cents per hour for track and grade men in connection with logging, \$2.75 per day in cooking and bunk-house work. As these rates were somewhat higher than in the scale previously accepted by the employers but refused by the strikers, the representatives of the latter stated that they would accept the scale thus modified, the rate of \$3.20 per day for the lowest paid loggers in their original demands being thus substantially granted. They insisted, however, on recognition of the union. Between April 9 and April 26 work was resumed in a number of

the camps, only in some cases where the wages prior to the strike were as high as the new scale. Camp committees apparently were recognized in some instances.

**COAL MINERS, STELLARTON, N.S.**—During April conferences between the representatives of the receivers, the employees and the provincial government were held with a view to a settlement of the dispute, involving approximately 1,300 miners on strike from February 28, against a wage reduction of about twenty per cent. At the end of the month it was stated that a settlement was likely, the wage scale prior to February 28 to be paid but the miners to make a rebate of \$100,000 to cover half the difference in wages in dispute. In the meantime the Supreme Court of Nova Scotia reconsidered a decision in March, refusing authorization for the receivers to close down one of the collieries, and authorized the abandonment of the lower part, conserving the upper part for operations later. Action on this, however, was postponed pending the completion of negotiations for a settlement of the dispute.

**MEAT PACKING EMPLOYEES, WINNIPEG, MAN.**—At the end of April no settlement had been reached in the dispute involving 40 out of 100 employees in one establishment in Winnipeg in a cessation of work on March 7, 1934. The plant, however, was being operated to some extent. In connection with picketing a number were arrested on charges of intimidation, assault, etc., several being sentenced to imprisonment. The Attorney-General of Manitoba interview the parties to the dispute with a view to a settlement but his proposals were rejected by the strike committee.

**SHOE FACTORY EMPLOYEES, TORONTO, ONT.**—Information as to the termination of this dispute, which commenced March 6, was received too late for the last issue of the *LABOUR GAZETTE*. The Shoe and Leather Workers' Industrial Union, affiliated with the Workers' Unity League, called a strike in this establishment, as in others, demanding union recognition and increases in wages. A settlement was reached and work was resumed on March 21, an agreement being signed, similar to that in other establishments summarized in the *LABOUR GAZETTE* for April, 1934, page 372, which provided for a shop committee and the employment of union members only. The employer reported that the wage scale was not an issue as union wages had always been paid.

**SHOE FACTORY WORKERS, KITCHENER, ONT.**—The strike commencing March 26 was terminated on April 30, 1934, a five per cent increase in wages being given and all former employees

being reinstated but recognition of the union and a shop committee was refused.

**SHOE FACTORY WORKERS, KITCHENER, ONT.**—A number of employees in one establishment ceased work on March 30, 1934, demanding a closed union shop, but work was carried on by those not striking and the others returned on April 2. On April 4 some of these again ceased work following the dismissal of one who became involved in a dispute with those who did not strike. These were apparently replaced almost immediately.

**WOMEN'S CLOTHING FACTORY WORKERS (CLOAKMAKERS), TORONTO, ONT.**—Employees in a number of contracting shops ceased work on March 22, 1934, to secure union wages and working conditions. At the end of April, although fifteen were reported to be still on strike, it appeared that employment conditions were no longer affected. The dispute has, therefore, been added to the list of such disputes in a previous paragraph.

**FURNITURE FACTORY WORKERS, KITCHENER, ONT.**—Early in April a settlement was reached in this dispute, commencing February 16, 1934, and involving two establishments under the same management, the strikers alleging that the agreement had been violated in one of the factories, wages being 13 per cent to 33 per cent below the union scale. Increases in wages of five per cent were granted, also union recognition.

**MOULDERS, PETERBOROUGH, ONT.**—This dispute involving the moulders in one establishment who had ceased work on February 27, alleging that piece rates had been reduced and a greater output of work demanded on pain of dismissal, was reported to be unternminated at the end of April, but the employer reported that the strikers had been substantially replaced immediately, so that employment conditions were no longer affected. The dispute has, therefore, been added to the list of such disputes in a previous paragraph.

**PLUMBERS, SASKATOON, SASK.**—As a result of conciliation by the western representative of the Department of Labour, an agreement was signed terminating the dispute commencing on March 1, on the expiration of the previous agreement. The employers had proposed a reduction in the wage rate from \$1.05 per hour to 75 cents, the union proposing an increase to \$1.25 and a thirty-hour week instead of forty hours, in view of the short time worked, only six out of thirty-five being employed. The employers then offered a rate of \$1 per hour which was accepted by the union but a disagreement over the period for which the agreement was to be in effect prevented a

settlement for some time. Finally the period from April 26, 1934, to March 15, 1935, was agreed upon. The agreement is summarized elsewhere in this issue.

**AUTOMOBILE WASHERS, TORONTO, ONT.**—The strike in one establishment, commencing March 26, was reported unternminated at the end of April. About the middle of the month a number of strikers were reported to have been arrested, apparently in connection with picketing. In another establishment the union involved reported an agreement had been reached without a strike. In a third establishment a number of employees ceased work during April, but as the majority remained at work the strike was not effective.

**RESTAURANT EMPLOYEES, TORONTO, ONT.**—A number of restaurants had become involved in disputes with the Food Workers' Industrial Union during March, demanding union recognition, increased wages and reductions in hours, several signing agreements with the union, in some cases without stoppage of work. During April an additional firm signed an agreement. Some of the proprietors secured temporary injunctions in the courts against picketing and the display of sandwich boards, pending trial of actions for damages and permanent injunctions.

**PULPWOOD PEELERS, HEARST, ONT.**—Employees of one firm ceased work on April 3, 1934, to secure an increase in wages, piece work, from \$1.50 per four foot cord to \$2. The employer offered to increase the rate to \$1.75 but this was refused and at the end of the month no settlement had been reported.

**PULPWOOD CUTTERS, KAPUSKASING, ONT.**—A strike in the camps of one company was declared by the Lumber Workers' Industrial Union on April 5, but was called off on April 8. The union had demanded increases in wages over the winter rates agreed upon following a strike in November, 1933, also the nine hour day, recognition of camp committees and certain other concessions. The employer stated that although the season was nearly over operations would be continued under the winter conditions if enough men remained to carry on the work, and 400 out of 1,400 did so, the others being paid off. It is reported that approximately 500 of these remained in the district until the strike was called off.

**COAL MINERS, MINTO, N.B.**—A number of the employees, from 200 to 250 out of 350 to 400, in one colliery ceased work on April 3, demanding increases in wages for shift miners from \$3 per day to \$4.50 and helpers from \$2.25 per day to \$4, 33 per cent increases in piece rates, also the seven hour day bank to

bank instead of eight, improvements in working conditions and recognition of a union recently organized, the New Brunswick Miners' Union. The strikers attempted to induce employees in other mines to cease work, but were not successful until about April 20, when employees in another mine ceased work bringing the total to about four hundred. On April 20, the union applied for a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act and a conciliation officer visited the district. The miners, being on strike contrary to the Act, agreed to resume work but the operators refused to undertake to reinstate them in their former positions but offered to take them back as required. On April 25 a number of miners on the way to work were attacked by strikers and their equipment taken from them but none were reported to be seriously injured. Seven of the pickets were arrested subsequently and remanded for trial. At the end of the month the dispute was unternminated, but the strikers resumed work on the employers' terms on May 7, applying later for a Board of Conciliation.

**BAKERS (JEWISH), TORONTO, ONT.**—Demanding an increase in wages and alleging that the agreement in effect until April 30, which provided for an eight hour day (LABOUR GAZETTE, September, 1931, page 1035) was being violated as employees were working twelve to sixteen hours, bakers and labourers, members of the Jewish local of the Bakers' and Confectioners' International Union, went on strike on April 7. As a result of negotiations, work was resumed on April 16, an increase of \$2 per week being secured with adherence to the eight hour day. The thirty-eight bakers were dividing the work with seventeen unemployed bakers and it was stated that if a \$4 increase in wages were given the work could be divided to give work to still other unemployed bakers. In connection with picketing two strikers were charged with intimidation and committed for trial.

**TANNERY WORKERS (LEATHER MOULDERS), ST. HYACINTHE, P.Q.**—One class of employees in one establishment ceased work on April 19, to secure an adjustment in piece rates on work in the production of parts for boots and, this being granted, work was resumed on April 20.

**AUTOMOBILE ACCESSORY FACTORY WORKERS, EAST WINDSOR, ONT.**—A number of the employees in one establishment ceased work on April 6, demanding increases in wages, with a minimum of 40 cents per hour for women and 45 cents per hour for men, the eight hour day instead of nine, with time and one-half rates for overtime, abolition of piece work and bonus system, the establishment of shop

committees and recognition of the Auto Workers' Industrial Union, affiliated with the Workers' Unity League. The establishment was closed down pending a settlement and the employer offered increased rates to the employees individually, with minimum rates of 30 cents for women and boys and 40 cents for men, most of the increases being about ten per cent. Recognition of a shop committee was refused. About the middle of the month the employees indirectly affected requested the Police Commission to provide protection from picketers so that they might return to work. It was stated that a large number of unemployed had joined the strikers in picketing the establishment. On April 16, the Police Commission adopted a resolution to request the Minister of Labour to take proceedings under the Conciliation and Labour Act to bring about a settlement. A conciliation officer accordingly interviewed the Police Commissioner with civic officials and representatives of the company, of the employees indirectly

affected and of the strikers, with the result that the wage increases offered by the company were accepted, with a proviso that further increases would be made to meet increases in the cost of living and that any grievances or disputes would be dealt with by the Police Commission and the Department of Labour. The demand for recognition of a shop committee, previously insisted upon by the strikers, a minority of the employees, was withdrawn and work was resumed on April 23.

**MATTRESS, ETC., FACTORY WORKERS, WINDSOR, ONT.**—Employees in one establishment manufacturing mattresses, springs, automobile cushions, etc., ceased work demanding increases in wages, with a minimum of 40 cents per hour, and the nine-hour day instead of twelve hours, and recognition of a shop committee. Work was resumed after two days when wage increases with a minimum of 35 cents per hour, a ten-hour day and recognition of a shop committee were agreed to as a result of negotiations.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

**T**HE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue of February, 1934, in the review of Strikes and Lockouts in Canada and Other Countries, 1933. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible directly from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

### Great Britain

The number of disputes beginning in March was 45, and 11 were still in progress from the previous month, making a total of 56 disputes in progress during the month, involving 15,000 workers, with a time loss of 106,000 working days.

Of the 45 disputes beginning in March, 6 were over demands for increases in wages, 4 over proposed wage reductions, 10 over other

wage questions, 15 over questions respecting the employment of particular classes or persons, 8 over other questions as to working arrangements, and 2 over other questions. Settlements were reached in 40 disputes, of which 10 were in favour of workers, 16 in favour of employers, 14 ended in compromises, and in 6 other cases, work was resumed pending negotiations.

A strike of 1,800 coal miners near Pontardawe was in effect from March 17 to March 27 over wage rates payable on certain work. An amicable settlement was reached.

### India

It is reported that 20,000 cotton textile workers went on strike April 23, at Bombay, against a reduction in wages.

### United States

The number of disputes beginning in February was 72, and 58 were still in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 41,747, and the time loss 1,031,747 working days for the month.

A strike of bituminous coal miners in Alabama began April 5, when coal operators attempted to have the wage scale fixed under the N.R.A. code reduced by having the previous differential between the scales in the north and south restored. By April 18, the number

of strikers had reached 21,000. It was reported that this strike was terminated after two weeks, but details of the settlement have not been noted.

Strikes of workers in the leather industry in northeastern Massachusetts, involving between 6,000 and 10,000 workers, were in effect during the first week in May and terminated with the granting of a substantial wage increase.

A stoppage of work involving 50,000 workers in dress manufacturing in New York lasted from April 17 to April 21, due to a dispute between the contractors and the jobbers in which the contractors closed all their shops in protest against alleged violations of the N.R.A. code by the jobbers. N.R.A. officials succeeded in having work resumed on the promise of the appointment of a commission to settle difficulties between the groups.

The strike of taxi drivers in New York City which was mentioned in the last issue of the *LABOUR GAZETTE*, terminated March 31, when work was resumed with no discrimination to be shown strikers, but without union recognition.

## The Mineral Industries of Canada

A handbook on the Mineral Industries of Canada, designed to present in popular form a brief sketch of the more important economic minerals so far discovered in Canada and of the mining and metallurgical industries founded thereon, has been published at Ottawa by the Mines Branch of the Department of Mines. The data, both technical and statistical, have all been compiled from official sources, either federal or provincial; a number of the illustrations used were furnished by Canadian mining or metallurgical companies. An index map showing the principal mining localities in Canada is included.

The handbook notes the development which began during the present century with the establishment in Canada of plants for the refining of Canadian metals—a development largely due to abundant and widespread sources of hydro-electric energy. At one time all Canadian metals were shipped abroad for the final treatment necessary to fit them for the use of the manufacturer, but now Canadian gold, silver, copper, lead, zinc, and nickel, as well as minor metals, are practically all marketed in highly refined form and go forth to the metal-consuming countries of the world, bearing brands clearly identifying them with their place of origin, and thus adding to Canada's prestige abroad as a mining country.

Strikes were in progress during April in the automobile manufacturing industry. On April 13, about 3,000 tool and die makers in job plants in Detroit, Michigan, and vicinity, went on strike for a 20 per cent wage increase and other demands. No report of a settlement of this strike has been noted. After a seven weeks' strike of about 4,700 men, work was resumed April 18 at automobile manufacturing plants at Milwaukee and other centres in Wisconsin when workers agreed to accept the wage increase offered by the company, which averaged 10 per cent with a minimum rate of 50 cents per hour for unskilled labour; union recognition was also conceded. At Cleveland, Ohio, a strike of 4,500 employees of an automobile body plant terminated after one week on April 30, pending further negotiations between the union and the employing company. At St. Louis, Missouri, a strike of 2,200 workers in the same branch of the industry beginning at the same time, terminated May 6, with a union agreement.

The Mines Branch has issued an important series of monographs and other reports dealing with individual products. More detailed information about any particular mineral, ore, product, district, or industry may be obtained from the proper official department of the various Provincial Governments, or from the Dominion Department of Mines at Ottawa.

Much information useful in shaping future policies of the National Recovery Administration in the United States with respect to employment, trade practices, code authority organization, and operation of codes in small enterprises was developed at the conference of code authorities and code committees held in Washington between March 5 and 8, 1934, and at the preliminary conference held a week earlier to develop constructive criticism. The National Recovery Administrator named 12 points as in need of immediate attention, including price, cost, employment, and wage factors. There was general recognition that employment in the durable goods industries particularly must be stimulated. Regarding labour, the Administration urged a 10 per cent decrease in maximum working time and an accompanying 10 per cent increase in wages.

Mr. Joel Horace Pillsbury, C.E., of Prince Rupert, has been appointed a member of the Workmen's Compensation Board of British Columbia, in place of the late Mr. Hugh B. Gilmour.

## COLLECTIVE LABOUR AGREEMENTS EXTENSION ACT

### Text of Act as passed by Legislature of the Province of Quebec

THE text of the bill respecting the extension of collective labour agreements, in the form in which it was introduced in the Quebec Legislature on January 30 by the Hon. C. J. Arcand, provincial Minister of Labour, was given in the *LABOUR GAZETTE*, March, 1934, page 235. Important changes were made subsequently in the bill in both Houses of the Legislature, the text of the Act as finally approved on April 20 being as follows:

#### AN ACT RESPECTING THE EXTENSION OF COLLECTIVE LABOUR AGREEMENTS

1. This act may be cited as the *Collective Labour Agreements Extension Act*.

2. The Lieutenant-Governor in Council may order that a collective labour agreement, made between, on the one part, one or more associations of employees and, on the other part, employers or one or more associations of employers, shall also bind all the employees and employers in the same trade or industry; provided that such employees and employers carry on their activities within the territorial jurisdiction determined in the said agreement.

Whenever an order is made under the preceding paragraph, the only provisions of the collective labour agreement which thus become obligatory, upon the classes of employees and employers concerned are those respecting rates of wages and hours of labour.

Such order shall remain in force during the same period of time as the collective agreement.

3. Any association of employees or employers, a party to a collective labour agreement, may request the Lieutenant-Governor in Council to pass an Order in Council under the preceding section.

Such request shall be made by a petition addressed to the Minister of Labour. The petition must be accompanied by a duly certified copy of such agreement.

4. Upon receipt of a petition, the Minister of Labour shall cause notice thereof to be given in the *Quebec Official Gazette* and, during the thirty days from the publishing of such notice, he shall receive the objections to the request contained in the petition.

At the expiration of such delay, the Minister, if he deems that the provisions of the collective labour agreement which is the object of such petition have acquired a preponderant significance and importance for the establishing of conditions of labour in a trade or industry in the region for which the agreement was entered into, may recommend the approval of the petition to the Lieutenant-Governor in Council.

The Order in Council establishing such approval shall come into force from and after its publication in the *Quebec Official Gazette*.

5. Subject to the formalities, delays and rules mentioned in section 4 of this act, the Lieutenant-Governor in Council may, at the request of the parties to the collective agreement, repeal or amend the order in council passed under section 2.

Such repeal or amendment shall come into force from and after its publication in the *Quebec Official Gazette*.

6. The provisions of a collective labour agreement made obligatory under this act shall, in the region fixed, govern all the individual labour contracts in connection with the trade or industry contemplated by the agreement.

However, when they are to the advantage of the employed, the provisions of an individual labour contract shall have effect unless they be expressly prohibited by those of a collective labour agreement which has been the object of an Order in Council under section 2.

7. 1. The parties to a collective labour agreement made obligatory under this act must form a joint-committee charged with supervising and assuring the carrying out of such agreement. The Minister of Labour may add to such committee such delegates, not more than two in number, as shall be designated to him by the employers or employees who are not parties to the agreement.

Such joint-committee shall, through its delegate or delegates, be entitled: (a) to verify the rates of wages and hours of labour among the employers contemplated by the collective agreement made obligatory; (b) to exercise, for the benefit of each of the employees, all rights of action arising in their favour, from a collective agreement made obligatory, without having to prove an assignment of claim from the person concerned.

2. The joint-committee contemplated by the preceding subsection 1 may create a board of examiners charged with determining the qualifications of workmen and apprentices who benefit from the collective labour agreement made obligatory.

3. Subject to the approval of the Lieutenant-Governor in Council, the joint-committee and the board of examiners may adopt by-laws for their internal government, for the administration of the funds and for exercising the powers conferred upon them by this section.

8. If such board of examiners be established in accordance with subsection 2 of section 7, only the workmen and apprentices to whom such board of examiners shall have awarded a certificate of competency shall be entitled to exercise the civil claims which may appertain to them under a collective labour agreement made obligatory under this act, but they shall be allowed any other recourse.

The provisions of this section shall not apply to day labourers nor to workmen who do not specialize, and no certificate of competency shall be required in their case.

9. The board of examiners provided for by subsection 2 of section 7 shall be entitled to charge, as a fee, not more than five dollars for the examination of a workman nor more than one dollar for that of an apprentice.

The fees so collected shall be employed in defraying the expenses of the said board.

10. The members of an association of employees and the day labourers or the workmen who do not specialize shall be exempted from the examination contemplated by subsection 2 of section 7 and shall benefit from the provisions

of section 8, if such association has its members undergo such an examination.

In the event of a dispute between an employer and an employee respecting such an examination, the board of examiners, contemplated in subsection 2 of section 7, shall settle the dispute, without appeal.

11. The Lieutenant-Governor in Council may refuse to apply the provisions of this act to any industry liable, in his opinion, to suffer, through their enforcement, serious injury from the competition of foreign countries or of other provinces.

12. Every collective agreement, liable to be made obligatory, must take into account the economic zones of the Province in establishing labour conditions.

13. Nothing in this act shall be deemed as compelling an employer or an employee to become or not to become a member of an association of his industry or trade.

14. This act shall not apply to railway companies which are subject to the jurisdiction of the Parliament of Canada.

15. This act shall come into force on the day of its sanction.

## NEW BRUNSWICK FOREST OPERATIONS COMMISSION ACT

### Minimum Wages for Workers in Pulpwood Operations

**A**MONG the legislation enacted by the New Brunswick Legislature at its recent session was the New Brunswick Forest Operations Commission Act, providing for the establishment of a commission, to consist of three members, with power "to establish a minimum wage scale or scales, which shall be fair and equitable as between employers and employees in the lumbering industry, and which shall apply, when established, to all operations to be thereafter carried on in the lumbering industry; such minimum wage scale or scales shall be established by the Commission not later than the fifteenth day of July in any year, and when established shall be effective and binding upon employers and employees for one year from the date on which they are so established."

The Commission has full powers under the Inquiries Act, with authority to summon any employer to give information or assist the commission. When the Commission sits for the purpose of hearing applications referred to it as a result of industrial disputes, the parties must be notified by the chairman as to the time and place of meeting. The proceedings of the Commission are to be heard in public. Procedure is laid down for the reference of disputes to the Commission whether by the employer or by workers. The disputes which may be so referred are those relating to (a) the wage paid by an employer to his employee or employees being less than the minimum wage established by the Commission; (b) board, store charges, and proper living conditions in the lumbering camps of any employer.

The Commission may make all such suggestions and do all such things as it deems right and proper for inducing the parties to come to a fair and amicable settlement of the dispute, and may adjourn the proceedings for any period the Commission thinks reasonable.

"Upon receipt of the Commission's final report and recommendation, the Minister shall forthwith cause the report and recommenda-

tions to be filed in the office of the Registrar, who shall forward a copy of the report and recommendations to each of the parties to the dispute, and if, after such recommendations on any part thereof are approved by the Minister and notice of such approval is given to the parties, either party is required to do anything as a result of recommendations made by the Commission, such party shall forward to the Minister a full report as to how the things that such party is required to do have been done. Any failure of either party to the dispute to carry out the recommendations made in the report of the Commission, in so far as they are approved by the Minister, shall constitute an offence under this Act."

The Act provides further that "if the recommendations made by the Commission, after such recommendations or any part thereof are approved by the Minister, are not carried out by the parties to a dispute within such length of time after a copy of the report and recommendations is forwarded by the Registrar as is considered reasonable by the Minister, then, upon the chairman of the Commission giving notice, by registered letter, to the party who has not carried out the recommendations so approved, that he requires such recommendations to be forthwith carried out, the party receiving such notice, if he does not comply with the terms thereof within twenty days after the mailing of such notice, shall be liable, on summary conviction, to a penalty of not less than fifty dollars per day or more than two hundred dollars per day for each day thereafter that he is in default in carrying out such recommendations."

By an Order in Council dated April 3, 1934, the Commissioners were appointed as follows:—Mr. Justice W. C. H. Grimmer, chairman; W. Scott Richards, Campbellton; John H. Wallace, Reynolds, Northumberland County; H. Lester Smith, Fredericton, secretary.

### Wage Scale for Pulpwood Workers

The following order of the Forest Operations Commission, dated April 17, 1934, was gazetted on April 25.

The following minimum wage scale for workers in pulpwood operations has been fixed by the Forest Operations Commission under authority of Chapter 15 of the Acts of 1934 and Order in Council of April 3, 1934:—

\$1 per day net, with board over and above all charges (including filing) when employed by the day.

Or when employed by the cord:

\$2 per cord of 138 cubic feet, cut, peeled, sawn and piled.

\$1.50 per cord of 144 cubic feet, cut, sawn and piled, over and above all charges (including filing) except a deduction for board not to exceed fifty cents per day.

W. C. H. GRIMMER,  
Chairman, Forest  
Operations Commission.  
JOHN H. WALLACE,  
Commissioner.  
WILLIAM S. RICHARDS,  
Commissioner.  
H. LESTER SMITH,  
Secretary.

G. H. PRINCE, Registrar  
Forest Operations Commission,  
Fredericton, N.B.  
April 17, 1934.

## MALE MINIMUM WAGE ACT OF BRITISH COLUMBIA

### Orders issued by Board of Industrial Relations governing Logging and Sawmills

THE following orders of the Board of Industrial Relations of British Columbia under the Male Minimum Wage Act, 1934, of British Columbia have been gazetted.

The Board of Industrial Relations which administers the Male Minimum Wage Act, the Female Minimum Wage Act, and the Hours of Work Act of British Columbia, consists of the following members: Mr. Adam Bell, Deputy Minister of Labour (chairman); Professor W. A. Carrothers (chairman of the Economic Council); Mrs. Helen Gregory MacGill, former judge of the Juvenile Court of Vancouver; Mr. James Thomson, past president of the Vancouver and District Trades and Labour Council; and Mr. C. J. McDowell, of McDowell and Mann, engineers, of Victoria.

#### Order establishing a Minimum Wage in the Logging Industry

Pursuant to the provisions of the "Male Minimum Wage Act," being an Act of the 1934 session of the British Columbia Legislature, the Board of Industrial Relations, having held such inquiry as the Board considers adequate, hereby orders:—

1. That where used in this Order the expression "logging industry" includes all operations in or incidental to the carrying-on of logging; pole, tie, shingle-bolt, mining-prop, and pile cutting, and all operations in or incidental to driving, rafting, and booming of logs, poles ties, shingle-bolts, mining-props and piles.

2. That, subject to the exemptions granted from time to time under section 6 of the said Act and to the provisions of paragraphs 3 and 4 of this Order, the minimum wage for all employees in the logging industry shall be the sum of forty cents (40c.) per hour.

3. The minimum wage for all employees engaged in grade and track occupations within the logging industry shall be the sum of thirty-seven and one-half cents (37½c.) per hour.

4. The minimum wage for all employees engaged in cook and bunk-house occupations

within the logging industry shall be the sum of two dollars and seventy-five cents (\$2.75) per day.

5. This Order shall not apply in respect of the logging industry carried on east of the Cascade Mountains.

Dated at Victoria, B.C., this 7th day of April, 1934.

#### Order establishing a Minimum Wage in the Sawmill Industry

Pursuant to the provisions of the "Male Minimum Wage Act," being an Act of the 1934 session of the British Columbia Legislature the Board of Industrial Relations, having held such inquiry as the Board considers adequate, hereby orders:—

1. That where used in this Order the expression "sawmill industry" includes all operations in or incidental to the carrying-on of sawmills and planing-mills.

2. The minimum wage for all employees in the sawmill industry shall be the sum of thirty-five cents (35c.) per hour, with the exceptions provided by paragraph 3 hereof.

3. Until further ordered, it shall be permissible for an employer to employ a percentage of employees in his plant at a rate less than that fixed in paragraph 2 of this Order, but in no case shall the rate so paid be less than twenty-five cents (25c.) per hour, nor shall the percentage of employees paid at such rate (inclusive of employees in respect of whom a permit has been obtained under section 6 of the Act) be in excess of twenty-five per centum of the total number of employees in the plant.

4. Pursuant to the provisions of the said Act, every employer in the sawmill industry shall furnish the Board, not later than the fifteenth day of each month, with a complete and certified statement of the names, ages, nationalities of, and wages paid per hour to every male person in his employ during the last preceding month.

5. This Order shall not apply in respect of the sawmill industry carried on east of the Cascade Mountains.

Dated at Victoria, B.C., this 7th day of April, 1934.

### Order No. 2A respecting a Minimum Wage in Tie-cutting Operations

Pursuant to the provisions of section 11 of the "Male Minimum Wage Act," being an Act of the 1934 session of the Legislative Assembly of the Province of British Columbia, the Board of Industrial Relations hereby orders:—

That with respect to the Order of the Board of Industrial Relations establishing a minimum wage in the logging industry and published in *The British Columbia Gazette* on April 12,

1934; and with respect to the Order of the Board of Industrial Relations establishing a minimum wage in the saw-mill industry, and published in the *British Columbia Gazette* on April 12, 1934, all tie-cutting operations shall be exempt from the said Orders from the time of the taking effect of this Order until midnight on the 30th day of September, 1934; and the said Orders are respectively varied accordingly.

Dated at Victoria, B.C., this 2nd day of May, 1934.

## FEMALE MINIMUM WAGES IN BRITISH COLUMBIA

### Order of the Board of Industrial Relations relating to the Fruit and Vegetable Industry

THE following order of the Board of Industrial Relations of British Columbia under the Female Minimum Wage Act, was published in the *British Columbia Gazette*, May 3, 1934.

#### Order No. 3—Relating to the Fruit and Vegetable Industry

Pursuant to the provisions of the "Female Minimum Wage Act," being an Act of the 1934 session of the Legislative Assembly of the Province of British Columbia, the Board of Industrial Relations, having held such inquiry as the Board considers adequate, hereby orders:—

1. That where used in this Order the following expressions shall have the following meanings respectively:—

- (a) "Fruit and vegetable industry" includes the work of females engaged in canning, preserving, drying, packing, or otherwise adapting for sale or use any kind of fruit or vegetable;
- (b) "Experienced female employee" means a female employee who has worked in the fruit and vegetable industry for a period of two months.
- (c) "Inexperienced female employee" means a female employee who has worked in the fruit and vegetable industry for a period of less than two months.

2. That subject to the other provisions of this Order the minimum wage for every experienced female employee in the fruit and vegetable industry (except women to whom special licences are issued under sections 5 and 6 of the said Act) shall be:—

- (a) The sum of twenty-seven (27c.) per hour for every hour up to eight (8) hours in any one day;
- (b) The sum of forty cents (40c.) per hour for every hour in excess of eight (8) hours and up to twelve (12) hours in any one day;
- (c) The sum of fifty-four cents (54c.) per hour for every hour in excess of twelve (12) hours in any one day.

3. That subject to the other provisions of this Order the minimum wage for every in-

experienced female employee in the fruit and vegetable industry (except women to whom special licences are issued under sections 5 and 6 of the said Act) shall be:—

- (a) The sum of twenty-five cents (25c.) per hour for every hour up to eight (8) hours in any one day;
- (b) The sum of thirty-seven and one-half cents (37½c.) per hour for every hour in excess of eight (8) hours and up to twelve (12) hours in any one day;
- (c) The sum of fifty cents (50c.) per hour for every hour in excess of twelve (12) hours in any one day.

4. This Order shall become effective at the expiration of fourteen days after its publication in the *British Columbia Gazette* of May 3, 1934, and upon the taking effect of this Order, the Order of the Minimum Wage Board made under the "Minimum Wage Act," being chapter 173 of the "Revised Statutes of British Columbia, 1924," governing the fruit and vegetable industry, which was published in the *British Columbia Gazette* of September 16, 1926, shall be rescinded.

Dated at Victoria, B.C., this 2nd day of May, 1934.

The following suggestions were made by the Select Standing Committee of the British Columbia legislature on mining in a report presented on March 27: (1) That some measure of compensation-protection be extended to *bona fide* prospectors injured in the course of their labour as such; (2) That citizens in receipt of relief allowances who, having no prospect of other employment, wish to engage in prospecting should not be denied their relief allowances while so engaged; (3) That rock-dust and silicosis be considered as occupational diseases within the meaning of the Workmen's Compensation Act; (4) That the Department of Mines take steps to utilize in some measure the available relief labour for the advancement of mining activities along the lines recommended by various Boards of Trade and other bodies.

## WOMEN'S MINIMUM WAGES IN SASKATCHEWAN

### Continuance of Reductions in established Minimum Rates

THE *Saskatchewan Gazette*, April 16, 1934, contains a new Order No. 6 of the Minimum Wage Board of Saskatchewan, continuing until June 30, 1934, the reductions in the rates fixed for various classes of female employees by Orders No. 1 to 5 (LABOUR GAZETTE, October, 1933, page 996). The reduction now continued for a further period was ordered last year, to be in force until March 31, 1934 (LABOUR GAZETTE, October, 1933, page 999). The text of the new Order is as follows:—

#### ORDER No. 6.

1. The minimum rates of wages fixed by the Board for workers in Shops and Stores, Laundries and Factories, Mail Order Houses, Hotels, Restaurants and Refreshment Rooms, Beauty Parlours and Barber Shops, are hereby reduced by ten per cent where the rate so fixed is less than thirteen dollars (\$13) per week and by fifteen per cent where the rate so fixed is thirteen dollars (\$13) per week or over:

Provided that, where an employee is employed for twenty-four (24) hours or more in any week, but for less than full time, the reduction shall not be greater than ten per cent, and provided further that there shall be no reduction in the case of an employee who is employed for less than twenty-four (24) hours in any week.

2. The rate of reductions provided for in this Order shall be determined by the gross wages, inclusive of cash and board and lodging, but shall be computed upon and deducted from cash wages only of an employee after deductions have been made for board and lodging where supplied by her employer.

3. This Order shall continue in force until the thirtieth day of June, 1934.

By order,

*The Minimum Wage Board,*  
A. J. WICKENS, *Chairman.*

THOS. M. MOLLOY,  
*Secretary.*

## WOMEN'S MINIMUM WAGES IN NOVA SCOTIA IN 1933

THE third annual report of the Minimum Wage Board of Nova Scotia deals with the administration of the Act during the year ended September 30, 1933. In all the industries covered by the Act—laundries, confectionery and baking, hotels and restaurants, textiles, needle trades, and leather trades, telephone operators, small factories and paper trades and printing—the outstanding feature of the past three years is the fact that the number of employees has only been reduced by a little over one hundred. The report also points out that of the total number of employees under the Act—2,221—ninety per cent are experienced workers, thus indicating a tendency to keep the higher paid employees.

The Board did not issue any further orders during the year, considering this would be unwise until business conditions improved. However wage sheets were collected from stores and any complaints against employers were investigated and adjusted satisfactorily.

Dealing with its relationship with employers the Board states that "it will take time for some employers to realize that they cannot exploit the labour of women employees, that they must treat them as human beings, and be willing to pay them a living wage, or else make way for someone else who will. With the spirit of co-operation between employers

and employees, each giving of his or her best and following out the standard as laid down by the Act, there is no doubt that employment will be better for both, and the beneficial results will redound to employers and employees alike.

"There are still some employers who utterly fail to recognize the progress and changes going on in the world, and still take the attitude that they are supreme in their own particular employment. Those employers should be made to feel the full force of the punishment provided by the Act, but to try and do this before we have at least a goodly part of the employers solidly behind the Act, would, we feel, be a mistake, but when the better class of employers realize the benefits of the Act, then it will be considered a disgrace to oppose it and enforcement will be made easier." At the same time the Board thanked those employers who did co-operate, and urges more support to the act in order "to make it a 100 per cent enforcement."

During the year the Board held twenty-three full meetings, five inspections throughout the City and Province, ten conferences with employers and employees, and two hundred and seventy-four interviews with employees, persons on behalf of employees, or employers were held by the Secretary at the

office. The amount recovered on behalf of the employees was \$348.48.

In the following table is presented a summary of all occupations under the Act, a comparison being made with 1932.

	1933	1932
Number of firms reported.....	152	152
Total number of employees.....	2,221	2,331
Total number of experienced workers.....	2,039	2,223
Total number of inexperienced workers.....	182	108
Total weekly wages paid.....	\$ 19,585 24	\$ 21,445 95
Total weekly wages paid experienced.....	18,154 02	20,190 38
Total weekly wages paid inexperienced.....		116 36
Total weekly wages paid girls under 18 years.....	189 07	329 74
Average weekly wage.....	8 82	9 20
Average weekly wage over 18 years.....	8 85	9 26
Average weekly wage under 18 years.....	6 09	6 85
Percentage of girls under 18 years...	1.3	2.2
Percentage of adults over 18 years...	98.7	97.8

The chief information with respect to each industry under the Act is given in the following statistical paragraphs:

*Laundries, Dye Works and Dry Cleaning.*—Number of firms, 19; number of women workers, 188 (experienced, 168; inexperienced, 20); time workers, 161; part time workers, 27; girls under eighteen, 10; total weekly wages, \$1,759.21; average weekly wages, \$9.35 (over 18 years, \$9.46; under 18 years, \$7.47); percentage of young girls under 18 years, 18.8; average weekly hours, 41.96. In 1932 the average weekly wage was \$9.90 and the hours per week averaged 46.2-3.

*Confectioners, Bakers, and Allied Food Trades.*—Number of firms, 11; number of women workers, 367 (experienced, 363; inexperienced, 4); time workers, 171; piece workers, 196; girls under eighteen, 3; total weekly wages \$3,040.06; average weekly wage, \$8.28 (over 18 years, \$8.30; under 18 years, \$6.45); percentage of young girls under 18 years, 1.1; average weekly hours, 42.5. In 1932 the average weekly wage was \$6.71 and the hours per week averaged 30.2.

*Hotels, Restaurants and Tea Rooms.*—Number of firms, 91; number of women workers, 599 (experienced, 527; inexperienced, 72); time workers, 595; part time workers, 4; girls under eighteen, 10; total weekly wages, \$4,380.59; average weekly wages, \$7.36 (over 18 years, \$7.36; under 18 years, \$4.03); percentage of young girls under 18 years, 5.9; average weekly hours, 53. In 1932 the average weekly wage was \$8.13 and the hours per week averaged 50.

*Textiles, Needle Trades and Leather Trades.*—Number of firms, 11; number of women workers, 524 (experienced, 455; inexperienced, 69); time workers, 118; piece workers, 403; part time workers, 3; girls under eighteen, 8; total weekly wages, \$4,450.01; average weekly wages, \$9.14 (over 18 years, \$9.17; under 18 years \$6.82); percentage of young girls under 18 years, 4.1; average weekly hours, 53. In 1932 the average weekly wage was \$8.85, and the hours averaged 47 per week.

*Telephone Operators.*—Number of firms, 1; number of employees, 428 (experienced, 427; inexperienced, 1); time workers, 428; total weekly wages, \$4,595.66; average weekly wage \$10.73 (over 18 years, \$10.73). Percentage under 18 years—none; average weekly hours, 48. In 1932 the average weekly wage was \$12.47 and the hours averaged 48 per week.

*Small Factories, Paper Trades and Printing.*—Number of firms, 19; number of women workers, 115 (experienced, 99; inexperienced, 16); time workers, 81; part time workers, 8; piece workers, 26; girls under eighteen—none; total weekly wages, \$1,359.71; average weekly wage \$11.82; average weekly hours, 43. In 1932, the average weekly wage was \$11.63 and hours per week averaged 47.

The Department of Defence of the Union of South Africa organized last year a special service battalion in which unemployed youths between the ages of 17 and 22 might enlist. The objects of this battalion are as follows: (a) to provide a means of temporary employment for the better educated young men of the country, who otherwise would be rendered idle and disconsolate through lack of suitable means of employment (b) to sustain the morale of the younger generation and by means of military discipline create a more self-reliant citizen; (c) ultimately to find suitable and more permanent means of employment after a period of military training. The plan provides for the training of 1,990 youths. They receive military and physical training, a limited number also undergo vocational training, and it is hoped that it will be found possible to place these young men in permanent employment after a period of training of from nine to twelve months. The battalion will form a pool from which the defence, police, prisons and other Government departments will draw suitable recruits, according to their requirements. The battalion is a unit of the Permanent Force, and in addition to being clothed, housed and fed, members receive a minimum daily rate of one shilling.

## INVESTIGATION OF BUILDING AND CONSTRUCTION INDUSTRY IN ONTARIO

AT the recent session of the Ontario Legislature a sub-committee of the Standing Committee on Labour was appointed "to make a thorough study and investigation into all conditions pertaining to the building trade and construction industry, including unemployment and every phase of the said industry during the recess and report back to the house at the next session." This action was taken on a report presented by the Committee on a resolution which had been moved in the House by Mr. Russell Nesbitt, proposing that "the government should give early and serious consideration to an amendment to the law governing the submission of tenders and the awarding of contracts for the construction of buildings, highways and other works for the purpose of improving the standards and conditions of building and construction work generally, to provide that general contractors when submitting tenders shall submit a list of their sub-contractors and the amount of each sub-tender, and providing that the successful tenderer shall award the sub-contracts according to the list so submitted."

In considering this proposed resolution the Committee heard representatives of general contractors and of the international and amalgamated trades organizations. It was the unanimous opinion of all that the Building Trade was in a very chaotic state and that some compulsory legislation should be devised and passed licensing not only the contractors and sub-contractors but every one engaged in the building trade. The facts presented showed conclusively that the losses sustained were borne in the final analysis by the working man. The different representatives were given latitude to discuss the various matters pertaining to labour conditions generally. The matter of minimum wage, fair wage, hours of labour, inclusion of wage schedules in large contracts and duplicate contracts were discussed.

The committee's recommendations were as follows:—

(1) That the Government make a study of the N.R.A. Code, the licensing system in California and the South African Code, and devise a licensing system applicable and appropriate to conditions which apply to the building industry throughout the length and breadth of Ontario.

(2) That the general contractor, at the time of tendering, must produce the names of the sub-contractor whose figures have been used in making up his tender. At the time of award-

ing the tender, the general contractor shall produce the sub-contractor's prices on which his general contract was based and the sub-contracts shall be let to the sub-contractors on the figures produced.

(3) At the time of submitting tenders for all public buildings and all public works the prevailing union rate of wages shall be set forth in order that all contractors shall be placed on the same basis of equality in submitting their tenders.

The committee "regrets to say that the statements made before the committee would indicate that there is an increasing number of contractors who operate only in the capacity of brokers and perform no work and derive their profits before even any of the material is on the job. Ninety per cent of those who appeared before the committee were opposed to the Ontario Mechanics Lien law and recommended that the Mechanic Lien law should apply to labour only. In their opinion supply houses were taking advantage of this law to extend credit to unreliable and irresponsible contractors to the detriment of legitimate contractors and trade in general. The reason advanced by the witnesses for the exclusion of all except the working man was that the supply house might have a prior lien without the knowledge of the working man, who in turn, by making use of the material in the building really created the only value on which a lien could be registered. Your committee further recommends that a sub-committee be appointed to make a thorough study and investigation into all conditions pertaining in the trade and construction industry, including unemployment and every phase of the said industry during the recess, and report back to the House at the next session of the Legislature, the said sub-committee to consist of Messrs. Morrison, Nesbitt, Murphy (Beaches), Hutchinson and Robertson. The said sub-committee to act without payment of fees."

The Industrial Relations Section of the Department of Economics and Social Institutions, Princeton University, has published a bibliography entitled "The Office Library of an Industrial Relations Executive." It is intended as a guide to persons interested in the formation of a small working library on the subject of industrial relations. The list includes a few outstanding books on trade unions and labour legislation.

## LABOUR AND INDUSTRY IN ONTARIO IN 1933

### Fourteenth Annual Report of Provincial Department of Labour

THE fourteenth annual report of the Ontario Department of Labour reviews the administration of the various Acts under the jurisdiction of the department during the year ended October 31, 1933. The following enactments are administered by the Department: The Factory Shop and Office Building Act; the Sanitary and Hoisting Engineers Act; The Employment Agencies Act; The Steam Boiler Act; and The Apprenticeship Act.

In prefacing the report the Deputy Minister reviews conditions in the province. He notes that the downward trend in employment which had prevailed since 1929 was checked in April, 1933. From that month on to November 1, the advances in the index number of employment represented an addition of 49,700 workers to the payrolls of firms making reports in Ontario. Logging and mining recorded the greatest activity with a resultant pick-up in certain manufacturing groups. While the general outlook is more encouraging than a year ago yet "the situation insofar as the unemployed individuals and their dependents are concerned grows steadily worse. Those on relief are provided with all the necessities of life and some employment, but the many who have lost their regular employment and who are valiantly striving to remain self-supporting are finding the struggle increasingly difficult. Financial reserves are depleted, credit is exhausted, and the cumulative effect of the prolonged period of idleness and dependence on the state is breaking down the morale and health of many of those people to such an extent that they are rapidly becoming unemployable. It is evident that many formerly competent workers, particularly those who have passed middle age, will never regain the spirit of independence or the skill and speed which will enable them to regain their former positions in industrial life. Many others, who have spent years acquiring knowledge and skill in certain occupations, have lost hope of becoming re-established in their former positions and have taken up new occupations which have removed them from the available supply of skilled workers."

Due to this situation the Deputy Minister predicts a shortage of skilled workers in the building trades when activities are resumed, the efforts made under the Apprenticeship Act to maintain a regulated supply of skilled workers being largely nullified by extended period of unemployment. While this shortage of skilled workers would occur in certain industries, it was also apparent that "many semi-

skilled and specialized workers have been permanently replaced in other industries which are becoming highly mechanized and in which amalgamation and mass production are replacing small plants."

Touching on the unemployment problem and possible factors in its alleviation in the future, the deputy Minister observes: "It is the conviction that unemployment has become a permanent rather than a temporary problem which lies at the root of the agitation for unemployment insurance, shorter working hours, and increased government control of industry. Those who advocate these measures, however, are apt to overlook the fact that the difficulties of organizing and administering such measures are greatly increased at a time when the need for them is most apparent. Unemployment insurance is not a cure for unemployment nor can it be used as a relief measure for those who are out of work when the scheme is adopted. It is at best a safeguard against the harmful effects of future predictable unemployment and must be supplemented by other measures designed to decrease unemployment and to provide relief for those unemployed persons who exhaust their benefits under the insurance scheme."

"Unless the volume of business can be greatly increased over that of the pre-depression period and new industries developed to absorb the workers replaced by technological developments and scientific management, it is apparent that the working hours in industry must be decreased in order to spread employment."

In dealing with the problem of unemployed youth, forming "habits of living which will have a lasting effect upon character and greatly depreciate their future usefulness," an appeal is made to support "any measure which will provide increased training and educational facilities for these young people." Employers are urged to absorb their share of them into industry as soon as possible.

Referring to the employment of women the deputy minister's opinion is that "there appears to be no immediate hope of relieving the unemployment situation for men by barring women from certain occupations or by developing new fields of employment for female workers. It rather appears that, for the time being at least, efforts should be directed towards bringing about a recognition of the principle of fair return for services rendered regardless of sex so that employed women may receive full value for their services."

The Deputy Minister outlines the purpose of Minimum Wage legislation and proceeds: "The need for such protective legislation is revealed by the fact that during the past year there has been an evidence of a tendency to replace girls and women by boys and men in certain industries which are subject to cut-throat competition and which are finding it difficult to maintain the established minimum wages for female employees. Such a tendency must be checked at the outset if the standard of living for industrial workers is to be maintained on a self-supporting basis. This practice leads inevitably to the subsidizing of such industries through supplementing the wages by direct relief.

"The extent to which wages have been decreased during the past three years is indicated by the fact that, for the first time in the history of the department, representatives of both employers and certain groups of employees in several industries have recently requested that action be taken to regulate the wages of male employees. Heretofore all branches of organized labour have been decidedly opposed to minimum wage regulations for men, fearing that the minimum rates would become the established rates and that the unions would be unable to secure higher wages through agreements and negotiations. It was also feared that if the Government undertook to regulate wages and hours, the prestige and usefulness of unions as representatives of the workers would be adversely affected."

"Perhaps the most significant development during the past year," the report states, "has been the change in attitude on the part of industrial workers. Persons in close touch with the situation during the past few years have been impressed by the patience and fortitude of the unemployed workers and their families, but recently there have been signs that the strain is becoming too great and that many are losing faith in the established order. The past few months have witnessed a decided increase in industrial disputes, strikes and protests of various kinds from both the unemployed and those whose wages and salaries have been reduced to the point where a decent standard of living cannot be maintained. The prestige of established labour organizations is endangered and the leaders are hard pressed to justify a continuance of the policy of co-operation and conciliation. Agitators and organizers of revolutionary bodies are finding a fruitful field for their endeavours and it is becoming increasingly difficult to maintain peaceful relations and to secure settlements when strikes occur.

"Many employers become aware of the situation only when they suddenly discover that their workers have been organized and an ultimatum is presented which results in a strike if not met immediately. In some cases, these employers have been struggling valiantly to maintain their organizations and have been making heroic sacrifices in an effort to keep things going at a time when no profits are being made and it is extremely difficult to secure business at any price. They cannot understand why the employees suddenly organize and make what appear to be unreasonable demands."

*Employment Service.*—Statistics of the Ontario Government Employment Offices indicated that during the year 141,896 vacancies were reported to offices in 27 centres throughout the province. This is 46,300 less than in the year previous and "is due more to the general reduction in the amount of unemployment relief work rather than to a decrease in employment opportunities in industry. Applications numbered 295,471 and placements (regular and casual) totalled 134,735, being 47,000 less than the previous year. This was due largely to the change in policy from unemployment relief work to direct relief. However there was an increase of 7,000 placements in regular employment as compared with 1932.

One phase of the work of the Employment Offices is that of assisting handicapped ex-service men. During the year there were 2,090 placements made and 5,218 applications received.

The superintendent remarks in his report on "the tendency shown by some firms to discharge their better paid employees and to replace them by younger men willing to work at lower salaries." He also comments on "the tendency on the part of American firms with branch factories in Canada, to replace Canadians with men from the parent plants. The Employment Service has checked this practice wherever possible, but it must be admitted that the spirit of The Immigration Act has been evaded in many instances, where the actual letter of the law may perhaps have been observed."

The superintendent also comments on another unsavoury feature of the employment market. This was the "discovery of innumerable schemes ostensibly for the purpose of providing employment but actually having as their purpose the provision of revenue for the promoters by the exploitation of unemployed men and women. Anyone reading the classified advertisements in the daily papers might gather the impression that work is available for any young men of good personality, initiative and sales experience. Many of these

schemes have been investigated. Almost invariably they have been a great disappointment to the men who answered the advertisements and who spent time and energy in various types of sales campaign. Legal, it is true, but bordering closely on illegality."

*Private Employment Agencies.*—The volume of business transacted by private employment agencies "dwindled to almost imperceptible proportions" during the year. There was also a substantial reduction in the number of licensed agencies, due in part to a ruling of the Attorney General's Department which excluded nurses registries and others dealing exclusively with placements in professional and business capacities from the scope of the Employment Agencies Act, and further reductions through the process of self-elimination. At the end of the year there were in operation a total of eight licensed agencies in good standing. Several applications were received to operate agencies but the issuance of additional licences is now prohibited. The placements by private agencies during the year numbered 2,863. There were a number of convictions for violations of the Act and the report listed various types of "rackets" having to do with employment or the promise of jobs.

*Factory Inspection.*—The 47th annual report of the Factory Inspection Branch, which is included in the report of the Department, indicates an increase of over 20,000 in the number of employees on the pay-rolls of the firms inspected. "An interesting feature is the fact that, whereas last year the adolescent girls employed in factories dropped from 1,602 to eighty-six, they have this year increased again to 803; on the other hand, adolescent males dropped from 113 in 1931 to eight in 1932, and this year the number is given as ten. This might tend to show that with the wage-earning father without employment the younger members of the family have had to turn in and help, and it is apparently easier for the young girl to secure employment than the youth."

Renewed activity was reported in certain trades, particularly needle and hat trades, and the textile, shoe and drug industries, which "show signs of attaining normalcy."

Employees in the firms inspected numbered 291,252, as compared with 270,102 in the year previous. The number of first inspections totalled 17,797 while there were 14,830 in 1932.

There were 1,278 applications, or 374 more than the previous year, for overtime permits, while double shift permits increased by 67, this system having become more or less permanent in many factories. It was explained that in this manner employment is provided for more persons, the hours for women and

youths being limited to eight for each shift. Proceedings were taken against 23 firms, for persistent overtime without permits, and convictions were obtained in 20 cases, the remainder being remanded.

In spite of the increased number on the pay-rolls there was a substantial decrease in the number of accidents which totalled 1,890 as compared with 2,504 in 1932. There were 23 fatalities in the year—a decrease of seven. The orders issued relating to various requirements of the Act numbered 4,255 as compared with 4,986 in 1932, and 193 complaints were received. Violations of the Acts in the enforcement of which the inspectors have a responsibility totalled 1,202 of which 1,192 were infringements of the Minimum Wage Act.

In the accompanying table are given the number of employees by sex and age in industrial and mercantile establishments and office buildings, together with hours of work during 1932-1933.

NUMBER OF EMPLOYEES IN ONTARIO  
FACTORIES

Employees	1932	1933
Males over 16 years.....	183,108	195,523
Males, 14-16 years.....	8	10
Females over 18 years.....	86,900	94,914
Females, 14-18 years.....	86	803
Total.....	270,102	291,250
Children under 14 dismissed.....	14	2

HOURS OF LABOUR IN ONTARIO FACTORIES

—	Number of employees
Males—	
45 hours per week.....	120,861
50 hours per week.....	27,645
54 hours per week.....	15,162
58 hours per week.....	982
60 hours per week.....	11,074
Females—	
45 hours per week.....	63,167
50 hours per week.....	13,716
54 hours per week.....	6,044
58 hours per week.....	715
60 hours per week.....	2,157

There were also 29,727 employees, male and female, working approximately 50 hours per week.

*Apprenticeship Act.*—The Apprenticeship Board reported that 1933 was a most difficult year. Owing to the great volume of unemployment in the building industry, it was found impracticable to enforce all the requirements

of the Act as employers could not possibly provide work for all industrial apprentices.

At the end of the year there were 647 apprentices registered in the different trades as compared with 826 the previous year. Employers were very reluctant to undertake the training of apprentices because of the impossibility of providing continuous employment and only 27 were indentured during the year, or 59 fewer than last year. Special day classes for the first and second year apprentices, with one class in each trade, were held in Hamilton only, because of the reduced attendance which numbered 94, as compared with 263 the previous year.

The 647 active registrations in effect at the end of the year were distributed by trades as follows: bricklaying, 69; masonry, 8; carpentry, 62; painting and decorating, 29; plastering, 33; plumbing, 220; steamfitting, 66; sheet metal work, 74; electrical work, 86.

**Boiler Inspection.**—The annual report of the Boiler Inspection Branch shows a total of 251 drawings and specifications which have been surveyed and registered with 57 returned to manufacturers for revision. The number of inspections of new pressure vessels totalled 277 first inspections, 165 second inspections, and 255 final inspections. 1,335 first and 205 final inspections were made of used pressure vessels and of this number 798, or 19 more than last year, were annual inspections made upon special request from the owners or users; since the responsibility for annual inspections of such vessels does not regularly come under this branch. Inspectors of the Boiler Inspection Branch investigated 6 explosions, which resulted in serious injury to 3 persons and the death of a fourth in addition to considerable property damage. It was found that the exploded pressure vessels did not come under the jurisdiction of the branch. The total amount of moneys transmitted through this branch to the Treasurer of Ontario was \$12,219.99, or \$403.67 less than in 1932.

**Operating Engineers.**—The Board of Examiners of Operating Engineers reported 16,516 certificates issued during the fiscal year 1933. Of this number 1,072 were issued upon examination or re-examination, 11 were provisional certificates, 9 were duplicates, 91 were plant registration certificates and 15,333 were renewal certificates. The number of candidates for examination totalled 1,441 of whom 590 were examined in the Toronto office and 851 at outside centres which were chosen to suit the convenience of the candidates, and where 64 sessions were held. In connection with these examinations it is of interest to note a decrease of 41 per cent in construction plant operation examinations, as compared

with the previous year. This decrease indicates the lack of activity prevailing during the year in the construction and building trades. The revenue of this Board amounted to \$23,177.06 for the fiscal year 1933 as compared with \$25,383.11 in 1932. The revenue from the sale of the text books compiled by the Board amounted to \$1,422.05.

**Industrial Disputes.**—During the fiscal year 1933, 39 industrial disputes were reported in Ontario, one of which was carried over from the previous year. This is the largest number of disputes reported for any year since 1929, states the report, and "the fact that 19, or practically one-half of them, took place in the last quarter of the year indicates the condition of increasing unrest among workers." The persons involved in these disputes numbered 7,380, with an aggregate loss in working days of 109,240. This total represents a greater time-loss than any year since 1923 and more persons were involved in disputes than any year since 1921.

### Falls of Ground in Coal Mines

A report recently published by the Safety in Mine Research Board of Great Britain on the subject of "The Problems of Accidents from Falls of Ground," points out that more than half the deaths underground in British coal mines in 1932, and over 45,000 injuries in respect of which compensation was paid, resulted from falls of ground. It describes the work undertaken by the Board with a view to decreasing the accidents from this cause. Many of these accidents resulted from natural faults or other weaknesses in, or induced fractures of, the coal measure strata; and an account is given of the conditions under which the coal seams are formed, and the reasons for fractures in the roof from which accidents arise. A description is given of some of the precautions which would be taken to avoid danger to life and limb. A chapter at the end of the book points out that many of the minor injuries to heads, eyes, hands and feet could be avoided by the wearing of protective equipment in the form of hard hats, goggles, gloves, and safety boots.

In another publication "The Movement of Flame in Fire-damp Explosions," the Board presents the results of many years' study of the way in which explosions develop in mixtures of fire-damp and air. This report deals with the conditions of fire propagation and describes proper methods of using wire gauzes, narrow tubes and perforated plates as a means for ensuring the safety of safety lamps and other mining appliances.

## WORKMEN'S COMPENSATION IN ONTARIO, BRITISH COLUMBIA AND SASKATCHEWAN IN 1933

### Ontario

According to the nineteenth annual report of the Ontario Workmen's Compensation Board there was a further decrease in the number of industrial accidents reported to the Board, the total during the calendar year 1933 being 38,042 as compared with 41,470 in 1932, or a reduction of about 8 per cent. However the decrease was not so pronounced as in 1932 when the decline in accidents was 21 per cent as compared with 1931. From August to the end of the year each month showed an increase in the number of accidents over the same month of the year 1932, indicating that there was a sustained increase in employment in industry under the Act for the latter part of the year 1933. The largest number of accidents reported in any month during the year was in November, amounting to 3,734. The allowed claims in 1933 numbered 33,706, as compared with 43,904 in 1932. Out of the 29,766 claims allowed in Schedule 1, 16,510 were for medical aid only. Death claims, allowed in 1933 numbered 167, which was substantially less than in 1932, when there were 283.

It should be explained that Schedule 1 comprises industries under the collective liability system, the employer not being individually liable for accidents to his workmen, but being assessed to provide a general fund out of which accidents occurring in the several classes of industries throughout the province are taken care of. In Schedule 2 industries the employer is individually liable for accidents to his workmen. The greater number of accidents are under Schedule 1.

The number of employers reporting under Schedule 1 again decreased, from 21,058 in 1932 to 19,600 in 1933, nearly 60 per cent of this decrease in number being in connection with the construction class. The only class showing any substantial increase in number of employers was the mining class. The provisional pay rolls reported to the Board showed a further decrease, from \$331,582,000 for 1932 to \$286,273,000 in 1933, although the percentage of decrease was less, the wage rolls for 1932 being 19 per cent less than those for 1931, whereas the pay rolls for 1933 were only 14 per cent less than those for 1932. A large drop in pay rolls followed the decrease in number of employers in construction, the pay rolls decreasing from \$21,757,000 in 1932 to \$11,130,000. On the other hand, while the lumbering industry indicated a considerable

decrease in number of employers, it showed an increase in the estimated pay rolls from \$3,890,000 to \$3,950,000.

*Benefits.*—There was a further decrease in the amount of benefits awarded, these being \$3,699,068.95 in 1933, as compared with \$5,125,620.56 in 1932. Of such benefits in 1933, compensation amounting to \$2,298,787.97 was awarded in Schedule 1 industries, \$401,297.49, in Schedule 2, and \$331,401.80 in Crown cases. The medical aid paid in Schedule 1 amounted to \$667,581.69, as compared with \$817,240.38 in 1932. The total benefits which have been awarded since the commencement of the Act to December 31, 1933, amounted to \$100,749,307.36.

*Assessments.*—As regards assessment of the various industries for their proportion of accident costs the Board endeavoured to carry on without increase in rates, except where absolutely necessary owing to the bad accident cost experience of a particular class or group during the year, and if it is considered that another year will bring the class back to a condition of paying its way without a change in rate the Board has continued the rate even though it may not have completely paid the cost of the year's claims. The average general rate levied over the full pay roll in Schedule 1 would show a decrease, being 98 cents, as compared with \$1.07 in 1932, and an average of \$1.16 since the commencement of the Act. So far as the rates of assessment for the year were concerned, they showed by far the largest number of rates remained the same. The actual rates of assessment for 1933 and 1932 showed 66 increases, 45 decreases, 311 remained the same, and there were 7 new rates. The provisional rates for 1934 and 1933 showed 61 increases, 32 decreases, 330 remained the same, and 6 new rates, with over 75 per cent remaining stationary.

*Administration.*—The administration expenses in 1933 amounted to \$300,292.50, or a decrease of \$25,035.71. This makes a reduction of over \$50,000 in two years. While the reduction in accidents lessens the work in connection with new claims it is pointed out that this is offset by applications for review, re-establishment of claims, and for special advances and commutations of pensions and infants' moneys.

All the administration expenses are now paid by the employers under the Act, and the ex-

penses were divided among the employers as follows: Silicosis Fund, \$2,145.51; Mine Rescue Work, \$647.47; Schedule 1 Employers, \$233,759.95; Schedule 2 Employers, \$25,784.96; Dominion Crown, \$15,888.89; and Provincial Crown, \$22,065.72.

It has been customary to estimate the percentage of administration expenses on the basis of benefits awarded only, but this is not considered a fair basis of estimating percentage, because the examination of claims and the awarding of benefits is only one branch of the Board's work. In addition the Board has to assess over 20,000 employers in Schedule 1 as well as collect from the employers in Schedule 2, and also invest and reinvest the funds set aside for pension reserves and keep a very complete and elaborate system of statistics, and the Board considers that these various services should be taken into account. The total administration expenses for 1933 chargeable to Schedule 1 employers (less expenses of supervising work in connection with silicosis and mine rescue stations not properly administrative work) were about 3.94 per cent of all benefits awarded and collections made in Schedule 1.

*Safety Associations.*—The report explains that part of the operations under the Act is the work of accident prevention and reduction of accident costs, this work being carried on by associations of employers, the cost being assessed by the Board against the employers in the classes represented.

There are in operation five accident prevention associations representing different classes, the Industrial Accident Prevention Associations representing the employers in seventeen different classes, the other being specially devoted to the one class represented by them. These different associations have been trying to increase the efficiency and practical nature of their work and have been more and more studying the cost ratio of individual employers and finding out the cause of accident costs in connection with individual employers who show a bad cost ratio, and trying to ascertain the reason of such bad accident experience and to assist by recommendations and suggestions in the improvement of the hazard of such industry. In this way there has been great improvement in the accident experience of individual employers. The amount spent in such work during the year 1933 was \$136,381.51, as compared with \$157,119.97 in 1932. The amount paid to each of the associations was as follows: Lumbermen's Safety Association, \$19,097.09; Ontario Pulp and Paper Makers' Safety Association, \$13,856.63; Class 5 Accident Prevention Association, \$4,700; In-

dustrial Accident Prevention Associations, \$90,319.48; and Electrical Employers' Association of Ontario, \$8,408.31.

The work of mine rescue stations was carried on in connection with the Mining Act and there was spent in connection with these stations for maintenance, salaries, supplies, and supervision, \$13,596.93.

*Rehabilitation.*—During 1933 the Board expended \$5,108.07 in giving training to injured workmen in special trades and lines of industry through courses in commercial and technical schools, and in paying a certain proportion of wages until such workmen were rehabilitated in their industry. In addition the Board again successfully conducted its rehabilitation clinic, the total number of treatments being 7,526. During the first year of its inception the Board considered a book-keeping charge should be made against each case of \$1.50 per treatment, which was considerably less than it had cost the Board previously in connection with similar treatments given in private institutions. With such a charge, the full cost of operation was paid, together with all the cost of equipment except a balance of \$698.31. For the year 1933 it was decided to reduce the charge to \$1 per treatment, and on this basis the full cost of operation and the balance due for equipment were paid and a balance was left to the credit of the clinic amounting to \$354.10. The average cost per treatment figures out at about 87 cents. With the present staff and equipment the clinic is capable of handling 28 to 30 cases a day. During the course of the year occasionally the attendance ran as high as 38 in a day and it was necessary to take on extra help for part time. "The operation of this clinic," it is stated, "has resulted in a considerable saving in the cost of physiotherapy treatments as previously paid, and has resulted also in lessening the period of disability of the patients treated and in lessening the awards for permanent partial disability by greatly reducing the permanent disability present, and it also enables the Board to exercise a close supervision over suspected malingering, hysteria, or lowered morale."

*Funds.*—The amount standing at the credit of all classes at December 31, 1933, was \$1,368,495.25, in accordance with the provisional financial statement, as compared with \$1,607,908.14, at the end of 1932, this amount being deemed sufficient to cover all continuing, outstanding and unsettled claims in connection with any of the classes, with a reasonable margin of safety.

The Disaster Reserve Fund, which is set aside to meet any unforeseen disaster or other circumstances which might unduly burden the

employers in any industry, did not require any assessment to be levied during the year, and showed a balance on December 31, 1933, of \$270,095.56, as compared with \$257,875.59 at the commencement of the year.

The amount now standing at the credit of the Pension Reserve Fund in Schedule 1 is \$19,777,085.78, as compared with \$19,706,508.89 at the end of 1932. This represents the actuarial liability outstanding in connection with pensions actually granted by the Board, and is necessary to assure to all pensioners the ultimate payment of their claims in full. On the 31st of October, 1933, when the valuation was made of this Pension Fund, it showed that there were 7,120 pensioners alive and in receipt of pensions as of that date, of which number there were 4,055 workmen drawing pensions, 1,334 widows, 14 foster-mothers, 1,665 children, 42 mothers, 4 fathers, and 6 other pensioners.

The Board also has the "Compensation Deferred" Fund, which comprises compensation moneys awarded to claimants other than pensioners, payment of which is deferred to a

future time by reason of the claimant being a minor or for other reason. The amount standing at the credit of this account at the end of 1933 was \$54,751.57.

As mentioned previously the provisional payroll expenditure reported to the Board for all classes in 1933 was \$286,273,000. The payrolls of the four largest classes in this total were: Bakeries, canning, liquor and tobacco, \$33,553,000; metal articles, jewellery manufacture, \$28,216,000; mining and explosives, \$22,666,000; printing and stationery, \$22,319,000.

Of 33,706 allowed claims for accidents in 1933, 167 were for deaths, 14 were permanent total disability cases, 1,526 were permanent partial disability cases, 15,489 were temporary disability cases, and 16,510 involved medical aid only. At the close of the year there were 1,032 claims in assembly, as compared with 765 at the end of 1932.

The report also contains completed statistics for the year 1932 that were not available when the report for that year was made.

### British Columbia

The seventeenth annual report of the British Columbia Workmen's Compensation Board for the calendar year 1933 indicates a 4 per cent reduction in the number of accidents reported as compared with 1932. For four consecutive years paralleling a reduction in payrolls there has been a progressive decrease in the number of accidents. The statistics for the past five years indicated the following accident totals: 36,750 in 1929; 33,285 in 1930; 25,877 in 1931; 19,011 in 1932; and 18,274 in 1933. There was also a reduction in fatal accidents as follows: 253 in 1929; 277 in 1930; 125 in 1931; 106 in 1932; and 97 in 1933. In addition to the foregoing, approximately 1,500 accidents were reported, but the disability resulted in less than three days' time-loss and medical attention was not required, first-aid being sufficient.

Of all the claims disposed of in 1933, 36 per cent were to workmen in the lumber industry group; 18 per cent in the general manufacturing and delivery classes; 7 per cent in coal-mining; 7 per cent in metal mining; 5 per cent in construction work; 5 per cent in the railroading groups; 4 per cent were municipal employees; and 18 per cent were in other employments. Of the fatal accidents, 29 per cent were in the lumber industry; 14 per cent in the general manufacturing and delivery classes; 14 per cent in the railway groups; 9 per cent in construction work; 5 per cent in metal-mining; 5 per cent in coal-mining; 4 per cent in the municipal class; and 20 per

cent in all other classes. Fifty-five per cent of the workmen injured were married. One hundred and seventeen of the accidents reported were sustained by women.

The total wage loss indicated by an analysis of 7,575 temporary total disability accidents in 1933 was \$932,055.43 and the total days lost by such accidents was 188,752. Of the 7,575 workmen injured in temporary total disability accidents, 2,832 were classed as British and 2,177 as Canadian.

*Payrolls.*—According to the report the gross payrolls covering all workmen within the scope of the Act rose steadily from \$78,725,992 in 1917 to \$189,839,024 in 1929. The next three years showed a sharp pay-roll decline from \$176,845,469 in 1930 to \$140,955,102 in 1931 and to \$110,760,551 in 1932. The low point in gross wages paid was reached in the first half of 1933. Increased employment became apparent from the pay-roll returns commencing in the summer of 1933. The upward trend has been continued, and it is anticipated that when the full returns for 1933 are audited the pay-roll curtailment which was experienced in the opening months of the year will be more than offset by the substantial gain of the later months, and that the gross figures for 1933 will reach \$115,000,000. The reduction in number of men employed, broken workingtime, and lower average rate of wages combined to produce between 1929 and 1933 a reduction in gross pay-rolls of nearly 40 per cent.

To replace the 1,185 firms which discontinued employing labour in 1933 there were 887 new firms and 131 other firms which resumed operations. Ninety-seven additional firms had the benefits of the Act extended to their workmen by special request. At the end of each year for the past ten years the number of active firms on the records were as follows: 6,838 in 1924; 7,197 in 1925; 7,613 in 1926; 8,243 in 1927; 8,688 in 1928; 8,888 in 1929; 8,958 in 1930; 8,565 in 1931; 7,654 in 1932; and 7,475 on December 31, 1933.

*Benefits.*—During the seventeen years since the Act came into effect 415,537 claims have been filed under it, or an average of 24,443 for each year. Three thousand five hundred and twenty-nine of the accidents reported proved fatal and 10,143 others resulted in permanent partial or total disablement. As a result of these accidents there were at the end of the year 840 widows, 899 children, 127 dependent mothers, 35 dependent fathers, and 31 other dependents in receipt of monthly pension cheques for amounts provided by the Statute. Of the workmen permanently disabled, either partially or totally, 1,894 were in receipt of monthly pensions. At the end of the year 3,826 persons were consequently receiving regular monthly allowances for the fatal and permanently disabling accidents which occurred in industry during the past seventeen years. In all the claims filed during the year only 408 workmen were shown to be entitled to receive any insurance or benefits other than those provided under the Act. Ninety-five per cent of the injured workmen relied on the Statute to provide them with the necessary means to tide them and their families over wage-less periods resulting from industrial accidents.

During the year disbursements in compensation to injured workmen totalled \$591,153.46 while expenses in connection with medical aid, physicians, hospitalization, etc. amounted to \$368,482.67. The investment in the capitalized pension reserves at the end of the year amounted to \$8,404,871.65. This investment is necessitated and provided for by the Act as follows: "The Board shall every year assess and levy upon and collect from the employers in each class by an assessment or by

assessment made from time to time rated upon the pay-roll, or in such other manner as the Board may deem proper, sufficient funds.... to provide in each year capitalized reserves sufficient to meet the periodical payments of compensation accruing in future years in respect of all accidents which occur during the year."

The cost of administration amounted to \$3.63 out of every \$100 collected for the Accident Fund in 1933. There was a net saving of \$16,147.81 effected in administration cost as compared with 1932.

*Accident Prevention.*—At the request of a number of employers in the lumber industry the Board introduced a system of experience rating to apply to assessments since 1932, and limited in its application to operations with a certain continuity and accident exposure. The report refers to this feature as follows: "While it is too soon to speak with any certainty as to whether merit and demerit rating will have any appreciable effect on the number and severity of accidents in the lumber class, it is an experiment which is being given a fair trial in the hope of reducing needless waste of life and limb. Those employers who have consistently carried on a program of accident-prevention education within their own organization, will, it is hoped, receive some preferment in rates over those who, through undue 'speeding-up' or through faulty equipment or careless methods, have burdened the class fund with a disastrous accident record.

"To the extent that accident-prevention is seriously considered and enforced by those engaged in industrial operations there will be a curtailment in the number, severity and cost of accidents. The cost of accidents that occur in any class of industry fixes the rate of assessment. The remedy is in the hands of those engaged in the industry."

*First Aid.*—With regard to the enforcement of first aid regulations the report states that it is rarely found necessary to cancel a preferred rate of assessment for failure to keep required first aid equipment and qualified aid attendant. The value of a competent, full-time first aid attendant in the larger camps was emphasized.

## Saskatchewan

The fourth annual report of the Saskatchewan Workmen's Compensation Board contains a provisional summary of the activities under the Act during the calendar year 1933, with a detailed analysis of statistics for 1932. The Board has been in active operation from July 2, 1930, when it began to pay compensation

and medical aid. A review of the provisions of the Act was given in the LABOUR GAZETTE for April, 1929, page 379.

There was collected from all employers in 1932 the sum of \$465,823.50, while the expenditure in compensation, medical aid, etc., was \$463,500.65, leaving a balance of \$2,322.85. For

the year 1933 total receipts are predicated upon an estimate of \$308,744.59 with estimated disbursements of \$300,432.45, leaving an estimated surplus of \$8,312.14. The wage expenditure for all classes under the Act for the year 1933 was estimated at \$23,017,292, while the provisional pay-roll of 1932 amounted to \$28,629,647.

The number of fatal accidents in 1933 totalled 13 as compared with 13 in 1932, 14 in 1931, and 17 in 1930, pensions being paid at the end of 1933, numbered 112, and the total number of employers making returns to the Board was 4,602 as compared with 4,899 in 1932.

Employers of the province are divided into 70 groups, each group bearing its own rate of assessment. These groups comprise the 20 classes under the Act. In 1933 assessments were decreased in 31 out of the 70 groups, and increased in three groups. The assessment rates for 1934 have been decreased in four and increased in twelve groups, the increase being made necessary by the accident experience of these groups in previous years.

*Accident Prevention.*—The Board continued its close check on accidents. Each accident which appeared to be due to faulty equipment, bad practice, or lack of safe methods was investigated by an inspector of the provincial Department of Labour, and the necessary recommendations made to remedy defective methods or conditions. From its files the Board indicated the cost of accidents in several typical cases. In one case the amount expended on medical and surgical aid totalled \$2,352.10, while in six cases of permanent disability the expenditure ranged from \$20,213.30 for the highest to \$8,031.36 for the lowest.

The total number of accidents reported in 1933 was 2,256, of which 13 were fatal, 22 involved permanent disability, 1,139 temporary disability, and 1,082 medical aid only.

A complete analysis of reported accidents in 1932 indicated a total of 2,817, of which 13 were fatal, 69 were permanent disability cases, 1,569 temporary disability, and 1,166 required medical aid only. The average age of all classes injured in 1932 was 32·90 years and their average weekly wage was \$17·79. In temporary disability cases, the average number of days lost was 27·29 and in permanent disability cases, the average was 136·45 days, the total time loss during the year in all cases was 51,012 working days. Causes of accidents in 1932 were grouped as follows: Prime movers, 88; working machines, 124; hoisting apparatus, 39; dangerous substances, 132; stepping on or striking against objects, 531; falling objects, 423; handling objects, 304; tools, 84; runaways and animals, 43; moving trains, vehicles, etc., 156; falls of persons, 474; all other causes, 419.

The following table gives the estimate of wage expenditure by classes in Schedule 1 for 1933:—

Class	Wage Expenditure
	\$
Canadian Pacific Railway.....	1,807,840
Canadian National Railway.....	1,950,000
Province of Saskatchewan.....	No estimate required
Dominion of Canada.....	
Cities of Regina, Saskatoon and Moose Jaw.	1,586,500
Municipalities, with the exception of Regina, Saskatoon and Moose Jaw.....	1,405,975
Lumbering.....	99,227
Planing mills, etc.....	1,000,980
Mining.....	1,190,340
Gravel pits, brick and glass works.....	57,260
Garages, machine shops, etc.....	2,123,290
Gasoline, chemicals, etc.....	410,100
Breweries, bottling works, etc.....	262,800
Milling and grain elevators.....	4,201,440
Abattoirs and packing houses.....	585,280
Creameries, and bakeries.....	1,203,980
Printing, power laundry, dyeing, etc.....	1,493,700
Road making and wheelsale establishments	2,136,430
Construction—Steel, concrete, brick.....	870,410
Electric power lines and railroad construction	631,740
	23,017,292

### Milk Control Board of Ontario

The Milk Control Act, 1934, passed by the Ontario Legislature at the recent session, and taking effect as from April 18, provides for the establishment of a Board with power to make regulations as follows: (a) governing and supervising the producing, processing, handling, storing, hauling, delivering, distributing, keeping or offering for sale and the sale of milk, and all persons engaged or employed therein, and the reports and returns to be made by them to the board; (b) requiring persons or classes of persons so engaged or employed to be licensed and to fix the term of such licences and the fees to be paid therefor; (c) governing disputes and the determination of disputes arising between producers and distributors of

milk, or between any two or more classes or branches of persons engaged in the milk industry as producers, processors, handlers, haulers, distributors or vendors of milk, or as being otherwise engaged in the said industry; (d) governing agreements which may be entered into between producers of milk and other persons or classes of persons engaged in the milk industry.

The Board was established, under an Order in Council dated May 1, 1934, to consist of the following members: Messrs. James B. Fairbairn, of the city of Toronto, Deputy Minister of Agriculture; Gordon A. Aird, of the city of Toronto, dairyman; Ernest H. Clarke, of the county of York, farmer.

## INDUSTRIAL ACCIDENT PREVENTION ASSOCIATIONS OF ONTARIO

THE seventeenth annual convention of the Industrial Accident Prevention Associations was held in Toronto on April 26 and 27, and was attended by 1,187 delegates from 81 cities and towns in Ontario. The Associations represent 17 industrial groups and it is estimated that their safety activity is reflected in 10,000 industrial plants throughout the province.

The discussions dealt with various phases of accident prevention and the latest devices for prevention of accidents were on display. These included a new type of flexible glass, and a new "safety" glass which permits its use in industry where a combination of visibility and safety is required. There was also a demonstration of new methods of illumination, which emphasized the importance of good lighting in factory or office. Records were presented of accidents caused by poor lighting which has also a causation factor in fatigue and nervousness.

Featuring the convention was the demonstration put on by the Rehabilitation Clinic of the Ontario Workmen's Compensation Board. The clinic was moved from its permanent quarters and established on the floor of the convention. Here the regular work of the clinic was carried on, the regular patients, victims of accidents, coming to the convention for their treatments. By this unique method, delegates were given visible evidence of the work of the Compensation Board in restoring injured workmen to as great a measure of earning power as possible.

Awards were presented to a number of large firms for accident-free records. The Goodyear Tire Company showed a trophy won by their plants at New Toronto and Bowmanville, where they had operated a full calendar year without a single lost-time accident. The Aluminum Company of Canada exhibited another trophy won in a similar achievement. Four smaller plants in Windsor and Walkerville were awarded bronze plaques for having completed five years' operation without a lost-time accident.

Mr. O. H. Shenstone, the new president of the Associations, in outlining the objectives of the following organization said: "The cost of industrial accidents is high, but cost is a secondary consideration. The humanitarian side of accident prevention is the important side. The cost is really only an index of how well we are helping to protect our fellow men from dangerous hazards and unnecessary injury." Pointing out that accidents cost in-

dustry a huge sum of money every year and that industry was anxious to have this cost reduced, the president insisted that "the most important consideration was the responsibility which every employer owed to his employees to make their work as safe as possible." He further declared that "cost or no cost, no man had the right to submit any other man to the risk of bodily injury or death where there was any possible way of avoiding it."

Mr. V. A. Sinclair, K.C., chairman of the Ontario Workmen's Compensation Board, detailed the method of handling accident claims. He told of the careful check made by the Board in order to ascertain that the claim was a legitimate one and described the reports received from the employer, from the injured worker and from the attending doctor, if any. From the inception of the Workmen's Compensation Act in Ontario in January, 1915, to the beginning of this year, more than one million claims have been presented to the Board and over \$100,000,000 has been awarded for compensation and medical aid.

On the subject of "Foremanship," Mr. E. D. MacPhee, of the York Knitting Mills, Toronto, recommended the adoption of a safety code with the following principles:—that no one would be asked to do something that endangered himself or others; that employees must report all injuries; that departments budget for time lost through accidents; that all lost time accidents be reported to the general manager of the plant; that there shall be a summary from the First Aid department with reports each week and lastly that management will hold foremen responsible for dangerous conditions in a department. Mr. MacPhee also recommended that the Associations consider the so-called "accident prone" worker and the possibility of unfairness in certain forms of discipline because of accident experience.

In an address on the "Psychological Interpretation of Accident Statistics," Professor S. N. F. Chant, M.A., of the University of Toronto said that industry would never slip back into the unsatisfactory conditions that prevailed before accident prevention was taken seriously and suggested that industry must consider certain phases: (1) the relationship of accident prevention to plant morale, (2) accident prone individuals, and finally the supervision of small groups of men. He suggested that safety habits must be learned and were not impressed on people from the outside. Each worker must acquire safety habits for himself by his own efforts.

Other speakers at the convention included: P. J. Wood, of Ottawa; Harry L. Sain, of the Industrial Commission of Ohio; R. B. Morley, General Manager, Industrial Accident Prevention Associations; C. S. Ching, U.S. Rubber Company, New York; R. L. Calder, K.C., Montreal; Major F. H. Rutherford, Hamilton; George D. Leacock, Toronto; Frank T. Groome Toronto; M. Grattan O'Leary, editor, *The Ottawa Journal*; Reverend Richard Roberts, D.D., Toronto.

In addition to the annual meeting of the main organization ten class safety associations also held their general meetings. These were: Woodworkers Accident Prevention Associa-

tion; Ceramics and Stone Safety Association; Metal Trades Safety Association; Chemical Industries Safety Association; Food Products Safety Association; Leather, Rubber and Tanners Safety Associations; Textile and Allied Industries Safety Association; Steel Erectors Safety Association; Construction Safety Association.

The election of Officers resulted as follows: President, O. H. Shenstone, Toronto; first vice-president, F. H. Rutherford, Hamilton; second vice-president, E. E. Sparrow, Toronto; and honorary-treasurer, W. S. Campbell Toronto; general manager, R. B. Morley, Toronto.

## ALL-CANADIAN CONGRESS OF LABOUR

### Legislative Proposals submitted to the Dominion Government

A DELEGATION from the All-Canadian Congress of Labour presented to the Dominion Government, on April 27, a memorandum containing a number of proposals designed to secure full recognition, under Dominion laws, of the right of "freedom of association" for Canadian labour. The government was represented by the Right Hon. R. B. Bennett, Prime Minister, the Hon. W. A. Gordon, Minister of Labour, and the Hon. R. J. Manion, Minister of Railways. The delegation included Messrs. A. R. Mosher, president, Zenon David, vice-president, and W. T. Burford, secretary of the All-Canadian Congress of Labour; M. Doran, of the Confederation of Catholic Workers of Canada; M. M. Maclean, of the Canadian Brotherhood of Railway Employees; E. H. Cook, W. A. Hogan, and W. M. Swinwood, of the Canadian Association of Railway Enginemen, Conductors, Trainmen, Yardmen, Telegraphers and Dispatchers; R. B. Russell, A. Meikle and J. K. Weir, of the One Big Union; I. E. Cross, of the Canadian Association of Stationary Engineers; and G. Salverson, of the Canadian Bushmen's Union. Besides the Executive Board of the All-Canadian Congress the following organizations were also represented:—Amalgamated Building Workers of Canada; Canadian Amalgamated Associations of Seamen; Canadian Association of Railway Enginemen, Conductors, Trainmen, Yardmen, Telegraphers and Dispatchers; Canadian Association of Stationary Engineers; Canadian Brotherhood of Railway Employees; Canadian Bushmen's Union; Canadian Printers' Union; Electrical Communication Workers of Canada; Federation of Catholic Workers of Canada; National Clothing Workers of Canada; National Union of Painters, Decorators and Paperhangers of Canada; One Big Union

and Vancouver and District Waterfront Workers' Association. The Amalgamated Civil Servants of Canada and the Amalgamated Mine Workers of Nova Scotia were not represented by delegates, but were in expressed accord with the representations made.

The memorandum reiterated the claims submitted in last year's presentation to the Dominion Government (LABOUR GAZETTE, February, 1933, page 182), in regard to "certain anomalies of the law and in administrative practice which retard the development of the Canadian labour unions by restraining Canadian workers from joining the organizations of their choice."

The need for a forward movement in labour organization was emphasized: "The deplorable conditions prevailing in manufacturing industry and in the distributive trades, as revealed in testimony before the Parliamentary Committee on Price Spreads and Mass Buying, are undoubtedly due to the driving of hard bargains by employers with their workpeople. It is inconceivable that such conditions could obtain were the employers and the employed on an approximately equal footing in the labour market. In the view of the All-Canadian Congress of Labour the disparity between what the workers earn and what they receive is the direct cause of the excessive spreads between the prices received for commodities by manufacturers and producers and the prices paid for the same goods by the consumers, and is itself caused mainly by the lack of organization among the workers.

"That it is to the public advantage for the workers to organize for collective bargaining has long been recognized by Parliament," the memorandum continued. "The Trade Unions

Act, the Conciliation and Labour Act, and the Industrial Disputes Investigation Act are the manifestations and the results of that recognition. These acts protect the organized workers and facilitate the peaceful functioning of the unions. Yet, of the 3,924,533 wage and salary workers only 283,576 persons, or 2.7 per cent of the population, are members of labour unions, a proportion which may be compared with the approximately 16 per cent of Australia, the 8 per cent of Great Britain, and the 7 per cent of New Zealand. It is submitted (1) that the full benefit which they were designed to confer has not been derived from Canada's labour laws owing to legislative and other concessions which have an unintended restrictive effect; and (2) that further legislation is needed not only to protect the workers' right to organize in the manner of their own choosing but also directly to enhance their power to bargain as to the wages which they shall be paid for their exertions."

The delegation presented the draft of a bill to amend the Railway Act, so as to provide a fair system of representation. "The railway industry," they stated, "being more closely regulated by legislation than any other industry, and being also, from the workers' standpoint, the key industry in labour organization in Canada and other countries, it is felt that the duty devolves upon the government of ensuring the equitable incidence of the law on railway employment, and of removing any anomalies which may occur under the law and in the industrial conditions which result therefrom. The one great anomaly resulting from existing railway legislation, in conjunction with the general law concerning industrial disputes, is the facility afforded a union or a group of unions which has once become dominant to continue indefinitely to exercise authority without the approval of the workers upon whose suffrage it is nominally dependent. To remedy this condition, the government is requested to take steps to amend the Railway Act in such manner as to provide that any class, craft, or category of railway workers shall be able, without risk of intimidation, to name the union which they desire to represent their interests."

It was pointed out that the principle of the workers' freedom of choice of organizations had been recognized lately by the Canadian National Railways so far as its employees in the United States were concerned.

Other recommendations contained in the memorandum were as follows:—

"The Congress requests the repeal of Clause 2 of Section 17 of the Industrial Disputes Investigation Act. This clause was inserted in

1920 as a special concession to the organization known as Division Four, Railway Employees' Department, American Federation of Labour, and to the Railway Association of Canada, both of which were established about that time. It is applicable to the relationship of no other employees' and employers' organizations in the whole realm of Canadian industry and constitutes a perversion of the original intention of the Industrial Disputes Investigation Act by permitting the imposition of closed-shop conditions under an open-shop agreement. The Act forbids strikes on the railways without prior reference of any dispute to a board of conciliation and investigation, but Clause 2 of Section 17, in most explicit terms prevents any group of employees in the shops of any railway from securing the appointment of a board without the consent of the A.F. of L.'s Division Four. As only a small proportion of the employees affected are members of the unions embraced in that group it is submitted that the continuance of the clause which deprives the remainder of the elementary right to voice their grievances before an impartial tribunal defeats the main purpose of the Industrial Disputes Investigation Act so far as they are concerned.

"The Congress also recommends that an amendment be sought to the British North America Act to empower the Parliament of the Dominion to pass, and that the Government introduce a male minimum wage act. The All-Canadian Congress of Labour has advocated minimum rates of wages for men for the last six years, but little progress has been made on account of the division of jurisdiction among the provinces. The reasons for minimum rates of wages for men are the same as have prompted the enactment of female minimum wage laws, and it is generally recognized that the existence of minimum wage rates only for women leads to the employment of men and boys at lower rates as a method of evasion.

"It is further recommended that the appointment of workers' delegates and advisers to International Labour Conferences shall be made in conformity with Article 389 of the Treaty of Versailles and the judgment of the Permanent Court of International Justice in 1922; also that no workers' delegate or adviser shall be selected without prior consultation with the All-Canadian Congress of Labour and such other organizations as are deemed qualified under the treaty.

"Finally, the government is requested to rescind at the earliest possible moment the special privileges now enjoyed by the United States unions having branches in Canada under the Insurance Act, the Immigration Act, and the Customs Tariff, in order to protect Canadian workers and their dependants."

## LABOUR LEGISLATION IN ONTARIO, QUEBEC AND ALBERTA IN 1934

### Ontario

THE following is a summary of the labour legislation enacted by the Ontario Legislature during its recent session which opened on January 31 and closed on April 3, 1934.

#### Minimum Wages

The Minimum Wage Act was the subject of a number of amendments. Where a minimum wage is established by the Board in any class of employment the number of hours per week for which such wage is to be paid may not exceed 48 hours in municipalities having a population of more than 50,000, 50 hours in municipalities of 10,000 to 50,000 inclusive and 54 hours in other municipalities. Nevertheless, if, in any industry or class of employment to which the minimum wage so established applies, the prevailing weekly hours of labour as determined by the Board are less than the maximum hours given above, such prevailing hours are to be considered the maximum for which the minimum wage shall be paid. The Board is authorized to establish a minimum wage to be paid for the maximum number of hours fixed by the Act, and may also establish shorter weekly hours for which the minimum wage must be paid in any industry or employment where prevailing hours are, or appear to be, less than the said maximum. Overtime and part-time must be paid pro rata. Where a male employee replaces a female employee at any class of employment for which a minimum wage is established, such male employee must be paid a wage not less than the established minimum. An employer may not discharge nor threaten to discharge, or in any way discriminate against any employee for lodging complaints or giving evidence as to breaches of the Act.

An employer who contravenes any of the above provisions or the clause providing for lower wages for handicapped employees or apprentices, or who contravenes any Order of the Board in regard to wages or hours incurs a penalty of from \$25 to \$500 for each employee affected instead of \$20 to \$200 as formerly. In addition, he is liable to pay to the Board, for such employees, the difference between the wages actually received for the full period, not exceeding one year prior to the making of the complaint or laying the information, and the wages established by the Board. Formerly the sum due employees was payable to them and the change is designed to prevent the employer from forcing a compromise. The maximum penalty imposed on

an employer failing to keep records or to furnish returns or hindering any member of the Board in his duties is raised from \$20 to \$100 and the penalty for falsifying records or making false returns now ranges from \$100 to \$1,000 instead of from \$50 to \$300 as formerly. A clause is added providing that an employer convicted of a second or subsequent offence in regard to wages and hours, discrimination against employees, or the employment of men or boys to replace women or for falsifying records or supplying false information, may be imprisoned for from two to six months.

#### Unemployment Relief

The Unemployment Relief Act, 1933, was amended to enable a municipality to undertake relief works beyond the municipal limits. A municipality which has incurred any expense in providing direct relief, under the order in council of September 19, 1932, as amended, for any person who has removed to such municipality, and within a period of three months after such removal, may recover the amount so expended, less sums received on account thereof from any source, from the municipality in Ontario from which such person last removed, provided he resided in the last-mentioned municipality for the three months immediately preceding his removal. The three months' period may be extended or reduced to correspond with any amendments to the said Order in Council altering the residence period. Any sums expended by the Province in providing employment or direct relief in any municipality, by reason of the failure of that municipality to provide such sums may be recovered to the extent of that portion of the expenditures which would have been borne by the municipality in accordance with the Unemployment Relief Act or orders in council under the Act.

#### Factory, Shop and Office Building Act

The Factory, Shop and Office Building Act was amended by the repeal of the section dealing with hours of work in bake-shops and the enactment of new provisions. The repealed section forbade the employment of any adult male person on Sunday or for more than twelve hours per day or sixty per week except with the written permission of the inspector. The new section fixes a maximum working week of fifty-six hours for such employees. Written permission of the inspector is required for overtime work except on the Friday of

any week when a statutory or civic holiday occurs on the following Monday. Employment between the hours of 7 a.m. and 1 p.m. on Sunday is prohibited except for preliminary work. This rule does not apply, however, to persons whose daily period of employment does not exceed eight hours between 7 a.m. and 6 p.m. and who have a rest period of at least twenty-four consecutive hours each week. Except in cases covered by special permit, employees working more than nine hours during any work period or during any twenty-four consecutive hours, must be given at least twenty-four consecutive hours' rest before commencing the next daily work period.

### Licensing of Chauffeurs

Under the Public Commercial Vehicle Act as revised and to come into force on July 1, the Lieutenant-Governor in Council, upon the advice of, the Minister of Highways, may make regulations fixing a minimum age and minimum rates of pay for drivers and regulating their hours of employment.

### Advance Polls in Elections

Amendments were made to those sections of the Election Act which provide for advance polls in provincial elections for sailors, railway employees and travellers, the changes being necessitated by the reduction in time between nomination day and polling day. Advance polls will now be open from 8 a.m. to 5 p.m. and from 7 p.m. to 10 p.m. on the two days immediately preceding that on which the poll is held, instead of from 2 p.m. to 5 p.m. on the Thursday, Friday and Saturday before polling day. Notice of the time and places of polls is to be posted prior to the day fixed for holding the poll at the polling places and other conspicuous places and where possible advertised in a newspaper of the district. Formerly a week's notice of such polls and advertisement in a newspaper was required.

An amendment to the Municipal Act makes provision for advance polls for railway employees and commercial travellers in municipal elections. Polls will be granted on petition of twenty-five such employees and will be held from 9 a.m. to 5 p.m. for not more than three days, exclusive of Sunday, immediately preceding polling day. Notice of time and place of holding must be published in a newspaper.

### Vocational Education

A clause was added to the Vocational Education Act, similar to a provision in the High Schools Act, enabling vocational committees to purchase text-books and other school sup-

plies and either furnish them to pupils free of charge or collect a sum to defray the cost not exceeding twenty-five cents per month for each pupil.

### Mothers' Allowances

The Mothers' Allowances Act was amended to authorize the Lieutenant-Governor in Council on recommendation of the Mothers' Allowances Commission to direct the continuance of an allowance in cases where it would otherwise cease because only one child remains under 16 years of age and one or more of the other children are continuing to attend school up to the age of 18 years. The same provision is made for cases presenting special circumstances where it has been shown to be advisable to grant an allowance to children dependent on a mother or foster-mother who is not strictly eligible for it.

### Marketing Act

The Ontario Marketing Act, 1931, was amended to enable the Province to take advantage of the proposed Federal legislation to regulate the marketing of natural products. The amendment will come into force on Proclamation. A summary of the proposed Federal law was given in the Labour Gazette for April at page 304.

### Woodmen's Employment Act

The Woodmen's Employment Act provides that the Lieutenant-Governor in Council may appoint an inspector to investigate the labour conditions of men employed in the timbering or lumbering industry by operators or contractors holding licences or other authorization to cut and remove timber from Crown Lands. Specific subjects for investigation are set out in the Act and were outlined in the LABOUR GAZETTE for April at page 308. They include wages, hours of labour, sanitary conditions, food, work hazards, prices charged for food, living accommodation and supplies, deductions from wages for medical and other services, fines, and such other matters as may be directed to be inquired into. The operators are to be held responsible for everything done or required to be done in connection with the timbering or other operations, whether they have let contracts for certain work or not. The inspector is given power to enter on any lands or premises, to summon witnesses and require documents to be produced.

The Report of an inquiry by the Labour Committee of the Legislature into conditions existing in the building and construction industry is given in the present issue at page 423.

## Quebec

The Quebec Legislature was in session from January 9 to April 20, 1934, and enacted a number of laws of labour interest of which the following is a summary.

### Industrial Establishments Act

The scope of the Industrial Establishments Act was widened to include commercial establishments and the title of the Act was amended accordingly. "Commercial establishment" is defined to mean any place where merchandise is sold or offered for sale but does not include hotels and restaurants nor shops where only members of the same family are employed.

A new clause empowers the Lieutenant-Governor in Council to prohibit the employment of women and of girls and boys under 18 years of age in certain industrial establishments or parts thereof which he may deem dangerous or harmful to their health. This provision is in addition to a section appearing in all the provincial Factory Acts except that of Alberta, under which no boys under 16 and no girls under 18 may be employed in industrial establishments which have been classified by the Lieutenant-Governor in Council as dangerous or unwholesome.\* No use has been made of this clause except in Quebec where a list of such establishments was drawn up in the nineties.

The section prohibiting the employment of children is made more explicit and clubs, amusement halls and arenas are added to the list of places in which it was forbidden to employ children under 16 who could not read and write fluently. The new section also repeats the prohibition of the employment of children under 14 which is contained in an earlier clause of the Act. The 1934 section is declared not to apply to domestic or farm servants nor to cases where the head of a family employs his wife or children in his industry or business. The new section omits from the prohibited list of employments that of work for any person practising a profession. As the section now stands, employers are forbidden to employ children under 14 or those under 16 who cannot read and write fluently, in any industrial or commercial establishment, in any industry, trade or business, in any theatre, cinema, club, amusement hall, arena, hotel or restaurant, or as telegraph or department store messengers, or as distributors of hand-bills or advertisements. The normal working day for women and young persons under 18 years of age in industrial establishments must end at

6 p.m. instead of 9 p.m. The clause permitting the employer to arrange the hours of labour per day in order to give a shorter work-day on Saturday has been omitted in the amending Act. The 10-hour day and 55-hour week remain as in the old Act.

Hours of employment for women and young persons under 18 in shops in cities or towns of over 10,000 population may not exceed 60 per week except during the two weeks preceding New Year's Day, and when the inspector gives special permission. Working hours must fall between 7 a.m. and 11 p.m. except on the day before Christmas, the day before New Year's Day and the day before Easter Sunday, when work must cease at 10 p.m. Where the inspector gives permission for overtime in either industrial or commercial establishments for a period of not more than six weeks, the maximum working hours for women and young persons are 65 per week instead of 72 as formerly.

The heads of industrial and commercial establishments are now required to keep a register of the names, ages, addresses and working hours of the men employed as well as of the women and young persons, and commercial establishments are to be inspected.

To the clauses providing maximum penalties for violation of certain sections of the Act, the amending Act adds minimum penalties. As the Act now stands, the penalty for keeping an industrial or commercial establishment contrary to the provisions of the Act or regulations is from \$10 to \$200 and costs or 12 months' imprisonment; for wilfully making a false entry in a register or other document or a false declaration \$20 to \$100 and costs or six months' imprisonment; for refusal to keep a register as required by the Act \$10 to \$30 and costs or three months' imprisonment, and for a contravention of the law, regulations of the Lieutenant-Governor in Council or orders of the inspector for which no other penalty is provided, the fine is from \$10 to \$100 and costs or three months' imprisonment. In the last case the maximum fine has been raised from \$50 to \$100.

### Women's Minimum Wage Act

Two bills to amend the Women's Minimum Wage Act were passed by the Quebec Legislature. One provides that no male worker shall be employed on work which, in the opinion of the Commission, is ordinarily and by custom performed by women, at a less wage than that fixed by an order of the Commission for female employees on such work.

\* In New Brunswick ages are 14 and 18 respectively.

The other Act amends the principal Act in several particulars. The Commission is no longer required to send notices of decisions to employers by registered mail but copies of them must be posted up in a conspicuous place where the women are working. A special scale of wages may be established for persons engaged in minor operations to be determined by the Commission. Other clauses added to the Act render void all agreements between an employer and employee fixing a lower wage than the minimum established by the Commission and prohibit the sale to an employee of any interest in, or any stock or bond of, an industry carried on by his employer unless the weekly wage of the employee exceeds \$20. The section imposing a penalty of \$50 and costs or from one to two months' imprisonment on employers for infringements of any order in council under the Act or of any order of the Commission was replaced by new provisions which include violations of the Act as well as orders in council and orders of the Commission and increase the penalties. The amended section declares such employers liable to a fine of not less than \$50 and not more than \$200 and costs or, in default of payment, to one to two months' imprisonment for a first offence. For a subsequent offence a penalty of from \$100 to \$300 and costs, or imprisonment for two or three months is provided. In case of a third or subsequent offence within the same twelve months, however, the employer, or manager in case of corporations, and any director knowingly participating in the offence is liable on summary conviction to one month's imprisonment without the option of a fine. The name of the informer must be kept secret and no witness in a prosecution under the Act may be compelled to state whether he is the informer and no question may be put to him tending to prove that the prosecution was instituted on complaint of an informer or tending to make known the name of the informer.

### Professional Syndicates Act

An amendment to the Professional Syndicates Act sets out new provisions for the division of property in case of the voluntary or judicial dissolution of a syndicate. Under the original Act, the general meeting of the syndicate laid down the rules for the division of property among the members after payment of debts and costs of distribution. Legacies and gifts were to be returned or handed over to similar or correlated undertakings determined by the general meeting or by the by-laws. The amendment requires one or three liquidators to be appointed and makes similar provision regarding the pay-

ment of costs and debts and concerning gifts and legacies but, instead of dividing the remainder among the members, it is to be used for the maintenance and administration in trust, of the special indemnity funds established under the Professional Syndicates Act to cover death and sickness benefits, superannuation, unemployment funds, etc. Any assets remaining must be devoted to one or more similar undertakings designated by the Lieutenant-Governor in Council. A further amendment enables municipal corporations to exempt from taxes the immovables belonging to a professional syndicate incorporated under the Act or to grant exemption to the owner of any immovables used by any syndicate as long as they are used as a hall for workers' meetings or as a library or lecture hall or for other social purposes as the municipal council may determine.

### Licensing of Engineers, etc.

The Stationary Engineers' Act now the Stationary Enginemen's Act was amended to extend the definition of "motive power" to include power developed in any place or building by means of compressed air, gas, crude oil or any other substance as well as steam but excluding motive power used for heating private residences or installations having a capacity of less than 15 square feet of heating surface or steam-heating installations of 25 h.p. or less where the safety valve regulates the pressure to five pounds per square inch or less; internal combustion motors with a capacity of less than 10 h.p.; and refrigerating machines with a capacity of three tons or less. No person may supervise a motive power unless he has satisfactorily undergone an examination before the board of examiners appointed under the Act. The Act does not apply to mines governed by the Quebec Mining Act.

A amendment to the Pipe-fitters Act replaces the term "pipe-fitters" by "pipe-mechanics". Plumbing systems in any building or construction are brought under the Act, and include piping and all accessories used for draining, for the back air vent and for supplying water or gas. Contractors, journeymen and apprentices engaged in installing such plumbing systems are not required to be licensed under the Act if the municipality in which they reside, by a by-law adopted before the coming into force of the amending Act, requires them to be licensed after examination as to their technical qualifications. Such municipal licences are only valid within the municipality. Formerly licences under the Pipe-fitters Act were not

required in municipalities having a population of 10,000 or less but they are now necessary, even in such municipalities, for persons undertaking work in public buildings or industrial establishments. Persons working or contracting for work on locomotives, railway cars or ships are excluded from the operation of the Act.

The Act passed in 1932, exempting from seizure for any claim for debts the salaries and wages of persons engaged on work undertaken to relieve unemployment with the aid granted under certain Federal and Provincial statutes, was repealed and a similar exemption provided for by an amendment to the Code of Civil Procedure.

### **Forest Operations Commission Act**

As in Ontario, the Legislature took steps to regulate labour conditions in the lumber industry. The conditions which, in Ontario, are to be investigated by the inspector are, in Quebec, to be reported as contemplated to the Commission administering the Act before operations are begun. The main sections of the Bill, which, with certain changes, has now become the Quebec Forest Operations Commission Act, were given in the March issue of this GAZETTE at page 236. Sections were added during its passage through the Legislature which require the posting on the inside of the main door of each lumber camp of a statement of the wages that will be paid and the prices that will be charged for articles sold, as well as other details mentioned in paragraphs 1-5 inclusive of section 14 of the Act. For violation of this provision a penalty of \$10 per day is provided and for selling any article at a price higher than that mentioned in the statement a fine of \$5 for each article may be imposed. Penalties are recoverable by employees before the courts of civil jurisdiction and employees who receive lower wages than those fixed under the Act may recover the difference before any court of competent jurisdiction. Paragraph (6) of section 14 as published in the LABOUR GAZETTE for March was struck out. This paragraph required the Commission to be supplied with details of the dimensions, sanitary conditions, etc., of rooms or places used for living and working or in the preparation, storing and distributing of food. An amendment to the Public Health Act, however, requires camps used for lumbering, mining and road work to be erected in accordance with specimen plans supplied by the Provincial Bureau of Health. The Director of the Bureau or his officers are authorized to control and supervise, by in-

spectors appointed for the purpose, the sanitary conditions in such camps as well as in saw-mills and similar industries.

### **Released Prisoners**

The Released Prisoners Farms Act enables the Lieutenant-Governor in Council to authorize the Attorney-General to establish one or two farms to receive persons released from a prison, industrial farm, reformatory school, insane asylum, etc., and, with their consent, persons coming within the conditions prescribed by regulations made by the Lieutenant-Governor in Council. Such regulations may also cover other subjects including the employment and remuneration of persons received by such farms. The cost of establishing each farm is limited to \$50,000.

### **Marketing of Natural Products**

An Act to aid in putting into effect in Quebec any Federal Act having as object the marketing of the natural products of Canada, and any Federal Act respecting bankruptcy as regards compromises between creditors and debtors, authorizes the Lieutenant-Governor in Council to take the necessary steps to give effect to such Acts.

### **Collective Labour Agreements Extension Act**

The text of the Bill which has now, in an amended form, become the Collective Labour Agreements Extension Act, was printed in the March issue of this GAZETTE at page 235. As a number of changes were made during the progress of this Bill through the Legislature, the text of the Act is given in this issue at page 417. This statute which enables the terms of a collective agreement as to wages and hours between one or more employers and one or more trade unions to be extended by the Lieutenant-Governor in Council on recommendation of the Minister of Labour, so as to bind all the employers and employees in the same trade or industry in a certain district is the first example in Canada of the extension of the "common rule" by a Government rather than by advances in collective bargaining. A somewhat similar provision is contained in the Alberta Department of Trade and Industry Act. Since collective agreements registered under the Professional Syndicates Act of Quebec are enforceable at law, as in no other province, the operation of these two statutes is of great interest.

### **Resolutions**

On February 15, 1934, the Legislative Assembly adopted a motion that as soon as the financial position of the Province will allow

it, the Government should consider the possibility of creating a system of assistance to indigent mothers.

On March 13, the Assembly adopted a motion praying the Government to find if it be possible to make it compulsory in industry and commerce to give preference in employment to fathers of families in preference to bachelors, and to men in preference to women and girls who are not obliged to earn their living.

On March 15, the Assembly adopted a motion that the Government should take immediate steps to insure an equitable wage to labourers in general and to men and women who work for industrial establishments or for business houses.

Motions dealing with old age pensions and the enforcement of the Lord's Day Act were given in the March issue of this GAZETTE at pages 214 and 215 respectively.

## Alberta

The Alberta Legislature was in session from February 8 to April 16, and enacted a number of labour laws.

### Coal Miners' Wages Security Act

The Coal Miners' Wages Security Act was the subject of several amendments designed to strengthen and adapt it to present conditions. The definition of "coal miner" was altered to include every miner and every other person ordinarily and usually employed in, on, or about a coal mine by a mine owner as an employee for salary or wages. The definition of "mine" was amended to mean only mines "at which coal is being gotten for sale". As in the principal Act, before June 1 in each year a mine owner must lodge with the Minister security for the payment of wages during the next twelve months. New sections stipulate that where the amount of security which a mine owner is required to furnish does not exceed \$500 the form of the security is to be in the discretion of the Minister; if it exceeds that amount its form is to be determined by the Board of Public Utility Commissioners. Pending its decision the Board may grant the owner a permit to operate the mine for a period not exceeding 30 days. If the owner makes a deposit in cash with the Minister of a sum equal to the amount of security required, he is deemed to have complied with the provisions of the Act and the said sum is to be invested by the Minister in securities to be held by him as security for the payment of wages by the owner. In case of default in the payment of any wages earned and for which security was given the Minister may realize upon such securities. The proceeds of any securities furnished by a mine owner under the provisions of the Act are to be dealt with as follows: (a) in the payment of all wages owing which were earned during the period for which security was given in the thirty days preceding default and unpaid, or, if the sum is insufficient, in their payment pro rata; (b) out of the balance, if any, in the payment of

the costs of realizing the securities and paying the wages; and (c) in payment of the balance to the persons legally entitled thereto.

The Minister or any person designated by him may give a written certificate as to whether or not during any specified time any mine owner has furnished security as required by the Act. The minimum penalty for default in furnishing security and for continuing to operate a mine is reduced from \$1,000 to \$100. Every mine owner must before the fifteenth day and the last day of each month make a return to the Minister setting out whether wages payable to his employees on the last preceding pay day have been paid in full and, in case they have not been so paid, the amount remaining unpaid. A fine not exceeding \$100 and costs or imprisonment for not more than 30 days is the penalty for default in furnishing this statement. The Board of Public Utility Commissioners may at any time, by order, upon the application of the Minister or any mine employee, suspend or cancel any certificate of exemption from the obligation to furnish security, which has been granted on the ground that the mine-owner has such resources as to assure the payment of wages, and may also issue such certificate on such terms and conditions as it may deem proper.

### Relief Liability Act

The Relief Liability Act authorizes the Minister in charge to make a written order referring to the Supreme Court of Alberta any question as to the residence qualification of any recipient of relief, that may arise within 6 months of the time at which such person first received relief, in order to determine the liability of the Province and municipality, either jointly or severally, to pay the costs of such relief. The Minister may make the reference of his own motion or on written application from any party to the dispute. The judge after hearing the case may make an order declaring the place or places at which the person in question is entitled to relief.

In case relief has been provided by the Province or any municipality for which another municipality is liable, wholly or in part, the cost of such relief may be recovered. After an order by a judge, the municipality liable to provide relief may require the person in receipt of relief or entitled thereto to reside within the municipality. If such person does not comply within thirty days and after being furnished with transportation facilities, the right to receive relief is to be suspended.

#### Licensing of Chauffeurs

The Public Vehicles Act was amended to provide that no person may be licensed as driver of a public vehicle unless he satisfies the Minister of his physical fitness. The Minister may also require any licensee to submit evidence as to his physical condition.

#### Natural Products Marketing Act

The Alberta Natural Products Marketing Act enables the Province to take advantage of Federal legislation relating to the marketing of natural products.

#### Department of Trade and Industry Act

The Bill which has now become the Department of Trade and Industry Act was summarized in the LABOUR GAZETTE for April at page 305. The Act, which will come into force on Proclamation, was amended in the Legislature. This statute, the first of its kind in Canada, provides for a Department of Trade and Industry in the Alberta Government to inquire into conditions in any trade or industry which appear to be detrimental to the interest of trade or the public; to survey the resources of the province and plan for their development; to promote conferences of representatives of those engaged or employed in any trade so as to remedy any harmful conditions; to promote trade associations for the same purpose and to collect information regarding the various trades in the province and its resources. If a conference of any trade agrees upon certain standards of ethics calculated to put an end to competitive practices harmful to the trade, its employees or the public, and, more particularly, agrees to establish minimum wholesale and retail prices, and minimum standards as to hours of labour and wages of employees, and if 66 per cent of those engaged in the trade, or if persons owning 66 per cent of the capital invested in the trade, approve such standards, the Lieutenant-Governor in Council may order that the code drawn up in accordance with the agreement shall be in force after a specified date and binding on every

person carrying on the trade. In the Bill as introduced, only 60 per cent of the trade had to be in favour of the code. Codes may be amended or cancelled by following the same procedure by which they were adopted. If a conference does not come to an agreement, the Minister and the Advisory Board appointed under the Act may draw up a code which may be approved and declared binding on the persons in the trade concerned. The Board is to consist of 3 or 5 persons, one representing the consuming public. The Lieutenant-Governor in Council may make regulations to provide for the registration and licensing of persons engaged in various trades. The Act applies to wholesale and retail dealers, druggists, printers, restaurant keepers, dry cleaners, barbers, hairdressers and plumbing, heating and sanitary engineers. The Act however does not apply to retail sale of second-hand goods, repossessed goods, damaged or perishable goods or to goods advertised in *bona fide* mail order catalogues and sold in the ordinary course of a *bona fide* mail-order business. If a representative number of persons engaged in any other trade, petition to be brought under the Act, the Lieutenant-Governor in Council on the recommendation of the Minister may declare such trade within the scope of the Act.

The sale of any commodity at a price less than the laid down cost or the replacement cost, whichever is the less, together with an additional amount considered as a fair return, may be prohibited, but bankrupt or unseasonable stocks and discontinued lines may be sold at less than the minimum price subject to any regulations that may be made.

Provision is made for inquiries into wages and for conferences between employers and employees for the purpose of collective bargaining. If no agreement is reached as to wages, the Lieutenant-Governor in Council may fix a minimum wage for all classes of employees or for any specified class or in any specified district. A wage order may be varied or cancelled. An employer is not to interfere directly or indirectly with the free selection of representatives by any association or in any lawful activity of such association. Penalties for contravention of the Act, of orders made thereunder or of the provisions of any code, are, in the case of an individual, to be not more than \$100 and costs and in default of payment, imprisonment for not more than 2 months, and, in case of a corporation, not more than \$500 and costs. For selling below the minimum price or paying wages below the minimum wage the penalty to be imposed on others than persons subject to a code is a fine

of not more than \$100 and costs or imprisonment for not more than 60 days.

Part III of the Act deals with coal mining and distribution. An advisory committee may be appointed from time to time for special inquiries. Agreements as to wages which provide for a sliding scale of wages in accordance with the profits of the industry are to be of no effect unless approved in writing by the Minister. The latter is to promote conferences among either operators and dealers or both in order to establish a common selling agency, to regulate the supply of coal according to the demand and to promote schemes for rationalizing the coal mining industry in Alberta by using coal from efficiently operated mines. Operators whose production is curtailed or assigned to other mines are to be compensated out of the increased profits accruing to the producing mines. If there is default in the payment of wages for more than one month, or an operator becomes unable to meet his liabilities or makes default in complying with any of the provisions of a code, the matter is to be referred to the Minister of Lands and Mines.

### Resolutions

A resolution adopted by the Alberta Legislature was to the effect that, in any unemployment relief work instituted this year, care should be taken to undertake such necessary public work as are most urgently needed while at the same time providing as many actual working days as possible so as to give the most relief to the unemployed and, further, that a fair proportion of any funds available for relief work should be allocated to rural relief and used for necessary highway construction and maintenance.

Another motion passed by the Legislature was in favour of extending, as far as possible under present conditions, the Government's policy of subsidizing medical practitioners and appointing district nurses. It was also recommended that a part of the report of the Legislative Committee on State Medicine, 1934, be put in effect as soon as possible. These relate to preventive medicine, especially in the control of tuberculosis, to demonstrations of contributory health insurance in one urban and one rural district and to municipal doctors and hospitals.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Reports on 1934 Conference Agenda

*Reduction of Hours of Work.*—The International Labour Office has published a report on the first item on the agenda of the 1934 Session of the International Labour Conference—"Reduction of hours of work." The question of hours of work in relation to unemployment was the subject of a preliminary survey by a Tripartite Preparatory Conference in January, 1933 (LABOUR GAZETTE, February, 1933, page 192) and passed through the first stage of the double-discussion procedure at the general session of the International Labour Conference in June (LABOUR GAZETTE, August, 1933, page 791). At that session it was decided that the matter was a suitable one for a Draft Convention or Recommendation, and a number of points on which Governments should be consulted were laid down. The report now issued, in preparation for the second discussion next June, contains the replies of the governments on those various points, a general survey of the problem in the light of the replies, the conclusions drawn from the survey, and the texts of two proposed Draft Conventions concerning the forty-hour week in industry and in commerce and offices, a draft Recommendation concerning the maintenance of the standard of living in the case of a reduction in hours of work, and a draft Resolution on technological unemployment.

By March 3, 1934, the date on which the report was closed for the purpose of including replies to the Questionnaire, replies had been received from the Governments of the following 27 countries: Austria, Belgium, Bulgaria, Canada (Provinces of Manitoba, Ontario and Saskatchewan), Chile, Denmark, Estonia, Finland, France, Hungary, India, the Irish Free State, Italy, Japan, Latvia, Lithuania, the Netherlands, New Zealand, Norway, Siam, Spain, Sweden, Switzerland, Turkey and Yugoslavia.

*Unemployment Insurance and Relief.*—A similar report has been issued on the second item on the agenda of the coming Conference—"Unemployment insurance and various forms of relief for the unemployed." This report contains the replies received from 26 Governments to the questionnaire issued after the first discussion last year (LABOUR GAZETTE, August, 1933, page 790) together with the texts of a proposed Draft Convention and a draft Recommendation put forward as bases for the final decisions of the Conference this year.

*Maintenance of Migrant Workers' Rights Under Invalidity, Old Age and Widows' and Orphans' Insurance.*—The International Labour Office has also issued a report on the fourth item on the agenda of the 1934 conference—"Maintenance of acquired rights and rights in course of acquisition under invalidity, old age

and widows' and orphans' insurance, on behalf of workers who transfer their residence from one country to another."

At the 1933 session the International Labour Conference adopted six draft conventions (LABOUR GAZETTE, August, 1933, pages 794, etc.) on invalidity, old age and widows' and orphans' insurance, three of which deal with such insurance for persons employed in industrial and commercial undertakings or in the liberal professions and for out-workers and domestic servants, while the remaining three deal with the same three branches of insurance for persons employed in agricultural undertakings. These draft conventions contain provisions governing scope, benefits, financial resources, insurance institutions, supervision, settlement of disputes, the position of foreigners, etc., but do not cover the maintenance of migrant workers' rights. It was therefore decided to place the question on the agenda of the forthcoming session for first discussion.

The above-mentioned report has accordingly been prepared by the International Labour Office in order to provide the Conference with full material on which to base its deliberations. It analyses those provisions of national legislation and bilateral treaties which deal with the maintenance of migrant workers' rights. The report is divided into four parts: (1) maintenance of rights in course of acquisition; (2) maintenance of acquired rights and residence abroad; (3) conditions of application of treaties; and (4) conclusions, and list of points on which the office proposes that Governments be consulted.

*Partial Revision of the Convention Concerning Employment of Women during the Night.*—A report on the above-mentioned subject, which is the seventh item on the agenda of the 1934 session of the International Labour Conference, has also been issued by the International Labour Office. It contains draft amendments for submission to the Conference as a basis for its discussions, together with the substance of the observations made by governments on the question and an examination of the conclusions which may be drawn from the governments' statements, leading up to the draft amendments submitted by the International Labour Office.

The main proposals for revision of the Convention are with a view to (a) the insertion in the Convention of an Article specifying that

the Convention does not apply to persons holding responsible positions of management and not ordinarily engaged in manual work; and (b) the insertion in Article 2 of the Convention a provision to the effect that the competent authorities may, in view of exceptional circumstances affecting the workers in a particular industry or area, and after consultation of the employers' and workers' organizations concerned, decide that for those workers the interval between 11 o'clock in the evening and 6 o'clock in the morning shall be substituted for the interval between 10 o'clock in the evening and 5 o'clock in the morning.

### United States and the International Labour Organization

A conference on labour legislation, held at Washington last February, was called by Secretary of Labour Perkins for the purpose of securing closer co-operation between the federal and State governments in the United States, in the working out of a national program for legislation affecting labour. Delegates were present from 39 States. Among the resolutions adopted at the conference was one which recommended "the full and permanent participation of the United States in the work of the International Labour Conference and the International Labour Office." The *Monthly Labour Review*, published by the United States Department of Labour, contains in its issue for April a full account of the conference. The first article of the same issue gives a full account of the work of the International Labour Organization since its formation, with a list of the Draft Conventions and the countries which have so far ratified them.

The conference adopted a series of recommendations regarding minimum standards on safety and health, workmen's compensation, unemployment insurance, old age pensions, and other subjects.

### Publications of the I.L.O.

The final series of brochures of "Occupation and Health," the Encyclopaedia of Hygiene, Pathology and Social Welfare, which is in course of publication by the International Labour Office, has just appeared. This series terminates the publication of the work in brochure form. Its publication in volume form will be completed shortly by the issue of Volume II.

## EMPLOYMENT CONDITIONS IN CANADA AT THE END OF APRIL, 1934

### Reports of the Superintendents of the Employment Service

THE employment situation at the end of April, 1934, was reported by the Superintendents of the Employment Service of Canada to be as follows:

There was little activity in farming in the Maritime Provinces, other than spring ploughing and early planting. Where harbours were clear of drift ice, prospects for the fishing industry looked fairly bright for the opening season. In logging, some stream driving was underway, but high water had caused considerable loss, as rafts of logs had gone adrift. The majority of mines in Cape Breton and vicinity worked two and three days per week. Improvement was noted in the iron and steel group, additional men being employed as more work became available. Construction was quiet. Transportation, both passenger and freight, was fair, also trade. Little change was noted in the women's section, where placements in domestic service were made daily.

Farming in the Province of Quebec was quiet, few placements being made. Orders had been received for river drivers in Hull; Quebec City and Sherbrooke also noted an improvement in the logging industry. Considerable activity was reported from the mining districts, where prospectors had arrived and machinery purchased, which would be put into operation as soon as weather conditions permitted. Manufacturing was reported from the various cities as follows: Hull, nearly all factories working and employing about 75 per cent of the regular staff; Montreal, rubber quiet, boot and shoe industry very active, with clothing and metallurgy fairly busy; Quebec City, leather and clothing active; Sherbrooke, conditions satisfactory; and Three Rivers, improvement noted in previous month, continued. Building construction was slightly busier, particularly in Montreal, where the number of orders for building tradesmen had increased. Extensive repairs and proposed erection of new structures were also under consideration at Hull, Rouyn, Quebec City and Three Rivers. There was the usual rush at the various ports attendant upon the opening of navigation, but, otherwise, transportation was quiet. Trade showed a revival of business and improvement was noted in the women's division, where a number of vacancies were listed and successful placements made.

The demand for farm help in Ontario was well maintained, with little difficulty experienced in meeting all requirements. Seasonal activity in logging was handicapped by per-

sistent cold weather and ice-bound lakes, so that there was practically no call for men. Saw-mills were also slack and would remain so until the spring drives began. Mining continued to show increased activity. Little work, however, was available for inexperienced labour, but skilled mining men were hard to secure. In manufacturing, improvement generally was noted in textiles, soap and box factories, auto, leather, and iron and steel production, with orders for skilled mechanics fairly well divided amongst the various industries. A slight increase in the volume of building construction was caused partly through alteration, renovation and small repair jobs offered, although a few larger projects were also under way. Highway and airport construction continued, but fewer placements were made on the trans-Canada highway, as the camps already had their quota and only an occasional replacement needed. Transportation was fair, a number of men having obtained employment with the opening of the Welland Canal and the start of navigation. Business in the women's section showed gradual improvement. Married couples were in demand and institutional vacancies increased, with the usual shortage of cooks and cooks-general prevailing. Industrial and clerical positions were fewer, however, in number and more difficult to fill, in that experienced help only would be accepted.

Seeding was general throughout the Prairie Provinces and about 70 per cent completed in Alberta, with fine weather conditions prevailing, but in Manitoba and Saskatchewan, dust storms had seriously hampered the farmers and a marked feeling of apprehension prevailed lest the high winds, which were drying out the top soil at a rapid rate, would also blow out the seed. In consequence, the demand for farm labour suffered a substantial decline. It also seemed likely that many men who had hired out in the winter under the Farm Relief Scheme would stay on for spring work, wages being offered from \$15 to \$20 per month. Logging, mining and manufacturing were quiet and there was little work of any duration in building construction, although a number of short jobs were offered. Recruiting of men for relief camps also continued. Retail trade, particularly at Winnipeg, maintained a fairly steady turnover, while wholesale trade also continued in regular volume. Paints, oils and greases, as well as groceries and hardware lines, reported the usual increases in sales. Collections were fair to poor. The women's divisions were for the most part quiet, al-

though there was a better demand for domestic help for city positions.

With warmer weather, farm placements in British Columbia showed an increase and in a survey of the fruit districts it was reported that there was one of the best crops of small fruits in years. Logging showed little change, with few calls for help, bush fires and strikes having somewhat hampered this industry. Saw and shingle mills operated as usual. Mining was active, with prospects bright. Building construction showed little signs of improve-

ment, with only casual jobs available. Relief camps continued. Longshoremen were busy at New Westminster and Victoria, but slack at Prince Rupert and only fairly well employed at Vancouver. Dry dock and shipyards showed activity, but few extra men were engaged. Trade registered no change. There was a fair amount of work offered for domestics in the women's section, with plenty of applicants on hand. All other lines of service, however, remained very quiet.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN MARCH, 1934

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on April 1 was 8,477, the employees on their payrolls numbering 847,993 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for April was 1,666 having an aggregate membership of 145,476 persons. It should be un-

derstood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

### (1) Employment Situation at the Beginning of April, 1934, as Reported by Employers

According to data tabulated in the Dominion Bureau of Statistics from 8,477 establishments, employment at the beginning of April showed a seasonal falling-off, the reported staffs aggregating 847,993 persons, compared with 861,053 in the preceding month. The statistics furnished by leading firms since 1920 show that in twelve of these thirteen years, employment on April 1, has experienced a between-seasons contraction, ordinarily resulting from the completion of the winter's work in logging camps, and prior to the absorption of any considerable numbers of persons in the outdoor industries opening up in the spring and summer. The general loss at the beginning of April, 1934, rather exceeded the average decline on that date in the years for which statistics are available; the situation this year, considerably affected by the above factors, was further complicated by the release of unusually large numbers of men who had been

temporarily employed in clearing the railway tracks and roads after last winter's severe storms, and by numerous shutdowns over the Easter holidays, this year reflected to some extent in the employment statistics, since Easter fell on April 1. The index of employment, based on the 1926 average as 100, stood at 91.3 on April 1, 1934, compared with 92.7 on March 1, 1934, while on April 1 in preceding years it was as follows:—1933, 76.0; 1932, 87.5; 1931, 99.7; 1930, 107.8; 1929, 110.4; 1928, 102.3; 1927, 97.4; 1926, 92.5; 1925, 88.3; 1924, 90.4; 1923, 88.7; 1922, 81.8 and 1921, 85.1. The index on the latest date was higher than in the early spring of the last two years.

There was an increase on April 1 in manufacturing, especially of leather, lumber, textile and iron and steel products. Metallic ore mining, building construction, services and trade also showed improvement; the gains in trade

were unusually large, having only once been exceeded in the years since 1920. On the other hand, logging camps reported very large seasonal reductions, a reaction from an exceptionally active season in bush work, and there were important declines in railway construction and maintenance; the persons released by the employers furnishing data in these two industries numbered approximately 13,600 from logging and 6,400 from track maintenance. Pronounced curtailment of a seasonal nature also occurred in coal-mining, and transportation was slacker.

tant seasonal losses, and activity declined in railway construction due to the completion of snow-clearing operations. On the other hand, manufacturing, building and highway construction and retail trade showed improvement. Employment was in greater volume than at the beginning of April, 1933, although increases had then been indicated; the index, standing at 95.1 on the latest date, compared favourably with that of 78.3 on April 1 last year.

*Quebec.*—Manufacturing, metallic ore mining, services and retail trade afforded more employment in Quebec; within the manufac-

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

### Employment by Economic Areas

Among the provinces, Ontario and British Columbia registered increased employment, while elsewhere losses were indicated, those in Quebec being greatest. The situation in all five economic areas was considerably better than on April 1 of last year.

*Maritime Provinces.*—For the first time since November, 1933, there was on April 1 a decrease in employment in the Maritime Provinces; the 592 co-operating employers reduced their payrolls from 72,795 persons on March 1 to 67,068 at the beginning of April. Transportation, logging and coal-mining showed impor-

turing group, textile and iron and steel factories recorded decidedly greater activity, while there were smaller gains in lumber, pulp and paper and other plants. On the other hand, logging reported very large seasonal contractions; there were pronounced losses in railway construction as track-clearing workers were released, and highway construction and transportation were also slacker. Statements were received from 2,041 firms, with 231,193 employees, as against 242,102 on March 1. The index, at 85.1 on April 1, 1934, was twelve points higher than on the same date of last year, when the curtailment indicated was on a smaller scale. The trend on this date has

almost invariably been retrogressive, but the losses at the beginning of April, 1934, were only once exceeded in the years since 1920, viz., by those in 1921. The exceptionally large decline this year mainly reflects seasonal reaction from the intense activity in bush operations which characterized the past winter, together with the release of men temporarily employed in railway track-clearance following heavy snow-falls; some 8,250 workers were displaced from logging camps, while those laid off from railway construction and maintenance numbered 4,225.

*Ontario.*—Employment continued to advance in Ontario, where 3,748 employers had enlarged their forces by 3,556 workers since the preceding month, bringing them to 374,175 on April 1. A decrease had been registered by the firms making returns for the same date in 1933, and employment then was at a lower level, the index standing at 78.3, compared with 98.7 on April 1, of the present year. The experience of the years since 1920 shows that activity customarily declines in Ontario at the beginning of April, there having been contractions in eleven of the thirteen previous years; the increase on the date under review was greater than in either 1931 or 1927, the other years in which employment gained on April 1.

Manufacturing showed further recovery in Ontario at the first of April, 1934, notably in iron and steel products, while improvement also took place in leather, lumber, non-ferrous metal, rubber and textile factories. In the non-manufacturing groups, mining, steam railway transportation, highway construction, services and retail trade reported increased activity. Logging, however, released large numbers of workers owing to the completion of seasonal operations, and building and railway construction were also slacker.

*Prairie Provinces.*—As is customary in the early spring, employment in the Prairie Provinces declined; the loss, however, was less than the average indicated in the last thirteen years, and also involved a much smaller number of workers than that which occurred on April 1, 1933. The index at 78.3, was then five points lower than on the date under review. Most of the decline at the beginning of April in the present year took place in coal-mining, but highway and railway construction, logging and lumbering also showed curtailment. On the other hand, retail and wholesale trade reported improvement. The working forces of the 1,253 co-operating employers aggregated 104,186 persons, compared with 104,928 on March 1.

*British Columbia.*—An advance was indicated in British Columbia, according to returns tabulated by the Bureau from 843 firms with 71,371 employees, or 762 more than in the preceding month. A rather larger increase had been noted on April 1 of a year ago, but employment was then in smaller volume. There were gains on the date under review in manufacturing, (especially of lumber products), and in building and railway construction and retail trade, while shipping companies released help.

Table I gives index numbers by economic areas.

### Employment by Cities

Employment increased in Quebec City, Toronto, Ottawa, Hamilton, Windsor and the adjacent Border Cities and Vancouver, while losses were noted in Montreal, and there was no general change in Winnipeg. Employment as reported by the leading firms in all these cities was better than on April 1, 1933.

*Montreal.*—Contractions were shown in Montreal, according to 1,168 employers who reported 121,355 persons on their payrolls, as compared with 122,089 on March 1. Activity, however, was greater than on the same date last year, when gains had been indicated. Manufacturing was busier than on March 1, 1934, textiles and iron and steel showing the greatest increase in this comparison. Building construction also reported improvement, but there were decided losses in transportation, and in work on the streets and roads, owing to the release of snow-clearing staffs.

*Quebec.*—Manufacturing, construction, services and trade registered gains in Quebec City, while transportation was slacker; the result was an increase of 276 in the working forces of the 153 firms making returns, who had 12,266 employees on April 1. Little general change had been noted at the beginning of April in 1933, when the index was lower than on the latest date.

*Toronto.*—Toronto employers reported a further and larger increase, mainly due to improvement in manufacturing, services and trade; within the group of factory employment, the textile, leather and iron and steel divisions reported the greatest gains. The working forces of the 1,253 co-operating firms totalled 111,575 persons, compared with 109,531 in the preceding month. Employment was more active than on the same date of last year, when a smaller gain had been indicated; the index then stood at 85.0, or 7.7 points lower than on April 1 of the present year.

*Ottawa.*—There was a small advance in Ottawa, chiefly in trade and building; an aggregate pay-roll of 12,474 workers was reported by the 165 employers whose statistics were tabulated, and who had 12,318 in their last report. The index, at 97.6 was higher by over twelve points than in the early spring of 1933, when a slight reduction had been recorded.

*Hamilton.*—Manufacturing and trade afforded greater employment in Hamilton, while construction and transportation were rather quieter. Returns were compiled from 258 firms employing 26,441 persons, or 594 more than on March 1. The level of employment was considerably higher than on the same date of last year, or in fact than in any other month since the summer of 1933.

*Windsor and the adjacent Border Cities.*—There was another increase in employment in the Border Cities on April 1. Data were received from 153 firms employing 13,762 workers, as against 13,125 in the preceding month. Automobile plants reported an important share of the advance, while other industries showed only slight changes. Activity was decidedly greater than in the spring of 1933, when the expansion indicated was on a larger scale.

*Winnipeg.*—Employment showed practically no general change in Winnipeg, where the pay-rolls of the 419 employers furnishing statistics aggregated 33,810 workers. Construction was slacker, while trade reported moderate improvement, and the fluctuations in the other divisions were slight. On April 1, 1933, little change had also been noted; the index then, however, was lower, standing at 78.0, compared with 79.7 on the date under review.

*Vancouver.*—A further increase in employment occurred in Vancouver, according to 365 firms with 26,568 employees, as compared with 26,358 in the preceding month. The gain occurred principally in trade, while shipping was slightly slacker, and the other groups reported only minor changes. A decline had been reported at the beginning of April of last year, and employment was then generally quieter; the index, at 84.8 on the latest date, was 5.8 points higher than on April 1, 1933.

Index numbers by cities are given in Table II.

### Manufacturing Industries

Further improvement was recorded in manufacturing; the most pronounced gains occurred in iron and steel and textiles, in both of which they were above the average for the last thirteen years. Non-ferrous metal,

leather, lumber, vegetable food, rubber, clay, glass and stone and some other groups also reported increased activity. On the other hand, curtailment was indicated in tobacco and beverage and mineral product plants, that in the former being seasonal in character. Statements were received from 5,100 manufacturers, employing 438,762 operatives, as compared with 430,887 in the preceding month. The increase, (which was considerably larger than that noted on April 1, 1933, and also exceeded the average for the years since 1920), would probably have been greater but for the fact that Easter fell this year on April 1, causing shutdowns over the holidays in many establishments. The index, at 88.1 on April 1, 1934, was higher than on the same date in either 1933 or 1932.

*Animal Products, Edible.*—Slight improvement was noted in dairies and fish canneries, but meat-packing establishments were slacker. The group showed a minor decline on the whole. Statements were tabulated from 228 firms employing 17,539 workers, as against 17,633 at the beginning of March. An increase had been recorded on April 1, 1933, but activity was then at a lower level.

*Leather and Products.*—All branches of the leather group reported increases in personnel, those in boot and shoe factories being most pronounced. The 259 co-operating employers enlarged their pay-rolls from 19,656 persons in the preceding month, to 20,160 at the beginning of April. A rather smaller advance had been indicated on April 1 a year ago, when the index of employment was over thirteen points lower.

*Lumber and Products.*—Seasonal expansion was noted in rough and dressed lumber mills, container, vehicle and other wood-using factories. The general improvement was much greater than that reported on the same date in 1933, when employment was in decidedly smaller volume. Statistics were compiled from 775 manufacturers, with 31,344 employees, as compared with 30,895 at the beginning of March, 1934. The largest gains were in Quebec, Ontario and British Columbia.

*Plant Products, Edible.*—There was an advance in employment in this group in the period under review, that in the sugar and syrup division being most pronounced. Returns were tabulated from 398 firms whose payrolls aggregated 25,251 persons, as compared with 24,991 on March 1. The index was higher by two points than at the beginning of April, 1933, when a slight falling-off had been noted as compared with the preceding month.

*Pulp and Paper Products.*—The movement in pulp and paper products was slightly upward, especially in the production of pulp and paper. According to data received from 561 firms in the industry as a whole, they employed 53,158 workers, as compared with 53,028 in their last report. Employment was in greater volume than on April 1, 1933; a considerable decline had then been indicated.

*Rubber Products.*—Activity in 49 rubber works advanced, 264 persons being added to their staffs, which totalled 11,858. A reduction had been shown on the same date last year, but the index then was many points lower.

*Textile Products.*—There was a further increase in employment in textiles at the beginning of April, chiefly in garment and personal furnishing and knitting factories, while woollen mills were slacker. Much less extensive improvement had been noted on April 1, 1933, when employment was in smaller volume; the increase on the date under review considerably exceeded the average noted on April 1 in the thirteen years for which data are available. Statements were compiled from 881 manufacturers with 92,562 employees, or 2,042 more than on March 1, 1934. There were gains in all five economic areas, those in Quebec being largest.

*Tobacco, Distilled and Malt Liquors.*—Seasonal reductions in employment were recorded in this group, 559 persons being released from the working forces of the 157 co-operating establishments, which employed 15,100 workers on the date under review. Most of the decline occurred in Quebec and Ontario, where tobacco factories were slacker. The index was slightly higher than in the spring of last year, when curtailment had also been indicated.

*Chemicals and Allied Products.*—One hundred and seventy plants turning out chemical and allied products reported 8,998 employees, as compared with 8,845 in their last return. All provinces showed slight gains. The general advance involved much the same number of workers as that indicated on the corresponding date in 1933, but the index was then decidedly lower.

*Clay, Glass and Stone Products.*—There was an increase in the personnel of building material works, 182 of which employed 6,292 persons as against 6,055 in their last report. Little general change had been indicated on April 1, 1933, when the index was lower.

*Electric Current.*—A very slight improvement was shown in this group, in which 95 plants reported 13,171 employees, or 28 more

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

(AVERAGE CALENDAR YEAR 1926=100)

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia

Feb. 1.....	91.4	101.3	88.5	95.3	84.7	84.1
Mar. 1.....	92.7	103.2	89.1	97.8	83.8	85.6
April 1.....	91.3	95.1	85.1	98.7	83.3	86.6
Relative Weight of Employment by Economic Areas as at April 1, 1934.....	100.0	7.9	27.3	44.1	12.3	8.4

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada by the firms making returns for the date under review.

than at the beginning of March. There were gains in the Maritime Provinces, Quebec and British Columbia, but losses in Ontario. The index of employment was slightly lower than on April 1, 1933; a small increase had then also been reported.

*Electrical Apparatus.*—Activity in electrical appliance factories increased to a small extent, according to the 106 co-operating firms, who reported 10,667 persons on their payrolls, as against 10,628 in their last report. A minor gain had also been noted on April 1, 1933, when the index was many points lower.

*Iron and Steel Products.*—Statistics were received from 791 manufacturers in this group, whose staffs were enlarged by 3,768 workers to 96,162 at the beginning of April. There were considerable gains in the automobile and other vehicle, crude, rolled and forged, machinery, foundry and machine shop, sheet metal and other groups. Improvement was shown in all provinces, that in Ontario being most noteworthy. Much smaller gains had been recorded in the same period last year, and the index number was then many points lower than on April 1, 1934, when it reached its highest point since the late winter of 1932.

*Non-ferrous Metal Products.*—Returns tabulated from 142 manufacturers in this group

showed that they employed 16,226 persons, as against 15,641 on March 1. Most of the increase took place in the smelting and refining division, but other groups within the industry were also busier. Improvement was noted in Ontario and British Columbia. The level of employment was much higher than at the beginning of April in 1933; curtailment had then been indicated.

*Mineral Products.*—A decline in the number was reported in these industries at the beginning of April, according to data received from the 117 co-operating establishments, in which 12,745 persons were employed. The volume of employment in this group was greater than in the same period of last year, when a reduction had also been reported.

### Logging

Continued and larger seasonal losses were shown in logging camps, 295 of which reduced their payrolls from 42,681 men on March 1 to 29,131 on the date under review; while this decline has been exceeded in the spring of several other years of the record, it was nevertheless very large, representing reaction from an exceptionally active logging season. The most extensive decreases were in Quebec and Ontario, although all provinces except British

Relative Weight of Employment by Cities as at April 1, 1934.....	14.3	1.4	13.2	1.5	3.1	1.6	4.0	.1

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated city to the total number of all employees reported in Canada by the firms making returns for the date under review.

Columbia indicated reductions. Much smaller contractions had been reported on April 1, 1933, and the index number then, at 35.6, compared unfavourably with that of 104.9 on the date under review, when it was, in fact, higher than on April 1 in any other year since 1920.

### Mining

*Coal*.—As is customary at the beginning of April, there was, on the whole, a falling-off in employment in coal-mines during the period being reviewed; this occurred in both Eastern and Western coal fields. Data were received from 100 operators, whose staffs included 22,796 employees, as against 25,536 in their last report. The index was slightly higher than in the spring of last year, when smaller declines had been reported.

*Metallic Ores*.—Reports were received from 85 firms in this group, employing 19,571 workers, or 294 more than at the beginning of March. A falling-off had been indicated on the same date in 1933, when the index stood at 131.3, compared with 165.4 at the beginning of April of the present year.

*Non-metallic Minerals, other than Coal*.—A slight increase occurred in this group; 75 firms

employed 4,881 persons, as compared with 4,813 in the preceding month. A small reduction had been recorded by the 70 employers furnishing statistics on April 1 of last year, and activity then was much less.

### Communications

According to information received from 82 communication companies and branches, their staffs were practically unchanged in number from the preceding month, there being an increase of only 27 persons in the reported pay-rolls, which aggregated 20,206. A loss in employment had been recorded on April 1, 1933, but employment was then brisker than on the date under review.

### Transportation

Declines were indicated in local, steam railway and water transportation, the largest losses being those of a seasonal character in shipping in the Maritime Provinces. Statistics were compiled from 378 employers of 89,454 workers, as compared with 91,903 on March 1. Of the former number, 23,461 persons belonged in the local transportation, 56,171 in the steam railway and 9,822 in the water transportation division. The present late season has retarded spring-time activity in this

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES

(AVERAGE CALENDAR YEAR 1926=100)

—	All industries	Manufacturing	Logging	Mining	Communications	Transportation	Construction	Services	Trade
April 1, 1921.....	85.1	87.3	80.3	92.1	87.5	88.2	53.2	81.7	91.8

Mar. 1.....	92.7	86.5	153.3	108.9	76.7	78.0	100.8	109.3	112.5
April 1.....	91.3	88.1	104.9	103.3	76.8	75.9	95.8	111.8	116.1
Relative weight of Employment by Industries as at April 1, 1934.....	100.0	51.7	3.4	5.6	2.4	10.6	13.1	2.7	10.5

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada by the firms making returns for the date under review.

group, which ordinarily advances on April 1. Employment in transportation was in slightly larger volume than on the corresponding date last year, when a small increase had been recorded.

### Construction and Maintenance

**Building.**—Statements were compiled from 614 building contractors, with 15,418 persons in their employ, or 734 more than in their last report. Little general change had been indicated on April 1, 1933 and the index then was several points lower.

**Highway.**—Curtailment in staffs was noted on highway construction and maintenance; 317 contractors employed 73,456 men, as compared with 73,806 in the preceding month. The Maritime Provinces and Ontario reported increased activity, but there were losses in the remaining provinces, mainly due to the completion of snow-clearing operations. Large reductions had been shown on April 1 of last year, when the number employed in this work

was less than in the period under review. Unemployment relief projects employed a considerable proportion of those reported in this industry at the latest date.

**Railway.**—There was a pronounced curtailment in employment in the construction departments of the railways in the Maritime and Prairie Provinces, Quebec and Ontario, while increases were indicated in British Columbia. Most of the decline was due to the completion of track-clearing operations necessitated by last winter's severe storms. The working forces of the 32 co-operating contractors and divisional superintendents aggregated 22,423 men, whereas in the preceding month they had 28,809 employees. The index number was rather higher than in the spring of 1933, when a gain had been recorded.

### Services

This group showed a further improvement, according to 392 firms with 23,007 employees, compared with 22,441 in the preceding month.

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT IN MANUFACTURING (AVERAGE 1926=100)

Industries	Relative Weight	April 1, 1934	Mar. 1, 1934	April 1, 1933	April 1, 1932	April 1, 1931	April 1, 1930	April 1, 1929

<sup>1</sup>The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

Laundries and dry-cleaning establishments and hotels and restaurants enlarged their personnel. A decline had been reported at the beginning of April, 1933; employment was then in smaller volume than on the date under review.

### Trade

There was a substantial increase in the aggregate forces of the 1,007 co-operating wholesale and retail establishments, which employed 88,888 workers on April 1, as compared with 86,037 at the beginning of March. This increase was only once exceeded in the early spring of the years since 1920, the gain on April 1, 1929, having been greater. The

advance indicated on the same date a year ago was decidedly smaller, and the index of employment then stood at 107·6, compared with 116·1 at the beginning of April, 1934.

### Tables

Index numbers of employment by economic areas, leading cities and industries, respectively, are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area, or industry, is of the total number of employees reported in Canada by the firms making returns on the date under review.

## (2) Unemployment in Trade Unions at the Close of March, 1934

The term unemployment as used in the following article refers to involuntary idleness due to economic causes. Persons who are employed at work outside their own trades or who are idle due to illness are not considered as unemployed. Unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Industrial activity among local trade union members during March again tended upward, though the change from February was slight, as indicated by the reports tabulated from 1,666 labour organizations embracing a membership of 145,476 persons. Of these, 28,436, or 19·5 per cent, were unemployed on the last day of the month, contrasted with a percentage of 20·0 in February. Conditions, however, were considerably brighter than in March a year ago, when 25·1 per cent of the members reported were without work. The most favourable change from February was reflected by Ontario unions, particularly in the manufacturing industries, though employment generally throughout the province was on a higher level. Improvement on a somewhat smaller scale was recorded in British Columbia, navigation absorbing a greater number of workers than in February. Nova Scotia unions also showed an upward employment tendency during March, which was however more apparent than real, being due to the exclusion of a union disbanded during the month which had previously been included in our tabulations. On the other hand, Alberta unions showed a drop in available work of over 3 per cent from February, concentrated largely in the coal mining areas, where the usual layoff at this period of the year occurred.

Employment curtailment of less than one per cent, however, was indicated by New Brunswick, Quebec, Manitoba and Saskatchewan unions. Every province, with the exception of Manitoba, shared in the employment advance noted over March, 1933, Nova Scotia, New Brunswick, Quebec, Ontario and Alberta unions all showing noteworthy expansions and British Columbia and Saskatchewan unions gains of more moderate proportions. The declines recorded from Manitoba were slight.

Monthly returns on unemployment in the largest city in each province, except Prince Edward Island, are tabulated separately. Of these, Toronto unions reported a considerably better situation during March than in the previous month and improvement, on a much smaller scale, occurred among Halifax and Regina unions. In Montreal and Winnipeg the tendency was toward a greater employment volume, though the changes were but nominal. Saint John unions, however, recorded marked losses in activity from February, and employment among Edmonton and Vancouver unions subsided slightly. Toronto members were also afforded a much better volume of work than in March a year ago, Montreal, Halifax, Vancouver and Regina unions in addition showing noteworthy employment gains. In Edmonton slight contractions of activity were recorded from March last year, while the recessions indicated in Saint John and Winnipeg were fractional only.

From the chart which appears with this article it will be noticed that the curve during March continued in the downward movement of the previous month, though the projection was slight and indicative of a more favourable employment tendency. The curve at the close of the month, however, remained on a level considerably below that of March last year, showing substantial employment recovery during the period under review.

A greater volume of work was afforded in the manufacturing industries during March than in the previous month, the 449 labour organizations from which returns were received, with a total of 42,282 members, showing 16.6 per cent of idleness, compared with an unemployment percentage of 19.7 at the close of February. The majority of trades participated in this more favourable employment movement, fur workers, cigar makers, hat, cap and glass workers showing marked increases in activity, and metal polishers, jewellery, textile and garment workers, bakers and confectioners, and brewery workers improvement also of noteworthy degree. Among

paper makers, brewery and jewellery workers, and bakers and confectioners. In the printing trades the situation was but moderately improved. General labourers, as in the previous comparison, registered employment recessions from March a year ago, and activity for hat, cap, and fur workers showed some curtailment.

Quieter conditions than in the preceding month prevailed for coal miners during March though some employment expansion was evident from March of last year. Returns for the month under review were tabulated from 47 unions of miners with an aggregate of 12,570 members, 1,808 or 14.4 per cent of

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADE UNIONS

pulp and paper makers, printing tradesmen and iron and steel workers gains of lesser proportions occurred. There was, however, a large falling off in employment among general labourers from February, particularly in Ontario, and declines in activity, on a smaller scale, were reflected by wood and leather workers. Much better conditions prevailed in the manufacturing industries, as a whole, as compared with March, 1933, when unemployment stood at 28.2. In this comparison, textile, garment, wood, leather, iron and steel, and glass workers, metal polishers and cigar makers all showed substantial recovery during the month reviewed, while employment advances, of somewhat lesser degree, were noted among

whom were unemployed at the end of the month, contrasted with percentages of 8.2 in February and 17.6 at the close of March, 1933. The drop in activity from February was largely seasonal in character, Nova Scotia, Alberta and British Columbia miners all contributing a share to the total group loss. Compared with the situation in March a year ago Alberta and British Columbia miners were afforded a considerably better volume of work during the month surveyed, while Nova Scotia unions reported moderate contractions in activity.

The building and construction trades during March showed very slight variation in the unemployment level from February, the 199

unions making returns with a membership covering 15,555 persons reporting 69.6 per cent of idleness in contrast with 69.2 per cent in February. Painters, decorators and paperhangers reported the best situation of any tradesmen as compared with February, the improvement being pronounced, and increases in employment of more moderate degree occurred among bricklayers, masons and plasterers, granite and stonecutters, plumbers and steamfitters, hod carriers and building labourers, bridge and structural iron workers and steam shovelmen. On the other hand, a sharp drop in work afforded was reflected by elec-

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

trical workers and fractional curtailment was evident among carpenters and joiners and tile layers, lathers and roofers. The trend of activity in the building trades was upward during March from the corresponding month of last year, when 71.0 per cent of the members reported were out of work. Painters, decorators and paperhangers, as in the previous comparison, were considerably better engaged, as were granite and stone cutters, and bridge and structural iron workers. Noteworthy gains were shown also by plumbers and steamfitters, and hod carriers and building labourers. Among carpenters and joiners moderate increases in available work were reported, steam shovelmen showing an upward employment tendency, although the change was less than one per cent. Important losses in activity, however, were registered by electrical workers, and tile layers, lathers and roofers from March, 1933, and among bricklayers, masons and plasterers slight curtailment was indicated.

Employment in the transportation industries during March was maintained in practically the same volume as in the previous month, the 735 unions from which reports were tabulated with an aggregate of 53,851 persons, showing that 6,797, or 12.6 per cent, were without work on the last day of the month, in contrast with a percentage of 12.5 in February. Steam railway employees, whose returns absorbed about 77 per cent of the entire group membership reporting, showed a slight falling off in work afforded from February, and among teamsters and chauffeurs minor contractions occurred. Employment expansion from February, on a noteworthy scale, however, was reflected by navigation workers, and among street and electric railway employees there was nominal improvement. A slightly higher level of activity than in March, 1933, was indicated in the transportation industries, when 14.1 per cent of idleness was reported, steam railway employees, navigation workers, and street and electric railway employees all sharing in this more favourable movement. Teamsters and chauffeurs, however, were not so actively engaged as in March last year, although the change was rather small.

The situation for retail clerks was less favourable during March than in the preceding month according to the returns tabulated from 4 associations, with 1,713 members. Of these, 117 were without work on the last day of the month, a percentage of 6.8, compared with 5.1 per cent in February. Employment was not so brisk as in March of last year, when only 0.8 per cent of inactivity was recorded. Civic employees were slightly busier during March than in February, while the im-

TABLE II.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

provement over March last year was more substantial. This was manifest by reports received from 71 associations of these workers, involving a membership of 6,893 persons, 188, or 2·7 per cent, of whom were idle at the end of the month, contrasted with percentages of 4·2 in February and 7·4 in March a year ago.

The miscellaneous group of trades reported heightened activity during March over both the preceding month and March, 1933, the 112 unions making returns, with 3,609 members, showing 16·9 per cent of unemployment, compared with 18·5 per cent in February and 20·9 per cent in March of last year. Hotel and restaurant employees were afforded a considerably better volume of work than in February and among unclassified workers moderate gains in activity were reported. The situation for barbers and stationary engineers and firemen improved slightly from the previous month. Among theatre and stage employees the trend was toward lessened activity, although the change was practically negligible. Substantial employment recovery from March a year ago was shown by unclassified workers, and hotel and restaurant employees while among theatre and stage employees, and stationary engineers

and firemen conditions were also somewhat better. Barbers, however, indicated but a fractional increase in activity.

From unions of fishermen 2 reports were received during March covering a membership of 745 persons, 1·3 per cent of whom were without work on the last day of the month, contrasted with 2·1 per cent in February and with 6·8 per cent in March last year.

Lumber workers and loggers showed a better situation during March than in either the previous month or March a year ago, as indicated by the reports tabulated from 5 associations embracing a membership of 1,292 persons. Of these, 117 were idle at the end of the month, a percentage of 9·1, while in February unemployment stood at 19·8 per cent and in March, 1933, at 35·8 per cent.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1933, inclusive, and also the percentage of unemployment by provinces for March of each year from 1919 to 1931, inclusive, and for each month from January, 1932, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Office Reports for March, 1934

The volume of business transacted by the offices of the Employment Service of Canada during the month of March, 1934, as represented by the average daily placements, remained practically unchanged from February, but showed a gain of nearly 50 per cent in comparison with the corresponding period a year ago. Total placements, however, were considerably higher in March than in the preceding month, due to the fact that there were more working days in the month under review. All industrial divisions showed gains over February, except logging and transportation, the highest being in services, construction and maintenance, farming, and trade. In comparison with March a year ago, farming and trade, alone, recorded declines, while construction and maintenance registered an exceptionally heavy increase, as a result of relief work sponsored by the Dominion and provincial governments. Logging and manufacturing also showed noteworthy gains, but those in other groups were less pronounced.

The accompanying chart shows the trend of employment since January, 1932, as represented by the ratios of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. As may be seen from the graph, the curves, both of vacancies and place-

ments in relation to applications, declined during the first half of the month, but showed a marked upward trend during the latter half of the period under review, and at the end of March were about eleven points higher than the levels attained at the close of the corresponding period a year ago. The ratio of vacancies to each 100 applications was 52·8 during the first half and 60·3 during the second half of March, 1934, in contrast with the ratios 48·4 and 48·8 during the corresponding periods of 1933. The ratios of placements to each 100 applications during the periods under review were 50·4 and 57·7 as compared with 46·2 and 46·6 during the corresponding month of 1933.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during March, 1934, was 1,255, as compared with a daily average of 838 during the corresponding month a year ago and with 1,249 recorded daily in February, 1934.

The average number of applications for employment received daily by the offices of the Service during the month under review was 2,225, in comparison with 1,724 in March, 1933. Applications for work during the preceding month of 1934 averaged 2,207 daily.

The average number of placements made daily by the offices of the Service during March, 1934, was 1,199, of which 590 were in regular employment and 609 in work of a

week's duration or less, as compared with a total daily average of 1,201 during the preceding month. Placements in March a year ago averaged 801 daily, consisting of 379 in regular and 422 in casual employment.

During the month of March, 1934, the offices of the Service referred 32,945 persons to vacancies and effected a total of 31,162 placements. Of these, the placements in regular employment were 15,339, of which 11,636 were of men and 3,703 of women, while placements in casual work totalled 15,823. The number of vacancies reported by employers was 25,093 for men and 7,514 for women, a total of 32,607, while applications for work numbered 57,828, of which 45,825 were from men and 12,003 from women. Reports for February, 1934, showed 29,972 positions available, 52,945 applications made, and 28,818 placements effected, while in March, 1933, there were recorded 22,613 vacancies, 46,534 applications for work, and 21,604 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1924, to date:—

Year	Placements		
	Regular	Casual	Totals
1924.....	247,425	118,707	366,132
1925.....	306,804	106,021	412,825
1926.....	300,226	109,929	410,155
1927.....	302,723	112,046	414,769
1928.....	334,604	135,724	470,328
1929.....	260,747	137,620	398,367
1930.....	187,872	180,807	368,679
1931.....	175,632	295,876	471,508
1932.....	153,771	198,443	352,214
1933.....	170,576	181,521	352,097
1934 (3 months).....	45,794	50,401	96,195

#### NOVA SCOTIA

During the month of March, orders received at Employment Offices in Nova Scotia called for over 66 per cent more workers than in the preceding month and over 124 per cent above the corresponding month last year. There was a gain also in placements of over 64 per cent when compared with February and of over 126 per cent in comparison with March, 1933. The increase in placements over March of last year was almost entirely due to relief employment on road construction, although minor gains were also reported in logging and trade: the changes in other groups were small. Placements by industrial divisions included: logging, 32; construction and maintenance, 1,160; trade, 25; and services, 298, of which 254 were of household workers. There were 86 men and 68 women placed in regular employment during the month.

#### NEW BRUNSWICK

Orders listed at Employment Offices in New Brunswick called for over 4 per cent more workers than in the preceding month and 150 per cent above the corresponding month of last year. Placements also were over 4 per cent higher than in February and nearly 154 per cent above March, 1933. As in Nova Scotia, relief employment on road construction was responsible for the gain in placements over March of last year. Improvement was also shown in services, but there were minor changes only in all other groups. Placements on construction and maintenance totalled 840 and in services 464; of the latter 360 were of household workers. During the month 105 men and 90 women were placed in regular employment.

#### QUEBEC

Opportunities for employment, as indicated by orders received at Employment Offices in the Province of Quebec during March, were nearly 24 per cent better than in the preceding month and nearly 48 per cent more favourable than during the corresponding month of last year. There was a gain of nearly 13 per cent in placements when compared with February and of 43 per cent in comparison with March, 1933. Increased placements in the women's divisions were mainly responsible for the improvement over March of last year, services showing the largest gain. All groups, however, except manufacturing, communication and farming, where small declines were indicated, reported more placements than during the corresponding month of last year. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 109; logging, 147; construction and maintenance, 269; trade, 154; and services, 1,846, of which 1,457 were of household workers. Regular employment was found for 735 men and 1,235 women.

#### ONTARIO

There was an increase of nearly 10 per cent in the number of positions offered through Employment Offices in Ontario during March, when compared with the preceding month and of over 66 per cent in comparison with the corresponding month of last year. Placements were over 11 per cent higher than in February and over 67 per cent in excess of March, 1933. Placements on relief work were mainly responsible for the gain over March of last year, although manufacturing, logging and farming also showed improvement. The only declines of importance were in services and trade. Placements by industrial divisions in-

cluded: manufacturing, 573; logging, 483; farming, 612; transportation, 130; construction and maintenance, 9,770; trade, 305; and services, 2,861, of which 1,665 were of household workers. There were 5,181 men and 1,148 women placed in regular employment during the month.

MANITOBA

Employment opportunities, as indicated by orders received at Employment Offices in Manitoba during March, were nearly 7 per cent less favourable than in the preceding month, but 11 per cent better than during the corresponding month of last year. There

SASKATCHEWAN

During the month of March, positions offered through Employment Offices in Saskatchewan were nearly 11 per cent higher than in the preceding month, but nearly 7 per cent below the corresponding month of last year. There was a gain of nearly 11 per cent in placements when compared with February, but a loss of nearly 4 per cent in comparison with March, 1933. The small loss from March of last year was due to fewer placements in farming and construction and maintenance, there being small gains reported in all other groups. Placements by industrial divisions included: manufacturing, 61; farming, 615; construction and maintenance, 416; trade, 60;

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o-o

was a decline of nearly 9 per cent in placements when compared with February, but a gain of nearly 10 per cent in comparison with March, 1933. The increase in placements over March of last year was due to gains in construction and maintenance and logging, offset, in part, by declines in all other groups. The reductions in services and farming were the most noteworthy. Placements by industrial divisions included: logging, 95; farming, 786; construction, 1,277; and services, 494, of which 396 were of household workers. During the month 1,912 men and 295 women were placed in regular employment.

and services, 631, of which 510 were of household workers. Placements in regular employment numbered 683 of men and 400 of women.

ALBERTA

There was a nominal decline only in the number of positions offered through Employment Offices in Alberta during March, when compared with the preceding month, but a gain of nearly 20 per cent in comparison with the corresponding month of last year. Placements were less than 1 per cent fewer than in February, but nearly 21 per cent above March, 1933. Increased placements on high-

\*205 Placements effected by offices since closed.

\*\*Totals include placements on highway construction through sub-office during quarter ending Mar. 31, 1934.

way construction accounted for the improvement indicated over March of last year, as, with the exception of a small gain in mining, fewer placements were made in all other industrial groups. Placements by industrial divisions included: logging, 61; farming, 591; construction and maintenance, 1,093; and services, 375, of which 311 were of household workers. There were 1,142 men and 258 women placed in regular employment during the month.

#### BRITISH COLUMBIA

The demand for workers, as indicated by orders received at Employment Offices in British Columbia during March, was nearly 2 per cent less than in the preceding month, but over 17 per cent greater than during the corresponding month of last year. There was a nominal decline only in placements when compared with February, but a gain of nearly 18 per cent in comparison with March, 1933. Relief placements on road construction were responsible for the increase over March of last year, although gains were reported in all other groups, except services, trade and mining: the only decline of importance was in services. Industrial divisions in which most of the placements were effected during the month were: farming, 100; construction and maintenance, 3,406; and services, 621, of which 440 were of household workers. There were 1,792 men and 209 women placed in regular employment during the month.

#### Movement of Labour

During the month of March, 1934, the offices of the Employment Service of Canada made 15,339 placements in regular employment, 5,234 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 310 were granted the Employment Service reduced transportation rate, 229 going to centres within the same province as the dispatching office and 81 to other provinces. The reduced transportation rate which is 2.7 cents per mile with a minimum fare of \$4 is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

All transfers at the reduced rate in Quebec during March were of bushmen and totalled 127. Of these, 99 were destined to the Quebec zone and dispatched by that zone office. Travelling outside the province 28 bushmen went from Hull to employment in the Sudbury zone. Business transacted by Ontario offices during March involved the issue of 75 reduced rate certificates, 72 provincial and 3 interprovincial. Of the latter, 2 were granted to millwrights proceeding from Ottawa to Rouyn and

1 to a farm hand conveyed from Timmins to the Winnipeg zone. Provincially, to employment within their respective zones Port Arthur transferred 25 bush workers, 6 highway construction cookees, 11 mine workers, and 1 domestic, Sudbury 11 bushmen and 8 mine workers, and Fort William 1 bushman. The Port Arthur zone also received 1 building construction foreman from Pembroke, and the Sudbury zone 1 miner from Stratford. The 7 remaining transfers were of moulders who journeyed from Hamilton to Windsor. The labour movement in Manitoba during March originated at Winnipeg, and comprised the transfer of 52 workers, 3 within the province and 49 to other provinces. The former were for the Winnipeg zone and included 1 miner, 1 farm hand and 1 hotel waitress. The Port Arthur zone was the destination of 43 workers travelling outside the province, 41 of these being bushmen, 1 a hotel general, and 1 a farm hand. In addition, 6 farm hands were conveyed to Saskatchewan rural centres. Offices in Saskatchewan granted certificates during March to 8 workers, these bound for provincial employment. The Regina office was instrumental in the dispatch of 1 teacher each to the Moose Jaw and Swift Current zones and of 3 teachers and 1 farm hand within the Regina zone. For employment within their respective zones Prince Albert transferred 1 logging camp cook and Moose Jaw 1 teacher. Workers taking advantage of the reduced transportation rate in Alberta during March were 26 in number, 25 of whom went to employment within the province. Of these, the Edmonton office assisted in the transfer of 10 farm hands, 6 bush workers, 2 construction labourers, 1 auto mechanic, 2 cooks, 1 lumberman, and 1 hotel housekeeper to centres within its own zone. In addition, the Drumheller and Edmonton zones each received 1 farm hand from Calgary. The one transfer outside the province was of a farm hand bound for the Saskatoon zone and travelling from Edmonton. Securing certificates at British Columbia offices during March 22 workers journeyed to provincial centres. From Vancouver this labour movement included 1 farm hand, 1 carpenter, 1 sawmill engineer and 1 diamond driller going to Kamloops, 1 nurse, 1 farm hand and 1 farm housekeeper to Penticton, and 8 mine workers, 3 farm hands, 1 baker, 1 compressor man and 1 housekeeper within the Vancouver zone. From Prince Rupert 1 miner was sent to employment within the same zone.

Of the 310 persons who travelled at the Employment Service reduced transportation rate during March, 158 were conveyed by the Canadian National Railways, 137 by the Canadian Pacific Railway, 12 by the Pacific Great Eastern Railway, 2 by the Northern Alberta Railway, and 1 by the Temiskaming and Northern Ontario Railway.

#### (4) Building Permits issued in Canada during March, 1934

According to returns tabulated by the Dominion Bureau of Statistics, the value of the building permits issued by 61 cities during March was \$1,089,481; this was an increase of \$208,329 or 23.6 per cent over the February total of \$881,152, and was also an increase of \$135,515 or 14.2 per cent, as compared with the aggregate of \$953,966 reported for the same month in 1933. The gain in March, 1934, over March of last year, though comparatively small, is interesting because, with the exception of December, 1933, this is the first month in several years in which such a comparison has been favourable.

Some 50 cities furnished detailed statistics, showing that they had granted 185 permits for dwellings valued at more than \$300,000 and some 850 permits for other buildings estimated to cost approximately \$700,000. In addition, one centre reported that it had authorized an engineering project valued at approximately \$5,100. In February, authority was given for the erection of some 100 dwellings and more than 580 other buildings, estimated to involve expenditures of approximately \$229,000 and \$590,000, respectively, while two engineering projects, valued at \$37,000, were also reported.

New Brunswick, Quebec, Manitoba, Alberta and British Columbia reported increases in the value of the building authorized during March, 1934, as compared with the preceding month. The greatest gains were those of \$103,651, or 52.2 per cent in Quebec and \$60,349 or 343.5 per cent in Alberta. The largest absolute decline in the remaining provinces was that of \$15,415 in Ontario, although the proportionate decrease of \$5,135 or 15.9 per cent in Nova Scotia was greater.

As compared with March, 1933, Quebec, Ontario, Saskatchewan, Alberta and British Columbia recorded increases, those of \$81,233 or 36.8 per cent in Quebec and \$51,128 or 12.8 per cent in Ontario being most marked. Of the reductions recorded, the largest was that of \$47,690 or 63.8 per cent in Nova Scotia.

Of the larger cities, Montreal, Toronto and Vancouver showed increases as compared with February, 1934, and March, 1933, while Winnipeg reported a gain in the first, but a decline in the second comparison. Of the smaller centres, Sydney, Saint John, Sherbrooke, Westmount, Belleville, Stratford, St. Thomas, Sarnia, East Windsor, Woodstock, Brandon, St. Boniface, Moose Jaw, Regina, Calgary, Edmonton, Medicine Hat, Nanaimo and New Westminster reported higher totals than in either February, 1934, or March, 1933.

*Cumulative Record for First Quarter, 1934.*—The following table gives the value of the building authorized by 61 cities during March and in the first quarter of each year since 1920, as well as index numbers for the latter, based upon the total for 1926 as 100. The average index number of wholesale prices of building materials in the first quarter of the same years are also given (1926=100).

Year	Value of permits issued in March	Value of permits issued in first quarter	Indexes of value of permits issued in first quarter (1926=100)	Average indexes of wholesale prices of building materials in first quarter (Average 1926=100)
	\$	\$		
1934.....	1,089,481	2,663,595	11.8	83.5
1933.....	953,966	3,065,821	13.6	75.2
1932.....	3,396,729	9,453,012	42.0	79.3
1931.....	9,948,979	24,746,094	110.0	83.7
1930.....	13,356,787	29,493,262	131.1	96.7
1929.....	24,068,018	42,950,228	190.9	99.2
1928.....	15,128,413	33,163,338	147.4	95.5
1927.....	11,713,640	25,028,353	111.3	96.4
1926.....	10,634,491	22,493,574	100.0	102.0
1925.....	8,631,627	19,981,015	88.2	102.9
1924.....	9,493,620	18,047,999	80.2	112.2
1923.....	9,658,950	19,478,119	86.6	110.6
1922.....	10,615,531	18,680,173	83.0	108.0
1921.....	7,290,589	13,569,512	60.3	139.1
1920.....	8,736,675	18,909,986	84.1	139.4

The total value of the building authorized in the first quarter of 1934 was less than in the same period in other years since 1920; the wholesale prices of building materials, though higher than in 1933 and 1932, and practically the same as in 1931, were considerably lower than in the first three months in any other year since 1920.

#### REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD JANUARY TO MARCH, 1934

**B**USINESS transacted by the offices of the Employment Service of Canada during the quarter January to March, 1934, showed a decided gain over that effected during the corresponding quarter of 1933, as there was an increase of 34 per cent both in vacancies offered and in placements effected. All groups, except farming and trade, showed gains in both instances, the highest gain being in construc-

tion and maintenance, where relief work on highways, streets, sewers, and other projects sponsored by the Dominion and provincial governments had been provided. Noteworthy increases were also recorded in logging and manufacturing, those in the remaining groups being considerably smaller. The decrease in farming, though much larger than that in trade, was more than offset by the above

gains reported in logging. Provincially, all, except Nova Scotia and Saskatchewan, showed increased vacancies and placements, the highest gain being in Ontario, where many placements on relief work had been effected in the construction and maintenance group.

From the chart on page 460 which accompanies the article on the work of the employment offices for the month of March, it will be seen that the curve of vacancies and of

placements in relation to applications showed a marked decline during the first half of January, followed by a sharp rise during the latter half of that month. In February, little change was recorded during the first half, but a decline during the latter half. This downward course continued into March, but in a lesser degree, while in the latter part of that month a sharp upward trend was again registered. Throughout the entire quarter the levels attained were

higher than those shown during the corresponding period of 1933 and at the end of March were eleven points higher than those recorded a year ago. During the period January to March, 1934, there was a ratio of 56.0 vacancies and 53.7 placements for each 100 applications for employment, as compared with 50.2 vacancies and 48.0 placements during the corresponding period a year ago.

The average number of positions offered, daily, during the quarter under review was 1,322, of applicants registered 2,359, and of placements effected 1,266, in contrast with a daily average of 986 vacancies, 1,965 applications and 943 placements in regular and casual employment during the first quarter of 1933.

During the three months January to March, 1934, the offices of the Employment Service reported that they had made 101,303 references of

persons to positions, and had effected a total of 96,195 placements, of which 45,794 were in regular employment and 50,401 in casual work. Of the placements in regular employment 35,080 were of men and 10,714 of women, while casual work was found for 43,759 men and 6,642 women. A comparison with the same period of 1933 shows that 71,641 placements were then made, of which 31,460 were in regular employment and 40,181 in casual work. Applications for employment during the period under review were received from 143,093 men

and 36,122 women, a total of 179,215, in contrast with a registration of 149,326 during the same period in 1933. Employers notified the Service during the first quarter of 1934 of 100,435 positions, of which 79,575 were for men and 20,860 for women, as compared with 74,929 opportunities for work offered during the corresponding quarter in 1933.

In another section of this issue will be found a report in detail of the transactions of the Employment Offices for the month of March, 1934.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

### Great Britain

THE British *Ministry of Labour Gazette*, April, 1934, summarized the employment situation as follows:—

Employment during March showed a further improvement, which extended to nearly all industries. The industries in which the improvement was most marked were the building, public works contracting, and allied trades, the clothing trades, iron and steel, tinplate and metal goods manufacture, engineering and ironfounding, vehicle building, ship-building and ship-repairing, most of the textile industries, printing and bookbinding, furniture manufacture, the distributive trades, the hotel, boarding-house and transport services, and laundries, dyeing and dry cleaning. There was a slight decline in employment in the wool textile and hosiery industries, textile bleaching and dyeing, leather tanning, and wallpaper manufacture.

The improvement extended to all the Administrative Divisions. In the London and South-Eastern Divisions employment was fair. In the South-West and Midlands it was moderate. In the North of England, in Scotland, and in Northern Ireland it was bad, while in Wales it was very bad.

Among the workpeople, numbering approximately 12,883,000, insured against unemployment in Great Britain and Northern Ireland and working in practically every industry except agriculture and private domestic service, the percentage unemployed at March 19, 1934 (including those temporarily stopped as well as those wholly unemployed), was 17·3 as compared with 18·2 at February 19, 1934, and with 21·9 at March 20, 1933. The percentage wholly unemployed at March 19, 1934, was 14·8, as compared with 15·5 at February 19, 1934; while the percentage temporarily stopped was 2·5, as compared with 2·7. For males alone, the percentage at March 19, 1934, was

20·1 and for females, 9·8; at February 19, 1934, the corresponding percentages were 21·0 and 10·7.

At March 19, 1934, the number of persons on the Registers of Employment Exchanges in Great Britain was 1,796,787 wholly unemployed, 312,622 temporarily stopped, and 92,168 normally in casual employment, making a total of 2,201,577. This was 116,332 less than a month before, and 574,607 less than a year before. The total included 1,808,290 men, 49,212 boys, 304,523 women and 39,552 girls.

In Great Britain and Northern Ireland, the total number of persons on the Registers of Employment Exchanges at March 19, 1934, was 2,263,807.

### United States

*Manufacturing Industries.*—Factory employment and pay-rolls continued to expand in March, employment increasing 4·0 per cent over the month interval and pay-rolls increasing 6·9 per cent (The Bureau of Labor Statistics of the United States Department of Labor has recently revised its index numbers of factory employment and pay-rolls from January, 1919, to March, 1934, and it was announced that "hereafter the Bureau's index will be based on the three-year average 1923-24-25 as 100." The statistics for March are on the new basis).

The Bureau's index of factory employment in March 1934 (80·8) reached the highest point recorded since December, 1930, and the index of factory pay-rolls (64·8) is the highest recorded since August, 1931. Increases in employment between February and March have been shown in 12 of the preceding 15 years for which data are available. An increase in employment therefore at this time is not unexpected but in no previous year has the March gain been as pronounced as the increase registered this year. Pay-rolls also normally increase in March as compared with

February. In only one year, however, (1920) has the March increase in pay-rolls exceeded the gain shown in the current report.

A comparison of the index of factory employment in March, 1934, with that of March, 1933 (58.8) when, because of the closings of the banks, business activity was at an exceptionally low level, shows that employment in March, 1934, was 37.4 per cent above the level of March, 1933, while a similar comparison with the March, 1933, pay-roll index (37.1) shows a gain of 74.7 per cent in the amount paid out in weekly factory wages.

Pay-roll reports were received in March from establishments in 90 of the principal manufacturing industries with 3,445,732 employees and with combined weekly pay-rolls of \$67,367,611 during the pay period ending nearest March 15. The employment reports received from these co-operating establishments cover more than 50 per cent of the total wage earners in all manufacturing industries of the country.

Each of the 14 groups into which the 90 manufacturing industries are classified showed increases in employment and pay-rolls over the month interval, the most pronounced gains, 10.3 per cent in employment and 17.4 per cent in pay-rolls, appearing in the transportation equipment group. The iron and steel group reported gains in employment and pay-roll of 5.1 per cent and 12.3 per cent, respectively. The machinery and non-ferrous metals groups reported gains of 5.3 per cent and 5.9 per cent. The gains in employment reported in the remaining 10 groups were 2.1 per cent or more with the exception of the paper and printing group in which employment increased only 0.6 per cent.

The largest percentage gains in employment over the month interval were shown in the fertilizer and canning industries in which seasonal activities resulted in increases of 32.1 per cent and 24.8 per cent, respectively. The locomotive industry reported an increase of 16.6 per cent in employment and the automobile industry showed a gain of 11.3 per cent. Increases in employment of 10.9 per cent each were shown in the stove and iron-and-steel forgings industries and gains of over 9 per cent were reported in the hardware, stamped and enameled ware, women's clothing, and men's furnishings goods industries. Industries allied to building construction reported seasonally increased activities, the cement, brick, sawmills, millwork, glass, and structural metalwork industries each reporting gains in employment and pay-rolls. Other industries of major importance in which substantial gains in employment were shown

were as follows: foundry and machine-shop products, 6.5 per cent; knit goods, 4.9 per cent; electrical machinery, 4.4 per cent; iron and steel, 4.2 per cent; men's clothing, 3.7 per cent; cotton goods, 3.3 per cent; boots and shoes, 2.9 per cent; and chemicals, 2.7 per cent.

In 29 industries the increases in employment over the year interval were in excess of 50 per cent. The machine tool, automobile, radio, and iron-and-steel forgings industries showed increase in employment of 100 per cent or more comparing March, 1934, with March, 1933.

Only 11 of the 90 manufacturing industries surveyed failed to show increased employment over the month interval, the largest decline (14 per cent) being a seasonal decrease in the cottonseed oil, cake, and meal industry. The woollen and worsted goods industry and the aircraft industry showed decreases in employment of 4.3 and 3.6 per cent, respectively, and the slaughtering industry reported a seasonal decline of 2.9 per cent. The decreases in the remaining 7 industries were 1.8 per cent or less.

*Non-manufacturing Industries.*—The general expansion in employment in the manufacturing industries was also evidenced in the non-manufacturing industries surveyed monthly by the Bureau of Labour Statistics, 13 of the 15 non-manufacturing industries reported increases in both employment and pay-roll between February and March. The most pronounced percentage gain in employment over the month interval was a seasonal increase in the building construction industry, in which a gain of 13.6 per cent in employment was combined with an increase of 16.1 per cent in pay-rolls. These increases are largely due to the moderation of weather conditions, which permits more active outside operations in this industry. The pronounced percentage gain in pay-rolls in the building construction industry was exceeded however in the anthracite mining industry in which increased production was reflected in a gain of 25.2 per cent in pay-rolls over the month interval. Employment in the anthracite mining industry increased 6.9 per cent. The quarrying and non-metallic mining industry reported a seasonal gain of 8.3 per cent in employment and 14.8 per cent in pay-rolls. The dyeing and cleaning industry reported increases, largely seasonal, of 6.4 per cent in employment and 11.7 per cent in pay-rolls and the group of retail trade stores, reflecting the effects of the Easter trade reported a substantial gain in employment with a less pronounced gain in earnings.

Under the retail trade classification, the group of stores composed of department stores,

variety stores, limited price stores and mail order house reported an increase of 6.1 per cent in employment and 3.9 per cent in pay-rolls. The remaining retail establishments surveyed showed a gain of 1.4 per cent in employment and 1.3 per cent in pay-rolls. The bituminous coal mining group, reflecting the increased industrial activity over the country, which has caused an increased demand for fuel, showed a gain of 2.2 per cent in employment and 7.9 per cent in pay-rolls. The hotel industry reported a continuation of previous months' gains, employment in March being 1.9 per cent above the February level and pay-rolls increasing 2.1 per cent. The laundry industry reported a gain of 1 per cent in employment coupled with a slightly larger increase in pay-roll totals. Each of the 3 utility industries, telephone and telegraph, power and light, and electric railroad and motor-bus operation, reported small gains in employment combined with slightly larger gains in pay-rolls. Employment in wholesale trade increased 0.7 per cent and pay-rolls increased 1.7 per cent, and the crude petroleum industry

reported a gain of 0.5 per cent in employment coupled with an increase of 3.9 per cent in pay-rolls. Small decreases in employment and pay-rolls were reported in the 2 remaining industries, metalliferous mining and banks-brokerage-insurance-real estate.

*Building Permits.*—Building permits issued in 759 cities having a population of 10,000 or over show an increase in March as compared with February of 61 per cent in the number of buildings and an increase of 2½ per cent in the estimated cost of buildings to be erected, according to reports received by the Bureau of Labour Statistics of the United States Department of Labour. The permit figures pertain to building construction only and do not include such other types of construction as road building, river, harbour and flood-control work, reclamation projects, etc. They include the number and cost of buildings for which contracts are awarded by Federal and State governments in cities having a population of 10,000 or over. In February the value of such public buildings was \$7,548,689; in March \$3,546,777.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government with respect to contracts "for construction, remodelling, repair or demolition of any work" is set forth in an Act of Parliament adopted on May 30, 1930, entitled "The Fair Wages and Eight-Hour Day Act" (chapter 20-21, Geo. V). The full text of this measure appeared in the *LABOUR GAZETTE*, April 1930, page 383. The Fair Wages and Eight-Hour Day Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repairs or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or, except in cases of emergency, as may be approved by the Minister.

The Fair Wages Policy was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by Order in Council of April 9, 1924. The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wages rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of contract.

In addition to the requirements of the Fair Wages and Eight-Hour Day Act, government contracts for the construction, remodelling, repair or demolition of any work, contain a number of other provisions for the protection of the workmen employed, which are sanctioned by the foregoing Orders in Council.

It is further provided in the foregoing Orders in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings;

harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees; mail bags, letter boxes, and other postal stores; and any other articles and things hereinafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions, which are referred to in the Orders in Council as "B" conditions (the Conditions of the Fair Wages Orders in Council with reference to building and construction works being designated as "A" conditions), including the following Fair Wages Clause:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

Both in the case of contracts for building and construction work, and in the "B" conditions sanctioned by Orders in Council applicable to contracts for the manufacture of certain classes of supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates and working hours.

The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed.

The contractor is also required to keep proper books and records showing the names, trades and address of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the Minister of the Department with which the contract has been made and payment of such claim may be made by the latter.

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of certain classes of supplies listed in the Fair Wages Orders in Council it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates or wages and hours, and empower the Minister of Labour to deal with any disputes which may arise.

During the past month statements were received in the Department of Labour show-

ing that the following contracts, containing fair wages conditions, have been recently executed by the Government of Canada:—

#### DEPARTMENT OF NATIONAL DEFENCE

##### *Contracts in Group "B" (Manufacture of Supplies, etc.)*

The following is a statement of contracts awarded by the Department of National Defence during the month of April, 1924, for various classes of manufactured goods which contracts included in all cases the "B" labour conditions above referred to:

Goods contracted for	Contractor
Cloth, drab.....	Dominion Woollens & Worseds Ltd., Toronto, Ont.
Serge, blue.....	Paton Mfg. Co., Montreal, P.Q.
Boots, ankle.....	J. A. & M. Cote, St. Hyacinthe, P.Q.
Boots, ankle.....	A. E. Wry-Standard Ltd., Amherst, N.S.
Boots, ankle.....	Eudore Fournier, Plessisville, P.Q.
Boots, ankle.....	Corbeil, Ltd., Montreal, P.Q.
Boots, ankle.....	Tetrault Shoe Co., Montreal, P.Q.
Boots, ankle.....	Tillsonburg Shoe Co., Tillsonburg, Ont.
Nightshirts.....	Houde, Larocche & Cie, St. Croix, P.Q.
Drill for shirts.....	Dominion Textile Co., Ltd., Montreal, P.Q.
Drill for shirts.....	W. Robinson & Son Converters Ltd., Toronto, Ont.
Enamel ware.....	General Steel Wares Ltd., Montreal, P.Q.
Cement.....	Canada Cement Co., Ltd., Montreal, P.Q.
Tents, marquee.....	Grant-Holden-Graham Ltd., Ottawa, Ont.
Tents, circular.....	Woods Mfg. Co., Ltd., Ottawa, Ont.
Tents, circular.....	J. J. Turner & Sons, Ltd., Peterborough, Ont.
Boots, naval pattern.....	Williams Shoe Co., Brampton, Ont.
Straw hats.....	J. R. Shuttleworth & Sons, London, Ont.
Artillery harness, dbl. sets.....	Hugh Carson Co., Ltd., Ottawa, Ont.
Tables, folding.....	J. Oliver & Sons, Ottawa, Ont.
Denim, 8 oz.....	Canadian Cottons, Ltd., Cornwall, Ont.
Caps, forage.....	Hamilton Uniform Cap Co., Hamilton, Ont.
Drawers and undershirts.....	Joseph Simpson Sons Ltd., Toronto, Ont.
Drawers and undershirts.....	Penmans Ltd., Montreal, P.Q.

#### DEPARTMENT OF PUBLIC WORKS

##### *Contract in Group "A" (Construction, etc.)*

Reconstruction of the Quebec side of the Temiskaming Dam, Temiskaming, P.Q. Name

of contractors, The T. C. Gorman Construction Co., Ltd., of Montreal, P.Q. Date of contract, April 26, 1934. Amount of contract, approximately \$455,176. A fair wage schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Blacksmiths.....	\$0 45	8
Blacksmiths' helpers.....	0 35	8
Carpenters.....	0 50	8
Cement finishers & floaters.....	0 50	8
Compressor operators.....	0 40	8
Cement mixer operators.....	0 40	8
Divers.....	1 00	8
Drill runners (machine).....	0 40	8
Firemen (stationary).....	0 35	8
Hoist operators (gas).....	0 45	8
Hoist operators (steam).....	0 55	8
Labourers.....	0 30	8
Machinists (repair men).....	0 55	8
Motor truck drivers.....	0 35	8
Powdermen.....	0 40	8
Plumbers and steamfitters.....	0 55	8
Quarrymen.....	0 35	8
Rivermen.....	0 30	8
Timbermen and cribmen (using such tools as broad-axe, adze, saw, hammer, auger).....	0 37½	8
Driver, horse and cart.....	0 45	8
Driver, team and wagon.....	0 55	8

#### POST OFFICE DEPARTMENT

Following is a statement of payments made in April, 1934, for supplies ordered by the Post Office Department under contracts which were subject to regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages, and the performance of the work under proper sanitary conditions:

Nature of orders	Amount
<i>Making metal dating stamps and type, brass crown seals, cancellers, etc.—</i>	
Pritchard-Andrews Co., of Ottawa Ltd.....	\$277 23
<i>Making and repairing rubber stamps, daters, etc.—</i>	
Pritchard-Andrews Co. of Ottawa, Ltd.....	196 31
<i>Making and supplying letter carriers' uniforms—</i>	
Workman Uniform Co., Ltd., Montreal, P.Q.....	375 64
Wm. Scully Ltd., Montreal, P.Q.....	95 40
M. Feldsten, Son & Co., Montreal, P.Q.....	216 48
Woods Mfg. Co., Ltd., Ottawa, Ont.....	477 00
E. Guillet & Sons Co., Ltd., Marieville, P.Q.....	1,923 90
<i>Mail bag fittings—</i>	
F. W. Carling, Ottawa, Ont.....	636 00
Federal Equipment Co., Ottawa, Ont.....	561 65
Ketchum Mfg. Co., Ltd., Westboro, Ont.....	187 05
<i>Scales—</i>	
Pritchard-Andrews Co. of Ottawa, Ltd.....	22 40

### Fair Wages Conditions in Harbour Commission Contracts

Under the Fair Wages Order in Council it is provided that certain conditions, referred to therein as "A" conditions, shall, as far as practicable, be observed by the department or departments of the Government of Canada in connection with all agreements made by the

Government involving the grant of Dominion public funds in the form of subsidy, advance, loan or guarantee for any of the purposes mentioned. Under this authority, fair wages conditions are prepared from time to time in the Department of Labour for insertion in con-

tracts awarded by the Harbour Commissioners throughout Canada. The labour conditions in question are similar to those which are applicable to contracts awarded by the several departments of the Dominion Government and include either a fair wages schedule or the General Fair Wages Clause.

The Department of Labour has been notified that the following contract has been awarded under the above-mentioned conditions:—

#### *Vancouver Board of Harbour Commissioners*

Construction of a gravel fill on the water-front roadway from Victoria Drive to Kaslo Street, Vancouver, B.C. Name of contractors, the McKenzie Barge and Derrick Co. Ltd., Vancouver, B.C. Date of contract, April 3, 1934. Amount of contract, approximately \$130,000. A fair wages schedule was inserted in the contract as follows:

#### SCHEDULE OF WAGES AND WORKING DAY HOURS

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per day \$9 00 per hour	per day 8
Foreman.....		
Derrick deckhand.....	0 50	8
Derrick fireman.....	0 65	8
Derrick engineer.....	1 00	8
Labourers.....	0 45	8

#### *Tugs—* Class "A" per month

Classes 1 to 6—	
Tug captain.....	\$200
Chief engineer.....	190
Deck hand.....	85

#### *Tugs—* Class "B" per month

Classes 7 and 8—	
Tug captain.....	\$190
Chief engineer.....	180
Deck hand.....	90

#### *Tugs—* Class "C" per month

Classes 9 and less—	
Tug captain.....	\$180
Chief engineer.....	170
Deck hand.....	90

N.B.—Above rates include board allowance.

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule the rates of wages for the principal classes of labour are given, with other information of general interest.

### Manufacturing: Miscellaneous Products

TORONTO, ONTARIO.—A CERTAIN PICTURE FRAME MANUFACTURING COMPANY AND THE FURNITURE AND WOOD WORKERS INDUSTRIAL UNION.

This agreement applies to the picture frame, glass fitting, lamp shade and all other departments of the factory.

Agreement to be in effect from April 15, 1934, to April 15, 1935, and thereafter from year to year until notice. (A strike at this plant in October, 1933, was reported in the LABOUR GAZETTE, November, 1933, page 1077).

79084—6

Only union members to be employed, if available. Any others employed must join the union. The company recognizes the union and the shop committee.

Overtime to be paid at rate of time and one-quarter for all work over 48 hours per week.

Wages: workers now employed are to be given a 10 per cent increase in wages in six months from the date of agreement.

Employees who have been employed for more than four consecutive weeks are not to be dismissed except for misconduct and negligence of work.

Equal division of work amongst employees during slack season.

Any grievances to be taken up with the shop committee, and if no settlement reached, it will be referred to the union. No stoppage of work to take place during negotiations over any disputes.

### Construction: Buildings and Structures

SASKATOON, SASK.—SASKATOON MASTER PLUMBERS' ASSOCIATION AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 264.

Agreement signed following the strike reported on page 413 of this issue.

Agreement to be in effect from April 26, 1934, to March 15, 1935, and thereafter from year to year until notice. When such notice is given, a joint committee will meet to reach a decision.

Only union members to be employed, if available. No journeymen of either trade to be employed to work at the other trade. Union members to work only for members of the Master Plumbers' Association, or, if sufficient work not

available from them, then for any other master plumber who will sign this agreement.

Hours: 8 per day, 5 days per week; a 40-hour week, with the exception of work out of the city where there is no local union in which case 6 days of 8 hours may be worked per week.

Overtime: time and one-half till midnight and for all work on Saturdays except emergency work on Saturday mornings which shall be at single time. Work from midnight to 8 a.m. and all work on Sundays and holidays, double time.

Wages for journeymen plumbers: \$1 per hour (a decrease of 5 cents per hour from the rate in the previous agreement).

For work out of the city, fares, expenses and travelling time to be paid by employer.

One apprentice allowed to either trade to every five journeymen employed at that trade. Apprentices to be registered with both associations.

Any disputes arising are to be settled by a joint committee, and no journeyman is to be dismissed or withdrawn from a job until such committee shall have met and rendered a decision.

### Transportation and Public Utilities: Street and Electric Railways

WINNIPEG, MANITOBA.—WINNIPEG ELECTRIC COMPANY AND THE MOTORMEN, CONDUCTORS AND BUSMEN IN THEIR EMPLOY.

Agreement reached through the Joint Council of Industry established under the Manitoba Industrial Conditions Act. (An article dealing with this case appears on page 404 of this issue.)

Agreement to be in effect from May 1, 1934, to April 30, 1935, and thereafter from year to year until notice.

This agreement is similar to the previous one which was summarized in the LABOUR GAZETTE, December, 1932, page 1338, with the following changes:—

Regular hours to be 7 per day, with overtime pay of time and one-half for work over 7 hours and 20 minutes (platform time). Except in cases of emergency, no men to be permitted to work more than six times the maximum run in any one week.

Wages per hour for two-men car operators: 42½ cents for first six months, 45 cents for second six months, 48½ cents for second year, and 51 cents after two years. One-man car operators: 5 cents per hour over two-man rate. Work on Sundays: 5 cents per hour over weekday rates. These rates are from 2½ to 3 cents per hour lower than paid for the 8-hour day in the previous agreement, and from 6 to 7 cents per hour lower than paid for the 7-hour day in that agreement.

All extra motormen, conductors and busmen reporting regularly each day for work to be paid a minimum of \$18 per week.

Each motorman, conductor and busman with five years' or more service with the company, and who has worked 48 weeks in the preceding year, to have one week's holiday with pay each year.

Company to pay for the required number of licences to operate buses at the beginning of the year, but any qualified bus driver coming in after that date to pay for his own licence.

Any employee discharged or suspended may have his case taken up with the company by the grievance committee, and if it is found that the cause was insufficient, he will be reinstated and paid for time lost.

WINNIPEG, MANITOBA.—WINNIPEG ELECTRIC COMPANY AND THEIR EMPLOYEES OF THE MECHANICAL DEPARTMENT.

Agreement reached through the Joint Council of Industry established under the Manitoba Industrial Conditions Act.

Agreement to be in effect from May 1, 1934, to April 30, 1935, and thereafter from year to year until notice.

This agreement is similar to the previous agreement which was summarized in the LABOUR GAZETTE, December, 1932, page 1338, with the following exceptions:—

Hours: 48 per week in car house and 44 hours in shops.

Wages: Reductions of from one to 4 cents per hour on the rates in the previous agreement, making the rates per hour for certain classes as follows: machinists, blacksmiths, welders, armature winders, carpenters, painters, sheet metal workers and pipe fitters, 64 cents; car wiremen and air brake repairmen and inspection, 55½ cents; electrical repairmen and electrical inspection and light repairmen, 50 and 52 cents; pitmen leaders, 50 cents; machinists' helpers and drill pressmen, babbittmen, wheelmen, blacksmiths' helpers, armature winders' helpers, brush hands, fendermen, pitmen, motor repairmen of box type motors, car cleaners, sweepers, stove tenders, and unskilled help at rates between 38½ and 48½ cents; apprentices from 24½ cents during first six months to 58 cents during second half of fifth year. There is no provision for additional pay for night work.

Employees with five years' or more service with the company who have worked a minimum of 48 weeks in the preceding year, to be given one week's holiday with pay each year.

WINNIPEG, MANITOBA.—WINNIPEG ELECTRIC COMPANY AND THEIR EMPLOYEES OF THE TRACK DEPARTMENT.

Agreement reached through the Joint Council of Industry established under the Manitoba Industrial Conditions Act.

Agreement to be in effect from May 1, 1934, to April 30, 1935, and thereafter from year to year until notice.

This agreement is similar to the previous one which was summarized in the LABOUR GAZETTE, December, 1932, page 1339, with the following changes:—

Hours: 44 and 48 per week.

Wages are reduced from 2½ to 3½ cents per hour and are now as follows: electric welders, 59½ cents; leading trackmen, 55½ cents; acetylene cutters, 50 cents; electric welders' assistants, 47 cents; switch inspection and switch and diamond repairmen, emergency men, grinder men, flat car motormen and tool repairmen, 47 cents; flat car motormen (part time), compressor men, derrick men, 42½ cents; labourers with established seniority, 38½ cents.

Employees with five years' or more service with the company who have worked a minimum of 48 weeks in the preceding year, to be given one week's holiday with pay each year.

The company agrees to engage track workers on the seniority list for truck helpers, and to give suitable trackmen every reasonable opportunity to qualify as truck drivers according to seniority.

Any employee discharged or suspended may have his case taken up with the company by the grievance committee, and if insufficient cause for such discharge or suspension is found, he will be reinstated and paid for time lost.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, APRIL, 1934

### Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slightly downward, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being lower than in the previous month.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was \$7.81 at the beginning of April as compared with \$8.04 for March; \$6.83 for April, 1933; \$11.24 for April, 1930; \$21.36 for April, 1926; \$10.26 for April, 1922; \$16.92 for June, 1920 (the post war peak); and \$7.51 for April, 1914. The decline was due almost entirely to lower prices for eggs, although there were slight decreases in the prices of veal, mutton and pork. The largest advances occurred in the prices of beef, butter and potatoes. Including the cost of fuel and rent with that of foods the total budget averaged \$16.28 at the beginning of April as compared with \$16.51 for March; \$15.74 for April, 1933; \$21.53 for April, 1930; \$21.64 for April, 1926; \$20.66 for April, 1922; \$26.92 for July, 1920 (the post war peak); and \$14.32 for April, 1914. Fuel and rent were unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics was again slightly lower at 71.1 for April as compared with 72 for March. Figures for previous dates are 65.4 for April, 1933; 91.2 for April, 1930; 101.2 for April, 1926; 98.4 for April, 1922; 164.3 for May, 1920 (the post war peak); and 64 for April, 1914. One hundred and thirty-five prices quotations were lower, sixty-five advanced and three hundred and sixty-seven were unchanged.

In the grouping according to chief component materials six of the eight main groups were lower, one was higher and one was unchanged. The groups which declined were: the Vegetables and Vegetable Products group, because of lower prices for grain, flour, bran and shorts; the Animals and their Products group, due to lower quotations for calves, hogs, meats, butter and eggs; the Fibres, Textiles and Textile Products group, mainly due to declines in the prices of raw cotton, raw silk, raw wool and silk fabrics; the Wood, Wood Products and Paper group, because of declines in the prices of cedar lumber and pulp; the Non-Ferrous Metals and their Products group, due to lower quotations for

lead, zinc, silver and aluminium; and the Non-Metallic Minerals and their Products group, mainly because of lower prices for domestic coal. The Chemicals and Allied Products group was slightly higher, due to increased prices for copper sulphate, zinc oxide and paints. The Iron and its Products group was unchanged.

In the grouping according to purpose both consumers' goods and producers' goods were lower, the former mainly because of lower prices for foods, chiefly eggs, flour and milled products, meats, milk and its products and sugar, and the latter due to lower prices for producers' materials, chiefly painters' materials, materials used in the metal working industries, milling industries and meat packing industries.

In the grouping according to origin Canadian farm products were lower, mainly because of decreased quotations for grains, vegetables, live stock, wool, eggs and fresh milk. Raw and partly manufactured goods and fully and chiefly manufactured goods were also lower.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of April of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The figures as to rental are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amounts due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which statistics were available when first published in the *LABOUR GAZETTE* in January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

### Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number for rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926, weighted according to the importance of each item in workingmen's family expenditure, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18%; Clothing, 18%; Sundries, 20%.

### Retail Prices

Beef prices continued toward higher levels, increases, however, being fractional. Sirloin steak averaged 21.6 cents per pound in April as compared with 21.5 cents in March and rib roast 16.7 cents per pound as compared with 16.4 cents in March. Prices in the main were lower in the prairie provinces than in other localities. Both veal and mutton were slightly lower, the former averaging 13 cents per pound as compared with 13.2 cents in March and the latter 20.6 cents per pound as compared with 20.8 cents in March. The price of fresh pork was down from an average of 21.2 cents per pound to 20.6 cents in April, decreases occurring mainly in Ontario and other eastern provinces. The price of lard was fractionally lower at an average of 13.6 cents per pound.

\*Prior to 1926 number of commodities was 236 and commencing in January, 1934, the number is 567.

(Continued from page 474)

The price of eggs was substantially lower, fresh being down from an average of 40.5 cents per dozen in March to 27.1 cents in April and cooking from 34.6 cents per dozen to 23 cents. Decreases were less pronounced in the western provinces than in other localities. Milk was unchanged at an average of 9.7 cents per quart. Both dairy and creamery butter were somewhat higher, the former averaging 29.3 cents per pound as compared with 28.3 cents in March and the latter averaging 33 cents per pound as compared with 32.5 cents in March.

Bread and flour were unchanged in the average. Onions were slightly higher in many localities averaging 4 cents per pound as compared with 3.8 cents the previous month. Potatoes were up from an average price of \$1.34 per ninety pounds in March to \$1.37 in April. Granulated sugar has remained unchanged throughout the first four months of the year at an average price of 8 cents per pound. The price of anthracite coal was practically unchanged at an

average of \$15.17 per ton. No changes were reported in rent.

Following are the prices reported for Welsh coal, domestic sizes: Halifax, \$16.50; Windsor, \$16.50; Charlottetown, \$14.40; Moncton, \$16; Saint John, \$14; Quebec, \$13.50; Three Rivers, \$15; Sherbrooke, \$16.25; St. Hyacinthe, \$14.75; Montreal, \$14.50; Ottawa, \$16.75; Kingston, \$15.50; Belleville, \$15.50; Peterborough, \$16.25; Oshawa, \$14.75; Toronto, \$14.75; St. Catharines, \$15.50; Hamilton, \$14.50; Galt, \$15.50-\$16; St. Thomas, \$15; Sudbury, \$17; Cobalt, \$18; Timmins, \$19; Port Arthur, \$16.50; Fort William, \$16; Winnipeg, \$19.50.

## Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

The price of No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, was down from an average of 66.4 cents per bushel in March to 65.5 cents in April. This movement was influenced to some extent by

the sharp decline in Chicago following the announcement that the return of the United States to an export basis might be imminent. In coarse grains western oats were down from 33·6 cents per bushel to 32·4 cents, rye from 46·1 cents per bushel to 44·1 cents and barley from 39·7 cents per bushel to 36·9 cents. In milled products flour at Montreal was down from \$5·40 per barrel to \$5·20, bran at Montreal from \$24·79 per ton to \$22·61 and shorts from \$26·13 per ton to \$23·57. Granulated sugar at Montreal was down from \$6·37 per cwt. to \$6·18. Raw rubber at New York advanced from 12·5 cents per pound to 14 cents. A factor in this advance was the announcement of an agreement signed by nine of the largest rubber producing countries as to restriction of output over a term of years. The price of this commodity in April, 1933, was 5 cents per pound. In live stock choice steers at Toronto advanced from \$5·99 per hundred pounds to \$6·05 and at Winnipeg from \$4·90 per hundred pounds to \$4·97. Lambs at Toronto also were higher the price being up from \$8·47 per hundred pounds to \$8·55. Calves and hogs were somewhat lower

the price of the former at Toronto being down from \$7·56 per hundred pounds to \$6·92 and the latter from \$9·11 per hundred pounds to \$8·21. Prices of creamery butter at Montreal declined from 31·6 cents per pound to 28·3 cents and at Toronto from 31·4 cents per pound to 28·3 cents. Stocks in cold storage at the beginning of April were about fifty per cent lower than at the first of the previous month. Fresh eggs at Montreal were down from 25·8 cents per dozen to 20·1 cents and at Winnipeg from 20·9 cents per dozen to 17·9 cents. Stocks in cold storage at the beginning of April were much lower than at the same date last year but were considerably higher than at the first of the previous month. The price of raw cotton at New York was down from 12·3 cents per pound to 11·8 cents. A factor in the decline was said to be the good prospects for the new crop. Visible supplies were considerably lower. Both raw silk and raw wool were lower, the former being down from \$1·53 per pound to \$1·48 and the latter from 22½-24 cents per pound to 21½-23½ cents.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes afford information as to significant changes in prices in Great Britain and certain other countries. The authorities for the wholesale prices index numbers are named in all cases. The latest table showing cost of living and wholesale prices index numbers for various countries appeared in the LABOUR GAZETTE for April.

### Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1924=100, was 62·5 for March, a decrease of 1·4 per cent for the month. Foods were 3 per cent lower than for February, due to a fall in the price of beef and bacon and to seasonal decreases in the price of eggs and milk. Industrial materials were 0·5 per cent lower, due principally to a decrease of 2·3 per cent in the wool group.

The *Statist* index number, on the base 1867-1877=100, was 82·2 at the end of November, a decrease of 0·4 per cent for the month. This decrease was chiefly confined to foodstuffs, of which the animal food group declined 3·3 per cent, vegetable food 1·5 per cent, and the "sugar, coffee and tea" group 0·2 per cent. The three industrial materials groups all showed slight advances.

COST OF LIVING.—The *Ministry of Labour Gazette* index number, on the base July, 1914

=100, was 139 at the beginning of April, a decrease of one point for the month, due entirely to lower food prices, chiefly eggs.

### France

WHOLESALE PRICES.—The General Statistical Office index number, on the base 1914=100 (gold index), was 77 for March, a decline of one point from the February level, due chiefly to decreases in the textile and miscellaneous industrial materials groups.

### Germany

WHOLESALE PRICES.—The Federal Statistical Office index number, on the base 1913=100 was 95·9 for March, a decrease of 0·3 per cent from the February level, due principally to lower prices for agricultural products. The greatest change in any one commodity group was a rise of 9·2 per cent in rubber.

COST OF LIVING.—The official index number, on the base 1913-1914=100, was 120·6 for March, a decrease of 0·1 per cent for the month. Food and sundries were slightly lower, clothing slightly higher, while rent and heat and light were unchanged.

### United States

WHOLESALE PRICES.—The Bureau of Labour Statistics index number, on the base 1926=100, was 73·7 for March, a rise of 0·1 per cent

for the month. There were no marked changes in any of the groups for the month, prices remaining for the most part unchanged from the February level.

*Bradstreet's* index number (continued by Dun and Bradstreet, Incorporated), which is the sum total of the prices per pound of 96 commodities of common consumption, was \$9.1697 at April 1, a fall of one per cent for the month. Fruits, metals, oils and building materials showed advances, but the other nine groups were all lower than the previous month's level.

*Dun's* index number (continued by Dun and Bradstreet, Incorporated), which is based on the cost *per capita* of a year's supply of com-

modities, was \$163.415 at April 1, a fall of 0.9 per cent for the month, due chiefly to a fall of 15 per cent in the dairy and garden produce group. Other groups showing decreases were breadstuffs and clothing, while increases were noted in meat, "other food," metals and miscellaneous commodities.

**COST OF LIVING.**—The index number of the National Industrial Conference Board, on the base 1923=100, was 78.5 for March, an increase of 0.3 per cent for the month, and of 9.3 per cent over March, 1933. Between March, 1933, and March, 1934, clothing advanced 27 per cent, food prices 20 per cent, sundries 3.1 per cent, and coal 3.5 per cent, while rent decreased 2.3 per cent.

## FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1934

THE number of fatal industrial accidents (including fatalities from industrial diseases reported with fatal accidents by workmen's compensation boards, etc., as well as fatalities to persons incidental to the pursuit of their occupation) which were recorded in the Department as occurring during the first quarter of 1934 was 193, there being 72 in January, 60 in February and 61 in March.

The report for the fourth quarter of 1933 showing 187 fatalities, was given in the *LABOUR GAZETTE*, February, 1934, page 206. In the first quarter of 1933, 170 fatal accidents were recorded (*LABOUR GAZETTE*, May, 1933, page 564). The supplementary list of fatal industrial accidents, not reported in time for inclusion in the reports covering the periods in which they occurred, contains 32 fatalities for the last two quarters of 1933.

In this series of reports it is the custom to record industrial accidents under the dates of their occurrence and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the Provincial Workmen's Compensation Boards, from the Board of Railway Commissioners of Canada, from certain other official sources and from the correspondents of the *LABOUR GAZETTE*. Information as to accidents is also secured from newspapers.

Classified by groups of industries, the fatalities occurring during the first quarter of 1934 were as follows: agriculture, 25; logging, 20; fishing and trapping, 9; mining, non-ferrous smelting and quarrying, 34; manufacturing, 24; construction, 19; transportation and public utilities, 46; trade, 5; service, 11.

Of the 34 mining accidents, 22 were in "metalliferous mining," 10 in "coal mining,"

1 in "non-metallic mineral mining and quarrying, n.e.s.," and 1 in "structural materials."

Of the 24 fatalities in manufacturing, 2 were in "textiles and clothing," 7 in "saw and planing mill products," 1 in "wood products, n.e.s.," 5 in "pulp and paper products," 1 in "printing and publishing," 2 in "iron, steel and products," 2 in "non-ferrous metal products," 3 in "non-metallic mineral products," and 1 in "chemical and allied products."

In construction, there were 6 fatalities in "buildings and structures," 10 in "highways and bridge," and 3 in "miscellaneous construction."

In transportation and public utilities there were 33 fatalities in "steam railways," 2 in "street and electric railways," 2 in "water transportation," 7 in "local transportation," 1 in "telegraphs and telephones," and 1 in "express."

In trade, there were 2 fatalities in "wholesale" and 3 in "retail."

Of the fatalities in service, 8 were in "public administration," 2 in "personal, domestic and business," and 1 in "professional establishments."

Accidents involving the loss of two or more lives were as follows:—

On or about January 15, four Eskimo hunters perished in a blizzard, near Aklavik, Northwest Territories.

A fatal accident which resulted in two other fatalities occurred at Britannia Beach, British Columbia, on March 1, when a motorman was killed while in charge of a mine locomotive. Out of control, the engine ran over the safety blocks at the end of its track and crashed 600 feet down a shaft, killing a shift boss and a control chute man.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1934  
BY GROUPS OF INDUSTRIES AND CAUSES

On March 18, two farmers near St. Paul, Alberta, were killed when a circular saw outfit, with which they were working, broke. A third man was seriously hurt in this accident.

Two miners in the Rouyn district of Quebec were killed during blasting operations on January 17.

On January 28, two miners at Red Lake, Ontario, were caught in a delayed blast. One was killed instantly, while the second man died the following day.

An engineer and a fireman were scalded to death at Meanook, Alberta, on January 29, when their engine was derailed.

On February 16, a trainman and a baggage-man were killed in the collision of a freight train and a milk train near St. Hermas, Quebec.

An engineer and a fireman were killed at Carberry, Manitoba, on March 2, when ice on the track caused the derailment of their engine.

At London, Ontario, a fire chief and a fireman lost their lives while fighting a fire which destroyed a flour mill on March 3.

*Supplementary List of Accidents.*—A supplementary list of accidents occurring during 1933 has been compiled which contains 32 fatalities, of which 3 were in agriculture, 4 in fishing and trapping, 5 in mining, non-ferrous

smelting and quarrying, 7 in manufacturing, 1 in construction, 6 in transportation and public utilities, and 6 in service. Of these fatalities, 2 occurred in July, 1 in August, 1 in September, 6 in October, 7 in November, and 15 in December.

Four fishermen were lost in a storm which occurred off the west coast of Vancouver Island on December 5, 1933. This was the only case, in the supplementary list, in which more than one life was lost.

The regulations for the carrying out of the Quebec Act respecting Electricians and Electrical Installations (LABOUR GAZETTE, July, 1933, page 697) provide for the establishment of a Board of Advisers to the Board of Examining Electricians, the former board consisting of the following members: Mr. Augustin Frigon, Director of Technical Instruction of the Province; Mr. L. A. Kenyon, representing the Public Service Corporations (electricity); Mr. Robert H. McDonald, representing the Association of architects of the Province; Mr. J. M. Robertson, representing the Corporation of Professional Engineers of the Province; Mr. William Girard, representing the electrical contractors; and Mr. R. Rémillard, representing the journeymen electricians of the Province.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Injunction against Defamatory Statements Injurious to Plaintiffs Trade

The proprietor of a restaurant at Toronto appealed in the Ontario Court of Appeal from an interlocutory injunction order made by Mr. Justice Rose, Chief Justice of the High Court, restraining five members of the local Restaurant Employees' Union from intimidating or interfering with his employees or customers, and sought a wider interim injunction restraining the defendants from "besetting and watching" the plaintiff's place of business. The circumstances of the case are given in the judgment of Mr. Justice Davis, which follows:—

"The plaintiff is the proprietor of the London Cafe, a lunch room and restaurant business at 311 Queen Street West, Toronto. The five defendants are members of a local restaurant employees' union.

"By writ of summons issued on March 9, 1934, the plaintiff claimed against the defendants damages for libel alleged to have been published by the defendants parading upon the street adjacent to the plaintiff's business premises and displaying boards or cards bearing defamatory information about the plaintiff's business, and an injunction restraining the defendants from further publishing defamatory statements of and concerning the plaintiff or his business, and from watching and besetting the said premises, and damages for alleged wrongful and illegal interference with the plaintiff's business.

"By amendment to the writ of summons, made pursuant to an order of Kerwin, J., on March 20, 1934, the plaintiff further claimed 'damages for false statements maliciously published by the defendants, their servants and agents and others acting pursuant to their instructions, of and about the plaintiff's business... which statements were and are false in fact and have been and are detrimental and injurious to the business of the plaintiff.' The following are the particulars of such statements:—

"(a) We are on strike—London Cafe—against low wages and discrimination. Hotel and Restaurant Employees of F.W.I.U.

"(b) Restaurant workers on strike. Eat in union restaurants, help abolish slavery. Food Workers Industrial Union (of Canada).

"And the plaintiff further claims for an injunction to restrain the defendants, the servants and agents, until judgment or further order, from further publishing or causing to be published signs, sandwich boards, placards, handbills, circulars or any other printed or written representations to the effect that a

strike is now on at the plaintiff's place of business or that discrimination is there practised, or that low wages are in effect there.'

"Kingstone, J., granted an *ex parte* injunction on March 10, 1934, restraining the defendants and each of them until March 14, 1934, or until such time as any motion to be made to continue the injunction shall have been heard and disposed of, 'from in any way publishing... that there is a strike or lockout at the New London Cafe against discrimination and low wages, or any other defamatory statement of and concerning the plaintiff or his business, and from watching or besetting the said premises....'

"Rose, C. J. H. C., on motion made to continue the interim injunction, on March 15, 1934, made a limited order restraining the defendants until the trial or other disposition of the action 'from threatening, accosting, intimidating or otherwise interfering with any employees or customers of (or with any other person having or seeking to do any lawful business with) the plaintiff for the purpose of inducing such employees or other persons from retaining or accepting employment or of inducing such employees or customers from doing any lawful business or from observing or performing any existing lawful contract with the plaintiff.'

"Kerwin, J., on March 20, 1934, gave special leave to the plaintiff to appeal to this Court from the order of the Chief Justice of the High Court.

"The plaintiff on this appeal seeks a much wider interim injunction than has been granted him, claiming to be entitled to an interim injunction in terms of restraining the defendants and each of them 'from besetting and watching the place where the plaintiff carries on business.... and from picketing the place where the plaintiff carries on business, and from further publishing, or causing to be published signs, sandwich boards, placards, handbills, circulars, or any other written or printed representations to the effect that a strike, or lockout, is now on at the plaintiff's place of business, or that discrimination is there practised, or that low wages are in effect there.'

"It is clear that an interlocutory injunction should not be granted in any such case unless well warranted by authority and likely to do less harm to the defendants, if the plaintiff should fail at the trial, than the withholding of the injunction from the plaintiff at this time would do to the plaintiff, if he should succeed.

"The words complained of and the facts of this case are so similar to the words com-

plained of and the facts in *Collard v. Marshall*, (1892) 1 Ch. 571, that an interim injunction should be granted in the same limited terms as there granted, restraining the defendants, their servants and agents, until judgment or further order, from further publishing or causing to be published the placards complained of or any other placards or statements to the effect that a strike is now on at the plaintiff's business.

"The plaintiff has been carrying on his lunchroom and restaurant during the past twenty years as a non-union shop, with at present some ten employees, all of whom with the exception of one employee, have been with him for at least four and a half years, and the other employee has been with him for at least one and a half years. He discharged one or perhaps two former employees, and this gave rise to the attack upon him. The learned Justice of Appeal said that he was satisfied on the affidavits that there was and is no strike at the plaintiff's restaurant, and that the statements made by the defendants were false and injurious to the plaintiff's trade. An action will lie for injurious falsehood where there is proof of malice, that is, some indirect and dishonest motive, *Balden v. Shorter*, (1933) Ch. 427.

"Counsel for the plaintiff pressed very strongly for a much wider order, in effect restraining the defendants from 'besetting and watching' the plaintiff's place of business. If there is a real case of 'besetting and watching,' as he claims, within the meaning of sec. 501 (f) of The Criminal Code, R.S.C. 1927, ch. 36, the plaintiff's remedy lies in a criminal prosecution. The equitable jurisdiction of the civil Courts should not be extended to regulate public conduct. Reference to *Robinson v. Adams* (1924), 56 O.L.R. 217, where *Middleton, J. A.*, said, at p. 225, after reviewing the authorities with great care, 'It is safe to say that the Court of Chancery never granted an injunction in aid of the criminal law, or as supplementing the criminal law, if it was found to be inefficient.'

"The order appealed from should be varied only by adding thereto the further injunction against defamatory statements injurious to the plaintiff's trade in the terms of the *Collard case* (*supra*). The plaintiff should have his costs of this appeal."

*Dallas, versus Felek et al* (Ontario) 1934 *Ontario Weekly Notes*, page 247.

#### **Employer failing to provide Compensation Coverage must pay Accident Damages**

The Court of Appeal at Toronto heard an appeal by the Pigeon Lumber Company from the judgment of Chief Justice Rose of the High Court, awarding Berg, the plaintiff,

\$5,000 for workmen's compensation, the company having failed to insure the plaintiff under the Workmen's Compensation Act as they had contracted to do. The circumstances of the case are given in the judgment of Mr. Justice Masten in the Court of Appeal, as follows:—

The plaintiff's contention was that the defendant company undertook to see that he was duly insured under The Workmen's Compensation Act and that it failed, either through negligence or plain breach of contract, to implement the duty which it had undertaken. The plaintiff was injured by a dynamite explosion while conducting, for the defendant, a drive of cordwood down the Current River. Claim having been made on the Workmen's Compensation Board, the Board held that the necessary returns had not been made to it so as to entitle the plaintiff to the benefit of the Act. The defendant appealed on the ground that no negligence on its part was established, and that the trial Judge erred in holding that there was a contract on the part of the defendant.

(The text of the agreement upon which the action was founded is omitted.)

The contest turns largely, if not exclusively, on the last sentence of the letter, "It is expressly understood that all the contractors are to be covered by workmen's compensation." While these words are perhaps ambiguous, yet in the light of the surrounding circumstances, the customary practice, and particularly the interpretation put upon them by the parties themselves by their subsequent course of action, they were established as a contract by the defendant company to see that the plaintiff should be covered by workmen's compensation. No questions were asked, no discussion took place, but the defendant company took the steps which, according to its customary practice, it deemed necessary to ensure the benefits of the workmen's compensation fund to the plaintiff, and charged the expense of so doing against him, pursuant to the terms of the contract above quoted. The plaintiff, on the other hand, did nothing but accept the charge so made against him. Consequently, there was an obligation assumed by the defendant to see that all allowable and essential steps were taken to insure that plaintiff should be covered by the workmen's compensation fund.

Mr. Manning, in his very able argument, suggested that it was impossible under the terms of the Act to cover the plaintiff, that the contract was for an impossibility, which impossibility must be assumed to be known to the plaintiff, and, consequently, that the contract in this respect was *nudum pactum*. This argument is founded on the contention that

the Workmen's Compensation Act does not contain any provision for accident coverage for contractors who are not employers, the only persons eligible for coverage being employers and workmen. The appellant contends that the plaintiff was not an employer since Berg, Erickson, Ferm and Johnson were contractors only and they never had an employee. Under the contract they were at liberty to hire workmen, and the contract contemplates that possibility; but they had not done so, and might not have found it necessary. They were doing the drive themselves personally, acting both as contractors and workmen on their own job.

In answer to this contention Mr. Allen, for the respondent, contended that, no matter what construction the Court might of its own motion put upon the various clauses of the Workmen's Compensation Act, the true construction of that Act had been determined in this case by the Workmen's Compensation Board, and that the determination of the Board in that regard was decisive for all purposes and must be adopted by the Court.

As soon as this accident occurred, application was duly made to the Workmen's Compensation Board for the necessary allowance to the plaintiff. The Workmen's Compensation Board announced its decision in a letter dated June 10, 1932, which read as follows: "The Board has decided that compensation or medical aid cannot be allowed in this case as the claimant is an employer and an employer is not entitled to compensation unless personal covering has been requested for him prior to the accident, as provided by Section 11 of the Workmen's Compensation Act."

The appellant had been informed by one Leggo that, in order to cover contractors doing work for it, such as the plaintiff was doing, the company, in their estimate for the ensuing year filed with the Board, should include a general statement of total estimated expenditure, and that thereby their contractors would be covered. This was done by the appellant. Apparently Leggo, who is a subordinate officer of the Compensation Board, led the appellant astray by omitting to say that, in addition to the estimates, it would be necessary, as soon as a contract was made, and before any accident occurred, to report to the Board the names of the contractors who were to be covered. In the present case, no such supplementary report having been made, the plaintiff was not covered, though he might have been covered if such return had been made.

While, on the plain wording of the Act, the argument of Mr. Manning is unanswerable that the only persons covered are employers and workmen, yet the adjudication

by the Workmen's Compensation Board that the plaintiff came within the term employer and, upon proper steps being taken, was eligible for the benefits of the Workmen's Compensation Act, is an adjudication by which the Court is bound. It is in the nature of an adjudication *in rem*. The Workmen's Compensation Board has by the legislature been made absolute in the administration and operation of the Workmen's Compensation Act. Their determination of matters either of law or fact, including construction of the Act, are without appeal and are absolute. The Court is expressly precluded from interference and, consequently, the Board, having determined that the respondent is an employer, the Court is bound in this action to accept their conclusion.

It follows that the respondent failed to rank on the compensation fund only because his name was not, before the accident, transmitted to the Board by the appellant company. Consequently, there has been a breach by appellant of its contract with the plaintiff, by which he has suffered, as damages, the loss of the compensation which the Board would have awarded him.

However, the computation of damages made by the trial Judge was not sufficiently supported by the evidence which the plaintiff adduced. There should therefore be a reference to the Master at Toronto to determine the damages. The plaintiff is entitled to the costs of the action down to the trial but to no costs of the trial before Rose, C. J. H. C., or of the subsequent proceedings in the action as now directed.

*Berg versus Pigeon Lumber Company (Ontario), 1934, Ontario Weekly Notes, page 257.*

#### Quebec Minimum Wage Act Subject to Provisions of Civil Code

A seamstress employed by a waist company at Montreal brought an action against the company for arrears of wages alleged to be due to her under section 11 of the Women's Minimum Wage Act of Quebec, which provides: "When an employer pays an employee wages lower than those fixed by the Commission, such employee may recover the differences by a suit before any court of competent jurisdiction, either during the course of her engagement or after the same has ended." The employee in question claimed the sum, of \$397 as representing the difference between the wages actually paid and the sum alleged to be due under the Minimum Wage Order for the industry.

The Superior Court allowed the claim in part but pointed out that under the Civil Code of Lower Canada workers who are paid by the

week or month or for less than a year cannot bring an action for wages for a period of more than a year calculated from the date when the action was begun. Special legislation, such as the Women's Minimum Wage Act, cannot override the civil law as to such matters unless it is expressly specified in such legislation. Where there is no such express provision, and a new law appears in conflict only in some points with the old law, the former must be so interpreted as to be in harmony with existing law and to reconcile any provisions which are not mutually exclusive.

The plaintiff was allowed \$57.90 for arrears of wages for the past year together with interest and costs. *Dubois v. National Waist Company* (Quebec), 1934. *Rapports Judiciaires de Québec, Cour Supérieure*, vol. 72, page 102.

### Employees' Benefit Plan Not a Form of Contributory Insurance

Canadian Industries Limited sets aside a reserve fund for the purpose of creating an Employees' Benefit Plan, whereby in the event of the death of an employee the company provides, without cost to its employees, for the payment of certain sums to the beneficiary of the deceased. Shortly before his death, an employee who held a certificate under the plan substituted the names of his daughters for that of his wife as beneficiaries. After his death the widow having brought an action for the payment of the benefit, the Superior Court found that the substitution of names was valid, being allowed by the terms of the plan, and that the widow could not claim the amount of the benefit either personally as universal legatee of the husband under his will, or as the executrix named thereunder, the amount of the benefit never having become part of the estate of the deceased. The judgment pointed out that the Employees' Benefit Plan is in no sense an insurance requiring the payment of premiums by employees entitled to the benefits thereof, but is purely a gratuitous and benevolent disposition on the part of the company in favour of such of its employees as remain in its employ (all benefit thereunder being lost when an employee leaves the company's employ), and is designed to foster and encourage the loyalty and co-operation of such employees."

The Court dismissed the action with costs.

*Dame Paouluk versus Canadian Industries Limited, and Dame Llacer and another* (Quebec), 1934, *Rapports Judiciaires de Québec (Cour Supérieure)*, page 109.

### Liability of Employer for Accident where Chauffeur has engaged Substitute

In a collision between a motor car and a motor truck in Alberta a passenger in the motor car was instantly killed. The widow brought an action for damages against the owner of the truck and also against the owner of the motor car, claiming that negligence had been shown by both parties. The motor car was owned and was being driven by Hart, an employer of the North Star Oil Company and the deceased had undertaken to assist Hart in his trip through the country acting as interpreter. The motor truck, owned by the Gillespie Grain Company, was being driven, not by Colby the driver employed by the Company, but by Wilkie, a friend who accompanied him contrary to the orders of the employing company. Judge Ewing, at the trial, found that the drivers of both vehicles were at fault. While not deciding that the Gillespie Grain Company was liable by reason of the negligence of Wilkie, he found that Colby, its employee, was not free from negligence, and gave judgment against both Colby and the Company, awarding the plaintiff \$24,100. The Gillespie Grain Company appealed on the ground that they were not liable because the car, at the time of the accident, was being driven by Wilkie, who was not an employee of the company. Colby, they contended, had been engaged by the company to drive this truck and had instructions from the company that nobody else was to drive it, but he allowed Wilkie to drive it from time to time. On the occasion of the collision Wilkie was driving, Mrs. Wilkie and Colby also being on the seat alongside Wilkie. Counsel for the appellant stressed the point that Colby was acting beyond his authority in allowing Wilkie to drive the car.

Chief Justice Harvey, in the Alberta Supreme Court (Appellate Division) concurred with the trial judge as to the negligence of the parties, and remarked that, "moreover, it is not to be overlooked that under our law the plaintiff need not prove negligence, and unless the defendant can show an absence of negligence he is liable. The only question that remains is as regards the amount of damages awarded." On this point his Lordship cited the decision in *Royal Trust Company versus C.P.R.* (1921), a similar case, where the deceased was a specialist of high standing in the medical profession, the loss to the widow being estimated on the basis of her expectations from the estate which the deceased would have amassed had he survived. In the present case the deceased had no definite settled occupation, and at his death

was a bankrupt with debts of \$700 and apparently no assets. "In my opinion," his Lordship concluded, "the sum awarded is much too high, having regard to the rights of the defendants, but, as the majority of the Court take an opposite view and would dismiss the appeal in all respects, no good purpose would be served by my stating or even deciding what I would consider fair."

Mr. Justice McGillivray referred to the submission of the Gillespie Grain Company that Colby, its employee, being prohibited from allowing anyone else to drive the truck of which he was in charge, his conduct in permitting Wilkie to drive relieved this defendant from liability because, acting contrary to instructions, he could not be said to have

been acting within the scope or course of his employment at the time of the accident. "As to this," his Lordship said, "I think that it must be said that while Wilkie was driving Colby was still engaged in carrying on his employer's work and the circumstance that he was disobedient or imprudent in so doing does not serve to put him outside the scope of his employment. In other words, his disobedience did not make his act different in kind from the act which he was required to do; it was merely improper conduct within the sphere of his employment and so the employer is not relieved of liability."

*Kuproski versus North Star Oil Company Limited (Alberta), 1934 Western Weekly Reports, vol. 2, page 7.*

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**I**NDUSTRIAL employment in Canada showed an increase at the beginning of May, according to returns received by the Dominion Bureau of Statistics from 8,591 firms, each employing a minimum of 15 workers and representing all industries except agriculture, fishing, hunting and highly specialized business. The working forces of these firms aggregated 856,316 persons, as compared with 848,799 in the preceding month. The employment index (with the average in the calendar year 1926, as the base equal to 100) stood at 92.0, as compared with 91.3 on April 1, and 77.6 at the beginning of May of last year. In the preceding twelve years, the indexes for May 1 were as follows: 1932, 87.5; 1931, 102.2; 1930, 111.4; 1929, 116.2; 1928, 106.8; 1927, 101.8; 1926, 95.4; 1925, 91.9; 1924, 92.9; 1923, 92.5; 1922, 84.3 and 1921, 85.1.

At the beginning of May, 1934, the percentage of idleness reported to the Department of Labour by local trade unions stood at 19.1 as compared with percentages of 19.5 at the beginning of April and with 24.5 at the beginning of May, 1933. The percentage for May was based on the reports tabulated by the Department of Labour from a total of 1,693 labour organizations with a combined membership of 150,638 persons.

Reports received by the Department of Labour from the offices of the Employment Service of Canada for the month of April, 1934, recorded gains over the previous month and also over April a year ago in the average daily placements effected, although total placements for the month under review were lower than in March, due to fewer working days. The major change under each comparison was in the construction and maintenance group. Vacancies in April, 1934, numbered 32,287, applications 60,349, and placements in regular and casual employment 29,968.

In retail prices the cost per week of a family budget of staple foods, fuel and lighting and rent at the beginning of May was again lower, due mainly to the lower cost of

foods, chiefly butter and eggs, although fuel and rent also declined slightly. The cost of the budget for May was \$15.96 as compared with \$16.28 at the beginning of April; \$15.57 for May, 1933; \$21.49 for May, 1930; \$21.54 for May, 1926; \$26.92 for July, 1920 (the post war peak); and \$14.21 for May, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics was unchanged, being 71.1 in April and May. Figures for previous dates are 66.7 for May, 1933; 89.7 for May, 1930; 93.4 for May, 1929; 100.2 for May, 1926; 164.3 for May, 1920 (the post war peak); and 64.2 for May, 1914.

The most recent statistics available reflecting industrial conditions in Canada are given in a table on page 493. Industrial activity as indicated by the index of the physical volume of business was slightly lower in April than in the preceding month but was about 33 per cent higher than in April, 1933. Of the principal factors in the index mineral production, electric power output, car loadings and imports were higher than in the previous month while manufacturing, construction, trade employment and exports were lower. All of the main factors were substantially higher than in the corresponding month a year ago. The latest statistics available for May show the wholesale prices index unchanged from the level in April while employment showed a slight gain. Car loadings continued to increase and for the four weeks ending May 26 were 21 per cent higher than for the corresponding period in 1933. Contracts awarded were much higher both as compared with the preceding month and as compared with May, 1933.

The number of strikes and lockouts recorded for May was 32, involving 5,954 employees, resulting in a time loss of 36,846 man working days, as compared with 21 disputes involving 5,282 employees with a time loss of 78,128 working days in April. For May, 1933, as finally revised, the number of disputes was 15, involving 1,580 workers with a time loss of 11,798 working days. Many of the disputes during May, 1934, involved small numbers of employees for short periods of time and most

of the time loss was due to three of the strikes carried over from April, namely loggers in Vancouver Island, B.C., coal miners at Stellarton, N.S., and Minto, N.B., all of which were terminated early in May. These with three other strikes of coal miners, one in the Crow's Nest Pass, B.C., and two in Cape Breton Island, N.S., accounted for nearly two-thirds of the time loss for the month. Three pulp and paper mill strikes at Fort Frances, Ont., and at Buckingham and Dolbeau, P.Q., caused about 3,000 days' time loss. Twenty-two of the thirty-two disputes recorded commenced during the month, and twenty-six were terminated, nine in favour of workers, eight in favour of employers, nine being partially successful or ending in compromises. The six disputes recorded as in progress at the end of the month involved 261 workers. These figures do not include those strikes and lock-outs in which employment conditions were no longer affected but which had not been called off or definitely declared terminated by the unions involved.

#### **Industrial Disputes Investigation Act.**

During the past month the Department received the report of the Board of Conciliation and Investigation in connection with the dispute between the Canadian National Railways and certain of its commercial telegraphers in the Maritime Provinces. Four new applications for the establishment of Boards were received during the month. Particulars of recent proceedings under the Act appear on page 499.

#### **Eighteenth International Labour Conference.**

The Eighteenth International Labour Conference opened at Geneva on June 4 under the presidency of Senator Justin Godart, of France. A full account of the proceedings, with the text of the Draft Conventions and Recommendations adopted, will be given, if possible, in the July issue of the LABOUR GAZETTE.

The following subjects are being dealt with at the Conference: (1) Reduction of hours of work (second discussion); (2) Unemployment insurance and various forms of relief for the unemployed (second discussion); (3) Methods of providing rest and alternation of shifts in automatic sheet-glass works (second discussion); (4) maintenance of acquired rights and rights in course of acquisition under invalidity, old age and widows' and orphans' insurance on behalf of workers who transfer their residence from one country to another (first discussion); (5) Workmen's compensation for occupational diseases: partial revision

of the Convention concerning workmen's compensation for occupational diseases; (6) Employment of women on underground work in mines of all kinds (first discussion); and (7) Partial revision of the Convention concerning employment of women during the night.

The Canadian Government is represented at the Conference by Dr. W. A. Riddell, who is also the Government's permanent representative at Geneva, and by Mr. P. E. Renaud, secretary, Canadian Government Office, League of Nations, Geneva. The other members of the Canadian delegation are as follows:—

*Advisers to Government delegates:* Mr. G. A. Gagnon, Vice-President, La Confédération des Travailleurs Catholiques du Canada, Inc., Chicoutimi, P.Q.; and Mr. W. T. Burford, Secretary-Treasurer, All Canadian Congress of Labour, Ottawa.

*Employers' delegate:* Mr. Wm. D. Black, Chairman of the Commercial Intelligence Committee of the Canadian Manufacturers' Association, and Vice-President and General Manager of the Otis-Fensom Elevator Co., Ltd., Hamilton, Ont.

*Adviser to Employers' delegate:* Mr. H. W. Macdonnell, Secretary of the Industrial Relations Committee of the Canadian Manufacturers' Association, Toronto, Ont.

*Workers' delegate:* Mr. Tom Moore, President of the Trades and Labor Congress of Canada, Ottawa.

*Adviser to Workers' delegate:* Mr. Percy R. Bengough, Vice-President, Trades and Labor Congress of Canada, Vancouver, B.C.

Dr. W. A. Riddell has been elected chairman of the Government section of the Conference, and Mr. Tom Moore, vice-chairman of the Workers' group.

#### **Bills to facilitate farm credit in Canada.**

Two bills to facilitate farm credit in Canada were introduced by the Prime Minister in the House of Commons on June 4. The first bill, entitled the Farmers'

Creditors Arrangement Act, is for the purpose of providing simple and inexpensive machinery and procedure whereby farmers who are unable to meet their liabilities as they fall due may propose to their creditors a composition, extension of time or scheme of arrangement of their affairs, and of reducing the costs of such procedure. This bill would provide further that where the debtor and creditors, after having considered such a proposal have been unable to reach an agreement, a Board of Review established by the Governor in Council, consisting of a Superior Court judge and representatives of the debtor and creditors, may formulate a proposal based upon the present and prospective capability of the

(4) Calculated from yields of Ontario bonds.

(7) MacLean's Building Review.

(8) For group figures, see articles elsewhere in this issue.

(9) Figures for end of previous month.

(9) Figures for four weeks ending May 26, 1934, and corresponding previous periods.

(9) Sugar production given in periods of four weeks ending May 19, April 21 and March 24, 1934; May 20, April 22 and March 25, 1933.

debtor to pay and the productive value of his farm, and this proposal after it has been considered by the debtor and the creditors may be confirmed by the Board of Review, as a result of which confirmation it becomes binding. There is a further provision that whenever the rate of interest on a farm mortgage exceeds seven per cent, the mortgagor may tender the principal and interest together with three months' further interest in lieu of notice, and thereafter no interest shall be payable in respect of the said mortgage at a rate in excess of five per cent.

The second bill would amend the Canadian Farm Loan Act so as to facilitate and increase the extension of credit to farmers, to authorize the Minister of Finance to purchase additional bonds issued by the Farm Loan Board and guaranteed by the government, and to provide for supplementary advances by the Board.

#### **Appeal to manufacturers to employ young men.**

An appeal to employers to assist in absorbing into the commercial and professional life of the country the thousands of young Canadians graduating from the universities, colleges and technical schools of the Dominion, is made in the May issue of the *Industrial Canada*, the monthly publication of the Canadian Manufacturers' Association. After a reference to the prominent part taken by the manufacturers in the support of educational institutions in Canada the magazine proceeds: "With this background, we are confident that members of the Association will take into serious consideration the placing of this year's graduates and in their own industries will endeavour to find positions for one or more of the young men entering on their life's work. Apart from the humanitarian aspect of the case, genuine advantage is to be gained from recruiting from year to year a steady stream of carefully selected juniors, who show promise of developing executive capacity in the future. It is desirable to do this irrespective of business conditions in the present since only by pursuing this policy consistently can a large business organization be certain of continuing to fill the higher positions of responsibility within it, as they successively become vacant, by the promotion of men trained within its own ranks."

#### **Committees to assist young persons in choice of career.**

a career and in finding suitable employment.

Since 1918 the British Ministry of Labour has co-operated with the Associations of Head Masters and Head Mistresses in the work of assisting boys and girls from public schools in choosing

This work is in charge of committees containing representatives from the schools, and from business and the professions. Officers of the committees periodically visit the schools and advise the teachers and children and their parents on the choice of, and prospects offered by, various careers. Information relating to training facilities and professional requirements and prospects in careers suited to secondary school pupils is collected by the committees, the results being published by the Department of Labour in bulletins under the general title of the "Choice of Career" series. Recent reports indicate that boys and girls, as the result of the work of the committees, are tending to seek employment in non-clerical occupations. In 1933, of candidates placed in other than clerical posts, over a hundred boys again entered engineering firms; while numbers of both boys and girls entered the distributive trades (wholesale and retail). Others interested in the sciences were placed in Government, municipal, scholastic, industrial, and hospital laboratories; while a large number of girls took up hospital or nursery nursing as a career. In order to maintain contact with their candidates, and to keep in touch with tendencies in the employment market, the Committees encourage the boys and girls whom they place in employment to report progress either at "open evenings" held each week or by calls at their offices during ordinary hours. They are then afforded an opportunity of discussing any difficulties they may have encountered, and are supplied with any information they may require in regard to facilities for further training.

#### **Apprentice training for the construction industry.**

The place of apprentice training in preparation for the coming revival of the construction industry is described by Mr. A. W. Crawford, Deputy Minister of Labour and Chief Inspector of Apprenticeship for Ontario, in an article in the *Engineering and Contract Record*, May 16. "The experience of previous depressions and existing information indicate," he says, "that there will be a decided shortage of skilled workers in the building trades immediately following the revival of activities. We are now on the way to such a revival. This is the time to plan for renewed activity in apprentice training and to select suitable boys for training and employment as soon as work is available."

Mr. Crawford refers to what has been accomplished under the Ontario Apprenticeship Act of 1928 (*LABOUR GAZETTE*, August, 1928, page 870). "Over 1,600 boys have been indentured in the nine designated building trades

under the Act, of whom 839 have been granted diplomas for successful completion of the training period. Employers and representatives of organized labour who are familiar with the work agree that even if nothing else had been accomplished except the operation of the special day classes for first and second year apprentices held during the months of January and February each year, the passing of the Act by the Ontario legislature would have been fully justified."

Many of the largest industrial establishments and several contractors of the building trades have adopted the practice of selecting apprentices from the graduates of vocational schools who have specialized in one branch of industrial activity. "Such boys make rapid progress and are an asset from the beginning. If this custom were to become general, apprenticeship systems would rapidly become effective in trades where they are needed, and other methods of training, requiring little time or expense, could be adopted for the highly specialized operations and semi-skilled occupations in which the majority of industrial workers are employed."

#### **Milk Control Board of Ontario.**

The Milk Control Act, 1934, passed by the Ontario Legislature at the last session, as was noted on page 432 of the last issue, has

been proclaimed as effective as from April 18, 1934. Regulations under the Act were published in the *Ontario Gazette*, May 12, signed by Mr. J. B. Fairbairn, chairman of the Milk Control Board under the Act. This Board has "jurisdiction and power upon its own initiative, or upon complaint or request made to it in writing, to inquire into any matter relating to the producing, supplying, processing, handling, distributing or sale of milk and, subject to the approval of the Lieutenant-Governor, to make regulations with respect thereto or to any of the said matters."

Under the regulations persons or classes so engaged or employed must obtain licences each year from the Board, the charge being \$1 for a licence or renewal of licence. The Board may refuse, suspend or cancel a licence where there has been failure to carry out the provisions of the Act or the regulations. Proof must be submitted to the Board as to the financial responsibility of the applicant for a licence. All premises, plant and equipment are subject to inspection by the Board, and all distributors must make reports to the Board as required.

The Board has authority also to make regulations "governing disputes and the termination of disputes arising between producers and

distributors of milk, or between any two or more classes or branches of persons engaged in the milk industry as producers, processors, handlers, haulers, distributors or vendors of milk, or as being otherwise engaged in the said industry," and also "governing agreements which may be entered into between producers of milk and other persons or classes of persons engaged in the milk industry."

#### **Enforcement of collective agreements in Great Britain.**

A bill to make temporary provision for enabling statutory effect to be given to rates of wages agreed between organizations representative of a majority of the employers in the cotton manufacturing industry on one side, and of a majority of the workers in the industry of the class or classes affected on the other side, was introduced in the British House of Commons on May 3 under the title "the Cotton Manufacturing Industry (Temporary Provisions) Bill."

The Bill enables an organization of employers and an organization of employed persons in the cotton manufacturing industry to make a joint application to the Minister of Labour in the prescribed manner for the making of an order with respect to any agreement made between the organizations as to the rates of wages to be paid to any persons employed in the industry. Provision is also made for public notice being given of the fact that an application is being made, and for a period of time being specified during which objections may be sent to the Minister. On receiving such an application the Minister is to appoint a Board to consider the application and report thereon, unless he is satisfied that the organizations do not respectively represent the majority of the employers and the majority of the employed persons in the industry of the class or classes that would be affected by such an order.

The Board is to consist of a chairman and two other members appointed by the Minister, none of whom is to be connected with the industry; and each of the organizations which were parties to the application would be entitled to appoint six of their members as assessors. The first duty of the Board will be to inquire whether the organizations which are parties to the agreement were, at the date of the agreement, representative respectively of the majority of employers and of the class or classes of employed persons affected. If satisfied on that point they are to inquire further whether it is expedient that an order be made, and are to report to the Minister as soon as possible; their report is

not, however, to contain a recommendation that such an order be made unless they are unanimous on the point. On receiving such a unanimous recommendation from the Board, the Minister of Labour may make an order, which is to set out the rates of wages thereby brought into force, and any provisions of the agreement as to the conditions for earning or the method of calculating such wages; the order may also contain further provisions, if necessary, to make plain who are the employers and the classes of employed persons affected by the order. The terms of the agreement may not however be modified by any such order. The rates so fixed are to become part of the terms of contract of every employed person in the industry, and an employer paying less than the rates applicable under the order will become liable to a monetary penalty. The bill also provides for the maintenance by employers of the records necessary to show compliance with the order. The procedure is laid down for the revocation of an order so made. The sections of the Bill which relate to the establishment of a Board and the enforcement of rates of wages are to be in force until December 31, 1937.

#### **Proposed code for coal distribution in Western Canada.**

The Western Canada Fuel Association, at their 14th annual convention held at Estevan, Saskatchewan, during May, decided to establish "codes of business ethics," designed to regulate all sections of the industry "with a view to placing competition on a fair and equitable basis, in the interests of the workers, consumers, producers and distributors." More than 200 delegates attended the convention, representing divisions in Manitoba, Saskatchewan, Alberta, and British Columbia. Codes will be drafted by each group of operators, retailers and wholesalers. These will be submitted to the executive board of the association and the whole combined in three general codes to apply to each branch. The purpose of the codes is stated to be to eliminate over-production and wasteful competition as far as possible.

A "code of fair competition," approved recently by the Winnipeg Coal Exchange, and published in the *Western Canada Coal Review*, April-May, 1934, contained the following Article on Labour:—

"(1) Employers shall comply with the minimum rates of pay, and other conditions of employment, as set forth in this Code; (2) Within each Province members of the industry shall comply with any laws of such Province imposing more stringent requirements

regulating the age of employees, wages, health, welfare, or general working conditions, than are imposed by this Code, but in no case shall any person under the age of 18 years be employed in the use of power-driven loading or unloading equipment or power or horse-driven vehicles and provided further that no person under the age of 16 years shall be employed; (3) Employers shall not reclassify employees so as to defeat the purpose of the Act; (4) The weekly wages of any salesman, or canvasser, regardless of whether he be compensated upon a commission or salary basis or both, shall not, unless specifically approved in writing by the Divisional Code Authority, be less than \$20 a week; (5) The use of contractors, sub-contractors, haulers, truckers, or others to perform any of the functions of this industry is prohibited unless the employees of such contractors, sub-contractors, haulers, truckers or other employees shall receive wages as high as employees in the same classification of this industry; (6) Any work done in any coal or wood yard or other branch of this industry on a piece work basis shall not be paid less than the minimum hourly rate as set forth in this Code.

"The following suggestions are not intended to be embodied in this Code, but are for the consideration of the members of the Trade in Greater Winnipeg.

"*Rates of Pay.*—Yardmen who operate a wood sawing machine or any other power-driven machine, 40 cents per hour; yardmen, other than those mentioned above, 35 cents per hour; truck drivers and teamsters, 40 cents per hour; men working on hired trucks to be paid on the same basis mentioned above and the company hiring the truck is responsible for seeing that the men working on the hired trucks are paid accordingly. The following are the cartage rates to be paid to cartage companies or to the owners of hired trucks: domestic coal or coke, 75 cents per ton; steam coal, 35 cents per ton; long wood, 90 cents per cord; cut wood, \$1.10 per cord; wood sawyers are to be paid at the rate of 75 cents per cord, whether it be for one cord or any greater quantity."

#### **Sickness and the economic depression.**

The Public Health Service of the United States Treasury Department has published a preliminary report dealing with "sickness and the economic depression," based on a study of illness in the families of wage earners in three cities (Birmingham, Detroit and Pittsburgh). The report refers to the fact that during recent years the gross death rate throughout the country actually declined and in 1933 attained the lowest level on record.

On the other hand, "the death rate is not an adequate criterion of the extent of sickness and impairment. It is not affected immediately by unfavourable living conditions unless starvation and pestilence are actually present. It does not promptly reveal decreased resistance to disease. It is not an accurate measure, for example, of malnutrition. Furthermore, the gross mortality rate for the nation as a whole or for any large group of the population does not tell whether or not certain elements of the population are suffering from ill health; the actual increase in illness and mortality among that fraction which has been reduced to poverty by the depression may be masked by the general downward trend of the mortality among the more fortunate and larger moiety of the population. In fact, fragmentary information already gives a hint of warning that, in certain areas and among certain classes of the population, the situation is not nearly so favourable as gross mortality rates appear to show. Malnutrition among school children apparently has increased in some localities at least. Higher infant mortality and tuberculosis death rate have been experienced in certain areas of New York City where unemployment was most serious. Signs of an increase in the number of cases of mental disease are not lacking. Already there is some evidence that the sickness rate has risen among the unemployed population, especially where social relief has been unequal to the situation."

In the three cities which formed the subject of this special investigation it appeared that the rate of disabling illness reported in the families of the unemployed was 39 per cent higher than that in the families of full-time wage earners, and 25 per cent higher than that of the group of part-time workers.

#### **Proposals for better housing for workers in Great Britain.**

The departmental committee on housing appointed last year in Great Britain recently published their report, which had been presented to Parliament by the Minister of Health. The committee was instructed to consider what steps might be necessary "to secure the maintenance of a proper standard of fitness for human habitation in working-class houses." Among other recommendations they propose that every owner of working class property which is not in all respects fit for human habitation shall be made liable at law to expropriation on a new basis of compensation; that private owners be given the statutory right to submit to the Minister voluntary clearance or improvement schemes (except in regard to properties

that are included in the five-year clearance programs of the local authorities); and that the local authorities be empowered to give a licence to any owner who has reconditioned his house to their satisfaction, exempting the house for a fixed period from liability to clearance or demolition without full compensation, the owner being obliged to maintain the property in good state during the licensed period.

The proposed basis for compensation is summarized as follows: "We propose that the dispossessed owners should be paid what they themselves paid for the property, or the value accepted for death duties if they inherited it, or the value adopted for stamp duty if they acquired it by deed of gift. That is to say, the consideration disclosed on the latest transaction prior to the date of our report should be taken as the compensation to be paid. In other words we should give them back their money..... We appreciate that the plan could not unfairly be described as rough justice we realize that anomalies will arise as between different owners, but we are satisfied that as between the owners and the community the plan would be fair and reasonable and would err, if at all, on the side of generosity to the owners. We are advised, however, that on balance the interests of the community would be adequately protected on this basis."

#### **Proposed Child Labour amendment in U.S.A.**

State committees are being formed in the United States for the purpose of opposing the Child Labour Amendment to the United States Constitution. Before the amendment can become effective it must be ratified by three-fourths of the States twenty of the 48 States have already ratified it. The proposed amendment is as follows:

Section 1.—The Congress shall have power to limit, regulate, and prohibit the labour of persons under eighteen years of age.

Section 2.—The power of the Several States is unimpaired by this article except that the operation of State laws shall be suspended to the extent necessary to give effect to legislation enacted by the congress.

The New York State Committee to oppose the amendment consists of Mr. Elihu Root, Dr. Nicholas Murray Butler, and Mr. William D. Guthrie. This committee is submitting to the State Legislature a pamphlet which points out that the amendment was first proposed on June 2, 1924, and that though it has now been ratified by 20 States it had been rejected in 1924-25 by 35 and ratified by only four. Although ratified in 1933 by 14 States it was

unsuccessfully re-introduced in 11, and in 1934 has not been ratified by any State and has been rejected by seven. A Supreme Court decision is quoted to show that an Amendment must be ratified within some reasonable time after its proposal, and the authors' claim that it had long been generally assumed that the Amendment had been finally defeated. The Amendment, it is argued, would trample on the rights of the States and vest in Congress greater power over the children of the nation than has even been or can constitutionally be exercised by any of the States, and attempts to exercise this power would probably result in as disgraceful a failure as the attempt to enforce the Volstead Act. Mr. Guthrie contends that the Amendment would also give Congress power to limit the labour of children in the household or on the home farm, and that effective enforcement would require a vast army of Federal functionaries, field officers, investigators, police, detectives, under-cover men and women, etc., necessarily greater in excess of the number found insufficient to enforce the Volstead Act and its amendments.

In pursuance of a resolution adopted by the Alberta Legislature at the recent session, a committee of the Assembly was appointed, by an Order in Council dated April 27, to make a comprehensive survey and study of education in the rural districts and report their findings and suggestions at the next session. The committee is as follows: Hon. P. E. Baker (chairman); Messrs. Hector Lang, W. E. Payne, J. Mackintosh, C. L. Gibbs, G. B. Walker, A. G. Andrews, C. A. Ronning, I. Goresky, R. M. McCool.

In order to fix a minimum wage for female employees in commercial establishments the Minimum Wage Board of the Province of Quebec is arranging to hold a conference of representatives of employers and workers in this occupation throughout the province. Hitherto such conferences have been held for particular districts only. At the general conference the employers in the department, chain and independent store groups are to be represented by the Retail Merchants' Association. Representatives of various social welfare bodies also will attend the meeting.

In the House of Commons, on May 29, Mr. A. A. Heaps (Winnipeg North) asked the Minister of Finance to consider the question of exempting from income tax contributions made by members of trade unions for the relief of unemployed members. "With a large percentage of the members of an organization out of work," he said, "the mem-

bers of that organization assess themselves, of their own free will, to the extent of ten or fifteen per cent of their wages for the purpose of maintaining the unemployed members of the organization, thereby keeping them off relief. I think in such cases, though these donations can be classified as you wish, where voluntary donations are made for the purpose of maintaining unemployed members, exemptions should be allowed for the amounts so donated." In reply, the Hon. E. N. Rhodes, promised that if the matter could be dealt with administratively, he would take it up with the Commissioner of Income Tax.

The following figures show the work dealt with by Ontario Workmen's Compensation Board in April, 1934, and April, 1933:—

—	April, 1933	April, 1934
Total accidents reported.....	2,658	3,884
Fatalities.....	15	11
Compensation and medical aid	\$301,725.78	\$370,124.66
Medical aid (only).....	\$ 52,030.03	\$ 69,333.34

By an Order in Council of the Ontario Government on May 15, the "metropolitan area" of the city of Toronto was, for the purposes of the administration of the Mothers' Allowances Act, enlarged to include the surrounding towns, villages and districts. This measure was taken because the cost of living in the suburban area was considered to be as high as in the city. The rate of \$40 per month prevails throughout the enlarged area as from May 1. Hitherto the rate was \$30 per month for a widow with two children, in townships, villages and towns under 5,000 in population, and \$35 per month in towns over 5,000 in population.

In a recent essay contest promoted by the Robert Owen Foundation in the interest of co-operation in Canada the winner of the prize of \$50 was James Brogden, of Edmonton, Alberta. The *Canadian Co-operator* notes that "while the competition was open to and participated in by university students, the winner is an unemployed carpenter now living in Edmonton, but raised in Lancashire, the birthplace of the modern co-operative movement." The prize was awarded for the best essay on one of the following subjects: (1) Why and how existing industrial enterprises should be organized on a co-operative basis; (2) Study of co-operative effort by unemployed citizens, and (3) The place of co-operative societies within a socialist state. The winning essay, which deals with the last-named subject, is published in the June issue of the *Co-operator*.

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

**F**OUR applications for the establishment by the Minister of Labour of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour during the month of May as follows:—

Two applications reached the Department from the locomotive engineers and the locomotive firemen, respectively, employed on Territory "C," District No. 1, of the Atlantic Region of the Canadian National Railways. Thirty-seven locomotive engineers and 47 firemen are stated to be directly affected by the dispute, which relates to the matter of seniority rights and priority of runs in the territory. An officer of the Department has been instructed to interview the parties concerned in this dispute.

An application was submitted to the Department by employees of the Corporation of the City of Winnipeg, being teamsters, helpers and employees of the incinerator, members of the General Workers' Unit of Civic Employees, One Big Union. Eighty employees are stated to be directly affected by the dispute, which arises in connection with their request for restoration of the 1932 wage scale

and certain changes in working conditions. As the industry concerned does not come within the direct scope of the Industrial Disputes Investigation Act, a Board of Conciliation and Investigation can be established only if the municipal authorities indicate their concurrence.

Employees of various coal operators in the Minto District, being members of the New Brunswick Miners' Union, also applied for the establishment of a Conciliation Board. This application supersedes the request for a Board which was received from the same union during April. The number of employees directly affected by the dispute is stated to be 983. The employing companies named in the application are as follows: The Minto Coal Company; Miramichi Lumber Company; Welton and Henderson Limited; Avon Coal Company; W. Benton Evans; Harvey Welton; Newcastle Coal Company; and Minto Coal Company (Tweedie Mine). The dispute concerns the employees' demand for increased wages and shorter working hours, certain changes in working conditions, and union recognition.

### Report of Board in Dispute between the Canadian National Railways and Certain of its Commercial Telegraphers in the Maritime Provinces

The findings of the Board of Conciliation and Investigation established to deal with a dispute between the Canadian National Railways and certain of its employees in the Maritime Provinces comprising (1) the "North Sydney group of operators," and (2) members of the Commercial Telegraphers' Union of North America, were received in the Department of Labour early in June. The personnel of the Board was as follows: His Honour Judge R. H. Murray, of Halifax, N.S., Chairman, appointed by the Minister in the absence of a joint recommendation from the other Board members; Mr. Hector McInnes, K.C., of Halifax, nominated by the company; and Mr. C. W. Lunn, of Truro, N.S., appointed by the Minister without recommendation, the two groups of employees having failed to agree upon a nominee.

The dispute concerns the wages and seniority rights of a group of cable operators

formerly employed by the Western Union Cable Company at North Sydney in connection with land line commercial telegraph activities and who were absorbed into the land line service of the Canadian National Telegraphs when the latter acquired the property of the Western Union Telegraph Company in the Maritime Provinces in July, 1929.

A unanimous report was presented by the Board with reference to the general question of district and office seniority. The Board's recommendation regarding the matter of basic rates of pay of the North Sydney Group was signed by the chairman and Mr. Lunn, who also suggested a solution of the main difficulties in regard to district seniority. Mr. McInnes dissented from the Board's recommendation concerning the wages question and submitted a minority report. Following is the text of the various reports in this matter:

### Unanimous Report

IN THE MATTER of the *Industrial Disputes Investigation Act* and of a dispute between *The Canadian National Telegraphs (employer)*, and certain of its commercial telegraphers in the *Maritime Provinces (employees)*.

To the Honourable W. A. Gordon,  
Minister of Labour,  
Ottawa.

The Board, in reference to the matters in dispute, unanimously agrees and reports as follows:

#### (a) District and Office Seniority:

In the dispute regarding District Seniority and Office Seniority, the Board is unanimous in finding that, in the evidence placed before the Board, the present system is the best which could fit the circumstances. The Board is, however, of opinion that hardship, in several cases, through lack of the spirit of co-operation, and the assignment of "tricks" among the employees in some of the offices, has caused unnecessary friction, which may be obviated by a conference between the representatives of the Company and the employees affected.

#### (b) Disputes at Brandon, etc.:

The Board has its attention brought to the difficulties regarding Commission Telegraph Offices in Brandon, Manitoba; Prince Albert, Saskatchewan; Drumheller, Alberta; and Woodstock, Ontario. The difficulties of the Telegraph and Railway Department was also referred to by Union representatives. The Board feels that its enquiry does not embrace these disputes and, therefore, has to decline dealing with the matters involved in the disputes.

(Sgd.) R. H. MURRAY,  
Chairman,  
(Sgd.) HECTOR McINNES,  
(Sgd.) C. W. LUNN.

### Majority Report

The majority of the Board, consisting of the Chairman and Mr. C. W. Lunn, representing Commercial Telegraphers' Union of North America, Canadian National Systems Division Number 43 and the North Sydney group, so-called, reports and unanimously agrees as follows:

(c) The solution of the main difficulties in regard to District Seniority could be obviated by the following agreement with all the employees involved in the dispute:

"That none of the operators, formerly of the Western Union in the Maritime Provinces, now in the employment of the Canadian National Telegraphs in the Atlantic Division

taken over on July 1, 1929, by the Canadian National Telegraphs, be hereafter laid off or transferred from the respective offices in which they are employed. This shall not affect operators bidding for bulletined positions, nor the right of the Canadian National Telegraphs to discharge or transfer such operators who, for a good cause, may be deemed unfit to fill said offices."

#### (d) North Sydney Group Ratings:

Mr. Robb had full departmental authority to make arrangements with the North Sydney group as to the special ratings; that such an agreement was collateral and independent, and it need not have been reduced to writing in the Agreement of Sale, but should be incorporated with it. This agreement was ratified by the Company recognizing and paying the Western Union ratings for some years. By virtue of this agreement made by the Canadian National Telegraphs, the Western Union ratings, in proportion to the ratings made to other employees of the Canadian National Telegraphs, should be restored to the North Sydney group. (The Chairman, as an ultimate alternative, suggests a lump sum payment.)

(e) The grievances of the employees: York F. A. Tutty, Jacob Miles, Arthur W. Coppin, Jacob Rogers, Stewart F. Everett and Hubert W. Taylor brought to the attention of the Board, although individual cases, were not strictly, in the opinion of the Board, within its purview. It strongly recommended, however, that an investigation be made in the different cases by the officers of the Company and alleged grievances fully dealt with. Mr. McInnes confines his report solely to the case of Mr. Everett.

(Sgd.) R. H. MURRAY,  
Chairman,  
(Sgd.) C. W. LUNN.

### Minority Report

Mr. Hector McInnes, K.C., representative of the Canadian National Telegraphs, is of opinion . . . that the arrangement made by Mr. W. D. Robb with the North Sydney group was only temporary, and that he did not anticipate abnormal conditions. Mr. McInnes is of opinion, therefore, that the Directors of the Canadian National Telegraphs were right when they put into effect the schedules of remuneration for the North Sydney group, and under their agreement with the Union they could take no other position. He concurs with the reasoning of Mr. Hungerford in his report to his Board in 1933.

(Sgd.) HECTOR McINNES.

## STRIKES AND LOCKOUTS IN CANADA DURING MAY, 1934

THE following table shows the number of disputes, workers involved and time loss for May, 1934, as compared with the previous month and the same month a year ago:—

Date	Number of disputes	Number of employees involved	Time loss in working days
*May, 1934..	32	5,954	36,846
*Apr., 1934..	21	5,282	78,128
May, 1933..	15	1,580	11,798

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time is frequently not received until some time after its commencement.

The number of strikes and lockouts during May was considerably greater than during April, but, as most of the disputes involved small numbers of employees for short periods, the number of workers involved was only slightly greater while the time loss in man-working days was less than half that in April. The strikes involving considerable time loss included that of loggers in Vancouver Island which commenced in March and terminated early in May, also that of coal miners at Stellarton, N.S., which commenced in April and terminated on May 12. Five coal mining disputes caused a time loss of about 12,000 days, and three pulp and paper mill strikes caused a time loss of 3,000 days. Most of the time loss in April was caused by the strike of loggers and two of the coal mining strikes. In May, 1933, none of the disputes involved large numbers of employees or caused much time loss.

Ten disputes, involving 3,883 workers, were carried over from April, the dispute involving automobile washers in Toronto, Ont., reported as in progress at the end of April, having terminated by April 30, while reports as to disputes involving shoe factory workers in Toronto and hop field workers at Sardis and Chilliwack,

B.C., were received too late for inclusion in the May issue of the LABOUR GAZETTE. Twenty-two disputes commenced during May. Of these thirty-two disputes, twenty-six terminated during the month, nine being in favour of the workers involved, eight in favour of the employer concerned, compromise settlements being reached in eight cases, while the result of one is recorded as partially successful. At the end of May, therefore, there were six disputes in progress recorded as strikes or lockouts, namely: shoe factory workers, Toronto, Ont.; compositors, London, Ont.; fur dressers and dyers, Toronto, Ont.; paper mill workers, Dolbeau, P.Q.; furniture factory workers, Toronto, Ont.; and spring and mattress factory workers, Toronto, Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information had been received indicating that employment conditions are no longer affected, but which the unions concerned have not declared terminated. Information is available as to five such disputes, namely: photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q.; and Winnipeg, Man., May 4, 1931, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; lithographers, Toronto, Ont., April 15, 1932, one employer; moulders, Peterborough, Ont., February 27, 1934, one employer; and women's clothing factory workers (cloak-makers), Toronto, Ont., March 22, 1934, several employers.

A dispute involving fifteen chesterfield factory workers in one establishment in Toronto, Ont., from April 16 to April 19, was not reported in time for inclusion in the May issue of the LABOUR GAZETTE. The strike was to enforce observance of an agreement with the Furniture and Wood Workers' Industrial Union of Canada in effect until August 22, 1934, and to secure an increase of ten per cent in piece rates, and was reported by the union to be successful.

A number of disputes were reported in the press regarding which reports giving particulars have not been received, as follows:—

Employees in one cleaning and dyeing establishment are reported to have ceased work early in May, the cause not being stated. Three of the strikers were sentenced to imprisonment for thirty days for assault of a worker.

Twenty caddies at a golf club at Fort Erie, Ont., were reported to have ceased work on May 24, demanding the restoration of the

rate of \$1 per round paid three years ago instead of 65 cents per round.

Shingle mill employees in one establishment near North Vancouver, B.C., are reported to have ceased work and secured wage increases about the middle of May.

Shingle mill employees at New Westminster, B.C., in one establishment are reported to have ceased work and secured wage increases early in May.

Five workers in a tannery and leather manufacturing establishment at Vegreville, Alta., ceased work on May 2 demanding increases, but the result had not been reported.

A strike of six employees in an upholstery establishment in Guelph, Ont., for three days commencing May 3 has been reported, the strikers securing equal distribution of work and recognition of a shop committee.

A minor dispute involved men, variously reported as numbering six to fifty, engaged to load a boat at Wallaceburg, Ont., for one and one-half hours on May 14, demanding an increase in wages from 30 cents per hour to 50 cents and also pay for time waiting. When informed that the wages and conditions were the same as in other ports they resumed work.

A dispute involving coal miners at Stellarton, N.S., not recorded as a strike or lockout, regarding union membership and the "closed shop" for members of one union prevented about seventy miners from working on May 21 to May 23. The United Mine Workers of America, which had an agreement with the employing company since 1919 and had settled a dispute as to a wage reduction on May 12, notified the employer that from May 21 its members would not work with members of another union, the Amalgamated Mine Workers of Nova Scotia. As seventy-five per cent of the employees were members of the former union the management refused work to the others. The collieries were operating only two or three days per week and two days later the members of the rival union picketed the mine, some disturbance occurring without any serious injuries being reported. The United Mine Workers, however, withdrew the demand for the "closed shop" and on the next working day employment was resumed as usual.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistence for which work is performed or may be required, are not included in the record, no relation of employer and employee being involved.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

**HOP FIELD WORKERS, CHILLIWACK AND SARDIS, B.C.**—Employees of one company at Sardis, B.C., ceased work on April 30, followed by those of another at Chilliwack on May 7, demanding increases in wages and better living conditions. The work was reported to be carried on partly on a contract system and partly at hourly wages, the workers and their families living in cabins during the season. As a result of negotiations work was resumed at Sardis after seven days, during which rain prevented work for six days, and after one-half day at Chilliwack. The contract system was abolished and the hourly rate was raised from 20 cents to 25 cents, also arrangements were made for a supply of good water.

**LOGGERS, ETC., VANCOUVER ISLAND, B.C.**—As stated in the May issue of the *LABOUR GAZETTE*, the fixing of minimum wages by the provincial authorities for the logging industry, under an amendment to the *Male Minimum Wage Act*, was followed by a resumption of work in several of the camps affected by this dispute, and on May 7 the strike was declared off, the remaining 1,800 involved resuming work immediately without, however, securing union recognition for which they had been holding out.

**PULPWOOD PEELERS, HEARST, ONT.**—The demand for an increase in piece rates from \$1.50 per cord to \$2 being conceded, work was resumed on May 16 by the employees of the one employer involved in this dispute.

**COAL MINERS, STELLARTON, N.S.**—The settlement of the dispute arranged toward the end of April by representatives of the provincial government, the miners and the receivers under whom the mines were being operated, was accepted by a vote of the miners on May 7, and work was resumed on May 14. The arrangement provided for the continuation of the wage schedule, but instead of a reduction of over twenty per cent, the miners agreed to a deduction of seventeen and one-half per cent from earnings in excess of \$4 per day and twelve and one-half per cent from the others.

**COAL MINERS, MINTO, N.B.**—As stated in the May issue of the *LABOUR GAZETTE*, work was resumed on May 7. The miners having ceased work before applying for a Board of Conciliation and Investigation under the *Industrial Disputes Investigation Act*, contrary to the provisions of the statute, returned on the same conditions as before the strike with the expectation of applying for a Board later. An application was made later, and at the end of the month was under consideration.

**ABATTOIR AND MEAT PACKING WORKERS, WINNIPEG, MAN.**—This dispute, which commenced March 7, involving a number of employees of one company, was terminated on May 19, when the employer reached an agreement with a committee of the strikers providing for a minimum wage rate of 25 cents per hour for inexperienced men, \$10 per week for boys, seven and one-half cents per hour increases for other classes, time and one-half rates for overtime work in excess of fifty-five hours per week, forty hours per week being guaranteed. The employer also agreed to meet a committee of employees at any time. The strikers had demanded a wage increase of ten cents per hour and recognition of the Food Workers' Industrial Union, affiliated with the Workers' Unity League. Wages prevailing had been between 20 cents and 35 cents per hour.

**SHOE FACTORY WORKERS, TORONTO, ONT.**—This dispute, commencing on April 25, was not reported in time for inclusion in the May issue of the LABOUR GAZETTE. A number of employees in one establishment ceased work when their demand for recognition of the Shoe and Leather Workers' Industrial Union and payment of union wages was refused. In connection with picketing, a number were arrested on charges of assault, several being sentenced to imprisonment. The employer secured injunctions from the court against the use of placards, etc., in connection with picketing. At the end of the month the dispute was unternminated but early in June the union reported that the employer had signed a union agreement and all strikers had returned to work on June 4.

**CAP FACTORY WORKERS, TORONTO, ONT.**—Employees in one establishment ceased work on April 27 alleging that the employer had violated an agreement with the Cloth Hat, Cap and Millinery Workers International Union, LABOUR GAZETTE, October, 1933, page 1036, not paying the wages stipulated. The union reported that on May 7 work was resumed, the employer having agreed to accede to the terms of the agreement.

**AUTOMOBILE WASHERS, TORONTO, ONT.**—In regard to this strike involving one establishment commencing March 26, the employer has reported that the strikers were replaced substantially in thirty days. Employment conditions being no longer affected it is, therefore, recorded as terminated.

**RESTAURANT EMPLOYEES, TORONTO, ONT.**—The strike involving employees in a number of restaurants at various dates since March 1, appears to have lapsed early in May.

**SALMON FISHERMEN, VANCOUVER ISLAND, B.C.**—Salmon fishermen on the west coast of Van-

couver Island refused to fish for the price of 7 cents per pound for Sockeye offered by the canning companies, demanding 40 cents per fish, claiming that the fish in that region did not average five pounds each. At a conference of representatives of the packers and a committee of the fishermen, the former offered to pay seven cents per pound with a minimum of 35 cents per fish and this was refused, but fishing was carried on at those rates after May 23.

**CORDWOOD CUTTERS, SOUTH RIVER, ONT.**—A number of the men cutting hardwood for contractors for chemical distillation establishments ceased work about April 16 demanding an increase in piece-rates from \$1.25 per cord to \$1.75-\$2.25. The contractors raised the rate to \$1.40-\$1.50 per cord at which it was stated men could make from \$2.25 to \$2.50 per day. Other workmen were brought into the district by the contractors to work at \$1.50 per cord and by the end of the month the dispute appears to have lapsed.

**COAL MINERS, DOMINION AND RESERVE, N.S.**—Part of the working force in one mine ceased work on May 15 demanding the reinstatement of one employee suspended for alleged carelessness which caused damage and danger to other employees. It was reported that there had been a considerable increase in both fatal and non-fatal accidents since the beginning of the year and the company was insisting on greater care being exercised by employees. The mines being operated under an agreement with the United Mine Workers of America which provided that there should be no cessation of work until negotiations regarding any complaint had been completed and that no grievance would be dealt with while men were on strike, the officials refused to deal with the case while the men were on strike but stated that the suspended miner had been directed to appear before the superintendent on the day of the strike, it being expected that he would be reinstated. The miners ceasing work did not belong to the United Mine Workers of America but to the Amalgamated Mine Workers of Nova Scotia and this organization called a sympathetic strike in other mines. Only one other mine was reported to be appreciably affected, one at Reserve and that for only part of two shifts. The representatives of the strikers requested the provincial Minister of Mines to deal with the dispute and he replied that mediation under the terms of the agreement could not be successful while the men were on strike but that he would come to the locality when the strikers returned. It was, therefore, arranged that work would be resumed on May 21, the suspended miner being reinstated next day.

## STRIKES AND LOCKOUTS IN CANADA DURING MAY, 1934\*

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
<b>(a) Strikes and Lockouts in progress prior to May, 1934</b>			
<b>AGRICULTURE—</b> Hop field workers, Sardis and Chilliwack, B.C.....	93	93	Commenced April 30, 1934; for increased wages and improved conditions; terminated May 7, 1934; compromise.
<b>LOGGING—</b> Loggers, etc., Vancouver Island, B.C.....	1,800	10,000	Commenced Jan. 27, 1934; for increased wages and recognition of union; terminated May 7, 1934; compromise.
Pulpwood peelers, Hearst, Ont..	75	975	Commenced April 3, 1934; for increased wages; terminated May 15, 1934; in favour of workers.
<b>MINING, ETC.—</b> Coal miners, Stellarton, N.S....	1,300	5,000	Commenced Feb. 28, 1934; against reduced wages terminated May 12, 1934; compromise.
Coal miners, Minto, N.B.....	400	2,400	Commenced April 3, 1934; for increase in wages, reduction in hours and recognition of union; terminated May 7, 1934; in favour of employer.
<b>MANUFACTURING—</b> <i>Animal Products—</i> Abattoir and meat packing workers, Winnipeg, Man....	40	680	Commenced Mar. 7, 1934; for increased wages, reduced hours, improved conditions, recognition of union and shop committee; terminated May 19, 1934; compromise.
<i>Boots and Shoes—</i> Shoe factory workers, Toronto, Ont.....	48	1,248	Commenced April 25, 1934; to secure union wages and working conditions; unterminated.
<i>Textiles, Clothing, Etc.</i> Cap factory workers, Toronto, Ont.....	20	100	Commenced April 27, 1934; alleged violation of agreement <i>re</i> wages; terminated May 5, 1934; in favour of workers.
<i>Printing and Publishing—</i> Compositors, London, Ont.....	77	2,000	Commenced Mar. 1, 1934; for renewal of union agreement; unterminated.
<b>SERVICE—</b> <i>Custom and Repair—</i> Automobile washers, Toronto, Ont.....			Commenced Mar. 26, 1934; for increased wages and against dismissal of worker; terminated April 30, 1934; in favour of employer.
<i>Business and Personal—</i> Restaurant employees, Toronto, Ont.....	30	100	Commenced Mar. 1, 1934; for increased wages, reduced hours and recognition of union; lapsed early in May; partially successful.

**(b) Strikes and Lockouts commencing during May, 1934**

<b>FISHING AND TRAPPING—</b> Salmon fishermen, Vancouver Island, B.C.....	50	350	Commenced May 15, 1934; for increase in price for sockeye salmon; terminated May 22, 1934; in favour of employer.
<b>LOGGING—</b> Cordwood cutters, South River, Ont.....	150	3,000	Commenced April 16, 1934; for increased wages; lapsed by May 31, 1934; in favour of employer.
<b>MINING, ETC.—</b> Coal miners, Dominion, N.S....	550	2,750	Commenced May 15, 1934; against suspension of worker; terminated May 19, 1934; in favour of employer.
Coal miners, Reserve, N.S.....	180	270	Commenced May 18, 1934; in sympathy with coal miners on strike May 15, 1934; terminated May 19, 1934; in favour of employer.
Coal miners, Michel, B.C.....	350	1,750	Commenced May 22, 1934; for recognition of union; terminated May 28, 1934; in favour of employer.

STRIKES AND LOCKOUTS IN CANADA DURING MAY, 1934\*—*Concluded*

Industry, occupation and locality	Number of workers involved	Time lost in working days	Remarks
<b>Strikes and Lockouts commencing during May, 1934—<i>Concluded</i></b>			
<b>MANUFACTURING—</b>			
<i>Fur, Leather, Etc.—</i>			
Tannery employees, Kitchener, Ont.....	54	700	Commenced May 1, 1934; for recognition of union and increase in wages; terminated May 15, 1934; in favour of employer.
Fur dressers and dyers, Toronto, Ont.....	60	240	Commenced May 28, 1934; for increase in wages and recognition of union; untermiated.
<i>Textiles, Clothing, Etc.—</i>			
Hosiery factory workers, London, Ont.....	20	120	Commenced May 19, 1934; for reduction in hours; terminated May 26, 1934; in favour of employer.
Hat factory workers, Montreal, P.Q.....	3	12	Commenced May 18, 1934; alleged violation of agreement <i>re</i> excessive overtime; terminated May 22, 1934; in favour of workers.
<i>Pulp and Paper—</i>			
Pulp and paper mill workers, Fort Frances, Ont.....	250	2,750	Commenced May 1, 1934; for increased wages and continuance of six hour day; terminated May 12, 1934; compromise.
Pulp and paper mill workers, Buckingham, P.Q.....	40	80	Commenced May 3, 1934; for increased wages; terminated May 4, 1934; in favour of workers.
Paper mill workers, Dolbeau, P.Q.....	42	294	Commenced May 23, 1934; for increased wages; untermiated.
<i>Other Wood Products—</i>			
Shingle mill workers, Vancouver, B.C.....	45	270	Commenced May 1, 1934; against reduction in wages; terminated May 7, 1934; in favour of workers.
Upholsterers, Toronto, Ont...	10	70	Commenced May 7, 1934; against violation of agreement <i>re</i> employment of union members only; terminated May 14, 1934; in favour of workers.
Furniture factory workers, Toronto, Ont.....	12	180	Commenced May 15, 1934; alleged violation of agreement; untermiated.
<i>Miscellaneous—</i>			
Spring and mattress factory workers, Toronto, Ont.....	22	300	Commenced May 15, 1934; for increased wages and reduced hours; untermiated.
Spring and mattress factory workers, Windsor, Ont.....	13	33	Commenced May 28, 1934; against dismissal of worker; terminated May 30, 1934; compromise.
<b>CONSTRUCTION—</b>			
<i>Buildings and Structures—</i>			
Plumbers, Halifax, N.S.....	17	440	Commenced May 1, 1934; for increased wages; terminated May 31, 1934; compromise.
<i>Bridge—</i>			
Teamsters and labourers, Kitchener, Ont.....	42	105	Commenced May 15, 1934; for increased wages; terminated May 18, 1934; in favour of workers.
<b>TRANSPORTATION—</b>			
<i>Water—</i>			
Longshoremen, Chatham, N.B.....	75	300	Commenced May 19, 1934; for increase in wages and reduction in hours; terminated May 23, 1934; in favour of workers.
Coal trimmers, North Sydney, N.S.....	36	36	Commenced May 28, 1934; for changes in working conditions; terminated May 28, 1934; compromise.
<b>SERVICE—</b>			
<i>Custom and Repair—</i>			
Window cleaners, Toronto, Ont.	50	200	Commenced May 28, 1934; against discharge of workers for union activity; terminated May 31, 1934; in favour of workers.

\*In this table the date of commencement is that on which time lost first occurred, and the date of termination is the last day on which working time was lost to an appreciable extent.

**COAL MINERS, MICHEL, B.C.**—Employees in one mine ceased work on May 22, demanding collection of union dues, apparently for the Mine Workers' Union of Canada, division of all work available with men laid off, and changes in working conditions of drivers. The mine had been operated since 1925 under an agreement between the company and the British Columbia Miners' Association, an independent local union. Some of the miners wished to be connected with the Mine Workers' Union of Canada and demanded its recognition. A large number of the miners, however, objected to this proposal. The management met the representatives of the employees and it was arranged that work would be resumed on May 29 under the terms of the agreement with the British Columbia Miners' Association, including the clauses regarding check-off for union dues and the work of drivers, on condition there would be no recognition of or negotiations with the Mine Workers' Union of Canada.

**TANNERY EMPLOYEES, KITCHENER, ONT.**—A number of the employees, 54 out of about 200, in one establishment ceased work when the demands of the Shoe and Leather Workers' Industrial Union, affiliated with the Workers' Unity League, for increased wages and union recognition was refused. It is reported that the employer had increased wages ten per cent toward the end of last year and promised to give another increase later when business improved and that a five per cent increase had been given recently, making the minimum wage 27 cents per hour with an eight hour day. The establishment continued to be operated but in connection with picketing a number were arrested on charges of assault, etc., several being convicted and fined or imprisoned. All the strikers whose places had not been filled resumed work by May 16 on the same terms as before the strike.

**FUR DRESSERS AND DYERS, TORONTO, ONT.**—Employees in one establishment ceased work on May 28 demanding a fifteen per cent increase in wages, reduction in hours to forty-eight per week, time and one-half for overtime and recognition of the Fur Dressers' and Dyers' Industrial Union, affiliated with the Workers' Unity League. At the end of the month a termination of the dispute had not been reported.

**HOSIERY FACTORY WORKERS, LONDON, ONT.**—Employees in one establishment ceased work on May 19 in protest against an increase in hours from 83 in two weeks to 132½, the wages being piece rates. On May 28, a number of the strikers resumed work on the employer's terms, terminating the dispute.

**HAT FACTORY WORKERS, MONTREAL, P.Q.**—Three employees ceased work on May 18 against the violation of the union rule limiting overtime to ten hours per week, regular hours being forty-four. The International Union of Cloth Hat, Cap and Millinery Workers claimed an agreement, apparently verbal, was in force affecting twenty employees. After four days the employer agreed to adhere to the union rule.

**PULP AND PAPER MILL WORKERS, FORT FRANCES, ONT., BUCKINGHAM, P.Q., AND DOLBEAU, P.Q.**—Employees in one establishment in each of these localities ceased work during May to secure increases in wages to the 1932 wage scale. At Fort Frances agreements between the employing company and the International Brotherhood of Paper Makers and the International Brotherhood of Pulp, Sulphite and Paper Mill Workers had expired on April 30 and negotiations had not resulted in a settlement. The agreements were renewed with the restoration of the 1932 scale, providing for an increase in the minimum rate from 35 cents per hour to 40 cents, with eleven per cent increases for other classes.

At Buckingham the strike was settled by negotiations in two days; similar settlements in two other mills at Ottawa and Hull, where no strikes occurred, were also reached.

At Dolbeau no settlement had been reported at the end of the month.

**SHINGLE MILL WORKERS, VANCOUVER, B.C.**—Employees in one establishment ceased work from May 1 to May 8, the union reporting that certain wage adjustments upward were demanded and secured. The employer reported that wages were not in dispute as a verbal agreement had expired but that a new one was reached.

**FURNITURE FACTORY WORKERS, TORONTO, ONT.**—Twelve employees in one establishment ceased work on May 15 against the alleged violation of an agreement with the Furniture and Wood Workers' Industrial Union of Canada signed in settlement of a one day strike on March 17, 1934, to be in effect until August 22, 1934, *LABOUR GAZETTE*, April, 1934, pages 319 and 321. At the end of the month no termination had been reported.

**SPRING AND MATTRESS FACTORY WORKERS, TORONTO, ONT.**—Employees in one establishment ceased work on May 15 demanding increases in wages, reduction in hours and recognition of the Furniture and Wood Workers' Industrial Union of Canada. Wages were reported as from 25 cents to 50 cents per hour and a thirty per cent increase was demanded, with the 44-hour week instead of 46½ and up. Two workers not on strike were reported to

have been attacked and slightly injured by pickets. At the end of the month no termination had been reported.

**SPRING AND MATTRESS FACTORY WORKERS, WINDSOR, ONT.**—A number of the employees in one establishment ceased work on May 28 demanding the reinstatement of an employee claimed to have been dismissed for activity in a previous strike, *LABOUR GAZETTE*, May, 1934, pages 412 and 415. The employer stated he had been doing unsatisfactory work and had been warned repeatedly. The strikers picketed the establishment where most of the employees continued at work and a number were charged with assault, etc. Through the mediation of the mayor a settlement was reached, the dismissed employee being given work in another department, and work was resumed on May 31.

**PLUMBERS, HALIFAX, N.S.**—On May 1, 1933, the agreement between the master plumbers and the union expired and the employers reduced the rate of wages from 85 cents per hour to 70 cents, at which the plumbers worked under protest for twelve months. In April, 1934, the union demanded the restoration of the 85-cent rate, and ten master plumbers employing about twenty, it is reported, paid this, a strike being declared against eight others, employing at the time seventeen men. Negotiations between the general organizer of the union and the officers of the employers' association were carried on after discussion with the Chief Conciliation Officer of the Department of Labour who was in Halifax on other business. An agreement was signed on June 1, 1934, between the master plumbers, members of the Constructive Mechanical Trades Exchange, and the union which provided for a rate of 75 cents per hour.

**TEAMSTERS AND LABOURERS (CONSTRUCTION), KITCHENER, ONT.**—Employes of a contractor for the construction of a bridge at Bridgeport, Ont., near Kitchener, ceased work on May 15, demanding an increase in wages for labourers from 25 cents per hour to 30 cents and for teamsters with teams from 50 cents per hour to 60 cents. Hours of labour were eight per day. As a result of a conference with officials of the Suburban Road Commission the increases were agreed to, effective from May 24, and work was resumed on May 18.

**LONGSHOREMEN, CHATHAM, N.B.**—Employees loading a boat with pulpwood ceased work on May 19, demanding an increase in wages from 20 cents per hour to 35 cents, and secured their demands on May 24 as a result of negotiations with the employer.

**COAL TRIMMERS, NORTH SYDNEY, N.S.**—Employees of a coal mining company ceased work on May 28 when informed that only part of

the crew were needed. They also demanded that they should be employed from the time the loading started instead of only when the boat had been partly loaded. The management refused to negotiate until work was resumed. This being done that night, it was arranged that employment would begin with the loading of the boat and that a full crew would be employed on boats of over 3,000 tons, the superintendent to determine the number on others.

**WINDOW CLEANERS, TORONTO, ONT.**—Employees of one company ceased work on May 28 demanding the right to organize, the reinstatement of employees dismissed for joining the union and recognition of a shop committee of the Window Cleaners' Section of the General Workers Union, affiliated with the Workers' Unity League. Work is reported to have been resumed on June 1, these demands having been conceded.

The Canadian Engineering Standards Association is extending its investigations with a view to the establishment of standards for various new branches of engineering. In addition to the Canadian Electrical Code, which has been adopted by most of the Provinces in Canada, committees are now at work on codes for steel construction, bridges and buildings and structural welding, and mechanical refrigeration. Work is progressing on a safety code for passenger and freight elevators. The first named committee includes representatives from various government departments, technical organizations, railways, universities, consulting engineers, steel manufacturers and fabricators. The Association maintains close relations with the American Standards Association.

The Hon. C. J. Arcand, Minister of Labour of Quebec, stated on May 14, that at the time of the next session of the provincial legislature it might be possible for the government to restore the minimum compensation rates under the Quebec Workmen's Compensation Act to the level at which they stood before the amendments of 1933 (*LABOUR GAZETTE*, July, 1933, page 695). These changes, the minister explained, had been made necessary by the financial standing of the Commission at that time, but this standing had been improved by means of the economies since effected. By the amendment of 1933 the minimum weekly payment to a widow or invalid widower with one or more children was reduced from \$12.50 to \$10 per week. The minimum compensation for total disability was also reduced from \$12.50 per week or the amount of weekly earnings, to \$10 per week or the amount of weekly earnings.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the review of Strikes and Lockouts in Canada and Other Countries, 1933. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible directly from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

### Great Britain

The number of disputes beginning in April was 36 and 11 were still in progress from the previous month, making a total of 47 disputes in progress during the month, involving 10,700 workers, with a time loss of 71,000 working days.

Of the 36 disputes beginning in the month, 6 were over demands for increased wages, 6 over proposed wage reductions, 6 over other wage questions, 5 over questions respecting the employment of particular classes or persons, 8 over other questions of working arrangements and 5 over other questions. Settlements were reached during April of 26 disputes, of which 5 were settled in favour of workers, 14 in favour of employers and 7 ended in compromise. In 4 other cases, work was resumed pending negotiations.

About 2,300 coal miners near Rotherham were on strike from April 25 to May 15 over wage rates paid to a certain class of workers; work was resumed pending further negotiations.

A strike of over 2,000 dock workers at London began May 15 against the employment as

dock workers of former clerks in the same Company's service, and was called off May 25.

### United States

Longshoremen at Seattle, Washington, San Francisco, California, and other ports on the Pacific coast went on strike May 9 for union recognition with the union control of hiring men and for increased wages and shorter hours. The number involved at first was 12,000 but these were joined a week later by between 6,000 and 7,000 seamen and by other allied trades. By the end of May, 25,000 workers in all were out on strike. Efforts were being made by the federal government officials to bring about a settlement. A strike of 4,000 longshoremen at Texas ports on the Gulf of Mexico began May 8 and was reported to have been settled May 12.

As a result of a strike of 5,000 automobile body plant workers at Flint, Michigan, which began May 11, protesting alleged discrimination against union members and for increased piece work wage rates, 14,000 other automobile plant workers were immediately thrown out of work. It was agreed that work should be resumed May 17 pending further negotiations between the Company and the union.

After a week's strike, 3,000 glovemakers at Gloversville and Johnstown, New York, were reported April 23, to have been successful in securing increased wage rates.

A strike of 3,000 shipyard workers at Camden, New Jersey, lasting seven weeks, was terminated May 14 when increased wage rates were granted.

Many other disputes occurred during May and some were marked by unusual violence causing loss of life and serious injuries; among these were a strike of taxi drivers at Cleveland Ohio, truck drivers at Minneapolis, automobile accessory workers at Toledo, Ohio.

## OLD AGE PENSIONS IN CANADA

### Financial Summary as at March 31, 1934

THE accompanying table is a summary of the financial features of operations, to March 31, 1934, under the Old Age Pensions Act (Revised Statutes of Canada, 1927, chapter 156, amended by Statutes of 1931, chapter 42), and under the concurrent legislation adopted by the provinces which participate in the scheme.

The Province of Nova Scotia appears for the first time in this summary, the provincial Old Age Pensions Act of 1931 having become effective as from March 1, 1934 (LABOUR GAZETTE, February, 1934, page 143). The total expenditures shown for that province are therefore for one month only.

FINANCIAL SUMMARY OF OLD AGE PENSIONS IN CANADA AS AT MARCH 31, 1934

	Alberta	British Columbia	Manitoba	Nova Scotia	Ontario	Prince Edward Island	Saskatchewan	North-west Territories	Totals
	Act effective Aug. 1, 1929	Act effective Sept. 1, 1927	Act effective Sept. 1, 1928	Act effective March 1, 1934	Act effective Nov. 1, 1929	Act effective July 1, 1933	Act effective May 1, 1928	Order in Council effective Jan. 25, 1928

## LABOUR LEGISLATION IN BRITISH COLUMBIA, SASKATCHEWAN AND MANITOBA IN 1934

### British Columbia

THE Legislature of British Columbia which was in session from February 20 to March 29, 1934, enacted a number of laws of labour interest, including revisions of the Hours of Work Act and of the laws providing for minimum wages for both male and female employees; amendments to the Acts relating to factories and to metalliferous mines; and new statutes dealing with unemployment relief, the creation of an economic council and the conferring of special powers on the Lieutenant-Governor in Council to enable him to deal with any matters that may arise from the depressed condition of industry before the next session of the legislature.

#### Board of Industrial Relations

In the revision of the Hours of Work Act, the Male Minimum Wage Act and the Female Minimum Wage Act the administration of the three statutes was placed in the hands of a single body, the Board of Industrial Relations appointed under the Male Minimum Wage Act.\* Formerly each of these statutes was administered by a separate Board.

#### Hours of Work Act

The Hours of Work Act, which will come into force on proclamation, is similar to the statute which it replaces in fixing maximum working hours at 8 per day and 48 per week for employees in mining, quarrying, etc., in the manufacturing industries including ship-building, the generation, transformation and transmission of motive power, and logging operations; and in works of construction, maintenance, repair, etc. These industries are set out in a schedule to the Act. A new clause provides that the Board may, with the approval of the Lieutenant-Governor in Council, add to or delete from the schedule the whole or any branch of any industry, business, trade or occupation. The Board may also, as formerly, exempt, after inquiry, any undertaking or class of undertakings in whole or in part from the operation of the Act or for such portion of the year as it may deem expedient. Like the former statute the present one does not limit or affect the provisions of the Coal-mines Regulation Act, the Metalliferous Mines Inspection Act or the Labour Regulation Act.

\*The constitution of the Board is outlined on page 511.

The former Act provided that the limitation of working hours should not apply to any undertaking in which only members of the same family were employed, but this provision has been omitted from the revision. Exemption is still given, however, to persons holding positions of supervision or management or employed in a confidential capacity, but the Board is now empowered to determine, in case of dispute, whether or not the position held by any person is such as to exempt him from the restriction on hours. As under the old law where by custom or arrangement between employers' and workers' organizations or representatives the working hours on certain days are less than eight, the eight-hour limit may be exceeded on the other days of the week by agreement between such organizations or representatives, but the daily limit may not be exceeded by more than one hour nor may the weekly limit of 48 hours be exceeded. In case of accident or urgent work overtime is permitted, but only so far as may be necessary to avoid serious interference with the ordinary working of the undertaking.

A new provision empowers the Board to hold an inquiry with respect to the persons working in or about any industrial undertaking as members or alleged members of a partnership or association or in the execution of any agreement or scheme of profit-sharing, co-operation or joint contract or undertaking, including the contractual or other relations of the persons so working. If the Board finds that such partnership, association, etc., is intended to have the effect of defeating the object of the Act in limiting hours of work, it may make regulations applying the provisions of the Act to such partnership, association, etc. As formerly, members of the Board have the powers of commissioners under The "Public Inquiries Act" in respect of any investigations held under the Hours of Work Act.

Employers must now keep records of working hours and registers of employees in the English language and the registers must show the nationalities as well as the names, ages and addresses of workers. A new section empowers the Board, or any person authorized by it, to inspect and take extracts from all books, pay-rolls, etc., of an employer relating to hours of labour and also to require the production of records, statements, etc., in

possession of employees, and to obtain information on oath from both employers and employees.

The section empowering the Board to make regulations is practically unchanged. Such regulations are to determine the permanent exceptions to be made in case of complementary or preparatory work, or for classes of employees whose work is seasonal or intermittent; temporary exceptions to deal with unusual pressure of work and the extent to which the eight-hour rule may be exceeded in continuous industries. Such regulations are to be made only after inquiry and the Board is to fix the maximum of additional hours in each case. Under the 1923 statute working hours in continuous industries were not to exceed 56 in a week. In special cases where the eight-hour rule cannot be applied, agreements between employers' and workers' organizations or representatives concerning the daily limit of work may be given the force of regulations if confirmed by the Board but the average number of hours' work per week over the number of weeks covered by the agreement may not exceed forty-eight. The regulations must also require employers to notify workers by posting notices or by other approved methods, regarding hours, shifts and rest periods, and to keep records of additional hours worked where this is permitted by the Act or regulations. Where longer hours are worked, in case of accident or *force majeure*, in continuous industries, or in complementary, preparatory, seasonal, or intermittent work, a new clause provides that regulations shall require employers to furnish the Board with a copy of their overtime record.

With regard to penalties, the former Act provided for a fine not exceeding \$1,000 for offences against the Act. The present statute provides as follows: For failure to notify employees of hours of work as required by the regulations or for employing any person outside the hours fixed thereby or during rest periods, a fine of from \$25 to \$100 for each employee affected; for other cases of failure by an employer or employee to perform any duty imposed by the Act or regulations or refusal or failure to permit an inspection or examination, or to deliver any information or thing required under the Act, a fine of from \$10 to \$500; for a violation of the Act or regulations for which no other penalty is provided, a fine not exceeding \$500. In the absence of a special vote of the Legislative Assembly the expenses incurred in administering the Act are to be fixed by the Lieutenant-Governor in Council and paid out of the Consolidated Revenue Fund.

### Male Minimum Wage Act

The Male Minimum Wage Act repeals the former statute on this subject. The first Male Minimum Wage Act in British Columbia was passed in 1925. Orders governing the lumbering industry and the catering industry were made under this statute, but the Order affecting the former industry was declared invalid by the Supreme Court of Canada. In 1929 a new statute was enacted to overcome the difficulty revealed by this decision, but the only order effective under the 1929 Act was one concerning stationary engineers. The statute of 1934, which annuls all orders fixing a minimum wage made under the 1929 Act, applies to all adult male employees in any industry, business, trade or occupation, with the exception of farm labourers and domestic servants, and to their employers. The 1929 statute applied to all occupations other than those of farm labourers, fruit pickers, fruit packers, fruit and vegetable canners, domestic servants, and the professions whose members are incorporated under the laws of the Province. The new Act is drafted along the lines of the minimum wage acts for women in the different provinces.

The 1929 Act was administered by a Male Minimum Wage Board of three members which had power, of its own motion or upon written complaint of ten or more employees in a common occupation, to make investigations and fix minimum wages. The wage might be varied according to locality. The new Act is to be administered by a *Board of Industrial Relations* consisting of five members including the Deputy Minister of Labour who is to be chairman, and the chairman of the Economic Council set up under the Economic Council Act. The three remaining members, of whom one must be a woman, are to be appointed by, and hold office during the pleasure of, the Lieutenant-Governor in Council and receive remuneration for their services and expenses as fixed by the regulations. The Board is empowered to hold such inquiries as it considers adequate and to make orders fixing minimum wages. By such orders the Board may apply the minimum wage to all employees or to any group or class of employees in any industry, business, trade or occupation or in all or in any two or more industries, businesses, trades or occupations; fix a different minimum wage for the same industry, business, trade or occupation in different parts of the Province; fix a minimum wage applicable only in the part or parts of the Province designated in the order. As formerly, the minimum wage may be fixed upon an hourly, daily, weekly or monthly basis. The

Board may also hold inquiries into the wages and conditions of labour of male employees between the ages of 18 and 21 years and make orders fixing minimum wages for such employees. All orders of the Board fixing a minimum wage are to be applicable throughout the Province unless restricted by their terms to some part or parts thereof and are to become effective fourteen days after publication instead of thirty days as formerly. Upon petition of employers or employees, or of its own motion, the Board may renew, suspend, vary or rescind any order. Formerly orders which had been in force for six months or more might be amended or replaced. The Board may, by written permit, authorize the employment of persons classified by it as handicapped or part-time employees or apprentices, at a wage less than the fixed minimum, and may limit the number of such persons to be employed by any employer. The Board may also investigate cases where board or lodging is furnished by an employer to any worker covered by a minimum wage order, and if the price charged by the employer therefor is found to be excessive and unduly affecting the wages of the employee, an order may be made fixing the maximum rate to be charged.

The Act contains a section, resembling that included in the Hours of Work Act, empowering the Board to hold inquiries into any partnership, association or scheme of profit-sharing, co-operation, etc., which may be intended to defeat the object of the Act. If such intention is found, the Board may make an order prohibiting the carrying on of such partnership, etc., such order, when gazetted, to be binding upon all persons engaged in the undertaking. A fine of from \$50 to \$500 or imprisonment for from two to six months is provided for contravention of such an order.

The Act makes similar provision to that of the Hours of Work Act in regard to powers conferred on the Board of Industrial Relations, and as to records of employers, etc. The Male Minimum Wage Act also provides that employers may be required to produce records, information, etc., relating to the profit and loss and the production and operating costs in the industry, business, trade or occupation.

The penalty for payment of a less wage than that fixed by the Board remains unchanged at from \$50 to \$500 for each employee affected, or from two to six months' imprisonment. The same penalty now applies to the charging of a price for board and lodging in excess of that fixed by the Board. The employer will be required also to pay the employee the difference between the wages to which he was entitled and the amount actually paid. The same fine is now liable to be imposed on em-

ployees also for refusal or neglect to produce anything required under the Act. A new section provides that where an employee, by collusion with his employer or otherwise, works for less than the minimum wage, or directly or indirectly returns to his employer any part of his wages which has the effect of reducing the wages actually received and retained by the employee to an amount less than the minimum to which he is entitled, the employer and the employee are each liable to a fine not exceeding \$100 in addition to any other penalties to which they may be liable under the Act. For the purpose of prosecution for an offence under this section proof of the fact that moneys were repaid or paid by the employee to his employer are to be prima facie evidence against the person charged that the moneys were so repaid or paid for the purpose, and had the effect, of reducing the wages to an amount less than the minimum. As under the former Act, protection is given to complainants by imposing a maximum fine of \$500 on an employer who discharges or otherwise discriminates against an employee making a complaint or testifying in proceedings under the Act. The Board may not disclose the identity of a complainant if the latter requests that it be withheld, but an exception is made in the new Act in cases where such disclosure is necessary for the prosecution of an employer contravening orders of the Board regarding wages or board and lodging or discriminating against an employee, or of an employer or employee who fails in any duty imposed on him by the Act. An exception may also be made where the Board deems it to be in the public interest.

Two sections of the old law are incorporated without change in the new. These provide that the Lieutenant-Governor in Council may make regulations for the carrying out of the Act and confer upon an employee the right to recover in a civil action the difference between the wages paid him and the minimum wage to which he was entitled. If the employee has left the employer's service he may not take such action after the expiration of sixty days from the termination of such service.

Orders establishing minimum wages in the logging industry and in saw-milling have already been issued and were published in the LABOUR GAZETTE for May, 1934, on page 419.

### Female Minimum Wage Act

The Female Minimum Wage Act repeals the Minimum Wage Act passed in 1918, but continues in force all orders made under that Act and subsisting at the time of the repeal. The new statute is similar in form to the

Male Minimum Wage Act, many sections being identical. It applies, as did the old law, to all female employees in any industry, business, trade or occupation with the exception of domestic servants, fruit-pickers and farm-labourers. The former statute was in charge of a Minimum Wage Board of three members, including one woman, established under its provisions but the new law is administered by the Board of Industrial Relations appointed under the Male Minimum Wage Act and described above in the paragraphs dealing with that Act.

The Minimum Wage Act of 1918 authorized the Board to make inquiries and fix minimum wages, and hours and conditions of labour. For the purpose of obtaining information the Board might hold public meetings at which persons interested might be heard and might also summon a conference composed of equal numbers of representatives of employers and employees in the industry in question together with a number of disinterested persons representing the public. The conference was charged with the duty of recommending to the Board the minimum wages and hours of employment proper in the industry, and the Board might accept such recommendations or might call another conference. The new law confers on the Board of Industrial Relations the same powers with respect to holding inquiries and fixing wages as are conferred by the Male Minimum Wage Act, except that under the Female Minimum Wage Act its jurisdiction extends to the hours and conditions of labour. An order under the latter Act applies to the whole Province unless restricted by its terms to some part or parts thereof. The provisions with regard to special permits for handicapped and part-time employees are also identical with those in the Male Minimum Wage Act. A section of the old Act which has been incorporated in the new empowers the Board to issue special licences fixing reduced minimum wages for inexperienced workers over 18 years of age other than apprentices. The section also limits the number of such persons to one-seventh of the total employees and the aggregate of such employees and of employees under 18 years of age to thirty-five per cent of the total.

New sections provide that where a minimum wage has been fixed for female employees in any industry, trade, business or occupation, no person may employ, on work usually done by such employees, any male person over 18 years of age at a wage less than the fixed minimum except male apprentices whose indentures have been duly approved by the Board and who are under proper instruction; nor may boys under 18 be

employed on work covered by the minimum wage orders at a less wage.

A number of new sections are identical with sections of the Male Minimum Wage Act, namely, those empowering the Board to inquire into the price charged for board or lodging, to investigate and prohibit schemes to defeat the Act. Similar powers as to inquiries, revision of orders, and records and registers to be kept by employers are granted to the Board of Industrial Relations under this Act as under the Hours of Work Act and the Male Minimum Wage Act.

The fine for contravention of Orders of the Board remains at from \$25 to \$100, the employer, as formerly, being compelled, on conviction, to pay the difference between the minimum wage and the sum paid. In default of payment of such fine and difference, the new Act would impose a term of imprisonment of from two to six months. The same penalty is also provided for employers charging a price in excess of the fixed maximum for board and lodging. A clause is added imposing a fine of from \$10 to \$100 on any person refusing or neglecting to furnish information or produce any document, etc., as required by the Act. The penalty for discharging or discriminating against an employee who has testified or is about to testify in any proceedings or investigation under the Act is now a fine not exceeding \$500 instead of from \$25 to \$100 as formerly. The same penalty protects complainants and employees producing the documents, etc., or making disclosures required by the Act. A clause is added similar to that included in the new Male Minimum Wage Act regarding the withholding of a complainant's identity. A new section providing a penalty in case of collusive return of wages is identical with that included in the Male Minimum Wage Act. The provision of the former law enabling an employee paid less than the minimum wage to recover the difference in a civil action is included in the new Act with the condition that in cases where the employee's service has terminated action must be commenced within sixty days of such termination. This provision and that referring to collusive returns of wages apply also to male employees engaged on work usually performed by female workers covered by the minimum wage orders. The new statute like the former one provides for the making of regulations by the Lieutenant-Governor in Council.

Revised orders have been issued under the Female Minimum Wage Act governing the fruit and vegetable industry, offices, and public housekeeping occupations such as employment in hotels, restaurants, etc.

### Unemployment Relief Fund Act

The Unemployment Relief Fund Act, which came into operation on April 1, 1934, provides that all unexpended moneys heretofore appropriated for the relief of unemployment under the provisions of any Act or by vote of the Legislative Assembly and all moneys so appropriated hereafter, shall be placed in a fund in the Department of Finance to be known as the "Unemployment Relief Fund" and be accounted for as part of the Consolidated Revenue Fund. Payments may be made from such moneys from time to time for such purposes and subject to such terms and conditions as may be approved by the Lieutenant-Governor in Council.

### Factories Act

An amendment to the Factories Act makes it clear that every laundry run by a person holding a trades licence therefor issued by any municipality, is within the scope of the Act.

### Metalliferous Mines Regulation Act

The rule in the Metalliferous Mines Regulation Act which requires that drills used in stoping in a mine where the ground is of such a nature that dust is caused by drilling, shall be equipped with a water jet or other approved appliance to prevent the escape of dust, was amended to make it apply to all drills used in such a mine.

### Economic Council Act

The main provisions of the Bill which has now become the Economic Council Act were given in the LABOUR GAZETTE, April, 1934, at p. 307. The Act provides for the creation, in the Department of Labour, of an Economic Council of not more than ten members to investigate matters of economic importance.

### Special Powers Act

The Special Powers Act sets forth in its preamble that owing to extraordinary conditions respecting business, finance, agriculture, industry, municipal government and unemployment, it is necessary and advisable that full power and authority be vested in the Lieutenant-Governor in Council to deal with those conditions including the supervising, developing, regulating, co-ordinating and prohibiting of business, financial, agricultural, industrial and municipal operations, including the production, distribution and disposition of products within the Province and the employment of labour therein. The Act therefore

provides that the Lieutenant-Governor in Council shall have power to promulgate such ordinances as he may consider necessary or advisable by reason or in anticipation of any condition or for the purpose of any matter referred to in the preamble in relation to the following matters:— the preservation, management, development and disposition of the natural resources of the Province; the borrowing of money on the sole credit of the Province; the lending of money to industries and municipalities, the aiding or joining with any person in the carrying on of any kind of industrial or productive operations, and the payment of moneys out of the Consolidated Revenue Fund therefor, or for any purpose otherwise considered necessary or advisable; provincial public works and property; municipal institutions; the establishment, maintenance, management and regulation of schools and hospitals; local works and undertakings other than ships, railways, canals, telegraphs and other works and undertakings extending beyond the limits of the Province and works declared to be for the general advantage of Canada or of two or more provinces; property and civil rights; the imposition of punishment by fine, imprisonment or penalty for enforcing any ordinance relating to the foregoing matters; generally all matters of a purely local or private nature.

Ordinances made under the Act are to be published in the *British Columbia Gazette* and thereupon to have the force of law. They may be varied, extended or revoked. A report of operations under the Act is to be submitted to the Legislature within ten days of the opening of the next session.

The Act provides that the powers delegated by it shall not include those conferred on the Legislature by certain clauses of the British North America Act, namely;—amendment of the Constitution; direct taxation; establishment of provincial offices and appointment and payment of officers; establishment, maintenance and management of prisons; licensing of shops, saloons, auctioneers, etc., for the raising of revenue; incorporation of companies with provincial objects; solemnization of marriage; administration of justice.

The Act is to remain in force until the beginning of the next session of the Legislature, but the ordinances made and promulgated thereunder are to remain in effect until the close of that session unless repealed by the Legislature. Nothing done or established under any ordinance is to be affected by the fact that the ordinance has ceased to have effect. The Act does not apply to or affect the provisions of the Pacific Great Eastern Railway Aid Act, 1925.

### Superannuation Act

An amendment to the Superannuation Act provides that where a widow or dependent relative of a contributor dying while in the service of his employer is granted an allowance under the Act, no further allowance shall be payable to such widow or dependent relative in respect of the services rendered to an employer by any other contributor.

## Saskatchewan

The Saskatchewan Legislature was in session from February 15 to April 7, 1934, and enacted the following laws of labour interest.

### Minimum Wage Act

An amendment to the Minimum Wage Act, which came into force on June 1, 1934, provides that, subject to the approval of the Lieutenant-Governor in Council, the Minimum Wage Board may declare the provisions of the Act applicable to male employees in any class or classes of shops or factories or in any shop or factory to which the Act applies, in which case the provisions of any order of the Board governing such shops or factories would also apply. The definition of "employer" was amended and now includes every person, firm or corporation, agent, manager, representative, contractor, subcontractor or principal and every other person having control or direction of one or more workers in a shop or factory to which the Act applies, or who is responsible, directly or indirectly, in whole or in part, for the payment of wages to or the receipt of wages by one or more of such workers. The definition of "wages" was also amended to include any compensation for labour or services paid to, or retained by, a worker in a shop or factory to which the Act applies, whether measured by time, piece, commission or by any other method whatsoever. Orders of the Board are to become effective upon a date named therein, subsequent to the second publication, instead of thirty days from the date of the first publication as formerly. An employer must now keep a register of his employees in each shop or factory. As heretofore registers must show the names, addresses, working hours, and actual earnings of all employees. The section was amended which provided that an employer convicted of paying less than the minimum wage should be ordered to pay the difference, and in default of payment should be liable to a term of imprisonment of from twenty days to three months in addition to any fine imposed for the offence. The Act

### Natural Products Marketing Act

The Natural Products Marketing (British Columbia) Act, which will come into force on proclamation, provides for the appointment of a provincial marketing board to co-operate with the proposed Dominion Marketing Board and to exercise powers within the Province with respect to the marketing of natural products.

now provides that in default of payment of the wages due, the magistrate may order the offender to be imprisoned for a term of from twenty days to three months in addition to any term imposed for the offence, or he may order the amount to be levied by distress and sale of the goods and chattels of the employer and if sufficient distress cannot be found, the offender is liable to imprisonment. A further change in the Act provides that the Department may request peace officers to ascertain whether employers are observing the Act and regulations.

### Workmen's Compensation (Accident Fund) Act

The Workmen's Compensation (Accident Fund) Act was amended, as from May 1, 1934, to provide that a workman leaving work on account of hernia must report it to his employer within seventy-two hours (exclusive of Sundays and statutory holidays), instead of within twenty-four hours as formerly. There was added to the schedule of industrial diseases for which compensation is payable dermatitis (venenata) due to employment in any process involving the use of or direct contact with acids and alkalies or acids and oils capable of causing dermatitis (venenata). This provision is identical with that which was added to the Ontario Workmen's Compensation Act in 1932.

### Mines Regulation Act

The Mines Regulation Act, 1934, which will come into force on Proclamation, provides for the inspection and regulation of mines other than coal, including quarries and oil and gas wells. A plan of every mine in which more than twelve persons are employed must be kept at the office of the mine and produced for examination by an inspector. The inspectors, who are to be appointed by the Public Service Commission, must make such periodical inspections as are directed by the Minister of Railways, Labour and Industries and make written reports to the Minister

upon the following points:—the condition of the hoisting machinery; the appliances for extinguishing fires; the manner of working and timbering the shafts, drifts, inclines, stopes, winzes, tunnels and upraises through which persons pass while employed in their daily labours; the condition of all exits; ventilation and sanitary condition; storage of explosives and other inflammable things; the system of signals in use. The inspector must then post a copy of his report or cause it to be posted in some conspicuous place at or near the mine. Provision is also made for special inspections, the result of which are to be reported to the Minister. If the inspector finds any thing or practice to be dangerous or defective he must give written notice to the mine owner or agent ordering the dangerous condition to be remedied within a stated time, and must cause a copy of such notice and order to be posted in a conspicuous place at the mine. The owner or agent may appeal within seven days to the Minister whose decision is final. A fine of from \$100 to \$1,000 may be imposed on an owner or agent failing to comply with such an order, and an additional penalty of \$1 to \$10 for each day of default. On receipt of notice of an accident causing loss of life or serious injury to any person, the inspector must inquire into the cause thereof and make a written report to the Minister. The Minister may also direct a special inquiry to be held into any such accident and a written report to be made public. Except in so far as his duty requires him to make a written report or take official action, an inspector is forbidden, under penalty of dismissal and a fine of from \$100 to \$1,000, to reveal any information with regard to chutes or bodies of ore or the location, course, or character of underground workings or to give any opinion formed by him in making his inspection.

The Lieutenant-Governor in council may make regulations for the carrying out of the Act and governing—(a) the protection of workmen employed in and about mines, including the care and use of explosives, the safety of cranes and all hoisting and lowering equipment, fire prevention and fire fighting appliances, the installation of proper ventilation and sanitary conveniences, the provision of suitable dressing rooms, and the equipment to be kept for, and means of furnishing, aid to the injured; (b) the age and sex of persons who may be employed in or about a mine; (c) the inspection of mines and mine works and the fees payable for inspection; (d) the fencing or the other precautions to be observed in connection with unworked mines

which may be closed down; (e) the imposition of penalties for breach of the regulations except those made under clause (a); the reports and statements to be furnished by owners and agents.

A penalty of \$10 to \$100 and, in case of a continuing offence, a penalty of \$5 for each day of such continuance, is provided for persons removing or defacing a posted notice, obstructing an inspector, violating any provision of the Act or regulations for which no other penalty is provided, for owners or agents refusing necessary facilities to an inspector, or for persons attempting to do any of the above acts. For violation of any regulation made under clause (a) in the preceding paragraph a fine of \$100 to \$1,000 is imposed on an owner or agent and \$10 to \$100 on any other person. In default of payment of any fine, an owner or agent is liable to imprisonment for three months and other persons for one month. For an offence which, in the opinion of the convicting magistrate, might have endangered the safety of persons employed in or about a mine and which was committed wilfully, by the personal act, default or negligence of the accused, the latter is liable, in addition to, or in substitution for, any other penalty, to imprisonment, with or without hard labour, for a period not exceeding three months. Prosecution of an owner or agent must be instituted by an inspector and prosecution for any offence must be commenced within six months.

### Steam Boilers Act

An amendment to the Steam Boilers Act, which came into force on May 1, 1934, requires the owner of a boiler, other than a tractor boiler, to provide a first-aid kit which must be produced for examination by the inspector. The Minister may require an owner of a boiler plant to furnish him with a certified statement giving the names and addresses of the engineers employed by him over a stated period, together with the grades and numbers of certificates held by such engineers, the boiler horse-power of his plant and any other information the Minister may require.

Certificates are to be issued on the recommendation of the Chief Inspector of Steam Boilers instead of the examining inspector, and are of four classes (in addition to those of traction engineers), instead of three, as formerly. The clause permitting a candidate who does not understand English to have the services of an interpreter is repealed and new clauses enacted which require that all candidates for certificates, other than those of

fourth class, shall themselves write the answers to questions on examination papers, and that examinations, except those for provisional certificates, shall be written. The clause permitting a candidate for a final certificate who is unable to write legibly to have the services of an amanuensis is repealed.

A number of amendments relate to qualifications of candidates for certificates which are now as follows: A candidate for a first-class certificate must hold a second-class certificate and, since its receipt, for a period of three years, have been in charge of a prime mover and a high pressure boiler of not less than 300 h.p. or acted as assistant in operating a prime mover and a high pressure boiler, of not less than 500 h.p.; or satisfy the Minister that he has operated a prime mover or high pressure boiler of not less than 300 h.p. for five years, or that he has served three years in a workshop in the manufacture or repairing of engines or boilers and has, for a further period of two years, been in charge of a prime mover and high pressure boiler of not less than 300 h.p. or acted as assistant in the operation of a prime mover and a high pressure boiler of not less than 500 h.p. A candidate for a second-class certificate must be holder of a third-class certificate and since its receipt, for a period of one year, have been in charge of a prime mover and a high pressure boiler of not less than 200 h.p. or acted as assistant in the operation of a prime mover and high pressure boiler of not less than 300 h.p.; or satisfy the Minister that he has operated a prime mover and high pressure boiler of not less than 100 h.p. for at least four years, or that he has served three years in a workshop in the manufacture and repairing of engines and boilers, and has for one year been in charge of a prime mover and high pressure boiler of not less than 200 h.p. or acted as assistant in the operation of a prime mover and a high pressure boiler of not less than 300 h.p. A candidate for a third-class certificate must be holder of a fourth-class certificate, and since its receipt have been in charge of a prime mover and a high pressure boiler of not less than 75 h.p. or acted as assistant in the operation of a prime mover and high pressure boiler of not less than 100 h.p.; or satisfy the Minister that he has operated a prime mover and a high pressure boiler of not less than 50 h.p. for two years or that he has served two years in a workshop for the manufacture and repairing of engines or boilers and been in charge of a prime mover and a high pressure boiler of not less than 50 h.p. for a further period of 12 months. No change is made in age or other qualifications

for these classes of certificates. A candidate for the new fourth-class certificate must be twenty-one years of age and must satisfy the Minister that he has, for a period of one year fired a high pressure boiler of not less than 25 h.p.; or is the holder of a final traction certificate and has fired a stationary high pressure boiler for six months, or that he has served two years in a workshop in the manufacture and repair of engines and boilers and has, for a further period of six months, fired a stationary high pressure boiler of not less than 25 h.p. The candidate must receive 60 per cent of the aggregate marks obtainable. The certificate entitles the holder to have sole charge of a prime mover or a high pressure boiler of not more than 100 h.p., or to act as assistant in the operation of a prime mover or a high pressure boiler of not more than 200 h.p., provided that the holder of a first, second, or third-class certificate is in actual charge. The provision was repealed which enabled the holder of a certificate from a competent authority in the United States to obtain a certificate and registration under the Act on application to the Minister accompanied by evidence of qualifications and identity and payment of fee. This privilege is now accorded only to holders of certificates from authorities in Canada and other parts of the British Empire. A provisional certificate which formerly entitled the holder to operate a boiler not exceeding 40 h.p. or to have sole charge of high pressure boilers not exceeding 100 h.p. when used for heating purposes only, now entitles the holder to operate a traction boiler not exceeding 50 h.p. The section was repealed which authorized the issue of a fireman's special certificate entitling the holder to operate a 25 h.p. boiler used for heating purposes or to act as night watchman in charge of high pressure boilers. New sections provide a penalty for any person furnishing false information as to the experience of any candidate, forbid boiler insurance companies' inspectors to re-set pressure gauges or interfere with safety valves, and forbid any person to weld a pressure vessel unless he holds a welder's certificate.

#### Fire Departments Two-Platoon Act

A section, effective May 1, 1934, was added to the Fire Departments Two-Platoon Act, and provides that in every city to which the Act applies (i.e. those with a population of 10,000 or more) and which has a permanent fire department, every officer and employee of such department shall be entitled to a rest period of at least twenty-four hours in each calendar week if a by-law to that effect has

been approved by the electors. Where the two-platoon system is in operation, no part of the twenty-four hours release at the change of platoons is to be included in the said period of rest. On receipt, before November 1, in any year, of a petition signed by not less than one-tenth of the electors, such a by-law is to be introduced and submitted to the electors at the next annual election. A by-law which has been assented to must be passed by the council within four weeks.

### **Weekly Half-Holiday Act**

The Weekly Half-holiday Act, which provides for a weekly half-holiday for employees of retail shops in cities with a population, of 7,000, or over, was amended to include in the definition of "shop" any premises declared by the Lieutenant-Governor in Council to be a shop within the meaning of the Act.

### **Unemployment and Farm Relief**

Amendments were made to three statutes dealing with unemployment and farm relief, namely, The Relief Act, 1933, The Municipalities Relief Act, 1933, and The Saskatchewan Relief Commission Act. The Relief Act, 1933, was amended to provide that relief debentures may be issued by municipalities to finance construction of municipal works and undertakings to give work to the unemployed. The Act which was to have expired on March 31, 1934, will remain in force until March 31, 1935.

### **Municipalities Relief Act**

The Municipalities Relief Act, 1933, was amended to provide that in cases where advances for direct relief or for shelter are or have been made by the Saskatchewan Relief Commission, under any annual relief program undertaken by it, to residents of a rural municipality, the municipality shall be liable for the portion of the cost of such relief designated in the by-law or agreement made under the Act. The power of rural municipalities to borrow sums required for relief purposes is extended to October, 1934. Repairs to implements and parts were added to the list of necessities on which money borrowed under the Act may be expended. Where the Provincial Treasurer has guaranteed repayment of money borrowed by a rural municipality under the Municipalities Relief Acts of 1929 or 1931 and has subsequently paid interest thereon to the lender, the municipality must repay such interest with interest thereon at the rate of 6 per cent per annum.

### **Saskatchewan Relief Commission Act**

An amendment to the Saskatchewan Relief Commission Act provides that if the quantities of seed grain received by a lienor are greater than the quantities applied for by him or inserted in the agreement, the agreement shall, nevertheless, be deemed to create a first charge in favour of the Commission for the total quantities of seed grain so received. The provision is retroactive to the commencement of the Act.

### **Public Health Act**

The Public Health Act was amended as from May 1, 1934, by the addition of sections dealing with health services. These provide for the creation of a Health Service Board consisting of the Minister of Public Health, who is to be chairman, the Deputy Minister of Public Health, the Chairman of the Local Government Board, the Deputy Minister of Municipal Affairs, and the Commissioner of the Saskatchewan Division of the Canadian Red Cross Society. The Board is to take over from the Saskatchewan Relief Commission responsibility for the administration of medical, hospital, dental, and allied relief services, when deemed advisable by the Lieutenant-Governor in Council and is to collect information on a number of subjects, including the needs of the people of the Province, or any portion of it, with respect to medical, hospital, nursing, dental and other health services, including drugs and appliances, to study such information and make recommendations to the Lieutenant-Governor in Council. The Board is also authorized, *inter alia*, to confer with and advise employers and employees in cities with respect to the establishment of health services for such employees, and to recommend to the Lieutenant-Governor in Council the establishment of such temporary health services as it deems necessary during any period of economic distress.

### **City Act**

In the revised City Act, which came into effect on May 1, 1934, sections of the former Act dealing with subjects of labour interest were incorporated without material change.

### **Natural Products Marketing Act**

The Natural Products Marketing Act enables the Province to take advantage of Federal Legislation dealing with the marketing of natural products.

## Manitoba

During the session of the Manitoba Legislature which opened on February 8, and was adjourned on April 6, 1934, legislation was enacted dealing with minimum wages, fair wages, weekly rest, masters and servants, unemployment relief, and licensing of electricians.

### Minimum Wage Act

The Minimum Wage Act was amended to make it applicable to all workers employed in mail order houses, offices, places of amusement, shops or factories. Formerly only boys under 18 years of age and women were within the scope of the Act. The Lieutenant-Governor in Council is empowered to extend the provisions of the Act or regulations made thereunder to employees in an industry not specifically provided for by the Act, and also to extend the provisions of the Act to portions of the province other than cities. The latter power was formerly vested in the Minimum Wage Board, but the former is new. Such Orders of the Lieutenant-Governor in Council are to have effect as if embodied in the Act. The section authorizing the Board to issue special licenses to handicapped employees and female learners, was extended to provide for the issue of such licences in other cases where the Board deems it justifiable. The measure also provides that where regulations are made fixing a standard of minimum wages for employees in any class of industry, no person of the age of 18 years or over shall be employed in the industry at a less rate than twenty-five cents an hour unless the Board has passed regulations providing for a different rate. The section providing a penalty for violation of the Act or regulations of from \$25 to \$100 or imprisonment for from ten days to three months, was amended to raise the maximum fine to \$300 and the maximum term of imprisonment to six months. A clause was added which places on the accused the onus of showing that he has complied with the Act and regulations.

### Fair Wage Act

A number of amendments which will come into force on proclamation were made to the Fair Wage Act, 1916, provides for fair wages and hours on provincial public works. The scope of the Act was widened to include "private work", which is defined to mean the building, construction, remodelling, demolition, or the repairing at a cost exceeding \$100, of

any building or construction work within the Greater Winnipeg Water District, or any city or town having a population exceeding two thousand, or any other portion of the Province to which the provisions of the Act are extended by the Lieutenant-Governor in Council. Work done on property by or under the immediate direction and control of the owner, tenant, or occupant is not included unless such work is undertaken with a view to sale or rental of the property.

Unless the Fair Wage Board declares otherwise, the minimum wage and the maximum hours per day on public or private work for the then next succeeding twelve months, are to be in accordance with a recommendation of the Board, based on such evidence of mutual agreement between employer and employee as the Board deems conclusive, or such wages and hours as the Board agrees are in accordance with the prevailing conditions. These provisions replace a section which required the Board to be governed by the principle that the rates of wages and standards of hours should not be less favourable to the employees affected than the wages and hours of labour commonly recognized by employers and trade societies as prevailing in the district during the then preceding twelve months. A clause is added which provides that every contract and engagement for a private work shall be deemed to include provisions and a stipulation similar to those which govern public work, and all mechanics, workmen, and labourers in the employ of the contractor are to be employed and paid in accordance therewith. The provisions and stipulation referred to are those setting forth the terms of any order of the Minister adopting the recommendations of the Fair Wage Board and stipulating that no workmen in the employ of the contractor shall be employed on any terms other than those set forth in such order.

Several new provisions are added to the Act. The Lieutenant-Governor in Council may extend the territory to which the Act applies and may exclude any particular work from the provisions of the Act. If an employee is paid less than the wages to which he is entitled and the employer is found guilty of violation of any of the provisions of the Act, he shall be ordered by the magistrate to pay the difference between the full wage and the amount actually paid, together with costs and the magistrate may issue his warrant to levy the same by seizure and sale of the goods and chattels of the employer. The provisions of the Masters and Servants Act are to apply to the warrant.

An agreement made by an employee to work for less than the fixed wage is invalid. The onus of proof that the provisions of the Act have been complied with is upon the employer.

### **One Day's Rest in Seven Act**

The One Day's Rest in Seven Act was amended to extend the operation of the Act to temporary watchmen, and janitors or firemen who do not live in the building where they are employed, and also to bring the operation of smaller hotels and restaurants within the scope of the Act. Hotels and restaurants were formerly included only when more than two of any class of employees were engaged. A bill to bring the operation of taxicabs and public service vehicles under the One Day's Rest in Seven Act was rejected by the Legislature.

### **Masters and Servants Act**

Amendments to The Masters and Servants Act are retroactive to January 1, 1933, and apply to all cases in which there are unsatisfied claims or judgments for wages, and whether involved in pending litigation or not. Where the complainant under the Act is a domestic servant and the sum ordered to be paid is not paid within ten days, the magistrate may commit the master to gaol for a period not exceeding six months. The amending Act further provides for the taking of distress proceedings against the personal property of an employer.

### **Unemployment Relief Loan Act**

The Unemployment Relief Loan Act, 1933, was amended to continue in force, until April 30, 1935, those sections authorizing the raising

of loans by the Provincial Government and the municipalities. These sections would otherwise have expired on April 30, 1934.

### **Electricians' Licence Act**

An amendment to The Electrician's Licence Act extends the provisions of the Act to a contractor doing work on his own behalf.

### **Child Welfare Act**

A clause added to the Child Welfare Act requires a child in respect of whom a mother's allowance is paid to have resided in the Province for a period of two consecutive years immediately prior to the death of the father or to his confinement in a hospital for mental diseases or to his becoming totally and permanently disabled. The section giving the Minister of Health and Public Welfare a lien upon the lands of a mother or child, to whom, or in respect of whom, an allowance is paid, was amended to provide for a like lien upon the lands of the disabled father of such child.

A further amendment to the Act enables municipal councils to pass by-laws for the licensing and regulating of children employed in a place of public entertainment. Formerly such licences were only issued by the Director of Child Welfare.

### **Natural Products Marketing Act**

The Natural Products Marketing Act was passed when the Legislature re-convened after the adjournment. This Act provides for the appointment of a provincial board to co-operate with the Board to be established under the provisions of the Natural Products Marketing Act passed by the Dominion Parliament.

### **Proposed Code for Photographers in Ontario**

The Ontario Society of Photographers, on May 7, approved a code "to eliminate unfair practices and unethical conduct." All but twelve members of the society, which represents 53 per cent of the 269 studios in Ontario, voted for the adoption of the suggested code. As soon as it has been submitted to photographers throughout the province and approved by 60 per cent of them the federal government will be petitioned to authorize it by law. The general plan is to license all portrait and commercial photographers and rescind the licences of any defaulters. Every photographer working under the code is bound to "give his employees a fair wage as consistent with such employee's position, and to abide by such minimum scale of wages as may be instituted by the government from time to time."

At the recent session of the Ontario Legislature three bills to amend the Workmen's Compensation Act were submitted but were not adopted. The bills proposed: (1) that an injured workman should have the right to have his case referred to a medical board instead of to a referee as at present; this board to be composed of one doctor to be chosen by the workman himself, one by the employer, and the third by the Senior County Court Judge, their decision as to the degree of disability and the injured workman's fitness for work to be final; (2) that compensation for silicosis be extended to other industries as well as mining; and (3) to entitle disabled workmen to the aid of drugless practitioners where such aid is appropriate, on the same terms as they are now entitled to medical and other aid.

## NEW GERMAN ACT FOR THE ORGANIZATION OF NATIONAL LABOUR

**A**N article dealing with the new German Act for the organization of national labour affairs appears in the April issue of the *International Labour News* (Geneva). A brief outline is first given of the labour organization that was set up under the Weimar Constitution of 1919 and subsequent Acts, that organization being based on the principle of freedom of association, and providing for the creation of joint works councils and tribunals for the settlement of industrial disputes. The underlying principles of German labour law as thus established remained in force until the advent of "National-Socialism" to power in 1933.

The first decisive breach in the existing system was made on May 2, 1933, when the dissolution of the trade unions was initiated and partly carried out. The German Labour Front, which was inaugurated at that time and absorbed the trade unions, is claimed to be the organization of all persons engaged in labour without distinction, the employer and worker being ranged side by side. It results in the elimination of employers' as well as of workers' associations.

To take the place of the collective agreement system, "labour trustees" were as a transitional measure created by an Act of May 19, 1933, to be responsible for the maintenance of industrial peace, and with power to terminate, revise or prolong collective agreements by uni-lateral decisions which were to be generally binding. These transitional arrangements were terminated by the Act of January 20, 1934, the main provisions of which became effective on May 1, 1934. This Act is based on the principle of "leadership," which also governs the political order, and on the conception of the "Works Community," both these principles being subordinate to that of social responsibility. Section 1 of the Act provides: "In each establishment the owner of the undertaking as the leader (Führer) of the establishment and the salaried and wage-earning employees as his followers shall work together for the furtherance of the purposes of the establishment and for the benefit of the nation and the state in general. The leader of the establishment shall make decisions for his followers in all matters affecting the establishment in so far as they are governed by this Act. He shall promote the welfare of his followers. The latter shall be loyal to him as fellow members of the works community. . . . Every member of a works community shall be responsible for the conscientious performance of the duties incumbent upon him in consequence of his position in the said community. He shall conduct himself in such a manner as to show himself worthy of the respect due to his position in the works com-

munity. In particular, he shall devote all his powers to the service of the establishment and subserve the common good, always bearing in mind his responsibility.

"These basic principles," it is stated, "strike the keynote of the whole system introduced by the Act." Earlier Acts and orders contrary to these principles were repealed. The owner of the undertaking as "leader" is in principle solely responsible for making decisions on all social questions affecting the undertaking for his followers, who are bound in loyalty to him.

In establishments which employ 20 persons or more "confidential men" are to be appointed from among the "followers" to advise the leader, and under his presidency they form the "confidential council" of the establishment. The new "confidential council" comprises not only "confidential men" appointed from among the followers but also the head of the undertaking; it is under the latter's presidency and is convened by him. Its chief duty is "to strengthen mutual confidence within the works community." The members of the works councils were elected directly by the wage-earning and salaried employees of the undertaking from among themselves, by secret ballot and on the system of proportional representation, from lists drawn up by the staff or sections of the staff. The lists of candidates for the new "confidential council" are to be drawn up by the head of the undertaking in agreement with the chairman of the National-Socialist establishment cell organization, and the staff will then decide for or against the list by ballot. If the leader of the undertaking and the chairman of the cell organization fail to agree, or if the followers fail to approve the list, the members of the council are appointed by the labour trustee. The functions of the confidential councils differ from those of the works councils as being largely advisory, while the works councils had administrative, deliberative and supervisory functions as well.

Labour trustees, instituted by the Act of May 19, 1933, are appointed for large economic areas. They are federal officials under the supervision of the Federal Minister of Labour. Their duty is to ensure the maintenance of industrial peace. For consultation on questions of a general nature or involving a principle, the labour trustee must appoint an advisory council of experts from the various branches of industry in their territory.

A novel feature of the Act is the institution of social honour courts to deal with "gross breaches of the social duties based on the works community as offences against social honour." These courts are intended to uphold by special sanctions the statutory principle of social responsibility.

## COLLECTIVE LABOUR AGREEMENTS EXTENSION ACT OF QUEBEC

### Applications to Extend Agreements involving Plumbers and Electricians in Certain Judicial Districts and Longshoremen at Montreal

NOTICE of an application, the first to be received under the provisions of the Collective Labour Agreements Extension Act passed by the Quebec Legislature at its recent session (LABOUR GAZETTE, May, 1934, page 417), was published in the *Quebec Official Gazette*, May 19. The application was made jointly by certain employers in Quebec city and the National Catholic Union of Plumbers and Electricians of Quebec. The text of the notice is given below. Order in Council No. 1496, mentioned in the notice, was given in the LABOUR GAZETTE, August, 1933, page 776; it limited the hours of work in the building trades in the Eastern Townships to 8 hours per day and 40 hours per week.

#### NOTICE RESPECTING A REQUEST FOR THE EXTENSION OF A COLLECTIVE LABOUR AGREEMENT

Pursuant to article 4 of the Act respecting the extension of collective labour agreements (24 Geo. V., ch. 56).

Notice is given by the Honourable Mr. C. J. Arcand, Minister of Labour, that "La Fraternité des Plombiers-électriciens de Québec, Inc.," has presented, this day, a request to the effect that the collective agreement entered into between, *On the first part*: Messrs. Jobin & Paquet, Ltée, 94 Cote Abraham, Quebec; Mr. J. A. Asselin, 37 Hermine Street, Quebec; Mr. Nap. Ferland, Ltée, 400 Saint Francis Street, Quebec; Mr. J. B. A. Lachance, 22 Ave. Mont-Marie, Levis; Mr. Pierre Paradis, 236 d'Aiguillon Street, Quebec; Mr. Ferdinand Jobin, Giffard, Quebec; Mr. Fortunat Gingras, 34 Saint Augustin Street, Quebec; Mr. O. Picard & Fils, Inc., 26 Saint Joachim Street, Quebec; Mr. J. B. Dugas, 78 Cote Abraham, Quebec. All plumbing and electrical contractors; and, *on the second part*: "La Fraternité des Plombiers-Électriciens de Québec," be made obligatory for the employees and employers of the aforesaid trade, according to the following conditions:—

1. The plumbing-electrician trade comprises pipe-mechanics journeymen and apprentices, as defined by the Pipe-Mechanics Act (ch. 176a, R.S.Q., 1925, amended by 24 Geo. V, ch. 52), and the electrical journeymen and apprentices as defined by the Act respecting Electricians and Electrical Installations (ch. 178, R.S.Q., 1925, amended by 23 Geo. V, ch. 70).

2. The schedule of wages shall be the following:—

	Per hour
Journemen...	45 cts.
Apprentices, 1st year...	10
" 2nd year...	12
" 3rd year...	15
" 4th year...	18

3. The limit of working hours shall meet with the provisions of the Order in Council No. 1496 of July 12th, 1933, for the putting into force of

the Act respecting the limiting of working hours (23 Geo. V, ch. 40).

4. In the case of non-application or derogation granted by the proper authority as to the limit of working hours, the rate of time and one-half shall be paid to journeymen and apprentices after one day of nine hours of work; double time, from midnight to seven o'clock a.m.

5. The territorial jurisdiction determined by the present convention comprises the following judicial districts: Quebec, Beauce, Montmagny, Kamouraska, Saguenay, Gaspé.

6. The duration of the present agreement extends from the signing thereof to the 1st of May, 1935.

During the thirty days following the publication of the present notice, the Honourable Minister of Labour will receive any objections which interested parties may desire to make against the request contained in the present petition.

GERARD TREMBLAY,  
Deputy Minister.

Quebec, May 15, 1934.

#### Application for Extension of Agreement Involving Longshoremen at Montreal

Notice of an application for the extension of a collective labour agreement by the Association of the Syndicated Longshoremen of the Port of Montreal and various companies forming part of the Shipping Federation of Canada, Incorporated, was published in the *Quebec Official Gazette*, June 2, 1934.

This agreement was summarized in the LABOUR GAZETTE, April, 1934, page 373.

Mr. Gustave Francq, chairman of the Women's Minimum Wage Commission of Quebec, stated recently that the educational work which has been done by inspectors of the commission is now bearing fruit, and employers are not only complying with the law in a more co-operative spirit, but the better class of them are even showing anxiety to have the law observed. He referred to the recent increase in the penalties provided under the Act, which are outlined elsewhere in this issue. "The commission," he said, "is now authorized to take as many actions as there are employees who have been underpaid, so that if an employer is convicted of underpaying 50 employees it means 50 cases, and 50 fines. Also, the commission is no longer obliged to send registered letters to employers notifying them of actions taken against them. They are presumed to know this law, as all other laws, and the ordinary procedure will apply."

## WORKMEN'S COMPENSATION IN NOVA SCOTIA AND MANITOBA IN 1933

### Nova Scotia

THE Workmen's Compensation Board of Nova Scotia, in its annual report for the calendar year 1933, records another accident decrease as compared with 1932, the total number of accidents reported being 5,307, a reduction of 40 from the previous year. The total cost of all accidents for 1933 under part 1 of the Act is estimated at \$818,500, which amount is exclusive of administration expenses and cost of safety associations.

According to the provisional statement of income and expenditure for 1933 the amount paid for medical aid in all classes was \$43,304.31 with \$8,350.78 expended on safety associations. The administration cost was \$80,812.86, the ratio of administration expenses to the compensation cost of accidents for the past seventeen years being 7.93 per cent.

For industries under Part 1 of the Act the total income for the year 1933, actual and estimated, amounted to \$622,710.26, and the estimated expenditure for the same period was \$907,710.64, showing a deficit for the year's operations of \$285,000.38. The surplus forward from prior years was \$615,346.84, leaving a surplus at December 31, 1933, of \$330,346.46; less \$20,000 for doubtful accounts, or a net surplus of \$310,346.46.

The 5,307 accidents reported to the Board in 1933 are classified as follows: fatal accidents (dependency established), 29; fatal accidents (no dependants), 6; fatal accidents (adjustment pending), 3; fatal accidents (claim non-compensable or disallowed), 5; permanent partial disability, 141; total disability (seven days or over), 3,468; accidents involving medical aid only, 1,279; accidents pending adjustment, 45; non-compensable accidents (other than fatal), 331.

At the end of the year persons receiving compensation for 1933 and prior years in the form of a monthly pension were as follows: widows, 539; children under sixteen, 860; dependent mothers, 72; dependent fathers, 21; other dependants, 11; workmen disabled for life (wholly or partially), 860.

Of the industries under the Act—mining, lumbering and woodworking, iron and steel, manufacturing, building and construction, public utilities, and transportation—the provisional statistics of income and expenditure show that the first named was leading in revenue accrued from assessments and also in disbursements. The revenue derived from assessments on the mining industry in 1933 was estimated at \$281,197.66 while the expenditure was placed at \$393,166.50. Of this amount \$60,640.47 was for compensation paid other than pensions,

\$52,700.46 was transferred to reserve for pensions, \$236,200.14 was for compensation estimated outstanding, the balance being for this industry's proportion for medical aid, safety, associations, and administration.

*Summary of Seventeen Years' Administration.*—During the seventeen years from the beginning of 1917 to the end of 1933, accidents in the industries within the jurisdiction of the Board to the number of 119,659 were reported. During that time 1,471 workmen were fatally injured. The amount actually paid to workmen or their dependents and for medical aid during the seventeen years from the beginning of 1917 to the end of 1933 was \$11,886,747.58, and the amount required at the end of 1933 for the purpose of paying life and other pensions and compensation to disabled workmen, and for medical aid, was \$6,809,416.75.

The total compensation paid or payable to workmen and their dependents and for medical aid for the seventeen years amounts to \$18,696,164.33. That amount does not, however, represent the entire cost of the accidents for the seventeen year period, as the administration expense and cost of safety associations are not included.

There were 797 widows to whom pensions for life or until re-marriage were awarded; 1,869 children under sixteen years of age were awarded monthly pensions while under that age; dependent mothers and fathers to the number of 418 were awarded compensation, 34 members of the family other than widows, children and parents, but who were wholly or partly dependant upon the earnings of deceased workmen at the time of their respective deaths, received benefits, and life pensions were awarded to 4,261 workmen who were disabled, either wholly or partially, for life.

Prior to January 1, 1920, medical aid was not furnished to injured workmen except in special cases. Since that date injured workmen have been entitled to free medical aid for thirty days from date of disability, and during the fourteen years that have elapsed the cost of medical aid was \$1,103,528.50. In the mining and iron and steel classes the greater portion of medical aid in connection with those classes is furnished under medical aid schemes and consequently is not furnished by the Board.

The report also gives completed statistics for 1932 dealing with accidents completed by classes, month of occurrence of compensated accidents, time loss, average wage and age, nature of industries, causes of accidents, etc.

## Manitoba

The annual report of the Manitoba Workmen's Compensation Board which reviews the administration of the Act during the calendar year 1933, notes that while there was a decrease in the volume of work handled by the Board, there were signs "that industrial activity was slowly on the up-grade; the number of accidents reported, a reflection of employment, has shown a slight but steady increase with each month commencing July, 1933, thus reversing the steady downward trend which has existed since 1930."

During 1933, the Board received reports of 6,560 accidents as compared with 6,909 reported during 1932. There were 12 fatal accidents in 1933 while 30 occurred in 1932.

Final returns for the year 1932 showed that 3,858 accidents were reported to the Board as having occurred during that year. Of these accidents 83 per cent entailed the payment of compensation, either for medical aid only or for compensation for time loss and medical aid, while in 17 per cent of cases no expense was entailed.

On December 31, 1933, the Board had on its books 538 dependants of workmen killed in industry during the period March 1st, 1917, to December 31, 1933.

The total actual payroll for all classes of employers in 1932 was \$49,894,126.37. Of this total the returns for the largest group, known as the general body of employers, showed a payroll of \$28,227,853. During 1933, the Board assessed 5,072 employers in this group as compared with 5,112 in 1932.

In 1933 the actual cash disbursed by the Board amounted to \$789,560.51 as compared with \$851,392.72 disbursed during 1932.

The value of the Board Orders passed during 1933, for the payment of compensation, including orders respecting Dominion Government employees and amounts transferred to General Unclassified Reserve to provide for future payments in fatal and permanent disability cases, was \$715,522.53 as compared with \$834,225.03 for the year 1932.

The accidents in the various groups during the past two years are summarized as follows:

### INDUSTRIAL ACCIDENTS IN MANITOBA, 1932-3

Group	1932	1933
Steam railways.....	947	925
Province of Manitoba.....	247	164
City of Winnipeg.....	277	256
General body of employers.....	4,882	4,765
Winnipeg Electric Company.....	163	155
Dominion Government.....	393	295
	6,909	6,560

The Board also handles all industrial accidents happening in Manitoba to employees of the Dominion Government, the Dominion agreeing to keep the Board in funds as required and to pay its share of the administration cost. In 1933 the disbursements for this purpose amounted to \$61,996.20, of which amount \$6,668.40 represented the proportionate cost of administration for 1932.

In addition, the Board also administers the old age pensions regulations for the province, but apparently no statistics of this phase of its work are presented in the report.

The latter part of the report contains a tabular analysis of the accidents occurring in 1932, showing the nature and causes of accidents, time loss, etc.

## CAMP REGULATIONS UNDER THE PUBLIC HEALTH ACT OF ONTARIO

REGULATIONS "respecting camps, works and premises, and the employers and workmen thereof in territorial districts without municipal organization" have recently been issued under the Public Health Act of Ontario. In the regulations, "camp" means the premises established to house workmen employed in any lumbering, mining, or other activity, and includes "permanent camp," which is defined as a camp housing more than twenty workmen, exclusive of one foreman and one clerk. An "Inspector" under the regulations is a provincial sanitary inspector appointed under the Public Health Act.

No employer is permitted to house more than 20 men in any camp other than a permanent camp, unless the employment period is less than six months in the case of mining, and less than four months in all other cases.

The duty of carrying out the regulations—a copy of which is to be open to inspection by every workman—is left to any person acting on behalf of the employer as superintendent, manager, agent, or other supervisory capacity.

For the observance and enforcement of the regulations "according to their true intent

and meaning to ensure that the proper sanitary conditions shall prevail in camps and that the health of workmen housed therein shall be safeguarded and to prevent nuisances arising or communicable diseases being spread in the unorganized districts, the Inspector may make such orders and give such directions as from time to time may appear to him to be necessary, and it shall be the duty of every person forthwith to comply with the terms of any such order or direction to whom it is directed or who is affected thereby after he shall have received written notice thereof, subject only to being relieved therefrom by any subsequent order or direction by the Inspector or by consent of the Department."

The Department may prescribe the form of medical and sanitation contract between an employer and physician in the carrying out of the regulations, a copy of such contract being transmitted to the Department of Health and subject to its approval and amendment.

The Department "may, by reason of neglect on the part of the contract physician to observe, perform or carry out the terms of such contract or of these regulations or of the Public Health Act and the regulations made thereunder or by reason of the inability of a contract physician to properly observe, perform or carry out his duties under the contract, these regulations or the said Act and regulations thereunder either from the distance at which he resides or practices from the permanent camp or from any other cause whatsoever which the Department in its opinion deems sufficient," require the contract to be cancelled and a new one entered into in accordance with the regulations.

Any employer or contract physician who contravenes any of the provisions of the regulations is liable to a fine of not less than \$10 nor more than \$200 for each offence, while the penalty scale for a person, other than an employer or physician, is \$5 and \$100.

Part II provides that when a permanent camp is established or re-opened in any unorganized district, before operations are commenced, the inspector must be notified of the: (a) location, nature and accommodation of the camp; (b) means of access thereto; (c) nature and extent of the operations to be conducted at or from the camp (d) estimated number of workmen and other persons to be housed at the camp; (e) name, occupation and address of the person to be in charge of the camp and the scope of his authority; (f) medical and sanitation contracts entered or to be entered into in respect of the camp

and the workmen to be housed therein; (g) hospital facilities available to the workmen housed at the camp.

Permanent camps are divided into four classes as follows: Class "A"—For the accommodation of over 50 men and not more than 100; Class "B"—For the accommodation of over 28 men and not more than 50; Class "C"—For the accommodation of over 15 men and not more than 28; Class "D"—For the accommodation of not more than 15 men.

Specifications are set forth regarding construction material, roofs and floors, windows, ventilations, bunks and bedding, white-washing, cook's quarters, storage, laundry, drainage, closets, water supply etc.

Part III, is as follows:—

#### HEALTH REGULATIONS

32. Every employer of labour in a camp usually housing twenty men exclusive of one foreman and one clerk in an unorganized district may enter into a medical contract with a contract physician for the medical and surgical care of workmen in his employ, but whether or not any such contract is entered into the duty of providing medical, surgical and hospital care and treatment and maintenance while under such care or treatment, for workmen in the employ of such an employ shall primarily be and remain the responsibility of the employer subject to the limitations hereinafter set out.

33. During the currency of a medical contract into which he was entered, an employer may deduct and retain from the pay or wages due to any workman entitled to the benefits of such contract a sum not exceeding \$1 a month, commencing with his first pay and once a month thereafter during the period of employment, and all sums so deducted and retained shall without abatement or reduction be paid by the employer to the contract physician.

34. It shall be the duty of every contract physician entering into a medical contract with an employer to supply medical and surgical attendance, treatment and medicine to every workman of the employer entitled thereto under the terms of the contract and in accordance with these regulations.

35. Every employer shall with respect to the employees of a permanent camp provide to the satisfaction and approval of the Inspector, isolation hospital accommodation and facilities for cases of communicable diseases and also general hospital accommodation and facilities for cases of sickness or injury.

36. The responsibility and liability of an employer under the provisions of Section 32 to 35 inclusive shall be subject to the following limitations:—

(a) In cases where the workman has been in his employ for less than three months out of the five months immediately preceding the need for medical, surgical or hospital care arising and the illness and consequent inability to work is the result of a chronic or degenerative disease or of an infection or defect existing prior to the commencement of employment, the employer shall be responsible only to return and pay the cost of return of the workman to the municipality at which

he was within the meaning of The Public Hospitals Act last resident in Ontario, or in the event of no such residence existing and the workmen being without means the employer shall be responsible for returning and paying the cost of return of the workman to the place from which he was engaged, and provide in the meantime such medical care and treatment and maintenance as the workman may need, and in cases where any such workman has been in his employ for three months out of the five months immediately preceding the need for medical, surgical or hospital care arising, the employer shall be responsible and liable for providing the same and for the maintenance of the workman for a period not exceeding ninety days and no longer.

(b) In cases where the workman becomes ill and by reason thereof need for medical, surgical or hospital care and treatment arises within ninety days after the workman ceased employment with the employer, and such illness is proved to have originated or been occasioned during the course of such employment, and such workman is an indigent person, the employer shall be responsible and liable for such medical, surgical and hospital care for the maintenance of the workman within the period of ninety days after such workman ceased employment and not afterwards.

(c) In any other case in respect of which an employer is responsible and liable for medical, surgical and hospital care and treatment and for the maintenance of the workman under the provisions of these regulations, such responsibility and liability shall be

limited to a period of ninety days and no longer.

37. Any dispute which may arise with respect to the responsibility or liability of an employer for the medical, surgical or hospital care, or for the maintenance of a workman under the provisions of these regulations shall be referred to the Department and its decision therein evidenced by its certificate shall be final and binding on all persons affected thereby and shall not be open to question.

38. Nothing in these regulations contained shall in any way relate to or affect matters of compensation determinable under The Workmen's Compensation Act or render an employer or a contract physician responsible or liable for medical, surgical or hospital care and treatment or for the maintenance of any workman in cases to which the said Act applies.

39. No employer who has not entered into a medical contract under the authority of these regulations may collect or deduct from the pay or wages of any workman in his employ any sum for medical, surgical or hospital care and treatment of such workman.

40. Nothing in these regulations contained shall in any way render an employer or a contract physician responsible or liable for the medical, surgical or hospital care and treatment or for the maintenance of any workman in cases where his illness arises from acute alcoholism, drug addition or venereal disease.

Part IV deals with the duties and responsibilities of employers and workmen in the matter of communicable diseases and nuisances.

## Mine Safety Regulations in Quebec

By Order in Council issued May 16, 1934, in the *Quebec Official Gazette* certain regulations governing the safety of work in mines in the province were modified and amended. These regulations had been previously amended in 1924 (LABOUR GAZETTE, May, 1924, page 403) and again in April, 1926.

Section 11 of the regulations of 1924 provided that "when in a vertical shaft or one inclined to be more than 60 degrees from the horizontal, travelling is done in a bucket, a skip or a cage, this bucket, skip or cage shall be provided with rigid guides, guard rails, safety catches and a hood." By the recent Order in Council it is stipulated that the bucket or cage "must travel on rigid guides" and be provided with guard rails, etc. This regulation does not apply to shaft sinking operations.

Section 17 of the 1926 regulations ruled that "old or greasy cartridges must not be used

in loading holes for blasting: they should be destroyed." The new section now reads that "defective or leaking explosives shall not be used in mining work; such explosives must be destroyed."

Section 27 as amended in 1926 declared that in cases of a missed shot, a fresh hole shall be bored at a distance not less than nine inches from it and in a direction not approaching it. This has now been further amended to prohibit drilling "within a distance of ten feet of any hole containing explosives."

Section 8 of the Order in Council of December 4, 1931, declared that "an effective block automatic derail or safety switch shall be provided at the top of each inclined plane to prevent cars from accidentally running down." The new regulation modifies this by stating that "such regulation is not required where the skip or car remains on the chain or cable."

## ANNUAL REPORT OF THE DEPARTMENT OF LABOUR OF THE PROVINCE OF QUEBEC FOR 1932-1933

THE administrative activities of the Department of Labour of the Province of Quebec are reviewed in the annual report of the Department for the year ending June 30, 1933, this being the first report for a full year's operations since the Department was established separately from the former joint Department of Public Works and Labour. The legislation authorizing the creation of a distinct Department of Labour was reviewed in the *LABOUR GAZETTE*, May, 1931, page 528. While the new Department came into effect in October, 1931, the report reviewed last year only covered a period of eight months—from November, 1931 to July, 1932. Accordingly, the present report brings the record to the end of June, 1933. In the re-allocation of duties and jurisdiction, the Minister of the new Department of Labour was charged with the duty of instituting and controlling inquiries into important industrial questions as well as into labour conditions and may collect statistics relating thereto and transmit them to the Quebec Bureau of Statistics. He also has charge of the carrying out of any Acts respecting riots near public works; disputes between employers and employees; municipal strikes and lockouts; employment bureaus; minimum wages for women; safety in public buildings; inspection of scaffolding; protection of the public from fire; installation of lightning rods; safety and inspection of industrial establishments; stationary engineers; weekly day of rest for industrial employees; labour accidents; Workmen's Compensation Commission; and, generally, everything concerning artisans, workmen, day and manual labourers.

In the report of the deputy minister attention is drawn to the increase of administrative duties of the department during the economic depression, with numerous complaints against unfair labour conditions.

The report of the chief inspector under the Industrial Establishments Act (which regulates the age of admission to work, limits the working hours of women and children and provides for safe and sanitary conditions in plants and factories) indicates a total of 4,496 inspections of industrial establishments and public buildings. A considerable decrease was noted in the number of girls and boys from 14 to 16 years working in industries, the reduction being approximately 75 per cent as compared with the previous year. During the year, 227 requests were received for overtime work for

women and girls and boys under eighteen years. Upon inquiry being made in each case, 117 requests were refused and 110 permits granted. Eight manufacturers infringed the regulations by not applying for permits for overtime and were fined.

A total of 467 accidents were reported by employers to the inspectors. Of this total, 22 were fatal and 179 were classified as "slight." It is explained that all accidents are supposed to be reported to the department, but often this is not done. However, as a result of close co-operation with the Workmen's Compensation Board a daily list of accidents is furnished the Department which then institutes an investigation. In cases of fatal accidents employers are obliged to report as quickly as possible. Following inquiry into such accidents, the Department is able to give a corner's jury all the necessary information on technical points.

Reference is made to the progress of the accident prevention work, and to the fact that in most of the important industrial establishments medical and nursing service is provided for employees. Most large plants also have an infirmary.

During the year, 463 complaints were received, of which 42 were found upon inquiry to be not justified while in 421 cases the complaints were founded. The justifiable complaints concerned the following: sanitary conditions, 39; inquiries following accidents, 129; non licenced engineers, 51; lotteries, 1; industrial diseases, 12; Sunday rest, 10; weekly rest, 70; movies in school rooms, 12; wages paid to men, 22; work after regulation hours, 18; night work (women and girls) 15; infractions of Industrial Establishments Act pertaining to hours, 42.

*Stationary Engineers.*—The report of the Boilers and Pressure Vessels Inspection Bureau indicated that there were issued 183 certificates of approval in the registration of plans for steam boilers, reservoirs, etc. It was stated that since the adoption of the Canadian Interprovincial Code, governing the construction and installation of pressure vessels, there have been far fewer accidents. There was a slight reduction in the number of licences issued to stationary engineers and also in the number of renewals, the decrease being attributed to the slackness in the building industry. In all, 8,576 certificates were granted during the year, of which 653 were issued upon ex-

amination, the remainder, with the exception of 185 being for renewals. The fees in these 185 cases were returned owing to the lack of qualifications on the part of the candidates; 65 of such cases are still pending since the candidates were permitted another examination. In 48 cases the candidates were trying for third-class certificates and succeeded in being rated fourth-class; while 210 candidates trying for fourth-class were only able to qualify for a stoker's licence.

*Board of Examining Electricians.*—This Board, which is responsible for the enforcement of the Public Fire Protection Act and the Lightning Rod Act reported reduced activity owing to the slackening of electrical installation work. There were 87,165 inspections during the year. Licensed individual contractors numbered 664; companies, 274; electricians, 3,314. It was also reported that the revision of the Act respecting electricians resulted in better control of apprentices, owing to the fact that apprentices are provided with a work book, thus permitting a "follow-up" on wherever they are employed.

*Provincial Employment Bureaus.*—As indicated by the general superintendent, the record of the 15 provincial employment bureaus during the year was as follows: appli-

cations, 74,542; vacancies, 26,788; references, 30,781; persons placed, 21,006. The superintendent states that the abolition of private employment agencies, begun in January, 1932, has continued steadily since, with good results. Permits for the operation of free employment bureaus totalled 80, of which number 36 were to employers having their own departments for such purpose.

*Fair Wages.*—The reports of the department's fair wage officers outline their activities in enforcing the provincial minimum wage schedule in government contracts. Included is the official fair wage scale for all trades that was in effect until May 1, 1933. There was a total of 27 wage complaints in the two districts, and each case was investigated and adjusted.

*Trade Disputes and Conciliation.*—The report of the registrar deals with conciliation activities in various disputes. Details were given of the arbitration proceedings in several of the chief cases under the Quebec Trades Disputes Act.

The report gives a review of the labour legislation enacted during the period of the report, which was outlined in the *LABOUR GAZETTE*, July, 1933, page 695.

## Women's Minimum Wages in Quebec

The annual report of Quebec Minimum Wage Board for the year ending June 30, 1933, is included in the general annual report of the provincial Department of Labour.

Unemployment in certain industries greatly increased during the year and a number of women occupying permanent positions for a long time were discharged or only worked on short time, while "manufacturers seemed to have decided on a shorter working week, thus entailing a corresponding reduction in wages." It was found that in order to meet competition some employers reduced to the minimum fixed by the regulations the much larger salaries they formerly paid to their employees. The result was a number of complaints laid before the Commission. On this matter the Commission states that while it has the necessary power to enforce the enactments fixing the minimum wage, it cannot prevent wage reductions so long as the minimum wage is not infringed. It also has no jurisdiction over the reducing of working hours. It points out that "a woman cannot receive for 30 hours of work the wages earned for 50 hours," and refers to cases of experienced women "who earned \$15 a week and

whose wages were reduced to \$6, an insufficient amount for a living, though they spent nearly as much time at the shop." The time spent at the shop, it should be explained, was not all taken up in actual working time, but a large part of it was in waiting for work. "But work is scarce," the report continues, "and under the piece system, in order to meet any eventuality, most employers keep more workers than they need. The latter willingly remain at the shop in order to have a share in any work that might come in their absence. For this reason women workers cannot avail themselves of the clause of the enactments requiring that waiting hours be paid, when they remain 40 to 50 hours per week at the shop and work only 20 to 30 hours. They receive only a small wage in proportion to the hours spent in the shop, but keeping in mind the hours of real work, it is evident that the Minimum Wage Act is not infringed. The Commission received numerous complaints as to certain factories breaking the law by paying only \$5 to \$6 to experienced women for a full week's work. Investigation revealed that in a particular case the woman worked by the piece and on

short time for which she was paid on the minimum wage basis. The Commission could not intervene for it could not rightly compel an employer to pay women workers a wage representing 40 hours of labour while they worked only for 30 hours.

"However, the system seems abnormal which permits an employer to have at his disposal twice the help that is required in ordinary times under the pretext that women work by the piece, and pay only for the work done; according to certain manufacturers, women can leave the shop when their work is finished and earn a much higher wage than the one fixed by the enactment when the amount of production increases. While paying the minimum prescribed these employers do not respect the spirit of the Act which would have women receive a wage sufficient to permit them to live decently on the fruit of their labour. The piece work system which became general after the application of the enactments tends to destroy this principle of social justice. The Commission intends studying this new phase of industrial life in order to put an end to the abuses of the piece system, the cause of 90 per cent of the complaints received; we might require that every woman working by the hour, by piece or on bonus receive the full minimum wage to which she is entitled for every hour passed in the shop.

"New requests were made to the Commission to reduce the minimum wage established or suspend the application of the enactments during the depression period. The minimum was fixed to provide for the cost of living of a working woman and we do not think such cost has varied sufficiently to justify a revision downwards. Besides, the number of working hours has been reduced in most industries, involving a proportionate reduction of wages. Moreover, a minimum wage should not be subject to the daily fluctuations of prices. As to the suspension of the enactments, every impartial mind will agree with us that a minimum wage is necessary especially during periods of depression, as affording protection. Our opinion in this matter is shared by most employers and labour unions whose co-operation has strengthened our efforts and enabled us to fulfil our delicate duties."

During the year action was taken against 26 employers for infractions of the minimum wage regulations. In each case the maximum fine of \$50 and costs was imposed, and in several instances "the judge regretted that the fine was not heavier." From these indications the commission "unhesitatingly states that the judge, the press and the public opinion uphold us, helping to make such

humanitarian legislation respected." In most cases, "employers guilty of infraction prefer paying the difference in wages than to be sued, which would occasion undesirable publicity."

At the close of the year there were in force 24 enactments, covering 1,068 establishments employing 30,362 women and apprentices. The Montreal office received 125 complaints from women workers. As a result of action by the Commission, 38 manufacturers paid 47 women a total sum of \$2,315.34, representing wages due, the individual amounts ranging from 64 cents to \$225. This office made 1,388 inspections and investigations during the year, which revealed that 81 manufacturers had ceased business, and 77 factories, not previously on the official list, were in operation.

The Quebec office instituted 246 investigations, settling two wage claims. The inspections from this office showed 11 manufacturers ceasing to operate and 9 new factories in industry.

*Permits.*—In order to help aged and infirm women or those placed at a disadvantage with respect to others, and put them on a footing of equality, the Commission continued to grant permits authorizing them to work for a wage lower than the minimum stated by the enactments. To obtain this permit, a special request by the woman must be made at the Commission's office, or in presence of the parish priest or some public officer. However, despite the permit, the wage of a woman worker must never be less than \$7 in Montreal and \$6 in the rest of the province.

Owing to the financial depression the Commission was faced with a new problem. During their apprenticeship, a large number of young working women are in charge of only minor operations requiring only a few days or weeks to learn. According to the Act they are entitled to the periodical increases fixed by the enactments. The work performed however does not justify the wage paid by their term of apprenticeship. To demand such a minimum would mean their immediate dismissal. Also, it would be impossible for the woman to find other work, for the apprenticeship term in one shop counts in another of the same industry. In order to prevent the minimum wage from working an injury to working women the Commission granted provisional permits to interested parties authorizing them to work for a wage corresponding with the experience required for the work to be done. If a woman in such a situation is promoted to a work demanding more skill, she must receive immediately the periodical increases.

During the year there were 237 establishments holding permits. The number of permits in force at the end of the year was 830, of which 156 were for aged or infirm workers, while 637 were for apprentices doing work of minor importance.

The chief statistics for 1933 for each industry under the Act are summarized as follows:—

*Laundries, Dye Works.*—For the city of Montreal—number of firms, 53; number of women employed, 1,192; average weekly wage per workwoman, \$9.88 (\$12.28 in 1932). For the rest of the province—number of firms, 28; number of women employed, 343; average weekly wage per workwoman, \$8.63 (\$9.45 in 1932).

*Printing Industry.*—For the city of Montreal—number of firms, 89; number of women employed, 656; average weekly wage per workwoman, \$11.20 (\$11.92 in 1932). For the rest of the province—number of firms, 30; number of women employed, 199; average weekly wage per workwoman, \$9.11 (\$9.03 in 1932).

*Textile Industry.*—For the city of Montreal—number of firms, 36; number of women employed, 2,423; average weekly wage per workwoman, \$10.72 (\$13.25 in 1932). For the rest of the province—number of firms, 51; number of women employed, 6,280; average weekly wage per workwoman, \$10.40 (\$11.50 in 1932).

*Leather Industry.*—For the city of Montreal—number of firms, 64; number of women employed, 1,831; average weekly wage per workwoman, \$10.84 (\$13.87 in 1932). For municipalities over 3,000 population—number of firms, 36; number of women employed, 1,081; average weekly wage per workwoman, \$8.66 (\$11.12 in 1932). For the rest of the province—number of firms, 26; number of women employed, 614; average weekly wage per workwoman, \$7.35 (\$8.53 in 1932).

*Women's, Men's and Boys' Clothing.*—For the city of Montreal—number of firms, 138; number of women employed, 1,881; average

weekly wage per workwoman, \$10.97 (\$12.96 in 1932). For the rest of the province—number of firms, 16; number of women employed, 754; average weekly wage per workwoman, \$8.16 (\$9.77 in 1932).

*Hat and Cap Factories.*—For the city of Montreal—number of firms, 35; number of women employed, 787; average weekly wage per workwoman, \$13.31 (\$14.29 in 1932).

*Women's and Children's Dresses, Silk Underwear, Etc.*—For the city of Montreal—number of firms, 98; number of women employed, 2,535; average weekly wage per workwoman, \$10.18 (\$12.26 in 1932).

*Manufacturers of Overalls, Mackinaws, Cottons, Etc.*—For the city of Montreal—number of firms, 63; number of women employed, 3,320; average weekly wage per workwoman, \$9.98 (\$11.13 in 1932). For the rest of the province—number of firms, 22; number of women employed, 818; average weekly wage per workwoman, \$8.49 (\$10.52 in 1932).

*Tobacco, Cigar and Cigarette Industry.*—For the city of Montreal—number of firms, 21; number of women employed, 2,804; average weekly wage per workwoman, \$9.05 (\$12.59 in 1932). For the rest of the province—number of firms, 19; number of women employed, 719; average weekly wage for workwoman, \$7.02 (\$10.14 in 1932).

*Fur Industry.*—For the city of Montreal—number of firms, 94; number of women employed, 522; average weekly wage per workwoman, \$14.60 (\$15.30 in 1932). For the rest of the province—number of firms, 35; number of women employed, 218; average weekly wage per workwoman, \$10.88 (\$10.87 in 1932).

*Biscuit and Confectionery Industry.*—For the city of Montreal—number of firms, 46; number of women employed, 1,321; average weekly wage, \$10.24 (\$9.42 in November, 1932). For the rest of the province—number of firms, 15; number of women employed, 121; average weekly wage, \$7.78 (\$5.01 in June, 1932).

## Minimum Wages in Saskatchewan

The Minimum Wage Board of Saskatchewan, by an Order dated May 16, 1934, amended Order No. 2 governing employment of females in laundries and factories in the cities of the Province. The text of Order No. 2 was given in the LABOUR GAZETTE, October, 1933, page 997. Clause (d) of section 2, formerly read as follows:

(d) *Knitting, Hat and Wearing Apparel Manufactories.*—Learners in knitting, hat and wearing apparel manufactories shall be paid wages at a rate not less than \$7.50 per week for a period of three months and for the twelve months following shall be paid the rate of

wages specified in subclause (b) for learners.

The amending order is as follows:—

That clause (d) of section 2 of Order No. 2, being an Order Governing Employment of Females in Laundries and Factories, be amended by adding the words "and book binderies" after the word "manufactories" wherever it occurs in the said clause and by striking out the words "three months" therein and substituting therefor the words "six months."

Mrs. Marwood Gay, of Moose Jaw, has been appointed as a member of the Minimum Wage Board of Saskatchewan, as from June 1, 1934, in the place of Miss Ethel M. Henderson, resigned.

## FEMALE MINIMUM WAGE ACT OF BRITISH COLUMBIA

### Orders governing Office and Public Housekeeping Occupations

THE following orders of the Board of Industrial Relations of British Columbia were gazetted in May. This Board was recently established under the provisions of the Male Minimum Wage Act, its functions being to administer that act, and also the Female Minimum Wage Act and the Hours of Work Act. The Board consists of the following members: Mr. Adam Bell, Deputy Minister of Labour (chairman); Professor W. A. Carrothers (chairman of the Economic Council); Mrs. Helen Gregory MacGill, former judge of the Juvenile Court of Vancouver; Mr. James Thompson, past president of the Vancouver and District Trades and Labour Council; and Mr. C. J. McDowell of McDowell and Mann, engineers, of Victoria.

The first orders of the Board, under the Male Minimum Wage Act, were reprinted in the last issue of the LABOUR GAZETTE, page 419, Order No. 1, establishing a minimum wage in the logging industry; No. 2, establishing a minimum wage in the sawmill industry, and No. 2A respecting tie cutting operations. The orders which follow are under the provisions of the Female Minimum Wage Act. Order No. 3, under the Female Minimum Wage Act, was also reprinted in the last issue, page 420. Orders No. 4 and No. 5, under the same Act, are as follows:—

#### Order No. 4.—Governing Office Occupations

Pursuant to sections 4 and 13 of the "Female Minimum Wage Act," being chapter 48 of the Statutes of British Columbia, 1934, the Board of Industrial Relations hereby orders:

1. That where used in this Order the expression "office occupation" includes the work of females employed as stenographers; book-keepers; typists; billing clerks; filing clerks; cashiers; cash-girls (not included in other Orders); checkers; invoicers; comptometer operators; auditors; attendants in physicians' offices, dentists' offices, and other offices; and all kinds of clerical help.

2. That, subject to the other provisions of this Order, the minimum wage for every female employee eighteen years of age or over that age in the office occupation (except women to whom special licences are issued under section 6 of the said Act) shall be \$15 a week of forty-eight hours, or 31½ cents per hour.

3. The minimum wage for every girl under eighteen years of age in the office occupation shall be as follows:—

\$11 a week during the first six months' employment in such occupation.

\$12 a week during the second six months' employment in such occupation.

\$13 a week during the third six months' employment in such occupation.

\$14 a week during the fourth six months' employment in such occupation.

\$15 a week for forty-eight hours, or 31½ cents per hour thereafter.

4. The minimum wage for every female apprentice eighteen years of age or over that age in the office occupation shall be as follows:—

\$11 a week during the first three months' employment in such occupation.

\$12 a week during the second three months' employment in such occupation.

\$13 a week during the third three months' employment in such occupation.

\$14 a week during the fourth three months' employment in such occupation.

\$15 a week of forty-eight hours, or 31½ cents per hour thereafter.

5. Licences must be obtained from the Board before such female apprentices eighteen years of age or over that age may be employed at the rates set forth in section 4 of this Order. Application forms for such licences may be obtained from the Board, Parliament Buildings, Victoria, B.C.

6. No woman or girl shall be employed in the office occupation for a greater number of hours than forty-eight in any one week unless a special permit in writing has been obtained from the Chairman or Secretary of the Board.

7. Every woman or girl employed for a greater number of hours than forty-eight in any one week shall be paid *pro rata* for such excess time according to the legal rate to which she is entitled as provided by sections 2, 3, or 4 of this Order.

8. Every woman or girl employed for a lesser number of hours than forty-eight in any one week may be paid *pro rata* for such time according to the legal rate to which she is entitled as provided by sections 2, 3, or 4 of this Order.

9. This Order shall be published in the *British Columbia Gazette* on the 10th day of May, 1934, and shall take effect at the expiration of fourteen days thereafter, and shall be in substitution for the Order of the Minimum Wage Board governing the Office Occupation published in the *British Columbia Gazette* on the 17th day of July, 1919, which is hereby rescinded.

Dated at Victoria, B.C., this 2nd day of May, 1934.

#### Order No. 5.—Governing Public Housekeeping Occupation

Pursuant to sections 4 and 13 of the "Female Minimum Wage Act," being chapter 48 of the Statutes of British Columbia, 1934, the Board of Industrial Relations hereby orders:—

1. That where used in this Order the expression "public housekeeping occupation" includes the work of waitresses, attendants, housekeepers, cooks, and kitchen-help in restaurants, hotels, tea-rooms, ice-cream parlours, light-lunch stands, and other places where food is cooked, prepared, and served for which a charge is made; and the work of chambermaids in hotels, lodging-houses, and apartments where lodging is furnished, whether or not such establishments are operated independently or in connection with any other business; and the work of all female elevator operators and janitresses.

2. That, subject to the other provisions of this Order, the minimum wage for every female employee eighteen years of age or over that age in the public housekeeping occupation (except women to whom a special licence is issued under section 6 of the said Act) shall be \$14 a week of forty-eight hours, or 29½ cents per hour:

Provided that when lodging is furnished by the employer to any employee as part payment of the wages of said employee, not more than \$3 a week may be deducted from the weekly wage of such employee for a full week's lodging of seven days;

And, further, that when board or meals are furnished by the employer to any employee as part payment of the wages of such employee, not more than \$5.25 a week may be deducted from the weekly wage of such employee for a full week's board of twenty-one meals. A fraction of a week's board shall be computed upon a proportional basis.

3. That the minimum wage for every girl under eighteen years of age employed in the public housekeeping occupation shall be \$12 a week of forty-eight hours:

Provided that when lodging is furnished by the employer to any girl under the age of eighteen years as part payment of the wages of such girl, not more than \$3 a week may be deducted from the weekly wage of such girl for a full week's lodging of seven days;

And, further, that when board or meals are furnished by the employer to any girl under the age of eighteen years as part payment of the wages of such girl, not more than \$5.25 a week may be deducted from the weekly wage of such girl for a full week's board of twenty-one meals. A fraction of a week's board shall be computed upon a proportional basis.

4. The minimum wage for every female apprentice eighteen years of age or over that age in the public housekeeping occupation shall be \$12 a week of forty-eight hours during the first three months' employment in such occupation.

Provided that when lodging is furnished by the employer to any apprentice as part pay-

ment of the wages of said apprentice, not more than \$3 a week may be deducted from the weekly wage of such apprentice for a full week's lodging of seven days;

And, further, that when board or meals are furnished by the employer to any apprentice as part payment of the wages of such apprentice, not more than \$5.25 a week may be deducted from the weekly wage of such employee for a full week's board of twenty-one meals. A fraction of a week's board shall be computed upon a proportional basis.

5. Licences must be obtained from the Board before such female apprentices eighteen years of age or over that age may be employed at the rate set forth in section 4 of this Order. Application forms for such licences may be obtained from the Board, Parliament Buildings, Victoria, B.C.

6. No woman or girl shall be employed in the public housekeeping occupation for a greater number of hours than forty-eight in any one week, except in cases of emergency, when fifty-two hours a week may be worked.

7. Every woman or girl employed for a greater number of hours than forty-eight in any one week shall be paid at the rate of time and one-half for such excess time according to the legal rate to which she is entitled by sections 2, 3, or 4 of this Order.

8. Every woman or girl employed for a lesser number of hours than forty-eight in any one week may be paid pro rata for such time according to the legal rate to which she is entitled as provided by sections 2, 3 or 4 of this Order.

9. This Order shall be published in the *British Columbia Gazette* on the 10th day of May, 1934, and shall take effect at the expiration of fourteen days thereafter, and shall be in substitution for the Order of the Minimum Wage Board governing the Public Housekeeping Occupation published in the *British Columbia Gazette* on the 17th day of July, 1919, which is hereby rescinded.

Dated at Victoria, B.C., this 2nd day of May, 1934.

## WOMEN'S MINIMUM WAGES IN NOVA SCOTIA

### Order governing Shops and Stores, including Millinery, Dressmaking, etc.

THE Minimum Wage Board of Nova Scotia issued the following order on May 2, 1934. Previous orders appeared in the *LABOUR GAZETTE*, November, 1931, page 1192 and in previous issues.

#### ORDER No. 7

Governing Female Employees in Shops and Stores in the Cities and Incorporated Towns in the Province of Nova Scotia (This order also includes Millinery, Dressmaking, Tailoring and Fur Sewing situated or in any way connected with a Shop or Store).

(1) *Wages*:—No person, firm or corporation shall employ a female worker or suffer or permit a female worker to be employed in any of the above industries in the Cities and Incorporated Towns in Nova Scotia at a wage less per week for the regular working period of the establishment than is set forth in the following table:—

Population Group	Cities and Towns of 17,000 population and over	All Towns under 17,000 population
Experienced workers.	\$11.00	\$10.00
Inexperienced adults over 18 years.	6 months at \$8 00 6 months at 9 00 6 months at 10 00	6 months at \$7 00 6 months at 8 00 6 months at 9 00
Inexperienced young girls under 18 years	6 months at 7 00 6 months at 8 50 6 months at 10 00	6 months at 6 00 6 months at 7 50 6 months at 9 00

No worker who begins as a young girl shall after reaching the age of eighteen years receive less than the wage prescribed for an inexperienced adult. A person shall be deemed to be experienced worker when such person has been employed in the industry for eighteen months.

(2) *Probationary Period*:—A probationary period of three months for which no wages are stipulated is allowed after which period

an inexperienced female employee shall be paid wages at a rate not less than the amount set forth in the above table for inexperienced workers.

(3) *Maximum of Inexperienced Employees*.—The number of inexperienced adults or young girls or both shall not exceed twenty-five per cent (25%) of the total female force, except when the total working force is less than four.

(4) *Hours of Work*.—(a) The work period for which these minimum wages shall be paid shall not be less than 44 nor more than 50 hours per week. Subject to the proviso, that special permission will be given during the period commencing December 15, and ending December 31, for any number of hours not exceeding sixty hours in any one week; (b) Work in excess of 50 hours per week shall be counted as overtime, and shall be paid for at not less than 50 per cent above the Minimum wage rate, fixed by this order, reckoned on the basis of a 50 hour week; (c) Work for less than 50 hours per week may be counted as short time and shall be paid for at not less than the minimum wage rates fixed by this order, reckoned proportionately to the regular weekly period in the establishment; (d) Any worker losing time during the operation of an establishment shall be paid proportionately for the actual number of hours worked; (e) No reduction for statutory holidays shall be made from the Minimum Wage.

(6) *Meals*.—Where meals are furnished by the employers and charged for, the price shall not exceed twenty-five cents (25 cents) per meal.

(7) *Permits*.—The Board may issue permits for lower wages on behalf of aged or

handicapped workers. It may also grant permits of variation or suspension of any of these regulations in case of exceptional conditions. Employers or Employees are invited to consult the Board regarding any problems which this Order may concern.

(8) *Deduction for Absence*.—No deduction below the minimum wage line for absence shall exceed the value of the time lost, reckoned in proportion to the normal working hours in vogue in the establishment.

(9) *Method of Payment*.—Wages shall be paid promptly at regular intervals in cash. This period shall not exceed one month.

(10) *Waiting*.—An employee required to wait on the premises shall be paid for the time thus spent.

(11) *Seats*.—Seats shall be provided in the proportion of at least one seat for every four employees or fraction thereof.

(12) *Penalties*.—Any violation of this order is punishable by fine (See section 11 N.S. Acts 1920 (Chapter 11)).

(13) *Posting*.—Each establishment shall keep a copy of this order posted in a conspicuous place on its premises.

This order shall come into force and be effective on the First day of June, 1934.

Address all communications to the Minimum Wage Board, P.O. Box 538, Halifax, N.S.

Dated at Halifax this 2nd day of May, 1934.

G. A. REDMOND, Chairman,  
MARION MURPHY,  
ALICE HATFIELD,  
WM. H. ROSS,  
G. A. SMITH,

Minimum Wage Board.

## Amalgamated Mine Workers of Nova Scotia

A special convention of the Amalgamated Mine Workers of Nova Scotia, which was subsequently approved as the annual convention, was held at Glace Bay, N.S., April 23-27, 1934, being attended by 47 credential delegates and 10 fraternal delegates. President John A. McDonald opened the convention with remarks pertaining to the organization and its future policy. The joint report of the officers, which was read by secretary-treasurer R. Stewart, was referred to the committee on officers' reports.

Fraternal greetings were extended by representatives of the Unemployed Workers' Organization of Nova Scotia; the Canadian Labour Defence League of Nova Scotia; and the Workers' Unity League of the Maritime Provinces.

The convention went on record as absolving the president and secretary from all blame in connection with the strike at Sydney Mines.

Following the discussion on a press despatch reporting a reduction in wages for miners of Thorburn, a resolution was adopted authorizing the secretary to communicate with the president of District No. 26, United Mine

Workers of America, requesting the co-operation of his organization in resisting this proposed reduction.

In the report of the policy committee, recommendations were made in regard to various questions affecting the organization, including the settling of disputes and affiliations. In regard to the former the committee recommended "that the A.M.W. of N.S. shall never subject itself to be a party to any of the capitalist machinery, such as conciliation, arbitration boards, commissions, royal or otherwise, as a means of adjusting its grievances." The recommendation as regards affiliations was "that our efforts should be towards establishing this organization more intimately with the Mine Workers' Union of Canada, the Workers' International Relief, and other bodies, with a view to affiliation when the time is opportune."

A number of clauses in the constitution were amended.

Resolutions were adopted approving the following policies: improved housing conditions and proper sewage installation; that silicosis be included in the list of diseases for

which compensation is paid; release of all class-war prisoners and an open investigation into the alleged shooting at Tim Buck in his cell at Kingston Penitentiary; that the present rates of relief be increased by 25 per cent; amendment to the Workmen's Compensation Act so that dependants of an injured workman shall receive the regular indemnity after his death, even though injuries ultimately causing death were received prior to his marriage; authorizing the executive officers to affiliate the entire membership of the Amalgamated Mine Workers of Nova Scotia with the Workers' International Relief and advise each local to set up relief committees to work in conjunction with the Workers' International Relief, and to assist all efforts to build up a

Workers' International Relief in the district, subject to the approval of the local unions; the immediate release of Sam Carr from Kingston Penitentiary owing to ill health; repeal of section 98 of the Criminal Code and the release of all those held under this section; unemployment insurance; observance of May Day; that advantage be taken of the check-off system until such time as a better method can be worked out; calling upon the officers of District 26 of the United Mine Workers of America to declare an immediate general strike against the alleged Pictou wage reduction and pledging them the full support of the Amalgamated Mine Workers of Nova Scotia.

### CANADIAN MANUFACTURERS' ASSOCIATION

THE 63rd annual general meeting of the Canadian Manufacturers' Association was held at Montreal on June 7-8, delegates from all the provinces being in attendance.

Major L. L. Anthes, the retiring president, referred to the improvement in economic conditions in the course of his opening address; "A gradual and continuous revival in most departments of economic activity has been evident since we met at this time last year. This is a matter for profound gratitude and relief. It is significant that this steady and marked recovery has been and is taking place in the principal countries of the world, in spite of differences in race, ways of doing things, standards and forms of living, methods of production, forms of government, political parties and economic theories and plans. It seems reasonable to assume, therefore, that the causes underlying recovery are fundamental and universal although they may be difficult to isolate and describe. Possibly the return of prosperity is as mysterious as the return of spring and the cause and progress of economic recovery elude the power of exact discovery and definition. We have been told that no return to normal was possible except through international agreements and effort, policed by centralized world authority, but we have been and are now witnessing the recuperation of the principal system and efforts. May we not expect that, as each nation puts its own house in order, it will stabilize its own finances, increase its national surplus, and then will be able to buy more from other countries with the result that, through the cumulation of individual national programs, further impetus will be given to international exchange of products, shipping and finance?

"The affairs of Canada," the president continued, "have made steady and substantial progress since a year ago. Wherever one goes and whomever one meets, one hears good news. The mines are prospering even more than last year; the production of forest products and their export have increased; the fisheries have been more active; the prices of many agricultural products have risen; the factories are making more goods; more people are employed; the transportation companies are carrying more freight; the merchants have larger sales; the financial institutions report better monetary conditions; and, in brief, the mental outlook of the great majority of people has definitely changed for the better, and the whole tone of business and industry is much more cheerful as the country's progress continues and accelerates. . . . Progress to date, so far as industry is concerned, has been more conspicuous in lines of consumable goods than in capital or durable goods. For example, industries which produce articles that are quickly used up, have recovered to a greater degree than industries producing building materials and machinery. More production by the capital or durable goods industries is very necessary to provide employment and to restore stability and balance to the country's economic activities and relations. When this occurs in volume, most of our material problems will be solved. Among the industries which have reached or passed the general level of 1926 are the following—gold shipments, copper exports, mineral production, tobacco, rubber imports, textiles, forestry production, newsprint, petroleum imports, electric power and coke production. Among those that are still below, and in many cases con-

siderably below, the average of 1926 are the following—production of iron and steel, pig iron, automobiles and sugar, exports of asbestos, cheese, wood pulp, planks, boards and shingles, construction and building, and car loadings.”

Major Anthes referred to the rise in prices as “one of the most encouraging features of the past year,” and passed to the consideration of various problems international and domestic, still remaining to be solved, including problems of export trade, transportation, the relation of governments to industry, etc. He concluded with an appeal for the retention of the system under which Canada has prospered and maintained freedom, with such modifications as may be necessary. “Are we not entitled to ask those who have been finding so many faults in our industrial system during the past two or three years if they have considered the constructive side? Admitting that industrialists have made mistakes and will probably make many more, the fact remains that the gross annual production of Canadian factories grew from \$221,000,000 in 1871 to \$4,063,987,279 in 1929, and for the latest available year, 1931, was \$2,698,461,862. During that period the intelligence and skill of Canadian factory workers succeeded in making practically every kind of article used in Canada, largely supplying domestic needs, and in addition exporting Canadian goods to over a hundred countries.

“We are emerging from the depression of unprecedented severity with the national producing departments, agriculture, lumbering, fishing, mining, industry, practically intact physically. The systems are all here. The machinery is ready. Natural intelligence, practical training and instruction, scientific research, chemistry, vocational and technical education have equipped a splendid army of workers for their tasks. Our national credit is high. Many of our difficulties lie behind. Many are still before us, but, with the advantages which are apparent and with our Canadian character and experience, we should be able to go forward with confidence in the future of our country.”

### Report on Industrial Relations

The report of the Industrial Relations Committee was in part as follows:—

“The principal matters dealt with in part by the Industrial Relations Committee during the year were:—unemployment insurance, minimum wage legislation, workmen’s compensation, collective bargaining and old age pensions.

“As regards unemployment insurance, the committee, after consultation with the various

divisions of the Association, as well as with insurance interests and other bodies interested, has put at the disposal of the competent authorities the result of its study of the many aspects of this very complex problem. An opportunity will be provided later at this meeting for a thorough discussion of the whole situation. It remains to add that unemployment insurance, together with the question of reduction of hours of work as a means of relieving unemployment, is on the agenda of this year’s International Labour Conference which is now in session at Geneva, Switzerland.....

“As regards minimum wage legislation, the committee, after consultation with the competent authorities, has approved of amendments fixing maximum hours, for which the minimum wage is to be paid, and providing that where men or boys are employed in substitution for women they must be paid the minimum rates fixed for women. As regards the proposal which has been made in certain quarters that the existing minimum wage legislation should be extended to cover male workers, the committee’s view is, that the Association’s policy of opposing general minimum wages for men, should be adhered to until a careful investigation has been conducted to determine the proper limits of such legislation.

“As regards workmen’s compensation, an amendment was proposed in Ontario to the effect that any injured workman might have his case referred to a medical review board on which the workman and employer should be represented, the decision of such Board to be final as to the degree of disability and the fitness for work of the injured man. This proposal was successfully opposed by the committee on the ground that the present system, on the admission of the employees themselves, works quite satisfactorily in at least 99 per cent of the cases, and that the proposed system, in addition to involving substantial expense and undue delay in the settling of claims, would not make for impartial adjudication in doubtful cases.

As regards collective bargaining, the committee took the view, after careful consideration, that it would not be wise for this country to follow the example set in the United States under the National Industrial Recovery Act, one of the principal features of which is, of course, the principle of collective bargaining. Thus the view was taken, that the Quebec Division was right in opposing, and securing important amendments in, the so-called Collective Labour Agreements Extension Act, introduced in that Province.

"As regards old age pensions, the Committee has to report that it has continued to urge upon the competent authorities that the present non-contributory, 'deserving poor' type of act is unsound and that the sound type of old age pensions legislation is that under which everyone is eligible for pension, but everyone must contribute. It is satisfactory to be able to add that there is reason to believe that this view, which has been urged by the Association from the beginning is being given serious consideration by the competent authorities."

The Association also received reports from the executive committee and from the Committees on tariff, transportation, legislation, insurance, commercial intelligence, publishing,

education, and membership. Reports were presented also by the various provincial divisions.

A feature of the proceedings on the last day of the convention was an address by the Prime Minister, the Right Hon. R. B. Bennett.

### Officers Elected

Officers were elected for the ensuing year as follows: President, Mr. James H. Webb, Montreal; 1st Vice-President, W. R. Drynan, Hamilton; 2nd Vice-President, W. S. Morden, K.C., Toronto; treasurer, T. F. Monypenny, Toronto. Messrs. J. E. Walsh and J. T. Stirrett, of Toronto, remain as general manager and general secretary, respectively.

## Hours of Work under the Recovery Administration in the United States

A summary of fact and opinion in regard to the "hours of work" feature of the recovery program in the United States has been published by the Industrial Relations Section of Princeton University. The pamphlet marshals the diverse opinions that have been expressed as to the economic results of shorter hours of labour: "The strict limitation of working hours, though widely hailed a year ago as a necessary measure in lessening the staggering burden of relief, has come to be regarded by many as a restraint upon the increasing momentum of business enterprise. Labour officials and governmental spokesmen, on the one hand, are reiterating the claim that shorter hours and increased rates of wages are essential to a sustained advance. The improvement which has occurred thus far would seem to justify this claim. Industrial executives and students of economic history, on the other hand, however, are expressing their apprehension that shorter hours will not only reduce actual and potential output and therefore prosperity, but that the increased costs involved may so diminish the opportunities for profitable operations that recovery will be delayed."

The bulletin sketches the history of hours legislation in the United States, the principal features of the Recovery Act and of the various industrial codes thereunder, the problems that have arisen in the course of administration, and the opinions of leading exponents of critics of code principles.

As to the effect of shorter hours on wages the bulletin says: "What has, in fact, happened to individual earnings in the face of reductions in hours is difficult to determine from the limited statistics available. Em-

ployees previously receiving wages lower than the code minima have certainly benefited as a whole, in spite of lack of complete compliance. The average weekly earnings of all wage earners, also, have increased in comparison with those for 1932 and for the early part of 1933 and have been increased slightly in comparison with those for June and July of 1933, when average hours of work were above 40. To what extent this increase is spread among the very low wage group does not appear in the statistics of averages available. It varies, moreover, in different establishments with the differing proportions of skilled and unskilled labour. It is in part due to an increase in the number of hours of work. Before the upturn of June and July, 1933, short time was prevalent enough to bring the average below 40. Many establishments are still working less than the code maximum allowance, but have increased their working hours from the low figures of March and April, 1933, and this is reflected in average weekly earnings. On the other hand, many more efficient plants which might have increased working hours in the absence of code restrictions were compelled to keep them within these requirements.

"Present-day arguments for and against shorter hours," the bulletin observes, "are almost entirely of an economic character. They are concerned with methods of avoiding unemployment—both cyclical and technological—and of spreading purchasing power so that business activity may be stimulated. One group feels that the way to bring about greater employment and increased business activity is to shorten hours; another that shorter hours will tend to decrease rather than increase employment by raising costs and thereby diminishing business activity."

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Annual Report of the Director

IN his annual report presented to the 18th International Labour Conference at Geneva, Mr. Harold Butler, the Director of the organization, reviews conditions throughout the world during the past year. His task, he points out, is one of unusual difficulty owing to the effects of the cumulative strain upon the economic and social structure of most countries. "Signs of cracking" had already appeared in 1932—abandonment of the gold standard by some thirty countries, the growing burden of indebtedness and the possibility of national insolvency, but the possibility of a return to normal conditions remained.

"During the last twelve months, however, a series of transformations have taken place which have profoundly modified the whole outlook. The prolonged and relentless pressure which the crisis has exercised on the world has finally resulted in the overthrow of political institutions in some of the countries which have been most highly tried and in destroying the faith of others in the economic principles by which they had been guided for generations. . . . "In the course of the last year upheavals of this tremendous character took place in Germany and the United States. The actual circumstances which produced them were no doubt widely different, as were the ideas and the methods which inspired their search for a better future. But both these great nations broke violently away from their past traditions under the goad of extreme economic distress, and both resolutely set out along new and untried paths. Nor were the American and German peoples alone in their determination to discard orthodox ideas and to adopt a new economic faith in order to save themselves from shipwreck. In Russia an economic State based on communist principles had already withstood the test of experience for sixteen years, however fiercely controversy might continue to rage as to the benefits which it conferred on its citizens. In Italy the corporative system had been gradually built up over a decade in defiance of the laws of individualistic economics; in 1933 a further revolutionary step was taken along this road by the Government's decision to organize the whole industrial life of the nation in vertical corporations invested with power to regulate the economic and social activity of their respective branches. Although the notions and aims guiding these four countries and their rules were markedly dissimilar, all of them had alike abandoned to a greater or

lesser degree the principles which had governed economic thinking and social statesmanship during the last century. . . . The fact that four of the world's chief industrial States, containing some 400 million people and responsible for 64 per cent of the world's industrial production, have already abjured to a considerable extent the principles which have hitherto primarily guided the economic policies of all countries, seems to imply that the way to recovery cannot lie straight back along the familiar tracks."

The Director next raises the question of the possible effects of these movements upon the Organization. "What is really meant by 'planned economy'?" he asks; "How far is it something completely novel or how far was it already latent in the classic economic system? To what extent are managed currency, managed commerce, managed industry, likely to operate to the benefit or the detriment of the wage earner? What effects is 'planning' calculated to produce on social legislation, social insurance, hours of work or regularity of employment? Finally, how can 'planning' of a national character be reconciled with the international economic system upon which the past growth of prosperity has so largely depended? These are some of the questions which require a thorough examination and a careful answer. To give categorical replies to them is impossible at the present time, which makes it all the more necessary to collect the material from which at least some first indications can be derived."

The Director marshals the material from which an answer to these questions may ultimately be furnished, dividing his report into the following chapters: (1) the effort towards recovery; (2) the social consequences—unemployment, social insurance, wages, hours of work, migration; (3) experiments in social structure; and finally deals with the actual work of the International Labour Organization in 1933.

### The Efforts Towards Recovery

In this section of the report the Director first notes the recent fluctuations of the economic barometer before proceeding to consider the social phenomena which accompanied them. The most hopeful feature is to be found in the increase in production. Omitting the U.S.S.R., the index of world production, which reached its lowest point at 63.3 in the third quarter of 1932, reached

66.5 in the first and 75.8 in the second quarter of 1933. In July it stood at 86.3, but fell away to 73.1 in December.

The rise in production was accompanied by some decline in unemployment and an appreciable rise in the value of industrial securities. On the other hand, while there was a substantial advance in American commodity prices, comparatively little movement was seen in France, Germany and Great Britain. One of the marked features of the crisis has been the maintenance of agricultural production in spite of tumbling prices, and little progress was made in bridging the gulf between farm prices and industrial prices, without which the purchasing power of the farmer cannot become an effective support of industry. "Hence 1933 is distinguished by drastic measures either to bolster farm prices by means of tariffs, quotas or guaranteed minimum prices in order to give the farmer a larger return than the world price of his produce would afford him, or alternatively to provoke a 'natural' increase of farm prices by deliberately cutting down production.... To attempt to meet fantastic discrepancies of this kind by limiting agricultural production," the Director continues, "can hardly be permanently successful.... The permanent remedy seems clearly to lie not in cutting down production to the level of present consumption, but in expanding the volume of consumption to absorb what agriculture can so easily produce. In other words, the real problem is to utilize instead of to destroy the abundant wealth which agriculture can furnish and against which industry is equipped to exchange an equally abundant production of articles needed to enhance the farmer's efficiency and standard of life. No purely national action can suffice to achieve this redistribution of the world's riches."

The Director next refers to the spread of commercial policies aiming at national self-sufficiency as a new difficulty in the way of foreign commerce. The problem, he says, is to find some way whereby a series of planned national units can be dovetailed into an organic and revitalized international system. "How, in fact, can the world be guaranteed the steady improvement of its living standards which its progressive development towards economic interdependence has hitherto conferred upon it? These are some of the questions with far-reaching social implications which the growth of 'managed economy' suggests. They have not yet been solved, but once the need for a solution is realized, sufficient good sense and goodwill should be forthcoming to render them soluble."

After a discussion of the question of international currency stabilization, and the developments in this field during the past year, the Director refers to the program outlined in the resolution submitted by the I.L.O. last year to the World Monetary and Economic Conference (LABOUR GAZETTE, August, 1933, page 788). That program recommended measures to secure stable monetary conditions; the international co-operation for the maintenance of a steady price level or for "the concerted elimination of restrictions on international exchanges and dangerous impediments to the flow of commerce." Little progress was made during the year in these directions, but "on the other hand, in some countries active and successful steps have been taken to increase the purchasing power of the community and to restore idle capital to circulation. To these steps the improvement in production and employment which has taken place should in all probability be mainly attributed."

### The Social Consequences

This section of the report discusses the position of the worker both as regards social security and the maintenance of living standards. "There has undoubtedly been a real improvement in the lot of the workers during the past year," the Director states, "but it is important not to exaggerate its extent or its implications for the future."

*Unemployment.*—The number of totally unemployed in the different countries was cut down during the year, chiefly by means of public works, camps for juvenile unemployed, and relief works. On the other hand, the reduction was partly due, in some countries, to the exclusion of certain classes from benefit, though the members were still unemployed, and there was also a considerable amount of short time, which is not shown in the records. The report analyses the unemployment returns of the principal countries, and finds evidence that the countries which remained on the gold standard, and did not follow an expansionist monetary policy, have not shared in the improvement shown in the unemployment figures to the same extent as those which adopted those policies. No clear answer is forthcoming as to the extent to which industrial planning failed or succeeded in reducing unemployment. The Director examines the various national relief and public works policies, and finds that "when every allowance is made for the progress so far achieved, there are still huge armies of men and women out of work. In the three-

largest industrial countries alone there are more than 15 millions—more than 2 millions in Great Britain, about 3½ millions in Germany and some 10 millions in the United States, while the number of those who have been out of work for long periods and whose distress is greatest has almost certainly increased."

*Social Insurance.*—The detrimental effects of the crisis on social insurance which had been evident in 1932 were checked to some extent in 1933, and the membership and revenue of the various schemes began to move upward; and there is some ground for the hope that "during the coming year the period of restrictions and compressions will have been brought to an end and that a new phase of consolidation and extension will take its place."

*Wages.*—This section outlines the movement of wages during the period of the report. During 1933 the pronounced downward tendency of the previous year began to slacken. "During the first three years of the crisis, real wages of those fully employed had on the whole tended to rise—that is to say, the cost of living was falling faster than the rates of wages. In 1933 the decline in the cost of living showed signs of slackening and in the summer months a very slight rise took place in a few countries, notably in Denmark, Germany, Great Britain and the United States. In most of the remaining countries the cost of living either remained stationary or continued to fall slowly. No very marked changes took place therefore in real wage rates during the year." However, the influence of short-time work has to be considered, and it is shown that the position would be different if actual earnings instead of normal rates are considered. "Whereas real wages per hour were at the end of 1933 about 20 per cent above the 1929 level, real weekly earnings were 16 per cent lower."

The Director observes that "the reliance on wage reductions as the sovereign remedy for unemployment has certainly been rudely shaken by the experience of the present depression. . . . Of course it cannot be argued from these figures that the level of unemployment is determined by the movement of wage rates. At the same time there is some reason for supposing that the decline in payrolls, in which the fall in wage rates played a part, had a certain influence upon the course of the depression in these countries."

The report notes the inclusion of a "higher wage" policy in the industrial recovery program in the United States, and discusses the effects of the code system on the wage level. "On the whole, the wage experience of the last year seems definitely to have emphasized the paramount importance of the income of the wage earner in the structure of consumption. Where it has been seriously depleted by drastic wage cutting, aggravated unemployment and crippled production seem to have been its usual accompaniments. This finding is only a further confirmation of the view which is now gaining ground generally that the key to the crisis is to be found not in over-production but in under-consumption. . . . In fact, the wages factor is now being realized as one of the essential elements in the problem of consumption, which in its turn is being recognized as the central problem to be solved before stability of business and security of employment can be ensured. The problem of production has indeed been abundantly solved. It is now generally agreed that the present depression is the offspring, not of scarcity, but of wealth in quantities which are at present beyond our powers of assimilation. . . . The real problem which 'planning' has to solve is not the problem of restriction, but the problem of expansion. It has to find the formula which will ensure that purchasing power keeps pace with the boundless possibilities of production, the formula of plenty which will defeat the despairing belief that the world is going back to mediaeval conditions of living at the very time when it has reached the zenith of its scientific knowledge and productive power. Happily, the true nature of the problem is now being more generally understood; and, once understood, it is well within the bounds of human ingenuity to discover the true solution, as long as human perversity does not hamstring the international effort which is indispensable to its application."

*Hours of work.*—During 1933 practical experience of the systematic reduction of hours of work was very considerably increased, and such reductions, embodying in many cases the 44-hour week, were put into operation in many countries either by legislative or administrative action, by collective agreements, or as a result of voluntary decisions by individual employers. "The rate of technical progress has recently been accelerated so rapidly that labour readjustment and re-employment have not kept pace with it. It is a consequent lack of rhythmic balance in the present operation of the industrial system which has produced a

recognition of the desirability of reducing hours of work on economic as well as on social grounds."

*Migration.*—The reversal of the flow of immigration is described as one of the most striking and important results of the crisis. "In previous depressions a reversal of the stream of migration occurred in isolated instances, but there is no precedent for its becoming so universal or prolonged. . . . No one can contest the right of every country to regulate the inflow of foreigners in the way which may seem best adapted to its economic and social needs. On the other hand, the whole migration problem is not one which can be left out of account when the time comes to consider the elements of a better planned and organized world economy."

### Experiments in Social Structure

This section of the report outlines the concerted action taken by the different countries to cope with the economic crisis. Between the two extremes of *laissez faire* and communism there are now "some dozens of half-way houses," all manifesting a new form of social structure. Reference is made to the codes of fair practice in the United States; to the impending re-organization of German industry under the leadership of the individual employers supervised by the state; to the Italian corporation system; to the British marketing schemes; and finally to the totalitarian form of organization represented by Soviet planning. Commercial and financial planning schemes are analyzed with special reference to the imposition of trade barriers in the interest of national self-sufficiency.

Turning to the effects of these movements on the conditions of the workers, the Director suggests the possibility of international agreements for the production and distribution of foodstuffs. "The inquiry into distribution now being undertaken by the International Chamber of Commerce may point the way to a more rational organization of the exchange of goods between nations. It has even been suggested that a concerted attempt to raise the general standard of living and thus to expand the world's markets is not outside the possibilities of the International Labour Organization. Whatever the means, it cannot be doubted that a new endeavour to secure international co-operation will be made as soon as the impracticability of economic isolation is more amply demonstrated by the hard logic of facts."

One inference reached in the report from the study of existing plans for reorganization is that "planned economy and an organized industrial system do not necessarily require a

special type of political constitution for their realization. Every piece of legislation under whatever form of Government involves some interference with individual liberty in the general interest, but, as innumerable instances have proved in the past, such interference can be introduced by consent as well as by compulsion."

### The I.L.O. in 1933

The past year was remarkable for a succession of important events in the history of the Organization.

First, the United States for the first time sent to the Annual Conference four official observers who, on their return home, recommended the affiliation of the United States with the Organization (LABOUR GAZETTE, February, 1934, page 161).

Second, Germany withdrew from the Organization in the autumn of 1933. On this subject the Director says: "Though the question of equality of status led to the withdrawal of Germany from the League of Nations, no such ground was applicable so far as the International Labour Organization was concerned. It only remains to hope that circumstances will permit of Germany's resuming its place before its notice of withdrawal becomes finally operative."

Next, Japan, while withdrawing from the League, decided that this withdrawal did not require the termination of its connection with the Organization.

Turning to the record of ratifications, considerable progress is again shown during the period of twelve months ending March 15, as may be seen from the following comparative table:

	March 15, 1933	March 15, 1934
Ratifications registered. . .	502	579
Ratifications authorized. . .	53	38
Ratifications recommended. .	116	122

The number registered during the year was thus the largest figure hitherto recorded in any year with the exception of 1929.

No less than 70 of the new ratifications have been received from Latin America, while only 7 have come from European States and none has been registered by any Asiatic State. The remarkable progress recorded by the Latin-American countries is a matter of keen satisfaction, especially as coming from a continent which has not been spared by the crisis and which has hitherto held a relatively small space in the ratifications table.

The paucity of ratifications from Europe is not so surprising or discouraging as might appear at first sight when the high proportion of Conventions already ratified is remembered. Of the 30 Conventions adopted, up

to 1930 Belgium had already ratified 21, Bulgaria 27, Czechoslovakia 12, Denmark 10, Estonia 19, Finland 13, France 18, Germany 17, Great Britain 18, Greece 13, Hungary 15, Irish Free State 21, Italy 18, Latvia 17, Luxembourg 27, Netherlands 15, Norway 11, Poland 17, Roumania 17, Spain 29, Sweden 16 and Yugoslavia 21. For these twenty-two countries, out of a possible 660 ratifications no less than 392 or nearly 60 per cent have already been registered. The only European countries which have ratified less than 10 Conventions are Albania (4), Lithuania (5), Portugal (8) and Switzerland (6).

The Director discusses the advisability of holding "regional conferences" to consider questions not universal, but special, in character—for example to consider Asiatic or Latin American affairs. This section of the report also discusses various events affecting the administration during the year, and refers as follows to the death of Senator Robertson:

"Before concluding this chapter it is a melancholy duty to record the death of Senator Gideon Robertson, who represented Canada on the Governing Body for many years and who was President of the Sixteenth Session of the Conference. Delegates who attended that Session will remember the determination with which he fought against encroaching illness in order to fulfil his duties as President until the end. In him the Organization has lost a faithful friend and Canada one of its foremost workers in the industrial field."

### Conclusion

The action of the Organization in connection with the crisis consisted in promoting the systematic relief of unemployment, the maintenance of social insurance, the initiation of public works, the adaptation of working hours and other measures for dealing with the immediate situation. "As the last Conference realized, however, none of the remedies which lie within the reach of industry itself afford a complete cure of the devastating economic anaemia from which the world is now suffering. Each of these remedies can make some contribution, but when they have all been applied they are still insufficient. Effective action cannot come from industry acting alone. Nor is financial action or Government intervention by itself sufficient. What is needed is joint action on the part of all three factors working together. Hence the resolution adopted unanimously at last year's Conference calling for a complete program of monetary and economic reconstruction."

The Director concludes his report with a strong plea for international collaboration in the search for a solution of the present difficulties: "As long as the framework of civilization endures, the need for international co-ordination will continue to exercise an irresistible force. By steadily pursuing its course during these years of stress and turmoil, the International Labour Organization has done its part by showing the value and the purpose of international co-operation. In the time ahead the task of the Organization is likely to become even more arduous and more responsible, but if it remains faithful to its organic principles of world peace and social justice it can play the great part allotted to it in solving the contradictions with which the present generation is wrestling."

### Agenda of the Conference in 1936

The Governing Body of the International Labour Conference, at a meeting held in Geneva from April 26 to 28, made a preliminary selection of questions which might be placed on the agenda of the 1936 session of the International Labour Conference. In thus dealing so far ahead with this agenda, the Governing Body was conforming to the wishes of certain countries which, owing to the difficulties inherent in their distance from Geneva, desired to know as far in advance as possible the subjects with which the Conference will deal. After discussion, it was decided provisionally to select the following items: safety provisions for workers in the building industry; the employment of children in the cinema industry; the recruiting and placing of migrant workers; and collective bargaining.

In accordance with the usual practice, the International Labour Office will prepare a report on each of these subjects, showing the law and practice in the different countries, and after studying this material, the Governing Body at its autumn session will make a final decision as to the placing of these items on the agenda of the 1936 Conference.

The City Council of Lachine, Quebec, recently decided to pay a fixed fee of \$50 a month to medical doctors attending unemployed persons. Formerly the city paid doctors 50 cents for ordinary cases and \$5 for maternity cases but it was found that the cost of medical treatment for the unemployed on that basis was too high. The city will also pay druggists for medicine prescribed by the doctors for the unemployed.

## EMPLOYMENT CONDITIONS IN CANADA AT THE END OF MAY, 1934

### Reports of the Superintendents of the Employment Service

THE employment situation at the end of May, 1934, was reported by the superintendents of the Employment Service of Canada to be as follows:—

Farmers in the Maritime Provinces were occupied planting and seeding, and fishermen were also busy. The herring run was practically over, but lobsters and mackerel were plentiful, likewise shad and sardine herring in some localities. Pulpwood cutting continued, with a number of men employed. Mines in the New Glasgow area operated from one to four days per week, while those in Cape Breton and vicinity worked four and a half and five days. Manufacturing showed improvement, due in part to seasonal conditions. Iron and steel industries were busy in all departments. No large projects were under way in building and construction, but quite an amount of overhaul and repair work was being done and several smaller buildings erected, with skilled and unskilled workers employed. Due to holiday transportation, traffic was heavy by rail and auto. Trade was slowly improving, with collections fair, and there was a continued active demand for char workers and domestics in the Women's Division.

There were only a few requests for farm hands in the Province of Quebec, and logging showed little change, a few river drivers having been sent out from Hull. Mining was also quiet. More optimism was reported by manufacturing centres, Hull stating that nearly all factories were active, Quebec City that local industries had increased their production, and Sherbrooke that conditions were satisfactory. At Montreal, however, slackness prevailed in the metal, rubber and boot and shoe trades, with tobacco and cigar factories a little busier, and clothing moderately active. Building tradesmen were more in demand at Montreal, but little work was available for unskilled labour, other than that provided by the municipality. Building construction was also slack in Quebec City. Transportation showed some improvement and trade was moderately good. In the Women's Domestic Section orders were more numerous, but applicants also were plentiful.

The call for farm help in Ontario was fair and all orders were easily filled by experienced hands, with no marked gain in placements expected until haying or berry picking time. In logging, pulpwood cutters, peelers, and cordwood cutters were in demand, also river drivers. Sawmills, also, had commenced operations. Producing mines were very active, requests for skilled men having increased considerably during the last period. The improve-

ment in manufacturing industries noted recently, continued, with only minor fluctuations. Staffs, for the most part, had been increased, and many factories reported that they were very busy. This applied particularly to textiles, boot and shoe, food products, iron and steel, and automobiles. Considerable building construction was also being carried on, which enabled skilled artisans to find employment. Highway construction, likewise, was progressing in various sections of the province, together with other relief projects. Transportation by rail and boat was greater, and trade decidedly better. There were many calls for women workers, but experienced applicants for household service were sometimes difficult to obtain.

With seeding practically completed, farming was very quiet in the Prairie Provinces. More rain was much needed, as there was a serious lack of surface moisture over a wide area, and prospects for pasturage and wild hay crops were somewhat slim. Grasshoppers, too, were a menace to crops in some sections. There was a fairly brisk demand for cordwood cutters and tie makers, which provided an increased number of jobs for bush workers. Mining was quiet. Manufacturing showed little improvement, with the exception of Alberta Clay Products, who had rehired some of their former employees for temporary work, and a steel tank company which had been working day and night shifts to complete a large order for oil tanks from the Calgary oil fields. Except at Winnipeg, where some new buildings were being erected, building construction was very quiet. A number of additional men were sent out to the National Defence camps. Trade showed no marked improvement, but compared favourably with that of last year. Little change was noted in the Women's Division, applicants still being greatly in excess of vacancies.

There was little call for farm help, except berry pickers, in the Province of British Columbia, and logging continued to improve, as there was a steady flow of labour to the camps, and saw-mills were also busy. Miners were better employed, although not sufficient activity was in evidence to provide work for all men waiting for employment. Fishing was excellent. Slightly better conditions were also reported in building construction, but there was no shortage of help, and relief work still continued in different sections of the province. Shipping and longshore work was fairly good. Trade was fair. There was a steady demand for girls for domestic service, and orders were also received for camp cooks and hotel waitresses.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN APRIL, 1934

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on May 1 was 8,591, the employees on their payrolls numbering 856,316 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for May was 1,693 having an aggregate membership of 150,638 persons. It should be un-

derstood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

### (1) Employment Situation at the Beginning of May, 1934, as reported by Employers

The Dominion Bureau of Statistics tabulated employment reports from 8,591 firms who reported an increase in personnel on May 1; their pay-rolls aggregated 856,316 persons, as compared with 848,799 in the preceding month. This gain was below the average recorded on May 1 in the thirteen preceding years for which data are available, so that the curve of employment, after correction for seasonal influences, showed a decline. The unadjusted index stood at 92.0, as compared with 91.3 in the preceding month, and 77.6 on May 1, 1933, while on the same date in the twelve preceding years, it was as follows: 1932, 87.5; 1931, 102.2; 1930, 111.4; 1929, 116.2; 1928, 106.8; 1927, 101.8; 1926, 95.4; 1925, 91.9; 1924, 92.9; 1923, 92.5; 1922, 84.3; and 1921, 85.1. The crude index on the latest date was the highest recorded in any month since December, 1931.

Manufacturing showed important improvement at the beginning of May, the increase in this group exceeding the average indicated on May 1 of the years since 1920. Transportation showed decided gains and mining (except of coal), building and railway construction and wholesale trade were also more active. On the other hand, retail trade, highway construction, coal-mining and logging released employees. The losses in bush operations were exceptionally large, partly as a result of the late season, which retarded river-drives.

#### Employment by Economic Areas

Heightened activity was reported in all provinces except Ontario, where the tendency was slightly unfavourable; the Maritime and

Prairie Provinces showed the greatest gains in personnel. The situation in all five economic areas was better than on May 1, 1933.

*Maritime Provinces.*—Employment in the Maritime Provinces advanced, the increase being larger than the average recorded on May 1 in the years since 1920. The index, at 98.3 on the date under review, was eighteen points higher than at the beginning of May in 1933; it was, in fact, higher than in any month of 1933, or of 1932, with the exception of January and February of that year. Six hundred and fourteen firms reported 69,429 employees, or 2,287 more than in their last return. Manufacturing (especially in fish-preserving factories), logging and highway construction reported gains, while coal-mining, transportation and railway construction released some workers, the declines in transportation being due to the falling-off of traffic at the winter ports.

*Quebec.*—Conditions improved in Quebec, according to 2,046 employers with 232,925 persons, as against 231,303 in the preceding month. Large increases were noted in manufacturing (notably in pulp and paper, lumber, textile, clay, glass and stone plants), in mining, transportation and building construction; on the other hand, tobacco factories, logging camps, railway construction and services released workers. Employment was in greater volume than on the same date of a year ago, although the seasonal advance then reported had provided work for many more persons than were added to the staffs of the firms making returns for May 1, 1934; the backward spring this year has militated against the

opening up of seasonal activities. The general increase noted on the latest date was below the average indicated at the beginning of May in the last thirteen years.

*Ontario.*—Following three months of industrial expansion in Ontario, there was a slight slowing-up in activity on May 1. The decline, which was contrary to the usual seasonal movement on that date, was largely due to severe seasonal losses in logging, together with curtailment in retail trade and, more particularly, in work on the streets and roads, while work in certain northern construction camps was held up by spring freshets. Other industries, however, reported improvement, that in

*Prairie Provinces.*—Manufacturing, construction, transportation and trade showed greater activity; in the first-named, most of the gain occurred in lumber, food and iron and steel factories. On the other hand, coal-mining and logging were seasonally slacker. Statements were tabulated from 1,283 employers in the Prairies, whose staffs rose from 104,437 persons on April 1 to 107,135 on the date under review. This advance was more than twice as large as that registered at the beginning of May, 1933, when the index was some six points lower than on the date under review.

*British Columbia.*—The increase in British Columbia was not so extensive as that re-

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

mining, building, transportation and manufactures being most marked. Within the manufacturing group, the largest gains were in iron and steel, but vegetable food, textile, lumber, pulp and paper and other factories also recorded considerable advances. The working forces of the 3,780 co-operating firms aggregated 373,610 employees, compared with 374,312 on April 1. Employment on May 1, 1933, had shown an increase, but the index then, at 79.5, was nineteen points lower than on the date under review. Except for the preceding month, when the index was fractionally higher, the May 1 figure (98.5) was higher than in any other month since December, 1931.

corded on the same date of last year, but the index was then over sixteen points lower than on May 1, 1934, when it stood at 88.4. An aggregate pay-roll of 73,218 workers was indicated by the 867 firms furnishing data, who had 71,605 employees in the preceding month. Logging, railway construction, mining and manufacturing showed substantial improvement over April 1, that in the last named taking place chiefly in the fish-preserving and other food groups. Highway construction and retail trade, however, were not so active.

Table I gives index numbers by economic areas.

### Employment by Cities

Improvement was shown in each of the eight cities for which separate tabulations are made, firms in Quebec city, Montreal, Toronto, Ottawa, Hamilton, Windsor and the adjoining Border Cities, Winnipeg and Vancouver reporting heightened activity. The largest gains were in Montreal, Windsor and Winnipeg. The situation in each of these eight centres was better than on May 1, 1933.

*Montreal.*—Transportation recorded a substantial seasonal advance in Montreal, and manufacturing and building construction were also busier; within the manufacturing group, decided increases occurred in textile, clay, glass and stone, electrical apparatus and lumber-using factories, but tobacco works showed marked seasonal curtailment. Work on the streets and roads also declined considerably, while only small changes occurred in other groups. The 1,186 co-operating employers reported 122,620 persons on their pay-rolls, compared with 121,202 on April 1. The level of employment was rather higher than on May 1, 1933, when employment had shown a greater increase.

*Quebec.*—Statements were tabulated from 159 firms with 12,498 employees, as against

12,312 on April 1. Most of the improvement took place in shipping and manufacturing, while services released employees. The gain involved practically the same number of workers as that recorded on May 1, 1933, when the index was a few points lower.

*Toronto.*—Local transportation, building construction and manufacturing reported increases in personnel in Toronto, while street construction and maintenance and trade afforded reduced employment. The improvement in manufacturing was general, but the iron and steel and printing and publishing divisions reported the greatest additions to staffs. According to data furnished by 1,267 employers, their pay-rolls aggregated 112,178 persons, as compared with 111,806 at the beginning of April. Rather larger gains had been indicated on May 1 of last year; employment was then in smaller volume, the index on the latest date (92.9) comparing favourably with that of 85.6 at the beginning of May in 1933.

*Ottawa.*—Construction, transportation and manufacturing registered improvement in Ottawa, that in factory employment being most marked; the general advance in the city involved more workers than that noted at the beginning of May, 1933, when the index stood

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

(AVERAGE CALENDAR YEAR 1926=100)

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
May 1, 1921.....	85.1	98.2	77.0	89.0	86.0	79.9

Feb. 1.....	91.4	101.3	88.5	95.3	84.7	84.1
Mar. 1.....	92.7	103.2	89.1	97.8	83.8	85.6
April 1.....	91.3	95.1	85.1	98.7	83.3	86.6
May 1.....	92.0	98.3	85.5	98.5	85.4	88.4
Relative Weight of Employment by Economic Areas as at May 1, 1934.....	100.0	8.1	27.2	43.6	12.5	8.6

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada by the firms making returns for the date under review.

at 87.2 compared with 100.8 on the date under review. Statistics were tabulated from 163 firms employing 12,808 persons, compared with 12,450 on April 1.

*Hamilton.*—A combined working force of 26,759 was reported by the 256 co-operating establishments, who had 26,496 employees on April 1. Manufacturing was slightly brisker, and construction showed heightened activity. Employment was at a much higher level than in the same month of 1933, when a decline had been indicated.

*Windsor and the adjacent Border Cities.*—Further improvement was noted in the Border Cities, where employment has increased steadily from the beginning of the year, the reporting firms having added over 4,300 persons to their staffs since January 1. Returns for May 1 were tabulated from 154 employers with 14,598 workers, compared with 13,765 in the preceding month. Most of the gain occurred in automobile factories. Much smaller additions to the pay-rolls had been indicated by the establishments reporting on May 1, 1933; employment was then at a decidedly lower level, the index standing at 80.6 as compared with 109.3 on the date under review.

*Winnipeg.*—Manufacturing (particularly of iron and steel and textile products), and transportation showed improvement, while other industries were generally unchanged. The 417 co-operating employers had 34,455 persons on their pay-rolls, compared with 33,811 on April 1. Employment was in rather greater volume than on the same date of last year, when a decline had been noted.

*Vancouver.*—Manufacturing activity increased in Vancouver, the food groups in particular showing improvement; other industries reported little general change in employment. According to data received from 371 firms, they employed an aggregate working force of 26,949 persons, compared with 26,591 on April 1. The index was higher than at the beginning of May of a year ago, when a much smaller advance had been reported.

Index numbers by cities are given in Table II.

### Manufacturing Industries

Employment in manufactures at the beginning of May showed a further increase, which exceeded the average gain indicated on the same date in the last thirteen years; it was also considerably greater than on May 1, 1933, when the index, at 76.8, was 13.4 points lower

TABLE II.—INDEX NUMBERS OF EMPLOYMENT BY PRINCIPAL CITIES

(AVERAGE CALENDAR YEAR 1926=100)

—	Montreal	Quebec	Toronto	Ottawa	Hamilton	Windsor	Winnipeg	Vancouver

Feb. 1	81.1	89.6	89.7	98.4	80.4	90.9	79.5	83.9
Mar. 1	82.6	93.2	91.1	96.7	81.0	97.7	79.7	84.1
April 1	82.1	95.4	92.7	97.6	83.0	102.9	79.7	84.8
May 1	82.9	96.3	92.9	100.8	83.9	109.3	81.2	85.9
Relative Weight of Employment by Cities as at May 1, 1934	14.3	1.5	13.1	1.5	3.1	1.7	4.0	3.1

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated city to the total number of all employees reported in Canada by the firms making returns for the date under review.

than at the latest date. Returns were tabulated from 5,189 manufacturers having 449,991 employees, compared with 438,985 on April 1, 1934. The greatest improvement on May 1, as in the last few months, occurred in iron and steel works, but fish-preserving, lumber, pulp and paper, textile and vegetable food factories also reported large additions to staffs, ranging in each group from nearly 1,100 to over 1,500 persons. Smaller gains were made in chemical, clay, glass and stone, non-ferrous metal, non-metallic mineral product, electrical apparatus and electric current plants. On the other hand, tobacco, rubber and musical instrument factories were slacker.

The advance which occurred on May 1, 1934, was the fourth consecutive increase made in manufacturing since midwinter. During this period of growing activity, over 51,300 persons were added to the pay-rolls of the co-operating plants, a gain comparing favourably with that of approximately 11,300 noted in the same period of 1933. The improvement so far recorded in 1934 exceeded that indicated in any other year since 1925. The index has risen from 80.0 on January 1 to 90.2 on the latest date, or by 12.8 per cent; the gain in the corresponding period of 1925 amounted to 14.7

per cent. The May 1, 1934, index was higher than in any other month since September, 1931. The experience of the last thirteen years indicates that employment in manufactures on June 1 has almost invariably increased, so that further improvement may be looked for in the next report.

*Animal Products, Edible.*—Large increases in employment were noted in fish-packing plants and dairies; the improvement was more extensive than that reported on May 1, 1933, when the index was several points lower. Statements were tabulated from 249 firms in this group, employing 19,030 workers, or 1,528 more than at the beginning of April. The expansion took place chiefly in the Maritime Provinces and British Columbia, but the trend in the group as a whole was generally upward.

*Fur and Fur Products.*—Employment in the fur division gained, according to the 51 co-operating manufacturers, who had 1,564 workers, compared with 1,485 on April 1. Employment was in rather greater volume than in the corresponding period of last year, when a larger increase had been indicated.

*Leather and Products.*—Employment in boot and shoe and other leather factories showed moderate improvement, according to 258

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES

(AVERAGE CALENDAR YEAR 1926=100)

	All industries	Manufacturing	Logging	Mining	Communications	Transportation	Construction	Services	Trade
May 1, 1921.....	85.1	86.8	90.1	90.9	88.6	88.8	56.9	82.1	93.5
May 1, 1922.....	84.3	85.5	66.8	94.4	86.3	91.1	62.0	79.9	89.4
May 1, 1923.....	92.5	97.9	86.2	101.1	85.7	93.9	62.3	81.1	91.0
May 1, 1924.....	92.9	94.9	98.1	108.1	93.0	97.8	68.2	90.3	91.2
May 1, 1925.....	91.9	93.7	85.6	98.6	94.0	92.6	77.1	91.8	94.2
May 1, 1926.....	95.4	98.8	72.7	93.0	99.5	94.9	82.6	95.7	96.3
May 1, 1927.....	101.8	103.9	82.8	103.6	103.5	100.8	95.0	101.5	104.4
May 1, 1928.....	106.8	109.0	78.5	111.5	105.0	100.7	103.7	111.7	111.7
May 1, 1929.....	116.2	119.8	75.8	115.6	117.3	108.1	113.0	121.6	124.0
May 1, 1930.....	111.4	112.4	63.5	114.1	117.3	104.3	112.0	123.9	125.6
May 1, 1931.....	102.2	100.7	55.9	106.0	104.0	96.6	106.6	123.1	123.3
May 1, 1932.....	87.5	85.8	32.5	97.9	94.1	84.3	83.2	114.7	116.2
Jan. 1, 1933.....	78.5	74.4	74.5	96.9	87.5	78.3	58.5	102.2	119.6
Feb. 1.....	77.0	75.0	67.3	94.0	85.7	75.0	56.2	104.2	109.4
Mar. 1.....	76.9	75.8	57.1	94.6	85.6	74.1	56.5	102.9	107.3
April 1.....	76.6	76.0	35.6	91.4	84.5	74.2	54.7	102.5	107.6
May 1.....	77.6	78.8	35.1	89.9	83.7	78.9	60.8	99.9	108.6
June 1.....	80.7	80.0	40.7	91.4	83.2	79.0	67.8	106.2	109.1
July 1.....	84.5	83.0	49.5	93.1	84.0	80.5	78.2	111.5	111.8
Aug. 1.....	87.1	85.2	48.9	97.4	83.6	81.2	88.4	111.8	110.5
Sept. 1.....	88.5	86.8	48.3	100.4	83.8	82.5	88.4	113.8	111.8
Oct. 1.....	90.4	86.7	64.7	105.8	82.5	82.7	97.0	108.1	115.0
Nov. 1.....	91.3	86.5	110.3	109.7	81.1	81.4	94.6	107.9	115.6
Dec. 1.....	91.8	84.4	166.5	105.5	81.0	79.8	94.6	108.8	119.1
Jan. 1, 1934.....	88.6	80.0	168.8	106.8	78.4	76.3	88.1	109.8	122.3
Feb. 1.....	91.4	84.2	174.0	109.4	76.8	76.2	98.0	108.7	111.6
Mar. 1.....	92.7	86.5	153.3	108.9	76.7	78.0	100.8	109.3	112.5
April 1.....	91.3	88.1	104.9	103.3	76.8	75.9	95.8	111.8	116.1
May 1.....	92.0	90.2	80.5	103.6	76.9	78.5	95.8	111.7	115.6
Relative Weight of Employment by Industries as at May 1, 1934.....	100.0	52.6	2.6	5.5	2.4	10.7	13.1	2.7	10.4

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada by the firms making returns for the date under review.

manufacturers of leather products with 20,174 employees, as compared with 20,099 in the preceding month. The gain occurred largely in Quebec. The increase was not so great as that noted on May 1, 1933, but the index on the latest date was considerably higher.

*Lumber and Products.*—Seasonal activity caused a pronounced advance in this group, particularly in sawmills, although operations were somewhat retarded by the late season. Data were received from 802 employers of 33,105 persons, as against 31,581 in the preceding month. There were increases in all provinces except British Columbia, those in Quebec being greatest. Larger additions to staffs had been registered on May 1, 1933; the index then, however, was decidedly below its level at the beginning of May of the present year.

*Plant Products, Edible.*—There was an increase in personnel in vegetable food factories, chiefly in fruit and vegetable canneries. The

general advance involved a much greater number of persons than that noted on May 1, 1933, when the index stood at 88.0, compared with 92.4 at the beginning of May this year. Statements were compiled from 398 employers, whose pay-rolls aggregated 26,267 persons, as compared with 25,207 on April 1. The gains took place chiefly in Ontario and British Columbia.

*Pulp and Paper Products.*—Further and more pronounced improvement was noted in these industries, in which employment was in greater volume than on the same date in 1933, when little general change had been reported. Increases took place on May 1, 1934, in pulp and paper and paper product mills, while printing and publishing houses were also slightly busier. The working forces of the 561 co-operating establishments aggregated 54,422 employees, as against 53,135 in their last report. Heightened activity was shown in Quebec, Ontario and British Columbia.

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT IN MANUFACTURING (AVERAGE 1926=100)

Industries	Relative Weight	May 1, 1934	April 1, 1934	May 1, 1933	May 1, 1932	May 1, 1931	May 1, 1930	May 1, 1929
<i>Manufacturing—</i>

	.5	109.4	107.9	90.8	102.8	106.6	111.2	112.5

<sup>1</sup>The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

*Rubber Products.*—Losses were noted in rubber factories on May 1, 1934, these being on much the same scale as those reported on the same date in 1933, when the index was many points lower. Returns were tabulated from 50 manufacturers employing 11,764 workers, or 117 fewer than at the commencement of April. Most of the decrease was in Quebec.

*Textile Products.*—Continued advances were made in this group at the beginning of May according to statistics from 894 manufacturers having 93,675 persons on their pay-rolls, as compared with 92,529 in the preceding month. Cotton, silk, garment and personal furnishing and knitting factories added to their forces. Practically no change had been noted on May 1 of last year, when the index stood at 91·5, compared with 110·7 on the date under review.

*Tobacco, Distilled and Malt Liquors.*—Data were received from 160 plants in this group employing 14,117 persons, or 1,047 fewer than in the preceding month. This decrease, which was smaller than that recorded on May 1 of last year, took place chiefly in tobacco manufacturing in Quebec and Ontario. Employment was at a higher level than on the same date in 1933.

*Chemicals and Allied Products.*—Employment in chemical and allied products showed a substantial increase, this occurring chiefly in the Maritime Provinces, Quebec and Ontario. Information was compiled from 169 manufacturers, whose staffs included 9,536 workers, as against 9,007 in April. The gain was much greater than that of May 1 a year ago, when the index was many points lower.

*Clay, Glass and Stone Products.*—Building material factories in all provinces except British Columbia indicated seasonal improvement; the general gain resulted in the employment of a much greater number of additional employees than that reported at the beginning of May last year, when the index number was decidedly lower. The 190 co-operating firms had 7,046 employees, as against 6,287 in the preceding month.

*Electric Current.*—Improvement was recorded on May 1 in electric current plants, in which employment was rather quieter than in the spring of 1933. Statements were received from 96 companies employing 13,330 workers, an increase of 200 over their April 1 forces.

*Electrical Apparatus.*—The trend of employment in this group was upward, 290 persons being added to the pay-rolls of the 108 reporting establishments, which had 10,954 employees. Curtailment had been registered on May 1, 1933, when the index was much lower.

*Iron and Steel Products.*—The rolling mill, machinery, automobile, iron and steel fabrication, heating appliance, sheet metal, and some other groups reported heightened activity on May 1, employment in the group as a whole showing its fourth consecutive increase since the beginning of the year. Returns were tabulated from 805 manufacturers with 99,273 operatives, as compared with 96,202 in the preceding month. Smaller gains had been indicated at the beginning of May last year, when employment was in lesser volume. The movement was upward in all provinces except British Columbia, most markedly so in Ontario.

*Non-Ferrous Metal Products.*—Non-ferrous metal products showed an increase in employment, according to data from 146 firms with a working force of 16,761 persons, or 491 more than on April 1. A reduction in staff had been recorded in this group in the same month in 1933, and the index number was then much lower. Most of the gain on May 1, 1934, occurred in smelters and refineries and in lead, tin, zinc and copper works, but all branches of the group were busier.

*Mineral Products.*—Improvement was indicated in the mineral products division; the increase was larger than that which occurred on May 1 of a year ago, when the index number was lower than on the date under review. Reports were received from 113 manufacturers, whose pay-rolls included 13,001 persons, as compared with 12,703 in the preceding month. The greatest advance was in the Prairie Provinces.

### Logging

Very pronounced seasonal losses, on the whole, took place in logging, in spite of additions to staffs in the Maritime Provinces and British Columbia, those in the former being due to river-drives. The 279 co-operating firms employed 22,217 men, or 6,765 fewer than on April 1. While the average change in employment in bush operations on May 1 in the years since 1920 is a decrease, that noted on the date under review is the largest yet recorded; that this is so, is partly due to delay in river-driving operations in Quebec and Ontario resulting from the late spring. Nevertheless, the index, at 80·5, was higher than at the beginning of May in any other year since 1927.

### Mining

*Coal.*—Employment in coal mining showed a seasonal contraction, which was smaller than that noted in the same month last year. The index then was slightly lower than on May 1,

1934. Data were received from 100 operators with 21,802 employees, as compared with 22,796 in the preceding month. The decrease took place mainly in the Alberta coal fields, but also to a smaller extent in the Maritime Provinces.

*Metallic Ores.*—There was an increase in metallic ore mines, chiefly in Quebec and British Columbia. An aggregate working force of 20,099 persons was employed by the 94 co-operating firms, who had 19,657 workers in their last report. A smaller advance had been indicated at the beginning of May a year ago, when activity was not so great.

*Non-metallic Minerals (Other than Coal).*—Employment in this group showed a seasonal gain; 77 employers enlarged their pay-rolls by 546 workers to 5,475 at the beginning of May. Quarries and other divisions reported heightened activity. The index was decidedly higher than on May 1, 1933, when moderate improvement was reported.

### Communications

A minor increase was noted in communications, in which the level of employment was lower than on the corresponding date of last year. The co-operating branches and companies reported an aggregate working force of 20,237 persons, or 25 more than at the beginning of April.

### Transportation

*Street Railways and Cartage.*—Improvement was shown in local transportation on May 1, when the 194 firms from whom information was received, reported 23,930 employees, or 420 more than in the preceding month. The index was lower than on the same date in 1933, when similar gains had been noted. Ontario registered most of the advance recorded on May 1, 1934, but the tendency was favourable in all five economic areas.

*Steam Railways.*—Steam railway operation afforded less employment in the Maritime Provinces, while elsewhere heightened activity was shown. Statements were received from 101 employers in this division, whose pay-rolls increased from 56,179 persons on April 1 to 56,307 at the beginning of May. A minor gain had been noted on May 1, 1933, when the index was lower.

*Shipping and Stevedoring.*—A combined staff of 12,493 men, as compared with 9,938 in the preceding month, was reported by the 90 firms furnishing statistics in the water transportation group. This gain was much smaller than that noted on the same date last year, when the index was higher. Reductions in the Maritime

Provinces and British Columbia were more than offset by increases in Quebec and Ontario.

### Construction and Maintenance

*Building.*—Employment in building construction showed a considerable expansion; the industry was rather more active than on May 1, 1933. The working forces of the 636 co-operating contractors aggregated 17,046 persons, as against 15,461 at the beginning of April. The tendency was favourable in Quebec, Ontario and the Western provinces.

*Highway.*—Work on roads and highways decreased at the beginning of May; 2,626 men were laid off from the forces of the 303 employers making returns, who had 71,056 workers on May 1. There were gains in the Maritime and Prairie Provinces and Quebec, those in the Maritimes being extensive. In Ontario and British Columbia, however, declines were indicated, partly as a result of the completion of springtime street-cleaning operations in the cities, while work in certain northern unemployment relief camps was retarded by spring freshets. Heightened activity had been recorded on the same date last year, but employment was then in smaller volume than in the spring of the present year.

*Railway.*—Thirty-two companies and divisional superintendents in this group employed 23,855 workers, as against 22,423 in their last report. The Western Provinces recorded most of the increase; moderate improvement took place in Ontario, but there were reductions in the Maritime Provinces and Quebec. Expansion involving a larger number of workers was noted at the beginning of May a year ago; the index number then was fractionally higher than on the date under review.

### Services

The service group reported very slightly lowered activity, according to statements from 398 establishments employing 23,112 persons, as against 23,126 in their last report. Small gains in laundries and dry-cleaning plants were rather more than offset by losses in hotels and restaurants. Employment was brisker than on May 1 in 1933, when a large reduction had been indicated.

### Trade

Continued additions to personnel were shown in wholesale houses, but retailers released some employees; 1,015 trading establishments reduced their forces by 223 persons to 88,696 on the date under review. The backward spring no doubt has had an unfavourable effect on trade. However, the in-

dex was higher than at the beginning of May a year ago, when general improvement had been reported.

### Tables

The accompanying tables give index numbers of employment by economic areas, lead-

ing cities, and industries. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area of industry, is of the total number of employees reported in Canada by the firm making returns on May 1, 1934.

## (2) Unemployment in Trade Unions at the Close of April, 1934.

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged at work other than their own trades or who are idle because of illness are not considered as unemployed while unions involved in industrial disputes are excluded from our tabula-

19.1 were without work at the close of the month as compared with 19.5 per cent in March. Improvement of noteworthy proportions, however, was reflected from April last year when 24.5 per cent of the members reported were idle. New Brunswick, Ontario, Manitoba, Saskatchewan and British Columbia

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

tions. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

A continuation of the favourable employment movement among local trade unions which commenced in February was apparent throughout April, according to the reports received from a total of 1,693 labour organizations with a combined membership of 150,638 persons. Of these, 28,725 or a percentage of

unions all indicated employment advancement over March, though the gains were slight, ranging from about 3 per cent in Saskatchewan to less than one per cent in British Columbia. Quebec unions, as a whole, maintained the same percentage of idleness as in March though fluctuations were noticed in the various trades. Some slackening in coal mining operations in both Nova Scotia and Alberta was mainly responsible for the less favourable tendency shown in these provinces from March, though the changes were small. All provinces participated in the employment recovery from April of last year, Nova Scotia

and Ontario unions particularly showing much better conditions. In Alberta and New Brunswick also the improvement recorded was noteworthy, while in Quebec and British Columbia employment advanced moderately, Manitoba and Saskatchewan unions showing slight gains only.

Reports on unemployment from the largest city in each province with the exception of Prince Edward Island are tabulated separately each month. Edmonton unions during April registered the most substantial percentage of

idleness of the cities compared, which was but slightly in excess of that recorded during March. In all other cities, however, activity tended upward, Saint John unions especially indicating a decidedly better situation than in the previous month, while in Regina moderate increases in employment were reflected. The improvement shown in the remaining cities was quite slight, Toronto, Winnipeg and Vancouver recording gains of just over 1 per cent and Halifax and Montreal fractional increase. Activity for Saint John, Halifax, Toronto and Vancouver members was in substantially greater volume during April than in the corresponding month last year, Montreal and Regina also showing noteworthy employment advancement, and Winnipeg a slightly better tendency. Edmonton unions, as in the previous comparison, alone reported an adverse employment movement from April a year ago though the recessions indicated were not outstanding.

Accompanying this article is a chart which illustrates the unemployment trend by months from January, 1928, to date. The curve during April followed a course downward from that of the previous month, a continuation of the favourable tendency shown in the two preceding months. Greater divergence was indicated in the level of the curve as compared with April, 1933, the point attained at the close of the month under survey being considerably lower than in April last year and representative of more active employment conditions.

The manufacturing industries at the close of April showed but slight variation from March conditions, the changes occurring in the various trades being of a rather offsetting nature. Reports for April were received from an aggregate of 466 local unions, covering a membership of 46,088 persons, 16.4 per cent of whom were idle at the end of the month contrasted with 16.6 per cent in March. The volume of employment for hat, cap and glass workers was substantially better than in March, but these tradesmen formed but a small share of the total membership in the manufacturing industries and hence did not materially affect the situation. The leather and iron and steel trades showed improvement involving the greatest number of members, and a better and employment tendency was noted among papermakers, printing tradesmen, bakers and confectioners, meat cutters and butchers, and general labourers, though the changes were quit slight. On the other hand, textile workers were much slacker than in March, and noteworthy employment curtailment was evident among garment and wood workers and metal polishers. The situa-

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

tion for fur workers declined moderately from March, brewery workers and cigarmakers also showing a slight lessening of the employment volume available. Pronounced employment expansion was noted in the manufacturing industries from April, 1933, when 28.3 per cent of inactivity was recorded, practically all trades sharing in this favourable employment movement. Outstanding among these were the iron and steel, leather, garment and wood-working trades, and the pulp and paper industry, all of which afforded a much greater volume of work than in April a year ago.

From unions of coal miners 49 reports were received in April, combining a membership of 14,008 persons, 2,700 of whom were idle at the end of the month, a percentage of 19.3 contrasted with unemployment percentages of 14.4 in March and 17.1 in April, 1933. Seasonal slackness of a more marked degree than in the preceding month was apparent in both the eastern and western coal fields, Nova Scotia, Alberta and British Columbia unions all showing an employment curtailment from March which was more especially pronounced in the western areas. Compared with the returns for April a year ago Alberta miners reported some lowering of the unemployment volume during the month reviewed, though conditions still were rather quiet. There was, however, a noteworthy falling off in the employment afforded both British Columbia and Nova Scotia miners from April last year. In addition to the miners reported as wholly unemployed considerable short time work was also registered during April.

Though depression in the building and construction trades continued quite pronounced during April, still the level of activity showed a notable advance over March. This was reflected by the reports tabulated from 207 associations of building tradesmen, with a total of 17,076 members, 10,470 of whom were out of work at the end of the month, a percentage of 61.3 as compared with 69.6 per cent in March. Employment conditions were also better than in April of last year when 66.7 per cent of the members reported were idle. The situation for electrical workers, painters, decorators and paperhangers, tile layers, lathers and roofers, and carpenters and joiners was substantially better during April than in the previous month, improvement on a more moderate scale, occurring for plumbers and steamfitters, bricklayers, masons and plasterers and steam shovelmens. On the contrary, marked curtailment was evident among bridge and structural iron workers. The volume of work afforded hod carriers and building labourers, however, remained iden-

tical with that of March. In making a comparison with the returns for April of last year tile layers, lathers and roofers, and bridge and structural iron workers reported large increases in available employment during the month reviewed which, however, affected few workers as their combined membership was small. The most important gain over April, 1933, was recorded by carpenters and joiners, and among painters, decorators and paperhangers also employment rose considerably. Improvement in conditions, on a much smaller scale, was registered by bricklayers, masons and plasterers, steam shovelmens, plumbers and steamfitters, and electrical workers. Granite and stonecutters and hod carriers and building labourers, however, showed a drop in employment on a rather noteworthy scale from April last year.

The situation in the transportation industries during April was slightly better than in the preceding month, as manifest by the reports received from 737 organizations, representing a total of 53,485 members. Of these, 6,103 or 11.4 per cent were idle at the end of the month contrasted with 12.6 per cent in March. Steam railway employees, whose returns included about 77 per cent of the entire group membership reported, were largely responsible for this favourable tendency from March though some employment advancement was also noted by teamsters and chauffeurs. Among navigation workers the trend was toward lessened activity, but the change was fractional only. Street and electric railway employees, however, reported an unvaried employment volume from March. As in the previous comparison, steam railway employees were the determining factor in the drop in the unemployment percentage for the transportation industries as a whole from 14.1 in April last year to its present level. Among street and electric railway employees there was little change in conditions from April, 1933, the tendency also being favourable. A considerable increase in slackness, however, was reflected by navigation workers, while teamsters and chauffeurs reported a fractional percentage of inactivity compared with a fully engaged situation in April last year.

Retail clerks at the close of April reported an unemployment percentage of 6.8, the same as was recorded in the previous month. Returns for April were furnished by 4 associations of these workers with a membership numbering 1,729 persons, 117 of whom were without employment at the end of the month. Activity was somewhat retarded from April last year when 2.0 per cent of the members reported were idle.

Civic employees were slightly better engaged during April than in the previous month, while the improvement recorded over April of last year was more pronounced. This was evident from the returns received from 73 associations including a membership of 6,807 persons, 114 or 1·7 per cent of whom were unemployed at the end of the month contrasted with percentages of 2·7 in March and 6·0 in April, 1933.

The 111 unions in the miscellaneous group of trades making returns in April and representing a membership of 3,542 persons showed that 540 were without work on the last day of the month, a percentage of 15·2 in contrast with 16·9 per cent in March. Hotel and restaurant, and theatre and stage employees reported heightened activity of moderate degree from March, stationary engineers and firemen showing gains of somewhat lesser degree, and barbers fractional increases in employment only. Unclassified workers alone registered employment losses from March which were not of particular importance. In comparing with the returns for April of last year in the miscellaneous group of trades when 20·8 per cent of the members were idle, hotel and restaurant employees were afforded a much better volume of work during the month reviewed, and gains of noteworthy degree occurred for theatre and stage employ-

ees, and stationary engineers and firemen. Unclassified workers also showed a slight rise in available employment during the month reviewed. Barbers, however, reported an unchanged situation from April a year ago.

Among fishermen little variation in conditions was shown during April from either the previous month or April last year, unemployment standing at 2·2 per cent compared with percentages of 1·3 in March and 2· at the close of April, 1933.

Activity for lumber workers and loggers declined sharply during April from the previous month, the percentage of idleness standing at 29·9 in contrast with 9·1 per cent in March. The April percentage was based on the returns tabulated from 3 unions of these workers, with a membership aggregate of 635 persons. The situation, however, showed some improvement over April, 1933, conditions when 34·3 per cent of the members reported were out of work.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1933 inclusive, and also the percentage of unemployment by provinces for April of each year from 1919 to 1931 inclusive, and for each month from January, 1932, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Office Reports for April, 1934

The volume of business transacted by the offices of the Employment Service of Canada during April, 1934, as indicated by the average daily placements effected, showed gains of 4 per cent and 23 per cent, respectively, when compared with the records of the preceding month and with those of the corresponding period a year ago. Total placements for the month, however, were lower than in March as there were two less working days. Losses under this comparison were recorded in all groups except farming, mining and services, the highest gain being in the last-named division and the greatest decline in construction and maintenance. Contrariwise, when compared with April, 1933, increases were shown in all industries, except farming and transportation, the gain in construction and maintenance being most marked.

The accompanying chart shows the trend of employment from January, 1932, to date, as represented by the ratio of vacancies offered and of placements effected for each 100 applications for employment registered at the offices of the Service throughout Canada, computations being made semi-monthly. As may

be seen from the graph the curve, both of vacancies and of placements, in relation to applications followed a marked downward trend during the first half of the period under review, but again showed an upward course during the latter half of the month, and at the close of April both levels were slightly higher than those shown at the end of the corresponding month last year. The ratio of vacancies to each 100 applications was 52·4 and 54·5 during the first and the second half of April, respectively, in contrast with ratios of 52·6 and 51·1 during the corresponding periods of 1933. The ratios of placements to each 100 applications during the periods under review were 49·1 and 50·1 as compared with 49·8 and 48·7 during April, 1933.

The average number of vacancies reported, daily, to the offices of the Service throughout Canada was 1,346 as compared with 1,255 in the previous month and with 1,072 in April a year ago.

The average number of applications for employment received, daily, by the offices during the month under review was 2,515 as compared with 2,225 in March and with 2,069 in April last year.

The average number of placements made daily by the offices of the Service during April, 1934, was 1,249, of which 624 were in regular employment and 625 in work of one week's duration or less, as compared with a total daily average of 1,199 during the preceding month. Placements in April last year averaged 1,019 daily, consisting of 563 placements in regular and 456 in casual employment.

During the month of April, 1934, the offices of the Service referred 31,812 persons to vacancies and effected a total of 29,968 place-

Year	Placements

#### POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o-o

ments. Of these, the placements in regular employment were 14,961, of which 10,711 were of men and 4,250 of women, while placements in casual work totalled 15,007. The number of vacancies reported by employers was 23,280 for men and 9,007 for women, a total of 32,287, while applications for work numbered 60,349, of which 47,630 were from men and 12,719 from women. Reports for March, 1934, showed 32,607 positions available, 57,828 applications made, and 31,162 placements effected, while in April, 1933, there were recorded 24,652 vacancies, 47,566 applications for work, and 23,415 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1924, to date:—

#### NOVA SCOTIA

Orders listed at Employment Offices in Nova Scotia during April called for nearly 15 per cent less workers than in the preceding month, but over 72 per cent more than during the corresponding month of last year. Similar percentages of change were recorded in placements under both comparisons. The gain in placements over April, 1933, was mainly due to work provided in relief of unemployment on highway construction, although services also showed an increase. The changes in all other groups were quite small, but, for the greater part, showed improvement over April of last year. There were 828 placements under construction and maintenance and 426 in services. Of the latter, 307 were of household workers. During the month 63 men and 106 women were placed in regular employment.

## NEW BRUNSWICK

Opportunities for employment, as indicated by orders received at Employment Offices in New Brunswick, were nearly 32 per cent less favourable than in the preceding month, but over 71 per cent above the corresponding month of last year. There was a decline of over 33 per cent in placements when compared with March, but a gain of over 67 per cent in comparison with April, 1933. As in Nova Scotia, construction and maintenance and services showed the only gains of importance over April of last year, that in the former being mainly responsible for the increase for the province as a whole. Nominal changes only were reported in all other groups. Placements under construction and maintenance numbered 351, and in services 520 of the latter 388 were of household workers. During the month 172 men and 85 women were placed in regular employment.

## QUEBEC

There was an increase of over 18 per cent in the number of orders received at Employment Offices in the province of Quebec when compared with the preceding month and of over 44 per cent in comparison with the corresponding month of last year. Placements were over 8 per cent higher than in March and nearly 33 per cent higher than April, 1933. Services showed the largest gain in placements over April of last year, with smaller increases in trade and logging, while construction and maintenance and manufacturing were the only groups in which there were declines of importance. The improvement in the province as a whole was largely due to increased placements through the women's divisions. Placements by industrial divisions included: manufacturing, 77; logging, 184; construction and maintenance, 320; trade, 156; and services, 2,010, of which 1,485 were of household workers. Regular employment was found for 834 men and 1,259 women.

## ONTARIO

Employment opportunities, as indicated by orders received at Employment Offices in Ontario during April, were nearly 7 per cent less favourable than in the preceding month, but nearly 41 per cent better than during the corresponding month last year. There was a decline of 10 per cent in placements when compared with March, but a gain of nearly 37 per cent in comparison with April, 1933. A large number of unemployed were placed on highway construction, which chiefly accounted for the increase over April last year, although placements in manufacturing, farming, services, mining and trade were also higher. Small losses were reported in transportation

and logging. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 535; logging, 151; farming, 881; mining, 57; transportation, 73; construction and maintenance, 7,691; trade, 308; and services, 3,593, of which 1,888 were of household workers. Placements in regular employment numbered 3,559 of men and 1,380 of women.

## MANITOBA

During the month of April, positions offered through Employment Offices in Manitoba were nearly 23 per cent less than in the preceding month and over 18 per cent below the corresponding month of last year. There was a decline also in placements of 20 per cent when compared with March, and of nearly 15 per cent in comparison with April, 1933. A reduction in farm placements, largely due to the suspension of relief placements on farms, was responsible for the decline from April of last year, although trade and services also showed small losses. The only gains of importance were in logging and construction and maintenance. Placements by industrial divisions included: logging, 136; farming, 466; construction and maintenance, 795; and services, 721, of which 597 were of household workers. There were 1,205 men and 399 women placed in regular employment during the month.

## SASKATCHEWAN

Employment Offices in Saskatchewan were notified of over 38 per cent more vacancies during April than in the preceding month and nearly 8 per cent more than during the corresponding month last year. There was a gain of nearly 39 per cent in placements when compared with March and of nearly 8 per cent in comparison with April, 1933. All groups, except farming, trade and logging, participated in the gain in placements over April of last year, construction and maintenance and services showing the largest increases. Placements by industrial groups included: manufacturing, 47; farming, 1,205; construction and maintenance, 455; and services, 771, of which 621 were of household workers. Regular employment was found for 1,331 men and 478 women.

## ALBERTA

The demand for workers, as indicated by orders received at Employment Offices in Alberta during April, was nearly 30 per cent higher than in the preceding month and over 27 per cent above the corresponding month of last year. Placements also were about 27 per cent higher than both in March and in April last year. Relief placements on highway construction were mainly responsible for the increase over April, 1933, although all groups,

\*141 Placements effected by offices since closed.

except logging and trade, showed improvement. All of these changes, however, were small. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 47 logging, 43; farming, 931; construction and maintenance, 1,163; and services, 543, of which 393 were of household workers. There were 1,551 men and 324 women placed in regular employment during the month.

#### BRITISH COLUMBIA

Orders received at Employment Offices in British Columbia during April showed a nominal increase only over the preceding month, but were nearly 31 per cent higher than during the corresponding month last year. There was a fractional decline in placements when compared with March, but a gain of nearly 31 per cent in comparison with April, 1933. The gain in placements over April last year was almost entirely due to relief work on highway construction; all industrial divisions, however, except services, showed improvement. Placements by industrial groups included: manufacturing, 33; farming, 130; mining, 42; construction and maintenance, 3,355; and services, 609, of which 441 were of household workers. During the month 1,996 men and 219 women were placed in regular employment.

#### Movement of Labour

During the month of April, 1934, the offices of the Employment Service effected 14,961 placements in regular employment, 6,003 of which were of persons for whom the employment found was outside the immediate vicinity of the offices at which they were registered. Of the latter, 562 were granted the Employment Service reduced transportation rate, 384 going to centres within the same province as the despatching office and 178 to other provinces. The reduced transportation rate, which is 2·7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

The labour movement in Quebec during April was entirely of bushmen and comprised the transfer of 115 persons. Of these, 41 secured their certificates at the Quebec city office for centres within the same zone, while the Hull office was instrumental in the despatch of 74 bushmen to employment within the Sudbury zone. Ontario offices issued 141 certificates for reduced transportation during April, 137 to points within the province, and 4 to outside centres. The latter were mine machine runners destined to Rouyn and trans-

ferred from Timmins. From Port Arthur the provincial movement included 25 mine workers, 22 bush workers, and 14 highway construction cookees, from Sudbury 61 bush workers and 3 mine workers, and from Fort William 1 mechanic and 2 bushmen who were conveyed to employment within their respective zones. The Timmins office was responsible for the transfer of 1 mine blacksmith to Sault Ste. Marie, 5 mine workers to Fort William, and 1 carpenter to a point within its own zone. In addition, the Oshawa zone received 2 automobile metal finishers from Windsor. In Manitoba, during April, 201 workers were granted the Employment Service reduced transportation rate, 102 of whom travelled to provincial situations and 99 to other provinces. All transfers were effected by the Winnipeg office, which despatched 88 farm hands, 6 farm housekeepers, and 8 hotel employees to various centres within the same zone. Journeying outside the province from Winnipeg 81 bush workers, 2 farm hands, 1 farm domestic, and 3 housekeepers were carried to Port Arthur, and 10 farm hands and 2 farm household workers to Saskatchewan agricultural districts. Workers benefiting by the reduced rate in Saskatchewan during April were 13 in number, all of whom were bound for employment within the province. This provincial movement was largely toward the rural districts of the province, which received 10 farm hands and 2 farm domestics, the Saskatoon office transferring 7 of these workers, Regina 3, and Moose Jaw and Prince Albert each one. In addition, 1 teacher received a certificate at Regina for transportation within the region covered by that city office. Of the 64 certificates for reduced transportation granted by Alberta offices during April, 63 were for centres within the province. Of these, the Edmonton office granted 50 to persons going to employment within its own zone, including 25 farm hands, 3 stewards, 6 bush workers, 11 labourers, 1 painter, 1 sawmill worker, 2 cooks and 1 hotel waitress. From Edmonton, also, 2 farm hands were despatched to Calgary. Securing certificates at the Calgary office 2 farm hands and 1 farm domestic travelled to Drumheller, 1 farm hand to Edmonton and 7 farm hands within the Calgary zone. The one worker transferred outside the province was a farm hand sent from Edmonton to Saskatoon. All persons travelling at the reduced transportation rate from British Columbia centres during April were for provincial employment and totalled 28. Of these, 26 were shipped from Vancouver, 1 pipefitter going to Kamloops, 2 mine labourers and 1 housekeeper to Penticton, and 13 mine workers, 7 power construction workers, 1 truck driver, and 1 housekeeper to various points within the Vancouver

zone. From Nelson the Penticton zone also received 1 steel sharpener, while the Victoria office transferred 1 miner to employment within the Nelson zone.

Of the 562 workers who were carried at the Employment Service reduced transportation

rate during April, 234 travelled by the Canadian National Railways, 300 by the Canadian Pacific Railway, 13 by the Pacific Great Eastern Railway, 11 by the Temiskaming and Northern Ontario Railway, and 4 by the Northern Alberta Railway.

#### (4) Building Permits issued in Canada during April, 1934

The Dominion Bureau of Statistics tabulated returns from 61 cities which granted building permits valued at \$2,246,317 during April, as compared with \$1,090,206 (revised figure) in the preceding month, and \$1,595,502 in the same month last year. There was, therefore, an increase of \$1,156,111 or 106 per cent in the first comparison, and of \$650,815, or 40·8 per cent as compared with April, 1933. The increase in the latter comparison (like that which occurred in the preceding month over March, 1933), is especially interesting, these two being the first gains shown in such a comparison over a period of many months. The cumulative total for the first four months of 1934 (viz. \$4,910,637), though lower than in earlier years of the record, was higher by 5·3 per cent than in the same period of 1933; this is the first time since 1929 that the cumulative value of the building authorized in any period has been greater than in the same period of the preceding year.

Some 50 cities furnished detailed statistics for April, 1934, showing that they had issued some 250 permits for dwellings valued at over \$800,000 and for more than 1,600 other buildings estimated to cost nearly \$1,400,000. In addition, Brantford reported an engineering project valued at approximately \$5,000. In March, authority was given for the erection of about 185 dwellings and 850 other buildings, valued at approximately \$300,000 and \$700,000, respectively, while one engineering project valued at approximately \$5,100 was also reported.

All provinces (except Prince Edward Island, from which no data were received for either April or March) recorded increases in the value of the building permits issued during April as compared with the preceding month, the greatest absolute gain of \$580,126 or 128·5 per cent, taking place in Ontario.

In the more significant comparison with April, 1933 there were increases in all provinces except New Brunswick and Manitoba, that of \$342,333 or 49·7 per cent in Ontario being most notable.

Of the four largest cities, Toronto and Vancouver registered increases in the building authorized during April as compared with the preceding month, and also as compared with

April, 1933; in Montreal and Winnipeg, the aggregate value was higher than in March, 1934, but rather less than in April, 1933. Of the other centres, New Glasgow, Sydney, Shawinigan Falls, Sherbrooke, Three Rivers, Westmount, Brantford, Port William, Guelph, Hamilton, Kingston, Kitchener, London, Oshawa, Ottawa, St. Catharines, Sault Ste. Marie, York and East York Townships, Welland, Walkerville, Woodstock, St. Boniface, Moose Jaw, Calgary, Lethbridge, Kamloops, Nanaimo, Prince Rupert and Victoria reported increases in the value of the permits issued as compared with March, 1934, and also with April, 1933.

*Cumulative Record for First Four Months, 1920-1934.*—The following table gives the value of the building authorized by 61 cities during April and in the first four months of each year since 1920, as well as index numbers for the latter, based upon the total for 1926 as 100.

Year	Value of permits issued in April	Value of permits issued in first four months	Indexes of value of permits issued in first four months (1926=100)	Average indexes of wholesale prices of building materials in first four months (Average 1926=100)
	\$	\$		
1934.....	2,246,317	4,910,637	11·8	83·4
1933.....	1,595,502	4,661,323	11·2	75·1
1932.....	4,370,863	13,823,873	33·3	79·1
1931.....	13,495,165	38,241,259	92·1	83·7
1930.....	16,978,076	46,471,338	111·9	98·2
1929.....	29,656,709	72,606,937	174·8	99·4
1928.....	18,606,167	51,769,505	124·6	95·7
1927.....	17,312,470	42,340,823	101·9	96·3
1926.....	19,044,499	41,538,073	100·0	101·7
1925.....	15,482,383	35,463,398	85·4	103·1
1924.....	13,689,101	31,737,100	76·4	111·6
1923.....	19,530,851	39,008,970	93·9	110·8
1922.....	15,833,688	34,513,861	83·1	107·7
1921.....	13,500,360	27,069,872	65·2	136·9
1920.....	15,648,915	34,558,901	83·2	143·1

The aggregate for the first four months of this year was rather higher than in the same period of 1933, but was lower than in any other year since 1920; the average index of wholesale prices of building materials, though higher than in 1932 and 1933, and practically the same as in 1931, was lower than in any other year of the record.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

### Great Britain

THE British *Ministry of Labour Gazette*, May, 1934, summarized the employment situation as follows:—

Employment in April showed a further improvement, which extended to most of the principal industries. It was much better than a year ago. The industries showing the most marked improvement during the month were the building, public works contracting and allied trades, engineering, shipbuilding and ship-repairing, vehicle building, the iron and steel industry, the manufacture of electrical apparatus and appliances, tailoring and dressmaking, furniture manufacture, certain food manufacturing industries, the distributive trades, hotel and boarding-house service, and most of the transport services.

On the other hand, there was a decline in employment in coal mining and in most of the textile industries.

The improvement in employment was most marked in the South of England, in Scotland and in Northern Ireland. In the London and South-Eastern Administrative Divisions employment was fairly good. In the Southwest and Midlands it was moderate. In the North of England, in Scotland, and in Northern Ireland it was bad, while in Wales it was very bad.

Among the workpeople, numbering approximately 12,883,000, insured against unemployment in Great Britain and Northern Ireland and working in practically every industry except agriculture and private domestic service, the percentage unemployed at April 23, 1934 (including those temporarily stopped as well as those wholly unemployed), was 16·7, as compared with 17·3 at March 19, 1934, and with 21·3 at April 24, 1933. The percentage wholly unemployed at April 23, 1934, was 14·1, as compared with 14·8 at March 19, 1934; while the percentage temporarily stopped was 2·6, as compared with 2·5. For males alone, the percentage at April 23, 1934, was 19·3 and for females 9·6; at March 19, 1934, the corresponding percentages were 20·1 and 9·8.

At April 23, 1934, the number of persons on the Registers of Employment Exchanges in Great Britain was 1,729,242 wholly unemployed, 329,913 temporarily stopped, and 89,040 normally in casual employment, making a total of 2,148,195. This was 53,382 less than a month before, and 549,439 less than a year before. The total included 1,736,423 men, 61,717 boys, 301,317 women, and 48,738 girls.

In Great Britain and Northern Ireland, the total number of persons on the Registers of Employment Exchanges at April 23, 1934, was 2,208,667.

### United States

*Manufacturing Industries.*—A further expansion in factory employment and pay-rolls was recorded in April by the manufacturing establishments reporting to the Bureau of Labor Statistics of the United States Department of Labor. Between March 15 and April 15, employment increased by 1·0 per cent, and pay-rolls rose by 3·8 per cent.

These gains brought the Bureau of Labor Statistics' index of factory employment for April, 1934, up to 82·3, or to the level that prevailed in December, 1930. The April index of factory pay-rolls rose to 67·3, and marks the highest point recorded since June, 1931. These increases are particularly significant, because of the fact that employment and pay-rolls usually decline at this time of the year.

The index of factory employment in April was 37·4 per cent above the level of the same month in 1933, when the index was 59·9. The pay-roll index is 73·5 per cent above that of April a year ago, when the index was 38·8.

The base used in computing these indexes is the average for the 3-year period, 1923-25, which is taken as 100. (Prior to March, 1934, the indexes of factory employment and pay-rolls published by the Bureau of Labor Statistics were not adjusted to conform with biennial census trends and were based on the 12-month average of 1926 as 100. The April, 1934, index of factory employment on the 1926 base is 77·8 and the payroll index is 61·9.)

The indexes of factory employment and pay-rolls are computed from returns supplied by representative establishments in 90 important manufacturing industries of the country. Reports were received in April from 20,883 establishments employing 3,646,492 workers, whose weekly earnings were \$72,816,200 during the pay period ending nearest April 15. The employment reports received from these co-operating establishments cover more than 50 per cent of the total wage earners in all manufacturing industries of the country.

The increases in employment and pay-rolls in April were widely spread, 66 of the 90 manufacturing industries surveyed reporting increased employment over the month interval and 69 industries reporting gains in pay-rolls. The most pronounced declines in employment from March to April were seasonal. Compar-

ing the level of employment in the separate industries in April, 1934, with April of the preceding year, all but 2 of the 90 manufacturing industries show more workers employed in April, 1934, than in April 1933, and every industry shows gains in pay-rolls. Six industries (machine tools, locomotives, automobiles, agricultural implements, typewriters, radios and phonographs) show gains of over 100 per cent in employment over the year interval and 23 industries show gains in the number of workers on the pay-roll ranging from 50·9 per cent to 94·2 per cent.

*Non-manufacturing Industries.*—The most pronounced gain in employment was shown in the building construction industry in which increased activity resulted in a gain of 16·5 per cent. Pay-roll totals in this industry increased 18·7 per cent. These percentages are based on reports supplied by 11,082 building contractors engaged in private building construction and do not include construction projects under Public Works Administration allotments. The quarrying and non-metallic mining industry reported seasonal gains of 15·9 per cent in employment and 23·9 per cent in pay-rolls. The dyeing and cleaning industry reported seasonal gains of 10·3 per cent in employment and 17·6 per cent in pay-rolls and the metalliferous mining industry reported a gain of 4·6 per cent in employment coupled with an increase of 5 per cent in pay-rolls. The laundry and crude petroleum producing industries reported gains in number of workers of 1·6 per cent each, pay-rolls increasing 2·6 per cent in the laundry industry and 1·8 per cent in the crude petroleum industry.

Reports received from 19,413 retail establishments showed a net gain of 1·1 per cent in employment from March to April coupled with an increase of 2·8 per cent in pay-rolls. The group of retail trade establishments comprising the general merchandise group (department, variety, general merchandise stores and mail order houses) showed a gain of 1 per cent in employment and the combined total of the remaining retail establishments reporting showed a gain of 1·2 per cent in number of workers from March to April.

The gains in employment in the remaining non-manufacturing industries reporting increases were as follows: Power and light, 0·8 per cent; electric railroad and motor bus operation and maintenance, 0·7 per cent; banks-brokerage-insurance real estate, 0·5 per cent; hotels and wholesale trade, 0·4 per cent each; and telephone and telegraph, 0·3 per cent.

The two industries in which declines in both employment and pay-rolls were reported were anthracite and bituminous coal mining. The decreases in employment and pay-roll in the first-named industry were 13·8 per cent and 37·3 per cent, respectively, and the declines in the bituminous coal mining industry were 7·2 per cent in employment and 12·7 per cent in pay-rolls. The observance of the "8-hour day" holiday in these industries accounted partially for the decrease in pay-rolls. In the bituminous mining industry, labour disturbances in certain localities resulted in pronounced decreases in employment in the mines affected.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts awarded by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government with respect to contracts "for construction, remodelling, repair or demolition of any work" is set forth in an Act of Parliament adopted on May 30, 1930, entitled "The Fair Wages and Eight-Hour Day Act" (chapter 20-21, Geo. V). The full text of this measure appeared in the LABOUR GAZETTE, April, 1930, page 383. The Fair Wages and Eight-Hour Day Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repairs or demolition of any work

shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or, except in cases of emergency, as may be approved by the Minister.

The Fair Wages Policy was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by Order in Council of

April 9, 1924. The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wages rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of contract.

In addition to the requirements of the Fair Wages and Eight-Hour Day Act, government contracts for the construction, remodelling, repair or demolition of any work, contain a number of other provisions for the protection of the workmen employed, which are sanctioned by the foregoing Orders in Council.

It is further provided in the foregoing Orders in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings; harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees; mail bags, letter boxes, and other postal stores; and any other articles and things hereinafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions, which are referred to in the Orders in Council as "B" conditions (the Conditions of the Fair Wages Orders in Council with reference to building and construction works being designated as "A" conditions), including the following Fair Wages Clause:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor

until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

Both in the case of contracts for building and construction work, and in the "B" conditions sanctioned by Orders in Council applicable to contracts for the manufacture of certain classes of supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates and working hours.

The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and address of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the Minister of the Department with which the contract has been made and payment of such claim may be made by the latter.

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially directed by the Fair Wages Orders in Council to do all in their

power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of certain classes of supplies listed in the Fair Wages Orders in Council it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates or wages and hours, and empower the Minister of Labour to deal with any disputes which may arise.

During the past month statements were received in the Department of Labour showing that the following contracts, containing fair wages conditions, have been recently executed by the Government of Canada:—

#### DEPARTMENT OF PUBLIC WORKS

##### *Contracts in Group "A" (Construction, etc.)*

Reconstruction of jetties at Anse-a-Beaufils, Gaspé Co., P.Q. Name of contractors, Ludger Lemieux, Limitée, Quebec, P.Q. Date of contract, April 3, 1934. Amount of contract, approximately \$16,659.34. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Blacksmith.....	\$0 45	8
Carpenter and joiner.....	0 50	8
Compressor operators.....	0 40	8
Drill runner (machine).....	0 40	8
Fireman (stationary).....	0 35	8
Hoist operators (steam).....	0 55	8
Hoist operators (gas).....	0 45	8
Labourers.....	0 30	8
Painters.....	0 50	8
Pile driver runners.....	0 55	8
Powdermen.....	0 40	8
Structural steel workers.....	0 65	8
Driver, team and wagon.....	0 55	8
Driver, horse and cart.....	0 45	8
Teamster.....	0 30	8
Timbermen or cribmen (using such tools as adze, hammer, broadaxe, X-cut saw, auger, etc.).....	0 37½	8

Dredging and cleaning River du Chene, St. Eustache, P.Q. Name of contractor, Oliver F. Cummins, Toronto, Ont. Date of contract, May 14, 1934. Amount of contract, approximately, \$7,000. The General Fair Wages Clause was inserted in the contract.

#### DEPARTMENT OF NATIONAL DEFENCE

##### *Contracts in Group "B" (Manufacture of Supplies, etc.)*

The following is a statement of contracts awarded by the Department of National Defence during the month of May, 1934, for various classes of manufactured goods, which contracts included in all cases the "B" labour conditions above referred to:—

Goods contracted for	Contractor
Waterproof cloth.....	Canadian General Rubber Co., Galt, Ont.
Khaki drill.....	Canadian Cottons Ltd., Montreal, P.Q.
Tap soles.....	Anglo-Canadian Leather Co., Toronto, Ont.
Spare parts for aircraft.....	Canadian Vickers Ltd., Montreal, P.Q.
Paints.....	Brandram Henderson Ltd., Montreal, P.Q.
Drill trousers.....	Grant-Holden-Graham Ltd., Ottawa, Ont.
Leather bandoliers and belts.....	J. E. Lortie Reg'd., Montreal, P.Q.
Drab forage caps.....	William Scully Ltd., Montreal, P.Q.
Embroidery badges.....	Madam Raoul Vennat, Montreal, P.Q.
Powder.....	Canadian Industries Ltd., Montreal, P.Q.
Uniform jackets.....	W. R. Johnston & Co., Toronto, Ont.
Drill shirts.....	Freed & Freed Ltd., Winnipeg, Man.
Nickel copper shot.....	Canadian Nickel Products Ltd., Toronto, Ont.
Drill shirts.....	Sterling Shirt and Overalls Mfg. Co., Cap de la Madeleine, P.Q.
Peak caps.....	Ottawa Imperial Cap Co., Ottawa, Ont.
Drab frieze.....	Oxford Woollen Mills, Oxford, N.S.
Enamel stock pots, etc.....	General Steel Wares Ltd., Montreal, P.Q.
Laundry soap.....	Guelph Soaps, Guelph, Ont.
Woollen blankets.....	Horn Bros. Woollen Co., Lindsay, Ont.
Woollen blankets.....	Slingsby Mfg. Co., Brantford, Ont.
Canvas rest shoes.....	Great West Felt Co., Elmira, Ont.
2-deck steel bunks.....	Arrow Bedding Ltd., Toronto, Ont.
Gloves.....	Aeae Glove Works Ltd., Montreal, P.Q.
Towels.....	Stauffer Dobbie Co., Galt, Ont.
Braces.....	W. A. Brophy Co., Ltd., Toronto, Ont.
Khaki drill.....	W. Robinson & Son Converters Ltd., Toronto, Ont.
Flatware.....	McGlashan Clarke Co., Ltd., Niagara Falls, Ont.
Pillow slips.....	Wabasso Cotton Co., Ltd., Three Rivers, P.Q.
Drill.....	Dominion Textile Co., Ltd., Montreal, P.Q.
Boots.....	Tillsonburg Shoe Co., Tillsonburg, Ont.

Dredging basin near outlet of the western channel of St. Maurice River, Three Rivers, P.Q. Name of contractors, St. Francis River Dredging Co., St. Francois du Lac, P.Q. Date of contract, May 19, 1934. Amount of contract, approximately \$7,099.84. The General Fair Wages Clause was inserted in the contract.

## POST OFFICE DEPARTMENT

Following is a statement of payments made in May, 1934, for supplies ordered by the Post Office Department under contracts which were subject to regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages, and the performance of the work under proper sanitary conditions:—

Nature of Orders	Amount
<i>Making metal dating stamps and type, brass crown seals, cancellers, etc.—</i>	\$ cts.
Pritchard-Andrews Co. of Ottawa, Ltd., Ottawa.....	372 17

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

## Logging

THUNDER BAY DISTRICT, ONTARIO.—CERTAIN TIMBER OPERATORS, MEMBERS OF THE LAKE-HEAD TIMBERMEN'S ASSOCIATION AND THEIR EMPLOYEES.

This agreement, which covers the cutting and peeling of pulpwood, is to be in effect from May 1, 1934, to September 1, 1934.

The terms of this agreement are similar to those of the agreement covering pulpwood cutters which was summarized in the LABOUR GAZETTE, January, 1934, page 73, with the following exceptions:—

Hours: 9 per day as a general rule (instead of 10 as in the other agreement).

Wages: for cutting and peeling of 50-inch pulpwood, spruce and balsam \$3.15 per cord; for 54-inch poplar \$2 per cord; for 98-inch pulpwood \$6 per cord. Monthly employees: \$35 per month and board for bushmen and camp staff, and \$40 per month and board for teamsters. Charge for board for men on piece rates: 75 cents per day.

Provided the company lives up to the agreement, there will be no strike against it.

## Manufacturing: Food, Drink and Tobacco

VANCOUVER, B.C.—A CERTAIN BAKERY AND THE BAKERY AND CONFECTIONERY WORKERS INTERNATIONAL UNION OF AMERICA, LOCAL No. 468.

Agreement to be in effect from May 1, 1934, to May 1, 1935, and thereafter from year to year until notice.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, October, 1933, page 1034; May, 1932, page 611; and September, 1931, page 1035, with the following exceptions:—

Wages per week: foremen \$33, doughmen and ovenmen \$30 (an increase of \$1), bench hands \$26, helpers \$18 (previously \$15 and \$18), apprentices \$15 to \$21 (previously \$12 to \$21), shippers \$28, finishers and cake wrappers \$16, assistant shippers and checkers \$20 (previously \$16 and \$18).

All employees with over one year's continuous service to be given one week's holidays a year with pay.

## Manufacturing Printing and Publishing

REGINA, SASK.—CERTAIN NEWSPAPER AND JOB PRINTING OFFICES AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 657.

Agreement to be in effect from May 1, 1934, to April 30, 1936.

This agreement is the same as the one previously in effect and summarized in the LABOUR GAZETTE, June, 1933, page 649.

Wages and hours are unchanged, and are as follows: in newspaper offices 78 cents per hour with a 48-hour week for day work, and for night work \$3 per week extra with a 45 hours week; in job offices 78 cents per hour for week of 44 hours for day work, and for night work \$3 per week extra with a 42 hour week.

EDMONTON, ALBERTA.—TWO NEWSPAPER PUBLISHERS AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL No. 255.

The agreement which came into effect May 28, 1933, and was summarized in the LABOUR GAZETTE, March, 1934, page 275, has been renewed without change to May 27, 1935.

Wages and hours remain at 85 cents per hour for journeymen pressmen with a 45-hour week.

**EDMONTON, ALBERTA.**—CERTAIN JOB PRINTING OFFICES AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL No. 255.

The agreement which came into effect May 16, 1933, and which was summarized in the *LABOUR GAZETTE*, March, 1934, page 275, has been renewed without change to May 15, 1935.

Wages and hours for journeymen pressmen remain at 85 cents per hour with a 44-hour week for day work, and 90 cents per hour with a 42-hour week for night work.

**EDMONTON, ALBERTA.**—CERTAIN JOB PRINTING OFFICES AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 604.

The agreement which came into effect May 16, 1933, and which was summarized in the *LABOUR GAZETTE*, October, 1933, page 1035, September, 1932, page 1019; March, 1931, page 349; and May, 1927, page 556, has been renewed without change to May 15, 1935.

Wages and hours for journeymen are unchanged at 85 cents per hour with a 44-hour week for day work and 90 cents with a 42-hour week for night work.

### Construction: Buildings and Structures

**HALIFAX, N.S.**—MASTER PLUMBERS, MEMBERS OF THE CONSTRUCTIVE MECHANICAL TRADES EXCHANGE AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 56.

Agreement reached following strike reported on page 507 of this issue. Agreement to be in effect from June 1, 1934, to April 30, 1936, and thereafter from year to year until notice.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: time and one-half to 10 p.m.; after 10 p.m. and all work on Sundays and holidays, double time.

Wages for journeymen plumbers and steamfitters: 75 cents per hour.

One apprentice allowed to each three journeymen. Apprentices to serve five years and to pass an examination before being classed as journeymen.

For work out of city, fare, board and travelling time up to 5 p.m. to be paid by employer.

The union to discourage and prevent if possible union members from working at their trade for anyone but a legitimate plumbing and heating contractor, except on government work.

A joint conference board to be formed to settle any disputes; but if any dispute cannot be settled by them, no strike or lockout to occur until the matter has been referred to the General Office of the union for decision.

**QUEBEC, P.Q.**—CERTAIN CONTRACTORS AND THE NATIONAL CATHOLIC UNION OF PLUMBERS AND ELECTRICIANS.

The terms of this agreement, which is to be in effect from May, 1934, to April 30, 1935, are printed on page 522 of this issue, except that in the original agreement contractors agree to employ members of the union only or those willing to join the union, and that union representatives are allowed on the jobs.

**CALGARY, ALBERTA.**—CALGARY GENERAL CONTRACTORS' ASSOCIATION AND THE AMALGAMATED BUILDING WORKERS OF CANADA (AGREEMENT FOR BRICKLAYERS AND MASONS).

Agreement to be in effect from January 1, 1934, to February 28, 1935. An agreement for the following period to be negotiated in January, 1935, and the cost of living index number published in the *LABOUR GAZETTE* to be used as a basis for negotiating wage rates for 1935.

Hours: 8 per day, 5 days a week, a 40-hour week, but strictly necessary work may be done Saturday mornings at regular rate. For night work a 7-hour shift with pay for 8 hours.

Overtime and work on Saturdays (with above exception), time and one-half; work on Sundays and holidays, double time. All overtime work on boiler and fire work repairs, double time.

Wages for journeymen bricklayers and masons: 90 cents per hour. All boiler and fire work repairs at 10 cents per hour above minimum rate.

Union members not to work for anyone except under the terms of the agreement.

In a case of any dispute, a joint committee of three from each party to be appointed, with, if necessary, a seventh person agreeable to both to be appointed; any settlement reached by such committee to be binding on both parties. Work not to be suspended pending such decision.

**CALGARY, ALBERTA.**—CALGARY GENERAL CONTRACTORS' ASSOCIATION AND THE AMALGAMATED BUILDING WORKERS OF CANADA (CARPENTERS' AGREEMENT).

Agreement to be in effect from January 1, 1934, to February 28, 1935. An agreement for the following period to be negotiated in January, 1935, and the cost of living index number published in the *LABOUR GAZETTE* to be used as a basis for negotiating wage rates for 1935.

Wages for journeymen carpenters: 75 cents per hour.

The other terms of this agreement are similar to those of the agreement between the same two parties governing bricklayers and masons, which is summarized above.

**CALGARY, ALBERTA.**—CALGARY GENERAL CONTRACTORS' ASSOCIATION AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 1779.

Agreement which is to be in effect from January 1, 1934, to February 28, 1935, is the same as that between the same Contractors' Association and the Amalgamated Building Workers of Canada (Carpenters' Agreement) noted above.

### Transportation and Public Utilities: Street and Electric Railways

**QUEBEC, P.Q.**—QUEBEC RAILWAY, LIGHT AND POWER COMPANY (CITY STREET RAILWAY DIVISION) AND THE NATIONAL CATHOLIC BROTHERHOOD OF STREET RAILWAY EMPLOYEES (CONDUCTORS AND MOTORMEN).

Agreement to be in effect from January 1, 1934, to December 31, 1934.

The Company recognizes the union and agrees to employ only members of the union as conductors and motormen on the City Street Railway Division.

Hours: employees not to be obliged to work more than 10 hours per day; regular rates to be paid for overtime.

Wages per hour for conductors and motormen: 36 cents on entering service, 41 cents after one year's service, 43 cents after two years' service, and 46 cents after five years' service. For one-man cars, operators to be paid 5 cents per hour extra.

Extra men reporting regularly at the different hours of the car service relief each day, if not allotted work, to be given one hour's pay.

For first two years of service, employees to pay half cost of uniforms; thereafter uniforms to be supplied by the Company.

Disputes to be referred to a joint committee, and if not settled, the union may bring the matter before the general manager.

### Transportation and Public Utilities: Water Transportation

CHARLOTTETOWN, P.E.I.—UNION WAGE SCHEDULE OF THE LABOUR PROTECTIVE UNION, No. 9568.

Schedule to be in effect from April 1, 1934, to March 31, 1935.

### Coal Production in Canada in April

The figures for coal production in Canada for April, as shown in the table on page...., indicate that the production in all Canadian mines (807,930 tons) was 20.5 per cent greater than in April, 1933, although it was 12.5 per cent less than the 5-year average for April of 923,607 tons. Bituminous coal production in April, 1934, amounted to 670,099 tons, sub-bituminous coal, 32,846 tons, and lignite coal, 104,985 tons. Nova Scotia mines produced 401,273 tons or 49.5 per cent above the April, 1933, total of 268,447 tons. In Alberta, 244,477 tons were mined as compared with 245,912 tons, a year ago. British Columbia's output rose 14.4 per cent to 110,165 tons from April, 1933, total of 96,316 tons. A 6.3 per cent decline was recorded in Saskatchewan's production; the month's output was 32,749 tons as against 34,957 a year ago. New Brunswick operators reported a production of 19,266 tons or 22.9 per cent below the total for the corresponding month in the preceding year.

Imports of coal into Canada in April declined 1.2 per cent to 574,309 tons from April, 1929-1933, average of 581,490 tons. Anthracite coal importations totalled 85,323 tons, made up of 79,512 tons from the United States and 5,811 tons from Great Britain. Imports of bituminous coal amounted to 488,796 tons, of which the United States supplied 482,704 tons and Great Britain, 6,092 tons. Lignite receipts in April were recorded at 190 tons. Canada exported 8,134 tons of coal in April, a 49.0 per cent decline from the average for the month during the past five years. Canadian coal exported through New Brunswick ports totalled 2,653 tons. Clearances through Manitoba, Saskatchewan, Alberta and British Columbia ports amounted to 5,481 tons. During April coal made available for consumption in

All stevedores having full charge of steamers discharging or loading to be union men.

Wages per hour: general wharf and warehouse work and work on sailing vessels with general cargo, 40 cents for day work and 50 cents for night work; for work at steamboats with general cargo 55 cents for day work and 65 cents for night work. Certain higher rates are specified for special cargoes, coal trimming, etc.: for trimming coal, stone or salt for sailing vessels, bagging of coal at any agents, 65 cents; for trimming coal for steamers and cars, working on steamboats or sailing vessels loaded with bag fertilizer, 70 cents; discharging molasses for steamers, 65 cents for day work and 75 cents for night work. Piece-work rates are also given for certain cargoes.

The number of men in gangs for certain work is specified.

Time and one-half for work on holidays and from 6 p.m. Saturday to 6 a.m. Monday; double time for work during meal hours.

Canada totalled 1,374,105 tons, a 7.7 per cent decline from the average for April during the past five years. The April, 1934, supply was made up of 85,323 tons of anthracite coal, 1,150,825 tons of bituminous coal, 32,846 tons of sub-bituminous coal and 105,111 tons of lignite coal.

### Safety in Mine Operation

In an article on Safety in Modern Mine Operation, *Coal Age*, May, 1934, says: "In every large mine or company there should be at least one safety man whose business it should be to head up safety activities, to inspect the mines, to study accidents and suggest remedies. Most reports on accidents omit many of the most important details, as to the man himself, his fitness for the job, his eyesight and the light he was furnished. The report too often seems framed to fit the accident into a definite classification rather than to relate it to the fact, remote or immediate, that caused the accident to occur. The alert manager will return them for further details.

"The function of watching for danger, while everybody's business, should have its special advocate and mentor. This man should report to headquarters and his reports should be distributed to company controller, manager, superintendents and foremen. In a large company, he should have a competent force of inspectors. Other safety men are foremen and sectional foremen, who report, however, to the foremen and superintendents of the mine, not to the safety department. Safety records of these men should be kept, both as to accidents and as to discipline meted to other employees, and if an accident occurs or the record in general is bad, they should receive additional admonishment or discharge."

## PRICES, RETAIL AND WHOLESALE, IN CANADA, MAY, 1934

### Cost of Living, Prices of Staple Articles and Index Numbers

THE cost per week of the family budget in terms of retail prices was considerably lower at the beginning of May, due mainly to lower cost of foods, while the Dominion Bureau of Statistics index number of wholesale prices was unchanged from the level of the previous month.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was \$7.53 at the beginning of May as compared with \$7.81 for April; \$6.86 for May, 1933; \$11.17 for May, 1930; \$11.29 for May, 1926; \$12.25 for May, 1921; \$16.92 for June, 1920 (the post war peak); and \$7.43 for May, 1914. The decline was due mainly to lower prices for eggs and butter although prices of veal, pork, bacon, lard, bread, evaporated apples and potatoes were also lower. Prices of beef and mutton were slightly higher. Including the cost of fuel and rent with that of foods the total budget averaged \$15.96 at the beginning of May as compared with \$16.28 for April; \$15.57 for May, 1933; \$21.49 for May, 1930; \$21.54 for May, 1926; \$22.84 for May, 1921; \$26.92 for July, 1920 (the post war peak); and \$14.21 for May, 1914. Fuel and rent were both slightly lower, the former because of lower quotations for anthracite coal and wood in certain localities.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based on prices in 1926 as 100 was unchanged in May at 71.1 the same level as in April. Figures for certain previous dates are 66.7 for May, 1933; 89.7 for May, 1930; 93.4 for May, 1929; 100.2 for May, 1926; 164.3 for May, 1920 (the post war peak); and 64.2 for May, 1914. One hundred and ten prices quotations were lower, seventy-seven were higher and three hundred and eighty were unchanged.

In the grouping according to chief component materials four of the eight main groups were higher and four were lower. The groups which advanced were: the Vegetables and Vegetable Products group, because of higher prices for grains which more than offset declines in the prices of bran, shorts, sugar and potatoes; the Wood, Wood Products and Paper group, owing chiefly to higher quotations for lumber; the Iron and its Products group, mainly due to higher quotations for steel sheets; and the Chemicals and Allied Products group, because of advances in certain chemicals. The groups which declined were: the Animals and their Products group,

because of lower prices for hides, leather, steers, calves, fresh meats, milk and butter which more than offset advances in the prices of hogs, lambs, cured meats and eggs; the Fibres, Textiles and Textile Products group, because of lower prices for raw silk, silk hosiery, raw wool and worsted cloth yarns; the Non-Ferrous Metals and their Products group, mainly because of lower prices for copper, lead, tin and zinc; and the Non-Metallic Minerals and their Products group, because of reductions in the price of gasoline.

In the grouping according to purpose consumers' goods declined due to lower prices for dried fruits, fresh meats, milk and its products, silk hosiery, woollen yarn and gasoline. Producers' goods advanced slightly, due mainly to higher prices for certain manufacturers' materials, chiefly in leather goods and milling industries. Materials for the textile and clothing industries and for the metal working industries were lower.

In the grouping according to origin raw and partly manufactured goods advanced and fully and chiefly manufactured goods were lower. Canadian farm products advanced and articles of marine origin, articles of forest origin and articles of mineral origin were lower.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of May of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

(Continued on page 576)

## COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family

\*Prior to 1926 number of commodities was 236 and commencing in January, 1934, the number is 567.

(Continued from page 568)

The figures as to rental are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amounts due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which statistics were available when first published in the LABOUR GAZETTE in January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the

western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

### Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences

in rates in the various cities being greater in these items than in the others. An index number for rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926, weighted according to the importance of each item in workingmen's family expenditure, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

### Retail Prices

Beef prices continued to advance in most localities, sirloin steak being up in the average from 21.6 cents per pound in April to

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18%; Clothing, 18%; Sundries, 20%.

22.2 cents in May and round steak from 17.5 cents per pound to 17.9 cents. Shoulder roast of veal was down from an average price of 13 cents per pound to 12.2 cents, while mutton advanced from 20.6 cents per pound to 22.1 cents. Fresh pork was about 1 cent per pound lower in May than in the previous month but was considerably higher than in May last year. Comparative prices are 19.7 cents per pound in May, 1934, 20.6 cents in April and 15.1 cents in May, 1933. Breakfast bacon was fractionally lower than in the previous month averaging 28.7 cents per pound. The price, however, in May last year was 19.9 cents per pound.

The price of eggs showed a substantial seasonal fall, fresh averaging 22.3 cents per dozen in May, 27.1 cents in April and 40.5 cents in March, while cooking averaged 18.5 cents per dozen in May, 23 cents in April and 34.6 cents in March. Butter prices also were considerably lower in nearly all localities, dairy being down from 29.3 cents per pound in April to 24.4 cents in May and creamery from 33 cents per pound in April to 27.8 cents in May.

Bread was fractionally lower at an average price of 5.8 cents per pound, slight decreases being noted in several localities. Potatoes were slightly lower at an average price of \$1.32 per ninety pounds in May as compared with \$1.37 in April but were considerably higher than in May last year when the price averaged 95 cents. Evaporated apples were down in the average from 15.2 cents per pound to 14.8 cents, while prunes were unchanged at an average price of 12.7 cents per pound. Granulated sugar was slightly lower in most localities the price averaging 7.9 cents per pound as compared with 8 cents in previous months. The price of anthracite coal was down in the average from \$15.17 per ton in April to \$15.06 in May. Seasonal decreases were reported from Saint John, Hull, Ottawa, Peterborough, Toronto, Hamilton, Brantford and Galt. Rent declined in some localities and advanced in others but was unchanged in most. The average was slightly lower.

Following are the prices reported for Welsh coal, domestic sizes: Halifax, \$16.50; Windsor, \$16.50; Charlottetown, \$14.40; Moncton, \$16; Saint John, \$13; Quebec, \$13.50; Three Rivers, \$15; Sherbrooke, \$16.25; St. Hyacinthe, \$14.75; Montreal, \$15; Hull, \$16.50; Ottawa, \$16.50; Kingston, \$15.50; Belleville, \$16; Peterborough, \$16.25; Oshawa, \$14.75; Toronto, \$14.75; St. Catharines, \$15.50; Hamilton, \$14.50; Galt, \$15.50-\$16; St. Thomas, \$15; Windsor, \$13.50; Sudbury, \$17; Timmins, \$19; Port Arthur, \$16.50; Fort William, \$16; Winnipeg, \$19.50.

### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices advanced considerably during May. No. 1 Manitoba northern cash wheat Fort William and Port Arthur basis averaged 70.6 cents per bushel as compared with 65.5 in April. The total advance, however, during the month was 16½ cents per bushel, the high price being 81½ cents on May 31. Unfavourable crop conditions in North America and in Europe were factors in this advance. In coarse grains western oats were up from 32.4 cents per bushel to 34.6 cents, flax from \$1.497 per bushel to \$1.573, rye from 44.1 cents per bushel to 46.4 cents and barley from 36.9 cents per bushel to 38.1 cents. Rolled oats advanced from \$2.50 per ninety pound bag to \$2.70. Granulated sugar at Montreal was unchanged at \$6.18 per hundred pounds. Coffee was up from 14.8 cents per pound to 16 cents. The price of Ceylon rubber at New York averaged higher in May at 13.9 cents per pound as compared with 12 cents in April. Prices toward the end of the month, however, were lower and consumption of rubber in the United States in April as compared with the previous month was lower. In live stock choice steers at Toronto were down from \$6.05 per hundred pounds to \$5.84.

Calves at Toronto were down from \$6.92 per hundred pounds to \$6.33 and at Winnipeg from \$5.42 per hundred pounds to \$5.07. Bacon hogs at Montreal advanced from \$8.40 per hundred pounds to \$8.68, at Toronto from \$8.21 per hundred pounds to \$8.55 and at Winnipeg from \$7.41 per hundred pounds to \$7.73. Lambs at Toronto were also higher at \$10.56 per hundred pounds as compared with \$8.55 the previous month. The price of fresh eggs at Montreal averaged 21 cents per dozen in May as compared with 20.1 cents in April. Quantities in cold storage were approximately 23 per cent less at the beginning of May than on the same date last year. The price of creamery butter at Montreal was substantially lower at 22.4 cents per pound as compared with 28.1 cents. The price at Toronto was 23.3 cents per pound as compared with 28.1 cents the previous month. Stocks in cold storage at the beginning of May were about 28 per cent higher than a year ago. The price of raw cotton at New York averaged 11.4 cents per pound for May as compared with 11.8 cents in April. The price of raw wool was down from 21.5-24.5 cents per pound to 20.5-22 cents. Maple lumber was \$3 per thousand board feet higher at \$55 and birch \$8 per thousand board feet higher at \$50. The price of steel sheets advanced from \$3.75 per hundred pounds to \$3.80.

### Chemical and Allied Products in Canada, 1931-1932

The Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics has recently published a report on the chemical industry in Canada in 1931-32. A total of 662 plants reported under Chemicals and Allied Products in 1932 compared with 621 in 1931, but capital employed declined \$3 millions to \$160,929,954, salaries and wages dropped \$1 million to \$20,008,108, the cost of materials fell \$5.5 millions to \$35,276,531, and the value added by manufacturing \$4.7 millions to \$60,002,845. The number of employees remained about the same at 15,295 compared with 15,207 in 1931.

The chemical industry is classified into fifteen separate groups, according to the nature of their main products. Three of these groups showed slight increases in output values and 12 showed declines when compared with 1931. The acids, alkalies and salts, or the heavy chemical industry, advanced 4 per cent to \$11,357,649; the polishes and dressings industry gained 2 per cent to \$1,812,603, and the toilet preparations industry was maintained at \$5,946,509 compared with \$5,946,292 in 1931. The greatest decline was in the paints indus-

try; the 1932 production was reported at \$14,912,383 compared with \$18,536,463 in 1931, a decline of 20 per cent.

According to the number of employees, the medicinal industry was still of first importance at 2,959 but was closely followed by the paints group with 2,658 workers. The soaps industry was third with 1,777 employees, and the heavy chemical industry was fourth with an average of 1,679 workers.

Including both salaried employees and wage-earners, the average number of persons employed in the manufacture of chemicals and allied products in Canada during 1932 was 15,295. This figure represented an increase of 88 over the number employed in the previous year. Plants in Ontario gave work to 8,053 people; in Quebec, 5,344 people; in British Columbia, 875; Manitoba, 565; Nova Scotia and Prince Edward Island, 191; New Brunswick, 156; and Saskatchewan and Alberta, 111. The 5,147 salaried employees were paid \$10,232,416 during the year, and the average of 10,148 wage-earners received a total of \$9,775,692, making a total amount of \$20,008,108 expended for salaries and wages by the various companies.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes afford information as to significant changes in prices in Great Britain and certain other countries. The authorities for the wholesale prices index numbers are named in all cases. The latest table showing cost of living and wholesale prices index numbers for various countries appeared in the LABOUR GAZETTE for April.

### Great Britain

**WHOLESALE PRICES.**—The Board of Trade index number, on the base 1924=100, was 61·9 for April, a decrease of 0·9 per cent from the March level. Foods were 1·4 per cent lower, due principally to lower prices for barley, imported bacon and butter. Industrial materials were 0·7 per cent lower due to declines in textiles.

The *Statist* index number, on the base 1867-1877=100, was 81·0 at the end of April, a decrease of 1·6 per cent from the previous month. With the exception of a slight advance in the animal food group, all groups showed declines, the largest decrease being one of 4·3 per cent in textiles.

**COST OF LIVING.**—The Ministry of Labour's index number, on the base July, 1914=100, was 137 at May 1, a decrease of 1·4 per cent for the month, due principally to lower food prices, chiefly milk, butter and bacon, and also to a slight decrease in the fuel and light group.

### France

**WHOLESALE PRICES.**—The General Statistical Office index number, on the base 1914=100 (gold index), was 77 for April, showing no change from the March level. A substantial advance in the vegetable foods group was offset by small declines in the other groups.

### Germany

**WHOLESALE PRICES.**—The Federal Statistical Office index number, on the base 1913=100, was 95·8 for April, a decrease of 0·1 per cent for the month. Agricultural products, as a whole showed little change as an increase in vegetable products was offset by declines in animal products. Among industrial materials, the most notable change was an advance of 7·5 per cent in rubber prices.

**COST OF LIVING.**—The official index number, on the base 1913-1914=100, was 120·6 for April, showing no change from the March level. Small advances in food and clothing were counteracted by small decreases in heat and light and sundries.

### Italy

**WHOLESALE PRICES.**—The index number of the Provincial Economic Council for Milan, on the base 1913=100, was 276·05 for February, a decrease of 0·6 per cent for the month. The slight decline in foods was due to vegetable foods, as animal foods were higher than in January. Among industrial materials, decreases in minerals and metals, vegetable products and miscellaneous commodities were partly offset by advances in textiles, chemical products and construction materials.

**COST OF LIVING.**—The index number of the Milan Statistical Office of the cost of living, Milan, on the base 1927=100, was 76·30 for March, a decline of 0·2 per cent for the month, due to slight declines in food and sundries, the other groups remaining unchanged.

### United States

**WHOLESALE PRICES.**—The index number of the United States Bureau of Labour Statistics, on the base 1926=100, was 73·3 for April, a decrease of 0·5 per cent for the month. Declines were noted in farm products, food products, textiles and chemicals and drugs, while the other six groups showed small advances.

*Dun's* index number (continued by Dun and Bradstreet, Incorporated), which is based on the cost *per capita* of a year's supply of commodities, was \$161·331 at May 1, a fall of 1·28 per cent for the month. With the exception of meat which advanced, all groups were included in the general decline.

**COST OF LIVING.**—The index number of the Department of Labour and Industries, Massachusetts, of the cost of living in Massachusetts, on the base 1913=100, was 130·8 for April, a slight decrease from the March level, due principally to decreases in the clothing and fuel groups.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Worker on Commission Basis is subject to B.C. Minimum Wage Act

The proprietor of a hairdressing establishment at Vancouver decided in 1932 to divide his premises, and he constructed an annex with a separate entrance from the street. A super-intendent was placed in charge of the annex, and she, on the direction of the proprietor, engaged a number of employees, payment being on a commission basis. The employees in the annex received 30 per cent of the receipts for all work done by them, the proprietor taking 70 per cent, paying the rent and supplying materials, including machines.

The proprietor was convicted by a magistrate, under the Minimum Wage Act (for women), for unlawfully employing one of the hairdressers for less than the minimum wage fixed by a valid order of the Minimum Wage Board at \$14.25 a week.

His Honour Judge Howay quashed the conviction in the County Court, holding that the evidence did not show that the proprietor exercised control or direction over the annex such as would bring him within the definition of "employer" in the Act.

On appeal from this judgment the British Columbia Court of Appeal allowed the appeal and restored the conviction.

Chief Justice Macdonald discussed the question whether the relations existing between the proprietor and the complainant were those of an employer and an employee as interpreted by the Act: "I see no difficulty," he said, "in harmonizing the wages consisting of a percentage of her (that is, the complainant's) earnings with the method adopted by the Board. I look upon the 30 or 40 per cent as it was in the complainant's case, as her wages. She earned during the whole period a sum of money which was less than the sum which the Board considered the minimum wage should be, and the only practical way of fixing the minimum wage was to name a minimum for a period as they did and, if the wage paid failed to conform to that standard but fell short of it, the employer would be liable for breach of the Act. I think, therefore, the learned magistrate came to the right conclusion and I would set aside the judgment of the learned County Court Judge and thus allow the appeal." *Rex versus Gautschi* (British Columbia) 1934 *Western Weekly Reports*, vol. 2, page 196.

### Employees Not Protected by Rules for Public Safety on Railways

A section foreman employed by the Canadian Pacific Railway Company in Saskatchewan was returning from an inspection of his section. A severe storm was raging, accompanied by very cold weather and a high wind. The use of the hand car was impracticable, and the foreman was making the trip on foot, carrying some tools and flags on his person. When approaching a level road crossing he was struck by a train and severely injured. The point at which the accident occurred was about midway between a whistle post and the crossing. In an action by the workman against the company for damages, before Judge Embury, the jury found that the engine bell was not rung at the approach of the train to the crossing, and it was admitted that the engine light was not on at the time, and the Court awarded damages to the plaintiff.

On appeal by the defendant company the Court of Appeal allowed the appeal and dismissed the action with costs.

Sec. 308 of the Railway Act (Revised Statutes of Canada; 1927, ch. 170), provides that, when a train is approaching a highway crossing at rail level, the engine whistle shall be sounded at least 80 rods before reaching such crossing and the bell shall be rung continuously from the time of the sounding of the whistle until the engine has crossed the highway. Besides this, one of the rules of the company, contained in a book of rules issued to its employees, including the plaintiff, also provides for the blowing of the whistle and the ringing of the bell at the approach of highway crossings.

Mr. Justice Turgeon in the course of his judgment, said that at the time of the accident the plaintiff knew that he was between a whistle post and the crossing, that is, in an area where these warnings of the train's approach could be expected; and the jury's findings indicated that, in their belief, he would have heard those warnings if they had been given. "To one approaching this case, without the guidance of former decisions, it might appear reasonable to conclude that the plaintiff was justified in relying on these warnings being given and that a breach of the defendants' duty to him was committed when the train went by without giving them. The learned trial Judge was of this opinion and he instructed the jury accordingly.....I must say, with great respect, that, unfortunately for the plaintiff, this instruction to the jury does not appear to be in accordance with the

rules of law that have been laid down on the subject. One may feel that the law ought to give an employee, lawfully on the track in the performance of his duties at a point where these warnings are required to be given, the benefit of this requirement, but the authorities are the other way."

His Lordship cited particularly the case of *Walker versus Grand Trunk Railway*, 1920, in which Mr. Justice Riddell expressed regret that the law should be as it is, but stated that previous decisions in similar cases must be followed. "The result of these decisions," Mr. Justice Turgeon continued, "is that the statutory provision for the blowing of the whistle and the ringing of the bell at the approach to a highway crossing is intended only for the benefit of persons coming upon the crossing, and that others lawfully on the track in the proximity of the crossing are not entitled to the protection afforded by the statute."

As to the fact that the engine headlight was, admittedly, not lit at the time of the accident, the judgment proceeded: "The absence of this light is the only other ground of negligence attributed to the defendants by the jury, and they say that it is one of the things

which caused the accident. Before examining the question whether the defendants owed a duty to the plaintiff in respect to the headlight, it will be well to inquire whether there was any evidence upon which the jury could reasonably find, not only that the presence of the headlight *might* have prevented the accident, but that it *would* have prevented it. If no such inference could reasonably have been drawn from the evidence, the case is at an end and the plaintiff must fail."

On the evidence "the jury could not reasonably have found more than that the plaintiff *might* have seen the headlight if it had been turned on, not that he *would* have seen it; and this, of course, is not sufficient to justify a verdict against the defendants. I am therefore of the opinion that the appeal should be allowed with costs, and the plaintiff's action dismissed with costs."

Separate judgments were given by Mr. Justice Martin, and Mr. Justice Mackenzie, both allowing the appeal, and Chief Justice Haultain also agreed in the result.

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

INDUSTRIAL employment in Canada at the beginning of June showed an important expansion, according to data tabulated by the Dominion Bureau of Statistics from 8,640 firms, each employing a minimum of 15 persons, the data being representative of all industries except agriculture, fishing, hunting and highly specialized business. The reporting firms had 899,286 employees on June 1, as compared with 856,548 on May 1. This increase was the greatest reported in any month since June 1, 1930, being more than twice as large as the gain indicated at the beginning of June in either 1931 or 1932; it was, also, greater than the average gain shown between May and June in the years since 1920. The index of employment (with the average for the calendar year 1926 as the base equal to 100) stood at 96.6 on June 1, 1934, as compared with 92.0 on May 1, 1934, and 80.7 on June 1, 1933. At the beginning of June in the preceding twelve years, the index was as follows: 1932, 89.1; 1931, 103.6; 1930, 116.5; 1929, 122.2; 1928, 113.8; 1927, 107.2; 1926, 102.2; 1925, 95.6; 1924, 96.4; 1923, 98.5; 1922, 90.3, and 1921, 87.7.

At the beginning of June, 1934, the unemployment percentage reported to the Department of Labour by local trade unions was 18.5, compared with 19.1 per cent at the beginning of May and with 23.8 per cent at the beginning of June, 1933. The June percentage was based on the reports furnished to the Department of Labour by an aggregate of 1,705 labour organizations, representing 156,963 members.

Reports received during May, 1934, from the offices of the Employment Service of Canada showed a gain in the volume of business transacted, as indicated by the average daily placements effected, when a comparison was made with April, 1934, and also with the corresponding month a year ago, all industrial divisions, except farming, showing increased placements in both instances. Va-

cancies in May, 1934, numbered 43,338, applications 70,548, and placements in regular and casual employment 40,688.

In retail prices the cost per week of a family budget of staple foods, fuel and lighting and rent at the beginning of June was again lower, due mainly to a decline in the cost of foods, chiefly butter, sugar and potatoes. The cost of the budget for June was \$15.78 as compared with \$15.96 for May; \$15.41 for June, 1933; \$21.44 for June, 1930; \$26.92 for July, 1920, the post war peak, and \$14.27 for June, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics was higher at 72.1 for June as compared with 71.1 for May and 67.6 for June, 1933. Comparative figures for certain previous dates are 93.4 for June, 1929; 100.1 for June, 1926; 97.8 for June, 1922; and 164.3 for May, 1920. The increase in June was due mainly to higher prices for grains, meats and raw cotton.

The most recent statistics available reflecting industrial conditions in Canada are given in a table on page 585. Industrial activity as measured by the index of the physical volume of business was substantially higher in May than in the previous month and 30 per cent higher than in May, 1933. Of the principal factors in the index, after making adjustment when necessary for seasonal variation, mineral production and car loadings were lower and manufacturing, construction, electric power output, trade employment, imports and exports were higher. As compared with May, 1933, all the main factors were substantially higher. Information available for June shows that employment, car loadings, wholesale prices and sugar production were at a higher level both as compared with the preceding month and with June, 1933. Contracts awarded were lower than in May but much higher than in June last year.

The number of strikes and lockouts recorded for June was 24, involving 3,278 workers and resulting in a time loss of 34,483 man-working days, as compared with 32 disputes in May, involving 5,954 workers with a

time loss of 36,846 days. For June, 1933, as finally revised, the number of disputes was 13, involving 3,097 employees with a time loss of 37,500 days. None of the disputes in June involved large numbers of workers except the strike of metal mine and smelter workers at Flin Flon, Manitoba, involving 1,073 workers with a time loss of 19,314 working days. Six of the disputes were carried over from May and eighteen commenced during June. Eleven disputes were terminated, two in favour of workers, five in favour of employers, and four resulted in compromises. The thirteen disputes in progress at the end of the month involved 2,208 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off, or definitely declared terminated by the unions involved.

#### **Industrial Disputes Investigation Act**

During the past month the Department received reports from the two Boards of Conciliation and Investigation established to deal with disputes respectively between the Toronto Transportation Commissioners and certain of their employees, and between the Shipping Federation of Canada and waterfront workers at Vancouver. Two new applications for the establishment of Boards were received during the month, but were subsequently withdrawn. The texts of the two reports mentioned above, together with a summary of the proceedings under the Act during the month, are given on page 590.

#### **Price spreads and mass buying inquiry to continue**

The Special Committee appointed by the House of Commons last February to inquire into price spreads and mass buying (LABOUR GAZETTE, February, 1934, page 92) submitted to the House before the prorogation of Parliament on July 3 a copy of the evidence and proceedings taken up to that date. Sessions were held on sixty separate days, witnesses were heard under oath, and auditors and investigators were appointed to examine into the matters referred to the committee. It was found that owing to the voluminous character of the evidence it was not possible to complete the investigation before the session ended, and the committee therefore made the following recommendations, which were adopted by the House: that the inquiry be continued and that the members of the committee be appointed commissioners under the provisions of the Inquiries

Act to continue their investigations and inquiry, with authority to engage services of counsel, secretary, accountants, technical advisers, reporters, clerks, stenographers and investigators, and to print the evidence, proceedings and documents received by the commission. The Commissioners are to report their findings to the Minister of Trade and Commerce.

The Commissioners are: the Hon. H. H. Stevens, Minister of Trade and Commerce (chairman); Messrs. J. J. Baribeau (Champlain); Thomas Bell (St. John-Albert); Oscar L. Boulanger (Bellechasse); Alex. M. Edwards (Waterloo South); Samuel Factor (Toronto West Centre); James L. Hsley (Hants-Kings); Donald M. Kennedy (Peace River); William W. Kennedy (Winnipeg South Centre); Mark C. Senn (Haldimand), and Edward Young (Weyburn).

#### **Price of milk in Edmonton and Calgary**

The Board of Public Utility Commissioners established in Alberta under the Public Utilities Act, 1923, of Alberta, recently published orders relating to milk and cream prices in Edmonton and Calgary during the summer months.

The minimum price to be paid to producers of milk by distributors and others purchasing in bulk for distribution as fluid milk is, for Edmonton, \$1.48 and for Calgary \$1.55 per 100 pounds (butterfat standard based on average test).

The minimum retail prices to be charged to consumers by distributors are: in Edmonton, 6 cents per pint (17 tickets for \$1); 10 cents per quart (11 tickets for \$1); and in Calgary, 5 cents per pint and 9 cents per quart, for milk containing 3.9 per cent butter fat or less; and 6 cents per pint and 10 cents per quart for milk containing 4 to 4.9 per cent butter fat. Special prices are given for Jersey, nursery and other special qualities.

Wholesale prices to stores for milk in Edmonton are 30 cents per gallon, 9 cents per quart and 6 cents per pint; and in Calgary one cent less than the retail prices. For milk sold by stores the price must not be less than the retail prices given above. Wholesale prices to hotels, restaurants, bakeries, factories or public institutions purchasing milk for use or consumption on the premises, are, in Edmonton, 30 cents per gallon, 9 cents per quart and 6 cents per pint; and for Calgary, 27 cents per gallon, 8 cents per quart, 5 cents per pint.

Another section of the orders fixes prices for cream in the two cities.

## MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official statistics except where noted)

	1934			1933		
	June	May	April	June	May	April
Trade, external aggregate..... \$	104,828,444	111,430,320	66,861,817	80,091,319	79,035,360	40,769,251

(3) Figures for end of previous month.

(4) Figures for four weeks ending June 30, 1934, and corresponding previous periods.

(5) Sugar production given in periods of four weeks ending June 16, May 19 and April 21, 1934; June 17, May 20 and April 22, 1933.

(7) MacLean's Building Review.

### Group hospitalization plan at Edmonton

The City Council of Edmonton, Alberta, recently approved a plan to establish a co-operative hospitalization scheme, four of the larger hospitals participating. The plan provides that industry or business may form a group of at least five members and on payment of specified monthly fees may assure hospital treatment at a low cost for themselves and their dependants. It is understood that persons wishing to take advantage of the plan sign a contract for monthly payments varying according to the size of the family, and that collections will be made by employers on request of the insured employee. The yearly cost for a family of five, consisting of father, mother, one child over 15 years of age, and two younger children is placed at \$25.20. Paid-up members of the groups will receive 30 days of public ward treatment, together with the usual nursing, examinations, treatments and other services. For special services such as X-ray, the charge is one-half the regular rate. Special rates are given also for patients in private and semi-private wards. Doctor's fees are not included in the plan.

The Edmonton *Journal* points out that the plan will be self-supporting and "will make the financial burden of illness less onerous on a good many families."

### United States to join the I.L.O.

This issue contains a report of the proceedings of the eighteenth International Labour Conference. Draft Conventions were adopted on unemployment insurance, workmen's compensation, night work of women, etc. Consideration of the proposed Draft Conventions on the reduction of hours of work was deferred until next year.

An invitation to the United States to join the Organization was issued by the Conference on the motion of the Canadian Government delegate, seconded by the Mexican Government delegate, following the announcement that Congress had passed a resolution recommending participation by the United States. The report on another page includes the text of the Congress resolution, and notes the expression by various speakers at the Conference of their appreciation of the great importance to the Organization of this event.

### Legal decision dealing with peaceful picketing

Among the recent legal decisions affecting labour which appear at the end of this issue is a brief report of the judgment of the British Columbia Court of Appeal dismissing the appeal of the defendants in the case of *Rex versus Richards*

and *Woolridge*, the appeal judges being equally divided in their opinion. The defendants had been convicted under Section 501 (f) of the Criminal Code of besetting their employer's premises, but their actions were admittedly of a peaceful character, and they claimed further the authority of the British Columbia Act relating to Trade Unions as sanctioning their conduct by exempting them from section 501, which provides that a person found guilty under its provisions shall have acted "without lawful authority."

### New Brunswick Forest Operations Commission Act

In the May issue of the LABOUR GAZETTE (page 418) was printed the Bill respecting Forest Operations and Woodsmen which had been introduced in the New Brunswick Legislature. The only important amendment made to the Bill during its passage through the Legislature was the addition of a section to enable the Commission set up under the Act to take cognizance of a dispute involving an employer of less than five employees. In such cases the Commission is authorized to make a preliminary investigation to determine the seriousness of the dispute and in accordance with its findings to hear or refuse to hear the application for an investigation. As set out in the Bill published in the May GAZETTE, the Commission has power to establish minimum wages for workers engaged in the lumbering industry where five or more are employed by the same employer. Disputes regarding such minimum wages or concerning the board, store charges and living conditions in the lumber camps, are within the scope of the Commission's jurisdiction.

The following minimum wage scales have been fixed by the Forest Operations Commission under authority of Chapter 15 of the Acts of 1934 and Order-in-Council of April 3, 1934.—

Minimum rate of wages in logging woods to be \$32 per month and board, net.

Minimum rate of wages for booming and sorting of logs, including pulpwood, to be twenty cents per hour.

Minimum wage scale for poplar pulpwood to be \$1.85 per cord of 138 cubic feet cut, peeled, sawn and piled, over and above all charges (including filing) except a deduction for board not exceeding fifty cents per day.

The Commission is composed of Mr. Justice Grimmer (Chairman), J. H. Wallace and W. S. Richards, commissioners, and H. Lester Smith, secretary.

### Union label for stationery made in Canada

The June issue of the magazine *Pulp and Paper of Canada*, contained the following note on a recent agreement at Port Arthur: "Following a series of discussions between the management of the Provincial Paper Limi-

ted plant at Port Arthur, and committees representing the men, an agreement was reached as to working conditions and wages. The major points asked by the men were: a rate of 45 cents per hour minimum for ordinary labour and an increase in other wages of about 11 per cent. Some department of the mill were already operated by union labour, and the management therefore consented to having other departments, particularly the paper machine room, operated under the union banner. This, we understand, makes the Provincial mill the only book paper plant in the Dominion to so operate. The interesting point in this connection is that union organizations throughout the Dominion can now have stationery and other paper watermarked with the union watermark. Heretofore trade union stationery and other papers requiring the union watermark had to be imported."

#### **Effects of unemployment on children of the unemployed**

A note submitted by the International Labour Office to the Child Welfare Committee of the League of Nations emphasizes the effect of the prolonged unemployment of large numbers of workers on their children. Mortality and morbidity statistics, it is stated, have not hitherto revealed any aggravation in the state of health of the population in general and of children in particular. Nevertheless, a number of indices suggest that the general lowering of the standard of living, from which millions of families totally or partially unemployed have for a long time past been suffering, constitutes a serious threat to public health. This threat is not equally serious in all countries. It depends on the degree of unemployment and on the extent to which measures of social protection can mitigate the effects of the crisis. In practice, the dangers to which the health of the children of the unemployed is exposed are due chiefly to inadequate clothing and bodily care, deterioration of housing conditions, and underfeeding. Abundant material on these three points has already been collected as the result of various inquiries.

The note gives the results of inquiries that were made in various countries. For example, in Great Britain unemployment has been found to lead to insufficient clothing and food, bad housing conditions, and a high sickness rate, but to a much smaller extent than in other countries, owing to the fact that the unemployment insurance system has to some extent mitigated the effects of the crisis.

As a whole, the information collected by the International Labour Office shows that the present economic crisis has almost everywhere produced such a reduction in conditions of life that there is a grave danger that millions

of children will not be able to grow up under normal conditions of health. The danger is particularly great in countries where measures of social protection are inadequate to counter the distress caused by the crisis.

#### **Children's minimum campaign in Great Britain**

A Children's Minimum Campaign Committee was formed in Great Britain towards the end of 1933, its aim being to ensure that no child shall go short of the minimum requirements of healthy upbringing because of its parents' poverty, and that, as far as may be necessary to accomplish this end, children shall have a first claim on the nation's returning prosperity. Miss Eleanor Rathbone, writing in the *New Statesman* (London), June 9, 1934, discusses the objects of the committee and the measures so far taken by the government in this direction. Among the facts which suggested the forming of such an organization the writer mentions the findings of the British Medical Association's Committee on Nutrition and other authoritative estimates of minimum needs for living. These reports had directed public attention to the wide discrepancy between the cost of a sufficient diet and the actual sums available to unemployed or poorly paid wage-earners for the nourishment of their children. On the other hand it was widely known that the food-producing industries were embarrassed by a surplus of milk, bacon, eggs and other foods beyond the effective demand of British consumers.

Miss Rathbone discussed the provisions of the Unemployment Bill, the Finance Bill and the Milk Bill, then before Parliament, in their bearing upon the subject of child welfare. "The Government's distribution of the benefactions made possible by the revival in world trade," she concluded, "goes a very short way indeed towards securing the objective of the Children's Minimum Campaign. Perhaps, the greatest gain will result from the Minister of Labour's assurance that in future the assistance obtained by the unemployed will be based on some kind of scientific scale representing the needs of healthy physical subsistence. But whether this part of the harvest ever matures and is garnered will depend on whether the new Unemployment Assistance Board is willing, or can be persuaded by popular pressure, to implement this assurance."

#### **Unemployment insurance in the United States**

President Roosevelt recently intimated that the legislative program to be considered by Congress next year would include the subject of unemployment in-

insurance. The Bill introduced this year by Senator Wagner and Congressman Lewis (LABOUR GAZETTE, February, 1934, page 95) sought to provide federal unemployment funds and to encourage State legislatures to enact laws for this purpose. The President in a letter to the House Committee to which the bill was referred expressed his approval of its general principles, stating that "the effect sought was a necessary one for recovery and prevention of future economic crises." The President also expressed the opinion that "social insurance should be national in scope, although the several states should meet at least a large portion of the cost of management, leaving to the federal government the responsibility of investing, maintaining and safeguarding the funds constituting the necessary insurance reserves."

In the meantime the Wisconsin Unemployment Insurance Act (LABOUR GAZETTE, April, 1932, page 379), came into operation on July 1, 1934, the Commission having decided to apply the compulsory features of the Act, as the number of employers establishing satisfactory voluntary schemes was not sufficient to justify further delay. *Business Week* (New York), in its issue of June 16, says: "Other States facing legislative debate on unemployment insurance, certain to be stimulated by the Presidential move toward social insurance, will be watching Wisconsin's test with keen interest. Ohio, New York, and Illinois in particular have had the subject under hot discussion. However, proposals brought up in many of the other States differ sharply from the Wisconsin program in calling for contributions from employees as well as employers." The Wisconsin law requires all employers of more than ten persons to set up reserves from which unemployment benefits of \$10 a week could be paid for ten weeks in one year. Employees earning \$1,500 a year or less are covered, except farm labourers and domestic servants. An employer may set up his own fund, join with other companies, or contribute to the State fund. Separate records will be kept of each company's account in the state fund. The contribution (all by the employer) is two per cent of the pay roll until the reserve amounts to \$55 for each employee covered and one per cent until the reserve amounts to \$75 per employee. The act was to have gone into effect July 1, 1933, unless by that time employers with 175,000 employees had voluntarily established equally liberal plans, but the effective date has since been extended to July 1, 1934.

### Unemployment insurance as a means to industrial recovery

In an address in connection with "Life Assurance Week" in Ottawa early in June, the Hon. Dr. R. J. Manion, Minister of Railways, referred to unemployment insurance as a possible means towards industrial recovery. "Scientific development," he said, "has gone ahead far more rapidly with regard to production than it has touching distribution. Thus the problem before the world to-day is one of securing and developing purchasing power so that the industrial world at least will be in a position to purchase from the plenty of everything which the world has to provide. The solution of the problem, I think, will be found in another form of insurance to spread purchasing power to stimulate consumption, and that form will probably be something in the shape of unemployment insurance." Dr. Manion commended life insurance as a form of thrift: "It is altruistic, since it is taken mainly to benefit others; based on the law of averages, it spreads the risk; it distributes wealth, and making for happiness; it gives stability in business in that funds are gathered and invested; and in these days of great economic stress it provides a study in political and business economy, dealing with the problems of production, distribution and consumption."

### Rochdale co-operation in Great Britain

The achievements of the co-operative movement in Great Britain are outlined in *The Nation* (New York), June 27, as follows: "There are to-day more than 7,000,000 co-operators in Great Britain; with their families they represent possibly one in three of the entire population. They do a wholesale and retail trade of nearly £350,000,000, financing it with a capital—not one penny of which is quoted on the Stock Exchange—£220,000,000. Their Insurance Society has an annual premium income exceeding £5,000,000 and their bank a yearly turnover of £600,000,000. The 'Co-ops' are the biggest British millers. The flour produced in 'Co-op' mills bakes one in four loaves of British bread. They are the biggest tea growers and distributors in the world, bringing much of their supply from their own tea gardens in India and Ceylon. They are the biggest soap manufacturers outside the gigantic Lever combine. They are steadily capturing, in their 10,000 retail shops, an increasing proportion of Britain's coal, meat, and milk trade. A score of governmental reports testify to their efficiency in distribution and production. Sixty per cent of the dividends—these 'divis' averaging £24,000,000

—are retained to finance new enterprise; co-operation taps a source of capital free from money-market manipulation.

"In matters pertaining to social welfare this movement of consumers has large achievements to its credit. It fostered the free library in Great Britain and was a pioneer in adult education. It has built convalescent homes, created cultural agencies, and developed contacts with the life of democracy at many points. Powerful propaganda agencies, like its own Women's Co-operative Guild, are assured of its support in promoting sex equality and an expansion of state and civic services. Ninety in every hundred of its 260,000 employees find membership in a trade union a condition of their employment. All enjoy conditions of labour far beyond the standards obtaining in private trade. In 1906, for example, the Co-operative Wholesale Society guaranteed its adult women workers a minimum wage of 17s. per week. This concession was a useful lever in the nation-wide campaign which won for women, in 1909, a minimum wage of 11s. 3d. per week by state regulation. The movement, too, has set the pace in raising food standards. It has shamed its more reputable competitors into describing accurately the nature and quality of packeted goods. Its example ended the custom of including the weight of the packet with the weight of tea.

"The most vital fact of all, however, is this: The co-operative movement, in its control as in its ownership, is democratic. Every consumer-member, be his shareholding large or small, has one vote. Policy is directed by popularly elected boards of management. It is applied by officials who, if they are not so highly paid as similar executives in the capitalistic world, exercise more real leadership by virtue of an integrity and efficiency which mark them out as the potential civil service of a new economic democracy."

During the month of June there were reported to the Ontario Workmen's Compensation Board 4,886 accidents, as compared with 4,452 during May, and 3,189 during June a year ago. The fatal accidents numbered 29, as compared with 23 in May, and 11 in June last year. The total benefits awarded amounted to \$380,059.55, of which \$310,310.19 was for compensation and \$69,749.36 for medical aid. This brings the total benefits awarded during the half year ending June 30 to \$2,061,064.26, as compared with \$1,802,445.93 during the corresponding period of 1933. During the first six months of 1934 the accidents reported numbered 25,016, as compared with 17,009 for the same period last year. The

fatal accidents for the six months' period were: 1934, 120; 1933, 97. The average daily benefits awarded for the half year were \$13,740, and the average number of cheques issued daily, 711.

The Alberta Baker's Association was incorporated in June, under the provisions of the Societies Act, its object being to consider measures calculated to further the interest of the industry in the Province and to consider matters pertaining to the business in which the members are mutually interested.

The Canadian Postmasters' Association, at their biennial Convention held at Windsor, Ontario, in June, adopted a resolution asking for an 8-hour day.

Mr. Tom Moore, president of the Trades and Labour Congress of Canada, was appointed as a member of the National Research Council. Reference to the work of the Council was made in the LABOUR GAZETTE, March, 1934, page 214.

The Education Committee of the London County Council recently approved in principle the raising of the statutory school-leaving age to 15 years and decided to convene a conference of local education authorities in and around Greater London to discuss the question of making joint representations to the Government with a view to the introduction of legislation at the earliest possible moment. The committee were of opinion that maintenance allowances should be a feature of the legislation, and that such allowances should be awarded in the light of the financial circumstances of the child's parents.

Manual training and home economics courses are now provided at North Vancouver, B.C., for out-of-school unemployed youths of both sexes. The provincial Department of Education furnishes three-fourths of the salary of the instructor, who was selected by the provincial Superintendent of Technical Education. Fifty boys enrolled on the opening day, and the limit of 100 pupils, receiving two periods of instruction a week, was reached at the end of the first week. The average age of the boys is 18; some contribute to the cost of the class. The 25 per cent of the instructor's salary for which the local committee is responsible is contributed largely by individuals and societies. In addition to manual training, a first-aid course by the St. John Ambulance Association is well attended. The home economics class for girls is a recent development.

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

**D**URING the month of June reports were received in the Department of Labour from two Boards of Conciliation and Investigation established under the Industrial Disputes Investigation Act to deal with disputes between (1) the Toronto Transportation Commissioners and certain of their employees, being members of the Toronto Railway Employees' Union, and (2) various firms, members of the Shipping Federation of British Columbia, Limited, and certain of their employees, being members of the Vancouver and District Waterfront Workers' Association.

### Applications Received

Two applications for the establishment, by the Minister of Labour, of Boards of Conciliation and Investigation were received in the Department of Labour during the month of June as follows:—

(1) From city hydro linemen in the employ of the Hydro Electric Commission, Arc Department, Police and Fire Alarm Signal Department, etc., of the Corporation of the City of Winnipeg. The dispute concerned the request of twenty-one employees for increased wages. The linemen subsequently withdrew the application, stating that the dispute had been, in the meantime, amicably adjusted by direct negotiations.

(2) From twenty-five workmen who had been laid off by the Luscar Collieries, Limited. The workmen in question, comprising fifteen coal miners, five timber packers and five haulage crew, are members of the Luscar Miners' Local Union. The men desired to be re-employed and to have the work equally shared. The Western Representative of the Department, Mr. F. E. Harrison, visited the district and discussed the matter with the parties concerned. The application was later withdrawn.

### Report of Board in Dispute Between Toronto Transportation Commissioners and Their Street Railway Employees

A Board of Conciliation and Investigation established to deal with a dispute between the Toronto Transportation Commissioners and certain of their employees reported to the Minister of Labour during June. The employees in question are members of the Toronto Railway Employees' Union, Division 113 of the Amalgamated Association of Street and Electric Railway Employees of America.

### Other Proceedings under the Act

The Department of Labour was advised during June that the Municipal Council of the City of Victoria, B.C., had referred for consideration and enquiry a dispute with its fire fighters to a Select Committee of the City Council, to be constituted and to function under the powers conferred by sections 48 and 49 of the Municipal Act. The dispute in question, which related to the employees' request for restoration of wage rates previously in effect, had been the subject of an application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act during April (LABOUR GAZETTE, May, page 401). Employees of this class, however, do not come within the direct scope of the Industrial Disputes Investigation Act, and, as the civic authorities did not consent to procedure under that statute, a Conciliation Board was not established.

In connection with the findings of the Board of Conciliation and Investigation which dealt with a dispute between the Corporation of the City of Edmonton and certain of its employees in the Waterworks, Engineer's and Power House Departments, members of the Edmonton Civic Employees' Union No. 30 (LABOUR GAZETTE, May, page 402), the Department was informed during June that the majority report had been adopted by the City Council, who had requested the City Commissioners to carry out the recommendations contained therein. The recommendations of the Board included reinstatement of Malcolm Ainslie in the Waterworks Department, with seniority and other rights restored; payment to him of a lump sum equal to three months' wages, and payment of regular rates of pay from April 20th, 1934, until he is permanently employed. These recommendations had been already accepted by the employees, and the dispute is accordingly terminated.

The dispute related to wages reductions proposed by the employer, approximately 2,000 employees being directly affected and 1,000 indirectly. The Board was composed of the Honourable Mr. Justice Patrick Kerwin, of Toronto, chairman, appointed by the Minister in the absence of a joint recommendation from the other Board members; Mr. C. H. Widdifield, of Toronto, former County Court

Judge, nominated by the employer, and Mr. Frederick Bancroft, of Oakville, Ontario, nominated by the men.

The report of the Board, which was signed by the chairman and Mr. Widdifield, recommended a reduction of three cents an hour in the wage rates of trainmen after one year's service, i.e., a decrease from 60 cents an hour to 57 cents an hour for motormen and conductors, and from 65 cents an hour to 62 cents an hour for one-man car operators and one-man bus drivers, with proportionate reductions in the wages of the other men under review. Mr. Bancroft dissented from the Board's findings and submitted a minority report.

The majority report was received by the Minister of Labour on June 18. On the same day the employees at a mass meeting rejected the Board's recommendations, and by a practically unanimous vote decided to strike, sanction to strike being subsequently received from the executive of the Amalgamated Association of Street and Electric Railway Employees of America. The Toronto Transportation Commissioners advised the Department on June 21 that they accepted the Board's recommendations. On June 23, a strike appearing imminent, the Ontario Municipal Board, acting under the powers conferred by the Ontario Municipal Board Act of 1932, called a conference of representatives of the disputing parties. At the suggestion of the chairman of the Municipal Board, the Toronto Transportation Commission agreed to re-engage seventy employees who had been laid off on account of seasonal reduction in traffic after the establishment of the Board of Conciliation and Investigation, and to refrain from making any change in wage rates for a period of one month, pending resumption of negotiations and investigation by the Municipal Board. The union representatives submitted the proposal to a mass meeting of the employees, who endorsed the proposition on the recommendation of their representatives.

Following are the texts of the majority and minority reports of the Board of Conciliation and Investigation:—

### Report of Board

June 16, 1934.

The Honourable W. A. GORDON, K.C.,

Minister of Labour,  
Ottawa, Ontario.

DEAR SIR,—The undersigned members of the Board of Conciliation and Investigation appointed in connection with the dispute between the Toronto Transportation Commissioners and certain of their employees, being members of the Toronto Railway Employees Union, report as follows:—

After a preliminary meeting on May 1, public sittings of the Board were held on May 25, June 11, 12, 13 and 14, at which representatives of the employers and employees submitted their respective arguments; and on June 15 and 16, the Members of the Board met to consider the matter.

As the result of the discussion before the Board and of meetings between the Commissioners and the men, all the matters in dispute were agreed upon except that of wages, and the parties were able to advise the Board that it need consider only that one feature. For this purpose there was adopted throughout the proceedings as a basis the rate per hour for trainmen after one year's service which, according to the agreement between the parties dated March 31, 1929 (which by subsequent agreement had been continued in force to March 31, 1934), was fixed at sixty cents.

The Commissioners pointed out:—

1. That this rate is considerably higher than in any city in eastern Canada,

(a) for similar work,

(b) in comparable industries;

2. That, irrespective of any such comparison, the cost of living has decreased to such an extent that a reduction of considerable proportions should be made.

3. That the lines of the Commission being operated, not for profit, but to give service to the public at cost, it has been shown that it was necessary in the past three years to withdraw from the Commissioners' Reserves an amount exceeding One Million Dollars, and that in the face of every possible economy having been established except the reduction of these employees' wages, the time had now arrived when that expedient could no longer be delayed.

In answer, the employees urged:—

1. (a) that the wages on transportation systems in municipalities which are considerably smaller than Toronto did not afford a fair comparison, and that the wages paid in Montreal should not be accepted as a basis; although evidence was submitted by the men as to the wages in a number of cities in the United States.

(b) that the industries mentioned by the Commissioners were not comparable;

2. that as by arrangement between the parties, a five-day week had been established instead of a six-day week, the average weekly wage received under that arrangement should be compared with the average weekly wage received under the agreement of March 31, 1929, and its renewal;

3. that the business of the Commission had increased during current year, and that it

was to be expected that such increase, if not a larger one, would continue.

While the undersigned feel that the wages paid to employees on other transportation systems and to employees in comparable industries should be borne in mind, it is difficult to make a satisfactory comparison without evidence as to the exact working conditions, etc.; and we therefore proceeded to consider point number 2.

In view of the fact that both parties had already realized the necessity of adopting a five-day week (which, however, was increased by the considerations hereinafter mentioned) in order to furnish employment to a larger number of men than admittedly could be used, it is proper to compare the wages received on the basis of a six-day week at the present time with those received for a similar working week in 1929. As a matter of fact, instead of working forty hours per week, even at the present time, the average is above that; overtime as paid by agreement is at the rate of time and a half, and the payment of time and a quarter for Sunday work is to be continued, both of which items will increase the average weekly wage being received by the employees at the present time. Furthermore, it appears that 41 per cent of the trainmen are entitled to an extra five cents an hour—being the one-man car operators and one-man bus drivers. Even on the basis of a five-day week these items, added to the average weekly wage at the rate which the undersigned feels should be established, brings the total to an amount comparable with the budget presented by the employees. At the same time the rate we are suggesting is not by any means reduced in accordance with the reductions shown by the table entitled "Changes in the Cost of Living in Canada" published by the Department of Labour in the *LABOUR GAZETTE*, which table shows that since 1929 there has been a decrease of 21.5 per cent. And when, of course, the wage received for a full six-day week at the present time is compared with that received in 1929, the average exceeds even the budget presented by the men.

As to 3: The Commissioners have no income but the fares they collect from passengers carried on their lines. The employers are not able to take care of increased expenditures by taxes as is the case with municipalities, or by raising the rates for power as is the case with the Hydro-Electric Power Commission. These two examples are cited because they were referred to in the argument. Reserves have been established as must be done to take care of replacements and variations in revenue, and these have

been depleted in the year 1933 by over three hundred thousand dollars, and during the years 1931, 1932 and 1933, by over one million dollars. Since 1929, the number of passengers carried has dropped by 28.64 per cent and the gross revenue by \$4,205,411.66. It is true that this year the traffic has increased slightly over the corresponding months of last year (about 3.85 per cent if the months of January and February when conditions were abnormal are taken into consideration, and about 3 per cent for March and April), but that still leaves a great decrease. It is impossible of course to predicate what the future may hold, and we do not see how we can do anything except deal with the actual conditions as they exist at the present time.

The terms of the agreement already arrived at between the parties provide that it shall be in force until May 15, 1936, so that from either point of view that period seems a reasonable one in which it may be ascertained whether conditions are improving or not.

Taking all these matters into consideration, we believe a reasonably basic wage for trainmen after one year's service is fifty-seven cents per hour, with an extra five cents per hour for one-man car operators and one-man bus drivers. Proportionate reductions in the wages of the other men under review will, of course, follow as a natural result.

The exhibits filed before the Board are transmitted herewith.

(Sgd.) P. KERWIN,

*Chairman.*

(Sgd.) C. H. WIDDIFIELD.

### Minority Report

June 21, 1934.

HON. WESLEY GORDON,  
Minister of Labour,  
Ottawa, Ont.

DEAR SIR,—*Re* the Board of Conciliation and Investigation to inquire into the dispute between the Toronto Transportation Commission and certain of its employees being members of the Toronto Railway Employees Union.

I disagree with the report and conclusion arrived at by my two colleagues on the Board, regarding the hourly rate of pay, and submit a minority report and recommendation.

I strongly recommend to both parties that the schedule of wages contained in the agreement which expired on March 31, 1934, be continued, either until May 15, 1935, or for the period named in the agreement upon working conditions, as reported by the parties to the Board of Conciliation. This schedule of rates contains the basic rate of 60 cents an hour for trainmen and five cents an hour extra for one-man car operators.

The report of the majority states: "and when, of course, the wage received for a full six-day week at the present time is compared with that received in 1929, the average exceeds even the budget proposed by the men."

The concluding sentence in the preceding paragraph, namely: "the average exceeds even the budget presented by the men," is a conclusion based upon a wrong assumption, in my opinion. For a period of about eighteen months the employees worked a forty-hour week and only in recent months have the hours been increased.

To compare the weekly wage, based upon a six-day week of 48 hours, at the present time is not dealing with actual conditions and the facts. Indeed the majority members in their report provide the answer.

The majority award states: "as a matter of fact, instead of working 40 hours per week at the present time, the average is above that." The foregoing is a statement of fact. At the present time, or since the Board of Conciliation was mooted or some time previously, the hours have been increased to over forty. Neither side before the Board seemed sure of the exact figure, but neither side suggested it was above 44 hours a week as an average and the employees did not agree it was so much.

The basic rate for trainmen at the present time is 60 cents an hour. The hours worked at the present time—from the evidence—is somewhere between 40 and 44. The payment of an extra rate to one-man car operators, is a recognized practice on this continent. The two-man car rate per hour is the basic rate referred to by both parties to the dispute.

Forty-four times 60 cents (I am assuming 44 hours) is \$26.40 a week. \$26.40 multiplied by 52 weeks amounts to \$1,372.80 a year.

My colleagues "believe" 57 cents is a reasonable rate. Taking their own figures, that the hours are "over forty,"—and I am using the higher hours 44—the weekly wages work out as follows:—

First, it should be pointed out from the evidence I think the hours worked are somewhere between 40 and 44.

Forty hours at 57 cents is \$22.80 a week, or for 52 weeks \$1,185.60.

Forty-four hours at 57 cents is \$25.08 a week, or for 52 weeks \$1,304.16.

The foregoing yearly wages at 57 cents are a very long way from the minimum quoted in the budget presented by the employees.

It should be remembered that in all these figures it means a year's work. The employees involved in this dispute do not get any holidays with pay, nor are they paid anything for lost time through illness. And during eighteen

months, and up to several months ago, the basic weekly wage was 60 cents for 40 hours or \$24 a week.

What are the facts? What is the use of talking about a six-day week, with the evidence before us?

Approximately, in the early summer of 1932, the employees and the management had a conference. It was a serious conference. The employees and the T.T.C. had an agreement covering wages and conditions. The result of the conference, which, in my opinion, was a credit to both parties was that a decision was reached to work the employees on a forty-hour week basis. A forty-hour week it was figured, would distribute the work and save a number of employees from being dismissed at a very bad time. Under this arrangement the employees lost a day's pay a week to aid in keeping as many of their fellow employees at work as possible. The 60-cent an hour trainmen lost \$4.80 a week from the basic weekly wage, or the weekly wage dropped from \$28.80 to \$24. Until several months ago, according to the discussions before the Board, the forty-hour week continued. Later, the hours were increased, until, as my colleagues point out, it is something over 40. It may seem difficult to many to understand why the exact hours for an average week cannot be stated. But when the question of train schedules, with their minutes of variation, are taken into account, an average hourly week for all employees is not so easy to obtain, judging from the evidence.

The drop in the weekly wage from \$28.80 to \$24 was equal to a reduction of sixteen and two-thirds per cent in the weekly wage. This percentage was admitted to be correct by both parties before the Board. The representatives of the T.T.C. strongly argued that this action did not save the Commission any money. It only saved employees from being laid off. I am compelled to state the evidence on this point, the non-saving of any money, was meagre and unconvincing.

The employees' representatives, in outlining their position before the Board, indicated their desire to maintain the same hourly rates of wages as in the agreement which recently expired. This provides a basic rate of 60 cents an hour. Their loss is in the weekly wage, which will provide a weekly wage of between \$24 and \$26.40, which in turn reflects a 40 and 44-hour week at 60 cents an hour. Three cents an hour reduction means a further loss of \$1.20 a week for forty hours, or \$1.32 for 44 hours.

The salaried staff of the T.T.C., so it was stated, have experienced a reduction of from five to ten per cent. But the salaried staff have had a reduction of five to ten per cent from their salary, and not sixteen and two-

thirds per cent represented by shorter hours and in addition a cut in salary. Discussions before the Board showed that the salaried staff enjoy holidays with pay and are paid for lost time due to illness. I am not even criticising these arrangements but am merely pointing them out, with all the circumstances, which indicate that the additional burden of a cut in the hourly rate should not be imposed on the wage earners involved in this dispute.

During the proceedings before the Board both parties announced that, with the exception of the rate of wages, they had arranged all other matters. While this arrangement was not formally presented to the Board as a document, yet my understanding of the discussion was that the arrangement was based on the continuance of the five-day week or forty hours until Exhibition Time, and then the T. T. C. officials had in mind a return to a longer number of hours per week for the employees. It was indicated that any further laying off was unlikely. The parties themselves, of course, know the nature of the arrangement.

What I want to make clear is that it is quite apparent the six day week is a considerable distance away and the five day week or forty to forty-four hours is the present situation. Up to several months ago, and for about 18 months preceding, it was a forty-hour week. Such is the evidence.

What is the use of stating that, based on a six-day week, these employees get so much a year, and then reduce the hourly rate upon this assumption. If a trainman at the present time is working 40 hours a week at 60 cents an hour his weekly wage is \$24, if it is 44 hours he receives \$26.40. How can it be implied that his wage is 48 hours for a six-day week, or \$28.80, and on that basis cut his wages three cents an hour.

The representatives of the Commission presented in evidence an elaborate chart of plotted curves to show the relation between the cost of living and the hourly rate of trainmen. The representatives of the employees took strong exception to this and placed on one of the charts a curve to show the weekly wage since 1913, compared with the other curves arrived at by the Commission. The employees claim it is the weekly wage which counts when arguing about the cost of living, and the Commission use the hourly rate. The figures upon which the employees based their curve are as follows:—

	Wages
In 1913, average week of 57 hours, at 27½ cents. . . . .	\$15 57
In 1917, average week of 57 hours, at 30 cents. . . . .	17 10
In 1918-19, average week of 57 hours, at 37 cents. . . . .	21 09

In 1919-20 average week of 48 hours, at 55 cents. . . . .	26 40
In 1920, average week of 48 hours, at 60 cents. . . . .	28 80
In 1933, average hours, 5 days per week, 40 hours, at 60 cents. . . . .	24 00

Evidence was presented by the employees to support their contention that they were entitled to the same consideration as civic employees. Their representatives presented the following exhibits showing the wages paid to civic employees in Toronto. Toronto owns the street railway system.

WAGES OF GARBAGE MEN AND STREET CLEANERS  
Regulars \$30 per week.

Less 5 per cent from March 1-December 31, 1934.

24 days per year sick pay.

Two weeks' holidays for less than 10 years' service.

Three weeks' holidays for those of over 10 years' service.

WAGES OF TORONTO POLICE FORCE

1st year. . . . .	\$1,551 50
2nd year. . . . .	1,765 50
3rd year. . . . .	1,765 50
4th year. . . . .	2,086 50

Less 5 per cent from March 1-December 31, 1934.

Free uniforms.

Sick pay.

Two and three weeks' holidays.

WAGES OF TORONTO FIRE FIGHTERS

1st year. . . . .	\$1,550
2nd year. . . . .	1,550
3rd year. . . . .	1,682
4th year. . . . .	1,810
5th year. . . . .	2,086

Less 5 per cent from March 1-December 31, 1934.

Free clothing.

Four weeks' sick pay.

Two and three weeks' holidays with pay.

The Toronto Transportation Commission representatives stated in their evidence:—"The principal wage rate we have to consider is the rate paid to trainmen (motormen, conductors and operators) after one year's experience." The curve on the chart, to which I referred previously, was based on the hourly rate, and for the last twelve years or more it follows the 60 cents basic rate.

The T.T.C. officials strongly urged that Eastern Canada was the place to compare the basic hourly rate for this class of employment; and cited Montreal, 51 cents an hour for two men cars; Winnipeg, 51 cents for two men cars; Hamilton, 54 cents for all one man cars; and so on.

The representatives of the employees argued just as strongly that it was very unfair to compare rates in the Province of Quebec with Ontario, and pointed out that Vancouver, Victoria and New Westminster enjoyed a rate of 60 cents an hour and got 6 cents extra for one man cars, compared with Toronto's five

cents. They also presented evidence to show that, on January 1st this year (their latest information), Calgary trainmen received 63 cents an hour, compared with 60 in Toronto, and Edmonton trainmen received 65½ cents. The employees cited cities in the United States which they thought compared with Toronto.

This brings up the question of rates paid in the United States. It was suggested, during the discussions, that the rates in the United States might reflect the operation of the N.R.A. and may not be a fair comparison.

The international officer of the Union, in giving evidence, made it quite clear that in the United States, where the international union had agreements, the contracts

had an arbitration clause embodied therein. And failing agreement between the parties arbitration took place. In such cases, the N.R.A. did not interfere and had nothing to do with the result. Where employees of street railways are unorganized, then the N.R.A. had a bearing upon the conditions, etc. He also pointed out that in the United States there was no Industrial Disputes Investigation Act.

The following evidence from the representatives of the employees, showing comparative rates in certain cities, carries with it the numbers of the divisions of the international union having agreements. According to the clear statement of the international officer, the influence of the N.R.A. didn't apply.

#### SCHEDULE OF WAGES FOR SOME OF THE LARGER CITIES IN UNITED STATES AND CANADA

Div. No.	Location	Minimum	Middle	Maximum
241	Chicago, Illinois..	·65	·68	·70
	One-man cars and busses 8 cents additional.

618	Providence, R.I. ....	·54	·57	·59
	One-man cars and busses 6 cents additional.			
788	St. Louis, Mo., Conductors..	·50	·55	·60
	Drivers 5 cents additional.			
	(Peoples Motorbus Co. of St. Louis.)			

The Chairman of the Toronto Transportation Commission made it quite plain to the Board of Conciliation that he believed a reduction of four cents per hour in the basic rate was quite necessary and that the three Commissioners of the T.T.C. unanimously ratified the proposal of the officials for a reduction in the hourly rate to this extent. The officials of the T.T.C. stated quite frankly that the Commissioners were behind them in their proposals.

The financial statement for the last fiscal year was discussed before the Board. The representatives of the employees claimed that over a period of years the T.T.C. had made a great deal of money. Whether the sums mentioned were surplus earnings or profits caused a very heated discussion. I present the statement submitted to the Board by the representatives of the men, and, as they challenged the T.T.C. officials to deny it and were

prepared to swear to it, it has an important bearing on the question of a reduction of wages.

The statement reads:—

T.T.C. FINANCES	
Cash from City.. . . .	\$40,483,598 68
Cash out of Earnings.. . .	10,496,011 98
Tickets in hands of public..	265,723 51
For Contingencies.. . . .	489,764 51
For Stabilization.. . . .	250,000 00
Surplus.. . . .	541,503 72
	<hr/>
	\$52,526,602 40
Outstanding Bonds.. . . .	29,535,934 09
	<hr/>
	\$12,990,668 31
	<hr/>
Current Assets.. . . .	\$1,784,592 35
Invested Funds.. . . .	1,400,438 97
	<hr/>
	\$3,185,031 32
Less Current Liabilities.. .	1,152,044 21
	<hr/>
	\$2,032,987 11

The Chairman of the Commission and his officials declared that they had taken over \$1,000,000 out of the reserves during the last few years and \$300,000 of the million during the last fiscal year. The men's claim that the T.T.C. was in a sound position financially and could afford to pay the wages in the old agreement was not seriously contested, in my opinion. We had no detailed evidence of how the revenues had been spent, except the general statement in the annual report.

The increase in the passenger traffic for the first five months of this year is a bright spot in the evidence. It amounts to 3.85 per cent, or 2,654,986 passengers. Should this continue or increase, it should go a long way to entirely stop the encroachments on the reserves.

During the period of falling revenues, the management and the employees have worked hard to maintain the service and distribute the work. The weekly hours of the employees have been reduced and the weekly wage, but,

throughout, the hourly rates have been maintained. The first five months of 1934 show a turn for the better in an increase in passengers and revenue.

The agreement between the parties on other conditions implies a five-day week or forty-hour week until Exhibition time, and then increased hours, and the intimation was that it would be unnecessary to lay off any more men. The Commissioners, through the Chairman, intimated that a mistake had been made in not laying off a number of men several years ago. It was not a mistake, it was good judgment to retain a valuable and experienced staff of employees, who agreed to distribute the work.

From all that has been said, it certainly appears that the present hourly rate can easily be maintained without any hardship to anyone. For anyone to imply that if the men do not accept a cut in the hourly rate, more men will be laid off, is most unfair. From all the discussions and judging from the agreement reached on conditions, this is not necessary and such an argument should not be used to determine the amount of a fair and reasonable wage rate to be paid by a successful and great public utility.

The efficient operation of the road and the harmony for a long number of years should not be disturbed. A publicly owned utility which has been built up by the management, the men and the public to its present excellent position should not be jeopardized by a division at this time on wages.

Both parties conducted their case skilfully and certainly it should not be beyond the intelligence of both sides to settle this item of wages, without recourse to any other action than the application of common sense and fair dealing.

All of which is respectfully submitted.

(Sgd.) FRED BANCROFT.

### Report of Board in Dispute Between Various Firms, Members of the Shipping Federation of British Columbia, Limited, and Their Employees, Members of the Vancouver and District Waterfront Workers' Association.

The findings of the Board of Conciliation and Investigation established in March to deal with a dispute between various firms, members of the Shipping Federation of British Columbia, Limited, and certain of their employees, being members of the Vancouver District Waterfront Workers' Association, were received in the Department of Labour at the beginning of July. The points in dispute involved wages and working conditions, approximately 940 employees being directly affected. The personnel of the Board was as

follows: the Honourable Mr. Justice Harold B. Robertson, of Victoria, B.C., chairman, appointed by the Minister in the absence of a joint recommendation from the other Board members, Messrs. J. E. Hall and Charles McGregor Stewart, both of Vancouver, B.C., nominated by the employers and men respectively. The report was signed by the chairman and Mr. Hall. Mr. Stewart submitted a minority report. The texts of these reports are given below.

### Report of the Board

IN THE MATTER OF *The Industrial Disputes Investigation Act, Chapter 112 of The Revised Statutes of Canada, 1927, and in the Matter of a Dispute between the Vancouver and District Waterfront Workers' Association and the Shipping Federation of British Columbia, Limited.*

#### Introductory

Pursuant to the provisions of the said Act, the Shipping Federation of British Columbia, Limited (hereinafter called the Federation), on the 9th of March, 1934, applied to the Honourable the Minister of Labour, for the appointment of a Board of Conciliation and Investigation and a statement in reply having been transmitted by the Vancouver and District Waterfront Worker's Association (hereinafter called the Association) to the Registrar dated the 15th of March, 1934, a Board was duly established, consisting of the following:

The Honourable Mr. Justice H. B. Robertson, Chairman, appointed by the Honourable the Minister of Labour, J. E. Hall, Esq., recommended by the Shipping Federation of British Columbia Limited and C. M. Stewart, Esq., recommended by the Vancouver and District Waterfront Workers' Association.

The Board held public meetings on the 9th, 11th, 12th, 13th, 16th, 17th, 18th and 19th days of April, the 31st day of May and the 1st, 5th, 6th and 8th days of June, 1934, when evidence was heard upon the following factors of disagreement:

#### 1. Claims of Federation, viz:

To employ labour as required on the waterfront.

To distribute the work as the needs of industry demand.

To determine the number of men which the industry can support.

To determine whether any one or more of the employees is or are physically fit or qualified for the work.

Protection from prejudice or injury by the employees calling a sympathetic strike or walkout.

To protect their employees from discrimination and to insure the continuance of their employment.

#### 2. Letter of Association, dated March 15th, 1934, to the Registrar, containing,

(a) Association's reply to claims of Federation.

(b) Claims of Association, viz:

Increase in wages.

Recognition and 100 per cent of long-shore work.

Dispatching by the Association.

Workmen's Compensation allowances.

Equal ship and dock rate of wages.

Travelling time.

Hours of Labour.

Waiting time and Suspended time.

Removal of Special Exceptions.

Other changes in Schedule "A," to wit:  
Sections 3, 5, 6, 8, 10, 15, 16, 23, 26 and 27.

(c) A request for an additional section in Schedule "A."

(d) A statement that certain demands had been agreed or partially agreed to conditional upon agreement finally being arrived at with respect to:

(1) Registration of ships' gangs.

(2) Placing of spare men on the spare board.

(3) Working on top of bulk grain.

Both parties to the dispute were agreed that the cardinal question upon which depended the fact as to whether or not the parties could come to an agreement was contained in the said six claims made by the Federation, and asked the Board to postpone hearing of the evidence upon the Association's claims. This was agreed to by the Board.

On the 19th of April, each party having submitted all its evidence on the six claims, the Board adjourned after stating that the parties would be informed as to its decision and, if deemed advisable, an interim report would be submitted to the Deputy Minister of Labour. Thereafter the Board considered the evidence but were unable to come to an unanimous decision. Particulars of the conclusions reached by the majority, also the minority, members of the Board, were then communicated to both parties to the dispute, it being hoped that negotiations would again be resumed between them and result in an agreement being reached.

On May 31st the hearings were resumed, at which time the Board was informed by the parties that they had been unable to come to an agreement based on the findings of either the majority or the minority of the Board, and were ready to proceed with the remainder of the case. The claims of the Association were then taken up during the hearings which followed and the evidence adduced and arguments put in were subsequently considered by the members of the Board in private sessions. Unfortunately, the Board was still unable to arrive at a unanimous view with the result that it is necessary for the undersigned, being the majority of the Board, to make a separate report.

At the outset, it was apparent to the Board that, due to the unusual nature of the industry in question, many contentious features

were involved for which elaborate provisions were necessary in any contract which might be considered equitable and meet with the approval of the parties concerned. In the majority of cases, undertakings of this nature in other lines of industry and commercial businesses can be defined in relatively few words with the beginning and end of the work periods definitely set in advance. Such is not the case with longshore work. In this instance, the operation to be performed is the handling of cargo, to and from deep-sea ships, at such times, and at such places as may prove necessary, either by day or night. The work itself is varied in nature and extent, and is often subject to delays and interruptions. Few, if any, of these features are within the control of the employer—in this case the Federation. Under the circumstances, detailed arrangements are necessary to cover the numerous situations which develop and it is not surprising that differences of opinion have arisen between the parties concerned when dealing with these matters.

From the records, which were produced, it would appear that for the past ten years relatively harmonious relations have prevailed between the parties and little difficulty has been experienced in arriving at satisfactory agreements—the last document of this nature being the agreement dated November 22, 1930, and, although it has expired, is still being carried out by the Federation and the Association, pending the making of a new agreement.

From the evidence put in (exhibit 15 A, B and C, and others) it became immediately apparent that, under present conditions, there is not sufficient work to assure a fair return to all the members of the Association. Therein it was shown that the total payroll during 1926-27-28 and 1929 averaged approximately \$1,544,000 per annum while the average number of active men available in the various men's organizations during the same period was 1,048. In contrast to this the total payroll for the industry during 1933 was some \$765,000 with 781 active men available. Thus, in effect, the amount of work available decreased approximately fifty per cent, while the number of active men on the payrolls showed a decline of only twenty-five per cent. Unquestionably this has been the principal cause of the parties being unable to renew their arrangements and has prompted the demand on the part of the Association for a more equitable distribution of earnings for some time in the past. The effect thereof concerns not only the question of the distribution of labour, but many other features involved in the agreement as well.

Under the circumstances some difficulty was experienced by the Board in arriving at what might be considered a proper solution to the problems presented. Quite a large number of witnesses were called, and in all some eighty exhibits put in, but many of these latter were mere statements by the representatives of the disputants and in many instances little, if any, concrete evidence was brought forward for the guidance of the Board. Under the circumstances, as will appear hereafter, the majority of the Board availed themselves of the report of the Conciliation Board of 1930 wherein it was apparent practically all the different features involved in this dispute had been thoroughly investigated, and, reference thereto will be made, in several instances, in the reasons and conclusions which are given later herein.

From this information, and after giving careful consideration to representations by both the Federation and the Association, we have reached definite conclusions as to what we would consider fair and reasonable arrangements, under existing circumstances, for both parties.

We now turn to a consideration of the six claims made by the Federation.

We deal first of all with Federation Claims 1 and 2 above, namely,

*Claim 1. To employ labour as required on the waterfront.*

*Claim 2. To distribute the work as the needs of industry demand.*

While not very happily expressed, we understand that the Federation desire to continue, in the future, as they have done in the past, to dispatch labour for all longshore work. The Association claims, "the distribution of the work should be governed by an agreed code of dispatching regulations whereby as far as possible, equal opportunity of employment in the respective work classification will be the greatest factor of distribution," and that it shall do the dispatching. To put it plainly, each of the parties says that it should have complete control of the dispatching of the men.

According to the Federation the actual procedure of dispatching which has been followed since October, 1933, is as follows:—

The stevedoring and dock companies, through their respective superintendents, telephone their requirements to the dispatcher on duty, notifying him how many gangs they require and the class of work which is to be performed. From this information the dispatcher knows whether he should allot general purpose or general cargo gangs, and from the gangs which are available he chooses the

gangs which he considers are capable of doing the work required, taking into account their earnings and endeavouring to distribute the work among the gangs as fairly as possible. Upon making his choice of the gangs, he books the order which he has received from the stevedoring or dock company and notifies the gang leaders of the work which they have been allotted to, the names of ships, the starting time and the nature of the cargo which they are to handle.

Dock gangs are dispatched to the companies whose work they have been following, if they are available, if not, the first dock gangs available are allotted the work, without any regard being paid to whether they are a company gang or not.

The wheat trimmers are ordered by the stevedoring companies and are dispatched according to the number of men who are required, in rotation, off the wheat trimmers' board. The usual order from a stevedoring company is for so many wheat trimmers for a certain ship at a certain time. When extra ship and dock gangs are required, the personnel of the gangs are made up by the dispatcher from the surplus (spare) board; the dock men in rotation, the ship men according to their registered classification, which is arrived at through the stevedoring companies and is based upon each man's experience and capabilities. From these men, those who are registered as hatch tenders, winch drivers, side runners, and boom men, are detailed to extra gangs under their various capacities and the hold men are taken, in rotation, off the surplus board.

At a joint meeting of the Federation and the Association representatives held January 15th, 1934, Mr. Emery, on behalf of the Association (exhibit 12, page 15) stated that the Association had taken the question of dispatching into consideration and had abandoned the idea of the Association supplying the dispatchers, and were then asking for an Association representative in the dispatching office which latter right apparently the Association had long enjoyed for the chairman replied to him: "You have always made use of that."

The reasons given for this are contained in exhibit 26 filed by the Association wherein it is stated the proposal for dispatching by the Association was withdrawn "By the membership believing that in so doing they could avoid a possible strike and at the same time secure improved dispatching methods through an Association representative in the dispatching office and a code of fair dispatching regulations."

Thereafter negotiations apparently proceeded between the Federation and the Association and by the 9th of March, 1934, the Association had changed its mind with regard to the question of dispatching and was then insisting that the Association should do it. This is borne out by the fact that the said application by the Board is dated the 9th of March, 1934, and the dispute, of course, had arisen prior to that, so that between the 15th of January, 1934, and the 9th of March, 1934, this change in the views of the Association had taken place.

No concrete plan as to detailed methods of procedure which would be adopted, if the Association controlled the dispatching, was submitted by it, but the basis of the Association's request for the controlling of dispatching is that, if this were in its hands it would be better able to distribute the work among the members of the Association and, as each one of its members was able to give a fair day's work, if its scheme were adopted, there would be no loss of efficiency and there would be no "speed-up," with a resulting decrease in the number of accidents. At first, we thought that the intention of the Association was, if it got control of the dispatching to so arrange matters that each one of its 940 odd members would have an equal chance of employment with any other member, and, would therefore be in the position to earn just as much money as any other member. This seemed like a very fine effort on the part of the Association and no doubt would have been greatly welcomed by the men on the spare board. Later on, however, it developed that the Association's proposition was to equalize the earnings (a) as between the high and low-earning gangs and (b) as amongst the men on the spare board. The method to be adopted was to rotate the high and low-earning gangs and also to rotate the men on the spare board. While this would tend to equalize more nearly the earnings of the gangs and the spare board men in their respective classes, it was not explained how the earnings of the spare board men as a whole would be increased.

The Association called three witnesses in support of its contention that it should be allowed to do the dispatching. The first was Mr. I. A. Emery, who detailed the result of his investigations as to the employment of longshoremen made at Tacoma, as set out in exhibit 38. In this exhibit it is stated that all dispatching, distribution of work and earnings, making up of regular gangs and assignment to the various classes of work, is carried out by the officials of the Local under agreement with the employers; that certain employers are allowed to prefer certain

gangs as regular company gangs, and are allowed to have those gangs on preference only; that when such a company requires additional gangs, it must take the gang sent by the local. On all calls, for other than company gangs, the low-earning gang is sent out first, and in this way earnings of all gangs are equalized to within a few dollars per month; but when a spare man has worked six hours or more on the job, he may not line up again until all others have worked six hours or more. Other matters were mentioned which it is not necessary to discuss here.

In answer to this evidence the Federation called H. W. Wells, manager of the Tacoma Waterfront Employers' Association for the last seventeen years, who said there was no written agreement between the employers and the longshoremen. He said, however, the officers of the men's Union did dispatch the men, but the employers had always reserved the right to choose their men; that the employers retained the right at all times to reject any gang; that the gangs are not dispatched in rotation and that the good men would refuse the rotation just as quickly as the employer. Further, he said, it was not the case that when a spare man had worked six hours or more on a job, he must not line up again as above mentioned. With reference to the statement in exhibit 38 that the relationship between gang earnings and those of spare ship men and truckers was controlled by the Union and showed some very slight differences and that some company gangs have earned about \$9 per month above the average for all gangs since the present system was adopted, Mr. Wells said that in Tacoma in the month of March one or two gangs made \$107 more than a number of other gangs, that the arrangements to distribute the work had only been in force the last two years, and that when an employer refused to have a man he did not work for that employer. The Pacific Lighterage Company which did most of the work in Tacoma always had its own gangs. There was not much difference in the earnings of the gangs whose work was similar, but the general average earned by the Pacific Lighterage gangs would be \$90 a month and the other gangs about \$81 a month. He said the system followed in Tacoma was to bring about a distribution of the work and while the Union officials did the actual dispatching, they did so under the supervision of the employers' representative and "that it was more a matter of consultation." He further said that nearly every company in Tacoma had one or more preferred gangs, who were more efficient than others, and that with the exception of the Pacific Lighterage gangs, if any gang, usu-

ally working for another company, had high earnings, that company would take another gang so as to equalize their earnings.

It would, therefore, appear that the system in Tacoma is not operated under a written agreement and while the men do the actual dispatching, it is done under the supervision of the representative of the employers: That each employer other than the Pacific Lighterage Company retains the right to the services of his own gang, with the exception above mentioned, as well as the right to say who shall work on that gang; and that the Pacific Lighterage Company at all times employs only its own gangs. This is not the system of dispatching the Association is now claiming the right to operate at Vancouver.

Evidence was also given by the Association of the mode of dispatching at New Westminster, British Columbia. W. W. Scott, who was the business agent of the longshoremen at New Westminster, said that in that port they handled mostly lumber, some box shooks and some general cargo and considerable lead; that the New Westminster gangs were very efficient; that the Association there makes up the gangs, but in doing so they consider the employer's views and that he, as the agent of his Association, did the dispatching; that he dispatches the gangs in rotation "according to the hours" and he also dispatches the sixty-seven spare board men in individual rotation, keeping the hours worked by them, and to do this he keeps a record of the working hours of all gangs of men. He says he handles 300 men by himself and keeps track of their earnings. He said there was very little difference in the amount of wages earned by the men, who are satisfied with the system and that there is no trouble with the employer.

In answer to his evidence, the Federation called John McMillan, manager of the Empire Stevedoring Company in New Westminster, who said he had read a transcript of W. W. Scott's evidence. Apparently five weeks before the date on which he was giving evidence, which was the 16th of April, 1934, trouble had arisen in New Westminster. At that time there were two associations in New Westminster which had their headquarters at Shaw's Hall and Scott's Hall. The Empire Stevedoring Company gave six gangs of Shaw's Hall the first call to work and when these had been put to work, it called on five gangs from Scott's Hall and it took the latter men in rotation, according to their earnings. The employer reserved his right at all times to call any gang. That about five weeks ago, as above mentioned, the men agreed among themselves to go into one hall, out of which they would work, and to recognize eleven regular gangs, two spare gangs and surplus

men. Accordingly, under the present system, the eleven regular gangs are given first call to work. So long as there is only work for eleven gangs, they go regularly to work, from day to day, and the two spare gangs and surplus men remain idle. As a result, this witness said that a day or so before he gave evidence the representatives of the two spare gangs and surplus men came to him and said they had been getting no work since the amalgamation, and, if he would promise to give them work, they would start another hall in New Westminster. He said that the system of dispatching by the men worked well in New Westminster as he had the power to correct and remedy grievances. The above, of course, is not what the Association is asking for at Vancouver. In the first place, in New Westminster there is no written agreement, and in the second place the employers retain the right to have their own gangs. The fact of the matter is, it is practically under the control of McMillan, so far as his company is concerned, because he has power to correct and remedy grievances. It will be noticed that although the matter of dispatching was in the hands of the men, within five weeks of amalgamation trouble arose as above mentioned.

Returning again to exhibit 26 (Association statement on dispatching by the Association) the Association said: "Finding since that the Federation has no intention of improving dispatching methods, nor of agreeing to any of our proposals which might affect their reiterated intention of 'controlling the labour on the waterfront,' the Association has no alternative but to face this issue of 'control' squarely by returning to the original proposal of 'Union dispatching' or more properly 'dispatching by the Association.'"

"The principal reasons underlying this proposal by the Association are:—

- "1. Abuses of the present system;
- "2. Impossibility of effecting improvement;
- "3. Desire for more equitable distribution of work and earnings;
- "4. Inability to function as a labour organization without the goodwill of the Labour Manager."

The statement goes on to say: "Abuses of the present system range all the way from intimidation to favoritism, examples of which can be provided almost indefinitely. A relative of one of the dispatchers was able to earn \$200 a month although not a registered longshoreman or member of the Association; gangs in the bad books of the dispatcher on duty have been denied the chance to go to work when asked for by the stevedores; non-registered men have been 'picked' and

sent out when capable, registered Association members were available; dispatching Association members to short jobs and holding back longer jobs for non-registered men; juggling dispatching slips in order to either favour certain spare men with long jobs or to penalize others with 'foo-foo' short jobs; dispatching non-registered gangs from North Vancouver as a threat against the claim for 'travelling time' and many other instances too numerous to mention."

And that the reason why they withdrew was: "It is the contention of the Association that no real obstacle to the solution of these problems exists, but that the Federation does not wish to find a solution, preferring to keep the system as it is now, for the following reasons:—

"5. It maintains the 'speed-up' in productivity through competition between gangs for high earnings and by fear of the power of the dispatch office to discriminate.

"6. It smotheres any effective efforts of the men to enforce wage rates or working conditions, provides the means for side tracking 'agitators', so-called, and prevents the expression of the right to collective bargaining through an autonomous Labour Union, having been able for the past ten years to force the men to accept company Union agreement.

"The excuse for maintaining such a system is the much lauded 'decasualization of longshore labour'. The uninitiated, not familiar with the peculiar conditions of longshoring usually swallow this 'decasualization' bait, hook, line and sinker. The longshoremen on the Pacific Coast themselves 'fell' for it ten to fifteen years ago. To-day every longshoreman from Vancouver to San Pedro, except in Tacoma, is up in arms against it. In Tacoma the 'Union' has a decasualization system of its own which it administers itself to the general satisfaction of both the men and the employers. Details of the Tacoma system are attached in a separate statement."

We now propose to deal with these matters. The first is that the Federation have no intention of improving dispatching. Evidence was produced that in order to meet the wishes of the Association as to the equalization of earnings of the high and low earning gangs and the spare board men and to assist in alleviating the situation, which had arisen, due to shortage of work, the Federation since October, 1933, has been following out the plan of rotating the high and low earning gangs, and the spare board men, with the result that the difference in the earnings of these classes has been considerably reduced as is

shown by the evidence of Major Crombie in exhibit 72 prepared by him. This statement shows that since October, 1933, the spread between the high and low earnings of the ships' gangs has been reduced—in the case of "logs and lumber" gangs from \$35.79 to \$27.53 per man per month, and in the "general" gangs from \$47.90 to \$31.72.

There was another matter which caused apparently a great deal of irritation on the part of the members of the Association and that is what is described as classification. Under this system of classification, the names of men on the spare board had opposite them certain letters, which indicated that these men were not acceptable, as employees, to certain members of the Federation, or, that they were not as competent as other men with the result that these men did not have the same chance of employment as other men on the Board, with no such mark opposite their names. In order to meet the wishes of the men, this system of classification was abandoned last year and while the Association have suggested there is some fear of a return to this, we understand the Federation are prepared to undertake that it will not be employed again.

As to the alleged "abuse of the present system" particulars thereof are given in exhibit 26. The first of these is intimidation and favouritism. There was no evidence given in support of either of these allegations, nor was any evidence called to support the allegation that gangs in the bad books of the dispatcher on duty had been denied the chance to go to work when asked for by stevedores. There was some evidence that non-registered men, who were in the basement of the dispatching hall, had been sent out, but not when competent, registered, Association members were available. There was no evidence of dispatching Association members to short jobs and holding back non-registered men for longer jobs, nor of juggling the dispatching slips. An attempt was made to show that non-registered gangs from North Vancouver were employed while there were members of the Association available for employment, and in exhibit 26, this is described as a threat against the claim for "travelling time". According to the evidence there was only one occasion when a gang from North Vancouver was employed. H. A. Stevenson, a past president of the Federation, swore that on a Saturday morning there was a call for men, who could not be obtained from the Association, and, therefore, a gang of North Shore men were sent.

Referring to Claim 2 above, viz., "Impossibility of effecting improvements", there was no evidence called to support this by the Association. As stated above, the evidence shows that two considerable improvements have been effected since October of last year.

Claim 3, viz., "Desire for a more equitable distribution of work and earnings". Particulars of the improvements which have become effective, as related to this feature, have already been referred to. Our conclusions herein are given later.

Claim 4, viz., "Inability to function as a labour organization without the goodwill of the labour manager." Admittedly, the duties involved in the position of labour manager are of vital importance to the smooth operation of any arrangement between the parties. It was claimed by the representative of the Association that discrimination had been shown by the present occupant of the position in the dispatch of the men, but there was nothing in the evidence to substantiate this allegation.

Exhibit 26 further alleges that the Federation preferred to keep the present system because "it maintains the speed-up in productivity through competition between gangs for high earnings and by fear of the power of the dispatch office to discriminate."

It is, therefore, necessary now to consider the evidence on the question of speed-up. Mr. Winn, the chairman of the Workmen's Compensation Board, was called by the Association and said the number of accidents held some relationship to the number of men employed. When asked if he would consider the speeding up of the work on the waterfront had anything to do with the increase of accidents, he said speeding up undoubtedly contributed to accidents, but he could not say what happened on the waterfront, that is, he had no knowledge of the conditions causing accidents on the Vancouver waterfront. The Association called its business agent, O. E. Salonen, who said that the speed-up was the cause of the increase in accidents on the waterfront, but he gave no instances to support this contention. James Dean, called by the Association, said that the increase in speed was the main factor in the cause of accidents. He gave no instance of accidents happening from speed-up, but, he said, that before the work was speeded up the men could take time to see that they were safe and a man now trying to live up to the Safety Code, hereinafter referred to, would "get fired". He had not worked on the waterfront from 1925 to 1930, but he said,

that while in 1925 he was doing an honest day's work, he was now working from half to twice as hard as he did then, and that the speed-up started right from 1925. He had to admit, therefore, that if his statement were correct, the increase in accidents should have started in 1925. Exhibit 66, put in by the Federation, shows that the number of accidents on the waterfront had decreased from .123 per cent in 1927, to .094 per cent in 1933. Again, exhibit 67, giving particulars of the accidents during the years 1930-33, the period of the last agreement, showed that the percentage of accidents was less during that period.

It is rather extraordinary that two of the men called by the Association apparently were not afraid to object to what they thought were unsafe conditions. One of these was H. H. Stewart, who, when asked did he think the foreman hurrying the men was likely to fluster them or if it had any tendency to make the men not look to what they were doing, replied, "His experience was that safety was his first motto." And whether the foreman, "hollers" or not, if he figured he was doing right, "that goes." He said he was more or less responsible for three men who worked with him and that he "took safety first," that was "his regulation." When he was asked whether he was ever checked up for taking extra time to do something from a purely safety angle, or did the foreman get after him for it, he said he had had "no come back" when he was in the right, he had had "no ill effect." The said witness, H. H. Stewart, said the trouble with regard to "speed-up" arose by reason of competition among the foremen who desire to get everything out of the men and that the men were handling more cargo in 1933 and the increased speed was bound to make conditions more hazardous.

The other witness for the Association, James Dean, stated that the superintendent or foreman did not take the said "safety Code" seriously and that a man who insisted on living up strictly to this Code would not be able to hold his place on any gang very long because he would be fired; yet, he said, he himself lived up to the safety code "pretty strictly." He did not know of any case where a man had been fired. He told of an incident where his foreman came down and was trying to speed him up a little bit and wanted him to work "under a load" and although he refused and waited for the load to go up, the foreman did not fire him. He further said with regard to the "speed-up" that the tendency was to increase the size of the loads and decrease the number of men and he instanced the loading

of salmon, salt fish and sugar. He was not able to give any figures as to the increase in accidents, in fact, he said he never took the trouble to inquire how many accidents there had been on the waterfront during the past four years, but based his opinion on what he saw in the newspaper reports.

The evidence on behalf of the Federation was as follows:

R. L. Mason, the assistant manager of the Victoria and Vancouver Stevedoring Company, denied there was any speeding up and said that the men individually did just as much work five years ago as they do now; that it would be impossible to force men beyond a reasonable daily performance and that his company never sacrificed safety to speed. He said, in reply to Dean's evidence, that about the same amount per man of salt fish and salmon was being handled now as five years ago and that his firm did ninety-five per cent of the loading and discharging of sugar; that that work was in a class by itself, and the reasons for the additional amount of sugar cargo being loaded or discharged was that in addition to improvements in machinery and handling equipment, they were now employing thirty-two men in the hold, as against eighteen in former years.

Philip George Groves, called by the Federation, stated he was manager of the Empire Stevedoring Company and had been on the Vancouver waterfront for the last twenty-seven or twenty-eight years. He said his company did fifty per cent of the longshore work in Vancouver and that the men were not producing more work now than they did five years ago, but were doing a fair day's work. He said there was no attempt to speed up the men, in fact, that the gangs needed very little supervision.

Robert Montgomery, superintendent of the Griffiths Stevedoring Company, said that he never drove his men and George Watt Webster, who is superintendent of the Victoria and Vancouver Stevedoring Company, said that the men were not worked as hard as they were five years ago and that he had never driven men to the extent that it was dangerous for them to work, but, on the contrary, many times he warned them to be careful.

It would appear to be correct that, generally speaking, more cargo is now being loaded and discharged by the men on any given day. Various reasons are given for this. Groves said there was a better spirit amongst the men, they had been working together for a long time and each man knew his own job and he did it. He also said there was better gear and machinery. Mason said the ships coming into port, were improved from the

point of view of cargo being loaded, or discharged faster, because the ships' holds were clear of stanchions and there were longer booms to carry the tackle. There was other evidence along this line.

Further, on two occasions, the Board visited the waterfront, to see ships being loaded or unloaded. On the 11th of April, the Board, accompanied by the representatives of both parties, saw the cargo being discharged from the *Empress of Russia*, and lumber being loaded on the *Bonnington Court*. On the 13th of April the Board, again accompanied by the representatives of both parties, visited the Lapointe Pier, where they saw grain being loaded from an elevator into the *Amerika* and the Terminal Dock Warehouse Pier, where they saw flour and paper being loaded into a Japanese ship *Hikawa Maru*. On none of these occasions was any attempt made to direct the attention of the Board to speed up, or any unsafe condition arising from the speed with which the work was being done, and we, the majority of the Board, did not notice any evidence of speed up.

Reference has been made hereinbefore to a Safety Code (exhibit 59) which came into force on the 1st of September, 1932. Captain Spring was appointed safety engineer by the Federation to administer the code, and he took part in its compilation, being assisted therein by the late Mr. H. B. Gilmour who was then one of the members of the Workmen's Compensation Board. After the Code came into effect, Spring was instructed by Clendenning of the Federation to have no fear in any contact which he might have with any individual employer who was a member of the Federation and if he found conditions were not right, and were not remedied immediately, to stop work and the directors would back him up. Spring confirmed these instructions in his evidence; said there had been no interference in his duties and that there had been no fatal accidents since he was appointed.

Some complaints have been made about the fact that the men were compelled to work under hatch beams which were not properly bolted. James Dean, an Association witness, said that since the Code came into force all these beams had been properly bolted or lashed.

Dealing then with the last point raised in exhibit 26, page 2, that the action by the Federation smothers any effective efforts of the men to enforce wage rates or working conditions, no evidence was called in support of this.

We have said that there was evidence that the rotation of the gangs and of the spare board would result in inefficiency. The witness Montgomery said that up to the time of the change the gangs had been efficient, but since the change his company was not getting efficient service. The witness Groves, whose company does fifty per cent of the waterfront work in Vancouver, said that the efficiency was less since the gangs were sent out in rotation. The witness Mason said that since the gangs were sent out in rotation there was a general slackening down as the men had lost interest knowing they were not going to get any more money and his company was dissatisfied with this. The witness Wells said that the distribution of the work by rotation meant a loss in efficiency.

There was one feature connected with the various points which have been under discussion which came to the attention of the Board which we feel should be referred to here. It is the arrangement which was agreed upon and became effective the 28th of June, 1932, exhibit 34, page 4, and has prevailed between the parties to deal with the grievances and complaints of the Association covering shortages of pay, irregularity or breach of agreement and/or rules, working conditions and wage schedule. This was in the nature of a "claim form" (exhibit 73) which was to be filled out by the Business Agent of the Association, filed with the Federation and dealt with in the manner set out in the agreement. It is noteworthy that notwithstanding the number of grievances now recited by the Association, not one written complaint was filed by the present Business Agent during his eight or nine months tenure of office.

In conclusion on claims 1 and 2 of the Federation after having given careful consideration to the evidence and argument of the Association which we have hereinbefore set forth and dealt with, we find that the employment and the regulation of all waterfront labour including the dispatching and distribution of the work and earnings should be controlled and supervised by the Federation, but we recommend that the Federation should continue in an endeavour to meet the wishes of the Association to equalize, as far as possible, the earnings between the high and low earning gangs.

#### *Claim 3.—To Determine the Number of Men which the Industry can Support*

The point at issue here is the question of what number of men should be kept available to take care of the traffic of the port. The Federation contend that this is a matter for which they only can take the responsi-

bility and desire particularly at this time, to see that the present situation is not aggravated further by an increase in the membership of the Association. They submit also that, when entering into a contract covering a period of years, they are entitled to the assurance of no radical change in the personnel of the other party to the contract which does not first receive their approval. Against this, the Association claim that the matter of increases or decreases in their membership is one for their determination only.

This feature was considered of substantial importance by the Board as, while there were differences of opinion on both sides in regard to the number of men which should be kept available, the evidence showed that under conditions which have prevailed during the past two years and still continue to exist, there has not been sufficient business to assure fair average earnings for all of those now belonging to the Association—in effect, the real cause of the present difficulties between the parties, as already recited.

After due consideration and while not wishing to interfere with the Association in the operation of its internal affairs, we feel the demand of the Federation for some control in this instance is reasonable and justified. Accordingly we recommend that the situation be met by the substitution of the undermentioned clause. This would give the Federation the assurance asked for and at the same time permit the Association to increase its membership should conditions warrant such action from time to time in the future.

"That the Association shall not admit new members without the consent in writing of the Federation, such consent not to be unreasonably withheld. In event of consent being refused by the Federation, the matter to be referred to the senior County Court judge for the County of Vancouver or one of the County Court judges of the said Court to be chosen by him, as sole arbitrator pursuant to 'the Arbitration Act' whose decision shall be final."

*Claim 4.—To Determine Whether any one or more of the Employees is or are Physically Fit or Qualified for the Work.*

The intent and purpose of this clause, as explained by the Federation, is to provide for proper physical examination of proposed new additions to the waterfront organization before they are added to the membership, thus insuring as far as possible, a personnel of sound and physically fit men. They stated they wished to avoid the development of some fundamental weakness in an employee

and the performance by him of some act resulting in injury, not only to the individual himself, but possibly also to those with whom he is working. The Federation felt that such an additional safeguard would be of value not only to themselves, but to the members of the Association as well.

Strenuous objection was registered to this clause by the Association, their representative claiming that with few exceptions, an examination of this nature was not required in any other industry nor was it necessary in this case. It was contended that the probationary period of the two months subsequent to the admission of new members provided ample protection.

From a purely humanitarian point of view some safeguard of this nature would seem desirable in the interest of both parties concerned, but, admittedly, the possibilities of risk are somewhat remote and in view of the attitude of the Association towards the proposal, we feel this clause could be eliminated from the agreement without serious consequences and so recommend.

*Claim 5.—To Protect Workmen from Prejudice or Injury by the Employees Calling a Sympathetic Strike or Walkout.*

While the Association claim that they have always considered that "stoppage of work," "strike" or "walkout" are the last things to be resorted to, and have shown a willingness to be fair and reasonable in this respect, nevertheless it reserves the right to exercise the principles of a labour union.

In the submission of the Federation dated April 20th, 1934, it said as follows:

"The provision with respect to sympathetic strikes is one which the Federation considers essential. The evidence has disclosed the nature of the longshoring industry; that it is intermittent and that the source of supply of work is not within the control of the employers. When ships come to the Port of Vancouver, they must be loaded or unloaded, as the case may be, and it would create a chaotic condition of affairs if the loading and unloading of these ships were made dependent upon the result of some dispute between other labourers and other employers in this same community not connected with the longshoring industry."

When parties enter into a contract for a period of time it is natural to expect each party to the contract to live up to the terms thereof and to do nothing to put himself into a position in which he will not be able to carry out the terms of his agreement. It would, therefore, seem fair that the Association should agree not to go on strike because of

its sympathy with men in other organizations, because this would result in a breach of its contract with the Federation. However, the Board feel that the Federation should be satisfied with the undertaking of the Association, as contained in the proposed agreement, to supply the necessary labour during the lifetime thereof, and should not anticipate that the Association will engage in sympathetic strikes, thereby committing a breach of its contract. We, therefore, feel that this provision could be omitted.

*Claim 6.—To Protect their Employees from Discrimination and to Insure the Continuance of their Employment.*

We feel that the success of any contract which the parties may enter into, will depend in no small measure on the good faith shown by both parties, in an endeavour to live up to the terms thereof and to faithfully carry out its provisions. Any attempt by either party to discriminate against the other is bound to work injuriously against the harmonious operation of the contract and we feel that both parties, once they enter into a contract, will do so, with a view to making it a success, and because of this, and also the fact that no evidence has been produced to show that the Association has in any way discriminated against the employees of the Federation, or in any way affected the continuance of their employment, we feel that this claim might also be omitted.

We now turn to the claims of the Association, the first of which is,—

*Increase in Wages.*—The Association considers that a further increase in wages is justified.

The Association submitted that a further increase in wages was justified and that the basic wage in Vancouver should not be less than other Pacific ports, and we shall hereafter refer to the evidence which they gave in support thereof.

The Federation in their submission, exhibit 79, contended that:

"Rates of wages will rise and fall in the future as in the past. The Federation has always been and is and will be in the future, ready and willing to discuss wage scales. What is required is that in any agreement which is entered into, proper provision be made for this subject to be dealt with by a properly constituted joint committee, and we suggest in this connection that the 1930 agreement, exhibit 5, clause 17, is a fair and equitable basis on which to work.

"If, however, you consider it desirable to bring in an award setting a rate of wage, then we point out that the rate now being paid is

the rate of 1924, and is a rate which pays a proper wage to every man who has reasonably steady employment.

"In fact, in 1934, the Federation was paying the same rate of pay as the men earned in 1924, but we are quite sure that the Federation need present no arguments to show that the rate paid to-day is equivalent to approximately twenty-five per cent more than the eighty cents paid in 1924—in this connection we would refer you to exhibit No. 77. It is no part of the case of the Federation, to attempt to establish that this present rate of wage, or double that, for that matter, will pay full wages to surplus or intermittent workers. We submit, however, if you do decide to make an award on this matter, that you will affirm our present scales."

According to exhibit 16, the rates of wages paid at the present time for straight time are eighty cents to ship men and seventy-six cents to dock men and the Association claims that there should be no difference in the rate of wages paid to ship men and dock men and that the wages paid to ship men and dock men should be eighty-five cents an hour. This would entail an increase to ship men of five cents per hour and to dock men of nine cents per hour. In support of their contention, the Association first put in the wage scales exhibits 49-A and 49-B, showing the rates of wages paid to longshoremen in Tacoma and in Seattle, which are higher than those paid in Vancouver. With regard to this, we find ourselves in the same position as the 1930 Board and agree with what they said in their report, exhibit 4, page 4, as follows:—

"The Board feels so many other factors may enter into the determination of the wage rates at these ports (referring to Seattle, Tacoma, etc.), such as higher cost of living, a lower average of available work per day and other considerations touching which no evidence has been presented, that the mere fact of a difference in rate of pay, taken by itself and without evidence as to other concomitant circumstances and conditions is not conclusive grounds for an increase."

Furthermore, if it were proper to compare rates of pay with those paid in foreign ports, without sufficient evidence to enable us to judge as to why these wages were higher, it would be equally fair to consider the wages paid in other Canadian ports, which we understand are lower than the wages paid in Vancouver.

The Association also submits a statement, exhibit 52, purporting to show the relative cost of living in Seattle and Vancouver. This evidence, we consider very meagre and unsatisfactory. In any case, we feel that the rate of wages to be paid in Vancouver should

be based upon the cost of living in Vancouver. This has been the custom in the past in the longshore industry, as appears from the agreement exhibit 5 paragraph 17 dated the 22nd of November, 1930, between the Federation and the Association which provided as follows:

" . . . . In determining whether wages should be increased or decreased, there shall be taken into consideration only, in the case of the longshoremen, the cost of living in Vancouver, or some condition which directly concerns the welfare or livelihood of the longshoremen, and, or in the case of the employer some condition which directly affects the well being of individual business of the shipping industry collectively which may justify the raising or lowering of wages . . . ."

"For the purposes of determining whether or not wages shall be increased or decreased, on account of the increase or decrease respectively of cost of living in Vancouver, it is agreed by both parties that the cost of living in Vancouver shall be calculated from the statistics published in the Canada LABOUR GAZETTE covering a period of two years prior to the date of the said demand, and shall be averaged over such period. It is also agreed that for the purpose of determining whether or not wages shall be increased or decreased on account of increase or decrease of cost of living that this agreement shall be deemed to be a continuation of the previous agreement between the parties hereto, dated the 1st of December, 1924, and that in pursuance hereof, that the cost of living in Vancouver for the year 1924 and the hourly base wage existing at that time shall constitute the index figure upon which all future calculations shall be based. The parties hereto further agree that for the purpose of this calculation, the cost of living in Vancouver for the year 1924 was \$21.91 per week and that the hourly straight time base wage for longshore labour was eighty cents. The parties hereto also acknowledge and agree that any increases which have taken place in the said base wage since the year 1924 have not been due to any increase in cost of living, but were granted voluntarily by the Federation at the time said increase went into effect and are not to be deemed a precedent upon which further application for increase in the hourly base wage may be made."

In the above agreement, it will be seen that the Association agreed that for the purpose of determining whether wages should be increased or decreased the cost of living should be calculated from statistics in the Canada LABOUR GAZETTE. The Board accordingly obtained a copy of the LABOUR GAZETTE issued

by the Department of Labour, Canada, for May, 1934, and at page 475 appears the average cost per week of a family budget for staples, foods, fuels, lighting and rent in terms of the average prices in sixty-nine cities in Canada, and it was there shown that the average for the month of March, 1934, was \$16.51 per week and for the month of April, 1934, \$16.28. Again, exhibit 77, put in by the Federation shows that the decline in the cost of living from 1924 to 1933 is 30.92 per cent, while the rate of wages now being paid is the same as in 1924.

In conclusion we think that there is no justification for an increase in wages at the present time, because if it is based on the wages paid in Seattle and Tacoma, we have not been supplied with sufficient evidence of the nature above suggested, of the conditions obtaining in those places, and, wages in other parts of Canada are less than those being paid to Vancouver longshoremen; and, if it is based on the cost of living, it is apparent the Association's demand is not only not supported by the evidence, but it is shown that the cost of living is much less than when the basic rate of wage was eighty cents.

*Recognition and 100 per cent of the Longshore Work.* This has been virtually agreed to, but the Federation have refused to give a written guarantee to this effect.

The demands of the Association under this head are contained in exhibit 25 and deal with two different points. The first refers to clause 9 of the proposed new agreement which reads,

"This agreement shall apply, so far as the employment of workmen is concerned, to those members of the Association who were registered in the July, 1930, registration and who then held Shipping Federation identification cards."

The Association claims this clause denies recognition to Association members who are not in possession of Shipping Federation cards.

In this connection the Federation agree that registration has not yet been agreed upon for all of the names submitted by the Association, but state that only eight or nine names remain to be dealt with and they have agreed to register those concerned. Under the circumstances there should be no further cause for complaint as to this feature.

The second deals with clause 12 of the proposed agreement which reads:—

"While the Federation cannot guarantee 100 per cent of the work, the Federation will continue to allot work and employ only Association men when available as the Federation is doing at present, that is to say, with the exception of jitney driving and/or the working

of other mechanized dock devices, and the work performed by dock maintenance men; the Federation will allot work to the efficient members of the Association now registered with the Federation or who may hereafter become so registered in accordance with the terms of this agreement and according to the amount of daily work available."

The Association state that this clause is still unacceptable since it does not guarantee preferential employment of its members on all longshore work as defined in clause 2 of the present Schedule "A."

The principle involved here is the question of "closed shop" to which the Federation are unwilling to agree. Their main contention in this respect is that so long as they are responsible for the dispatching of the labour they cannot have their hands tied in working out this feature. They point out, for instance, that should a shortage of gangs develop at any given time, for some special class of work, and suitable men are not available from the spare or surplus boards, they desire the right to fill the deficiency from outside sources should it be necessary.

The evidence shows that with the single exception of the employment of one gang from North Vancouver, to which reference has already been made, members of the Association have been given preference for and received all of the work of the Federation. Under the circumstances, we feel there should be no cause for concern on the part of the Association with respect to this feature, and recommend that the clause referred to stand as at present.

*Dispatching by the Association.*—The Association withdrew this claim conditional on improved dispatching methods being adopted, and that the Association be allowed a representative in the dispatching office. Since this has been refused by the Federation, the Association has no alternative other than to revert to the original claim "Dispatching by the Association."

This has already been dealt with in our findings on claims 1 and 2 of the Federation.

*Workmen's Compensation Allowances.*—Although this is a matter which properly comes under the jurisdiction of the Provincial Legislature, the Association has asked that a basis for computing the Compensation payable to an injured member be mutually agreed upon.

The Association's claim in this respect is set out in exhibit 47 in which it is stated:—

"The Association claims that the only fair basis for computing compensation allowances

is by the most commonly used time unit on which wages are based. This is true in respect to workers on a steady weekly or monthly wage rate, but not in the case of casual workers.

"Longshoremen are paid on an hourly base wage for an eight-hour day and a six-day week, and this should, in our opinion, be accepted as the basis for the compensation allowance."

In this exhibit, however, the Association suggests as a compromise:—

"That the average earnings of all registered longshoremen over a period of one year previous to the accident be taken as the minimum figure for the payment of compensation allowance. That for all earnings above this figure the present method be followed."

The submission of the Federation is that it should not be expected to pay anything in addition to that which it must pay under the Workmen's Compensation Act.

Prior to 1916, a workman could not recover against his employer unless he could show negligence. In that year the Province of British Columbia passed the Workmen's Compensation Act, which, generally speaking, made the employer liable for any accident which happened to any of his workmen whether it arose from negligence or not. The present Act, R.S.B.C., 1924, Chap. 278, provides for the various industries in the Province being divided into classes, and an assessment being made upon each of these classes, based on the individual payrolls of each industry. Section 19 of the Act provides that where permanent total disability results from the injury, the compensation shall be a periodical payment to the injured workman equal in amount to sixty-two and one-half per centum of his average earnings and shall be payable during his lifetime.

Section 20 of that Act provides that where permanent partial disability results from an injury, the compensation shall be a periodical payment to the injured workman equal in amount to sixty-two and one-half per cent of the difference between the average earnings of the workman before the accident, and the average amount which he is earning or is able to earn in some suitable employment or business after the accident. The Compensation is payable to the workman during his lifetime. Section 21 of the Act provides for minimum compensation at \$5 per week.

Section 25 (1) of the said Act provides as follows:—

"The average earnings and earning capacity of a workman shall be determined with reference to the average earnings and earning capacity at the time of the accident, and may

be calculated upon the daily, weekly, or monthly wages or other regular remuneration which the workman was receiving at the time of the accident or upon the average yearly earnings of the workman for one or more years prior to the accident, or upon the probable yearly earning capacity of the workman at the time of the accident as may appear to the Board best to represent the actual loss of earnings suffered by the workman by reason of the injury, but not so as in any case to exceed the rate of \$2,000 per year."

The principle underlying compensation as provided for in this Act appears to be that each man is to receive compensation based upon the amount of his earnings which is to be determined in the manner provided for in section 25 above quoted.

As appears from the Association's claim, they are not satisfied with the method of compensation fixed by the Workmen's Compensation Act, and it is clear that if their proposal were acceded to it would mean that the Federation would have to pay a much greater sum as compensation. The difference in the amount of compensation which, under these circumstances, the Federation would pay would be a purely voluntary payment, entirely outside the Workmen's Compensation Act and is something which, so far as we have been able to learn, is not done by any other employers in the Province of British Columbia. This question, no doubt, has become much more important to the Association by reason of the great reduction in the total of the earnings of the longshoremen as has heretofore been mentioned.

It appears from exhibit 47, page 2, that the Association thought that the Workmen's Compensation Act would be amended at the session of the Legislative Assembly of British Columbia which was concluded in the spring of this year, but later on they were told this legislation would be brought down next year. It is quite likely that this same request has been made to the Government of British Columbia from time to time and has evidently been refused, presumably for good reason, and we think that if any change is to be made in the compensation arrangements between the parties, it should be done by amendment to the Workmen's Compensation Act.

*Equal Ship and Dock Rate of Wages.* The Association claims that there is no justification for the present difference of four cents per hour between the two classes of work.

The Association's claim is contained in exhibit 48 at page 2, in which they set out the definition in Vancouver of longshore work as follows:—

"(a) Ship's work—loading and unloading of vessels, from hold to sling and from sling to hold and also to and from open cars when within reach of ship's tackle.

"(b) Dock work—from sling to cars direct; to first place of rest or to pile in the shed or on dock, and from pile in the shed or dock or from cars to sling direct."

In this exhibit it is pointed out that in Seattle and Tacoma, longshore work covers both ship work and dock work as above defined and the men are paid the same rate of wages. It is further submitted that the only argument against distinction in wages has been on the ground that dock work is not as hazardous, is easier work, requires less skill, and that the dock operators cannot afford to pay the same rate. The Association's claim, in answer to this, is that dock work is less hazardous than ship's work because of the fact that proper safety regulations are not enforced on the ship. We will deal later with the safety regulations and their enforcement. The Association also point out (exhibit 48) that the element of hazard is present on the dock, to a marked degree, as a visit to any ship discharging or loading cargo will show. Details of the hazard are enumerated by it. It was contended also that dock work is just as arduous, and in some cases more so, than ship work.

The answer of the Federation to this submission is contained in exhibit 77 at page 6 wherein the Federation point out that Mr. Winn, the chairman of the Workmen's Compensation Board, on the hearing, "Definitely pointed out the less hazardous nature of dock work to ship work." And in addition the Federation points out that the Association's exhibit No. 57 shows that there have been only 282 dock accidents in the last four years for the whole of British Columbia as against 1,600 ship accidents. To this the Association replies in their final argument, exhibit 80, at pages 7 and 8, by stating the Federation had omitted to give the comparison between the number of men employed on ship and on dock. The Federation further contends in said exhibit 77 at page 7 that from the nature of the work itself and the additional hazard in working cargoes into and out of ships' holds the ship men are entitled to a higher hourly rate of pay than the dock men, and particularly so where ship men confine themselves to ship work and dock men to dock work, as has been the custom here for years. We under-

stand that in Tacoma and Seattle any member of the Association does either ship or dock work, in other words, there is no difference in the work done by all the members of the Association.

In connection with this difference as between the Federation and the Association, there are two things which assist us in coming to a conclusion. The first is that Mr. Winn said that the rate assessed against wharf operators in 1934 by the Workmen's Compensation Board was two per cent, whereas for stevedores it was eight per cent, and he said he undoubtedly considered the hazards greater in the latter than in the former. This was confirmed by the impression we received when the Board visited four ships and had an opportunity of noting the work carried on by both the ship gangs and the dock gangs, from which we have no hesitation in saying that not only is the work on the ships harder and more hazardous, but the men, specially working in the holds, have to do so in a restricted area on uneven surfaces and under conditions which are much less favourable. Furthermore, they have not the same mechanical aids, and, therefore, have to do much more lifting than the men on the docks.

Taking everything into consideration, we feel that a higher rate of pay for the men on ship's gangs is justified and find accordingly.

*Travelling time.* The Association demands that travelling time be restored on the basis of time spent in travelling or on the basis of the Interim Report of the Board of Conciliation on this question dated 17th July, 1930.

Due to the fact that in the longshore industry there are many different places at which the work has to be performed, the exact location of which cannot always be determined until the employees report at the dispatching hall, the question naturally arises as to whether or not the men should receive remuneration for the time spent while proceeding to the job, and if decided in the negative, to what extent this rule should apply.

Dealing first with the main principle involved, viz., as to whether or not travelling time should be allowed while men are proceeding to their work:—

The Association's claim is that an allowance should be made in all cases and to all points to which the men have to proceed for their work. No evidence was put in to support this contention other than the statement contained in exhibit 46. Herein it is contended that employees when leaving home in the

morning seldom know where they are likely to find themselves working before the day is over, also the fact that the building of docks on the North Shore is proof that some inducement or advantage exists there sufficient to offset the disadvantages which were known to exist when the dock was built. Against this is the claim of the Federation that it is a universal practice in the longshore industry for men to report directly to the job, within a certain area, without remuneration. They contend that in many cases the employees proceed direct from their homes to their work, giving as an instance the month of May this year when out of a total of 186 orders to gangs only forty-nine gangs had to report to the Dispatching Hall before going to work.

Evidence was put in showing the practice prevailing at Tacoma (exhibit 49-A) and Seattle (exhibit 49-B). Herein it was laid down that at Tacoma no travelling time was allowed inside the harbour while at Seattle no travelling time is allowed within the harbour nor at adjacent ports as far as Everett on the north and Tacoma on the south—approximately thirty miles in each case. The 1930 evidence shows that a similar situation prevailed at Portland and San Francisco.

As regards Vancouver, however, the 1930 Board reached an unanimous conclusion with respect to this feature. Their findings which are contained in their main report, exhibit 4, and supplement thereto, exhibit 4-A, being as follows:

"1. Travelling time should not apply to points within the harbour which can be reached by available public transport in a time not to exceed thirty minutes, according to the regular schedule, or by other transport provided by the Federation when the time taken is within said limit, the starting point to be the nearest point of departure (from the Federation Hall) of available suitable transportation. Travelling time and transportation in excess of thirty minutes to be allowed in proceeding to all points within the harbour which cannot be reached in compliance with the foregoing provisions.

"2. That the starting point should be from the Shipping Federation Hall to the place of employment instead of from the nearest point of departure.

3. That full time be paid for all time in excess of one-half hour spent in travelling to and from points inside the harbour which come under the definition of 'travelling points.'

"4. That to all points where travelling time applies, as defined, transportation to be paid both ways by the Federation."

These findings were further elaborated in a letter from the Board dated August 4th, 1930, to the Deputy Minister of Labour, which stated it had been agreed by the parties that the Japan Dock and Midland Pacific Elevator on the North Shore were to be considered as within the thirty minutes radius for the purpose of dealing with travelling time.

From the evidence it is apparent that the common practice at other ports is for the employees to proceed to the points at which the work is to be performed before pay time commences. It would also appear that in many cases the employees report direct to the job rather than stopping first at the dispatching hall, as the Federation's claim in this regard was not refuted. Under the circumstances, we can see no reason to alter the conclusions of the 1930 Board which appear fair and reasonable as applied to Vancouver Harbour and concur in their findings in this regard.

We were further impressed with the definition laid down by the 1930 Board with respect to the radius within which the free travelling time arrangement was to apply, viz: those points which could be reached by available public transport, etc., etc., within a period not exceeding thirty minutes. Under conditions which prevail at Vancouver this definition would seem to be a fair compromise as between the claims of both the Association and the Federation and receives our concurrence.

Failure on the part of some members of the Federation to allow full travelling time to two booming grounds which are admitted by the Federation to be outside the thirty-minute radius was claimed by the Association. This was not confirmed by sworn evidence, but if the statement is correct the omission should be rectified by the Federation, if the findings of the 1930 Board are to be complied with—which is our recommendation.

*Hours of Labour.*—The Association has demanded a maximum of eight hours with a limit of ten consecutive hours under special conditions, and that double overtime rate be paid for all work in excess thereof; also, that when men have worked five or more hours in any one day, they shall not be ordered back after the supper hour when other members are available.

The contention of the Association is set out at page 3 of exhibit 46 as follows:—

"A long-standing grievance of the men against the necessity of having to work long hours, has resulted in the demand that ten (10) hours shall be the maximum day's work, and that in order to ensure that this rule will not be abused, that a penalty of double over-

time shall be paid for any time worked in excess of ten (10) hours. This rule would also guard against the possibility of reducing the number of regular men below requirements for the purpose of showing high earnings as an argument for low hourly wage rate.

"This rule, together with the proposed rule that when men have worked five (5) hours or more in any one day, they may not be ordered back after supper, would serve to enforce a more equitable distribution of work. No man can stand up under the average longshore work for longer than eight (8) hours and continue the same pace. The employers themselves agree to this and to the fact that long shifts are responsible for increased accidents. Yet, in spite of these admissions, individual employers persistently break the rule and we believe the only way in which they can be made to live up to the rule is to attach such a stiff penalty that they will take no chances and make provision for fresh men in ample time."

The answer of the Federation is set out at page 8 of exhibit 77:—

"What Mr. Emery describes as a long-standing grievance of the men, having to work long hours and which he says is a bone of contention between the Association and the Federation, never has centred upon the maximum hours of work. Whatever reluctance there has been to maintain maximum hours of work, has been on the factor of efficiency and the question of the availability or not of an efficient supply of labour being obtainable if the supply of regular and efficient men was curtailed and the less experienced men had to be employed in their place.

"It should be pointed out that submissions of the Association as to maximum hours of labour, while veiled by arguments which may be true as far as they go, such as physical endurance, liability to create accidents and so on, are as previously pointed out to the Board in other matters mainly directed towards improving the conditions of the surplus men and give no consideration to or provide any assurance to the employer of obtaining or maintaining a guaranteed standard of efficiency if maximum hours were reduced. It seems extraordinary if this is to be considered a serious matter, that no better proof can be shown by the Association than has been given to the Board. Working men excessive hours being a common practice, no evidence is given, nor has it been proved to be the case that individual employers persistently break the existing rules, and it seems reasonable to assume that if the Association really attached the importance to this question which they would have the Board believe that

they would have produced more conclusive evidence than they have done to substantiate their claim that this is a grievance for the Board to pass upon and one which could not have been settled by ordinary procedure between the Federation and themselves."

This again is a matter which was carefully gone into by the 1930 Conciliation Board, and we quote from their report:—

"It seems necessary to point out at the beginning that the question before the Board is not what is commonly termed 'a ten-hours day.' At present the standard day is one of eight hours and there is no indication of a disposition on either side to make any change in that respect. The real point at issue is a desire on the part of the Association to limit a maximum of ten hours the duration of any one day's work . . . . At present thirteen hours is the maximum agreed upon. The Association's claim is that a ten hours' maximum would work to better advantage and would attain the desired results and could be brought into effect without hurt to the Federation by modifying the 'Rules and Working Conditions' in such manner as might be found necessary to safeguard the Federation against incurring 'penalty' rates of pay. It has been contended by the Federation that the adoption of a ten hours' maximum would result in loss of gear and in efficiency of work, due to having to change men more frequently, and to having to break into the third shift. At present, a shift consists of four hours and ten hours would be equivalent of two and one-half shifts.

"The Board is satisfied from the evidence submitted that the ideal working day is not more than eight hours and that the Federation should endeavour to have all its members recognize this and be governed accordingly. The Board feels, also, that the adoption of a ten-hour maximum per day should at least be given a fair trial for a period, as there does not appear to be evidence of sufficient weight to the contrary, nor to justify the continuance of the present thirteen-hour maximum per day. It is the opinion of the Board that any loss which accrue to the Federation from the changing of men or loss of gear would be compensated for by the higher efficiency of the men on the job and the probable reduction of hazards."

In the wage schedule, exhibit 16, section 9, adopted following the above report, ten consecutive working hours was fixed as the maximum number of hours.

No evidence has been produced before us to show that this provision has worked a hardship upon the men and we feel that ten consecutive hours (with time off for meals) should be the maximum for a gang or individual, except that in cases of emergency,

such as those covered by items "B" and "C" of section 9. Double time should be (either straight time or overtime as the case may be) allowed with twelve hours the extreme working limit.

As to the suggestion that when men have worked five hours or more in any one day they should not be ordered back after supper when other members are available, it appears to us that the present clause is advantageous to both parties in case only where a limited amount of work remains to be completed. To guard against abuses, however, we would suggest that it be modified by inserting a provision that when men have worked five hours or more in any one day they should not be ordered back after supper, unless not more than two hours' work is involved and this, of course, should be subject to the provision that twelve hours should be the extreme working limit.

*Waiting Time and Suspended Time.* The Association has demanded that the full overtime rate be paid for waiting or standing by during overtime hours. Also that Suspended Time without pay shall apply only in cases of "Shifting Ship" and "Compass Adjustment."

At page 3 of exhibit 46 filed by the Association it is stated:—

"Other conditions lost or altered in recent years include waiting and suspended time and special conditions concerning the handling of silk, mail and express cargo, while these are minor conditions, they were altered without much reason and were simply a case of the employers chiselling in on long recognized conditions in order to save a few dimes at the expense of the men."

No new evidence on this point was given on this occasion. The 1930 Board seem to have given a great deal of time and attention to these features and their findings apparently improved former arrangements to an extent which proved satisfactory to the men.

With reference to waiting time, the finding of the Board was as follows:—

"It feels, however, that, even so, the Federation is not unfair in desiring to pay only one-half instead of full overtime for 'waiting time.' The men lose no work on this account, the work being merely deferred and still remaining to be done; while the employers can have no possible interest in deferring work, if it can be avoided." (Exhibit 4, page 11.)

With reference to suspended time, the 1930 Board was unanimous in approving changes suggested by the Federation subject to the addition, in the interests of clarity, of certain things therein mentioned, and these changes

were adopted in the schedule which became part of the agreement of the 22nd of December, 1930, between the Federation and the Association. There does not appear to have been any change from the conditions under consideration by the last Board so far as waiting and suspended time are concerned. No evidence was called to show that the present regulations in regard to waiting time and suspended time worked a hardship on the men, and as far as we can see, rather than constituting a hardship, they are of considerable advantage to them, and are designed to protect the men, in view of the possibility, from various causes, of the Federation being unable to say definitely, in many cases, when work will commence and how long it will last.

We have carefully considered both these matters and feel that the findings of the 1930 Board are fair and reasonable.

*Removal of Special Exceptions.*—Concerning the handling of silk, mail, baggage and express cargo, to wit:—Section 8 (b) of present Schedule "A" to terminate after the words "Finishing Ship." Deleting subsection (b) of section 10 of said Schedule.

While appreciating the desire of the Federation to have an extra thirty minutes allowance between one and 1.30 a.m. in case of emergency in discharging mail, baggage, silk, or express cargo, we feel these features could be eliminated in accordance with the wishes of the Association without undue hardship and so recommend.

*Other changes in Schedule "A" to wit:—*

(a) Section 3.—To include Saturday afternoon in overtime hours.

With regard to this the Association said (exhibit 46, page 2):—

"A new condition being asked for is the recognition of Saturday afternoon as a half holiday on overtime rate of pay. This would reduce the working week from forty-eight (48) hours to forty-four (44) hours and assist in spreading employment. When it is considered that one of the demands of longshoremen now on strike in U.S. ports is for a six (6) hour day, and thirty (30) hour week, our demand for a forty-four (44) hour week seems very modest. The majority of European ships calling at the port recognize the Saturday half holiday and many European ports also."

Exhibit 77, page 9, sets out the view of the Federation on this question as follows:—

"The question of a Saturday afternoon being included in overtime hours seems to the Federation to have no real justification for its proposal, and the interjection of working

weeks and hours of work based upon an eight-hour day, is irrelevant to the subject."

No evidence was called to support the statement that "the majority of European ships calling at the port and many European ports also" recognized the Saturday half holiday. Assuming, however, this to be the case, then there would be no work to be done for the majority of European ships calling at Vancouver. We feel the trouble with the present situation is that there is not enough longshore work to enable the men to work anything like eight hours per day or forty-four hours per week, and, therefore, there is no necessity to reduce hours to assist in spreading employment. If the high and low earnings gangs do not desire to work on Saturday afternoon, this would give an opportunity to the spare board men to secure some much needed employment. It seems to us there is no justification, at this time, to penalize the employer by forcing him to pay overtime rate of pay on Saturday afternoons, when there is a scarcity of work. In view of the fact that under present conditions a continuation of the six-day week will assure more work for the men on the spare board and others in the low earning class in the event of the high earning gangs desiring to lay off Saturday afternoons we recommend that Saturday afternoon be not included in overtime hours.

(b) *Section 5.*—To delete clause providing for new gangs starting work between 6 and 7 p.m. being paid only overtime rate.

After due consideration, we feel that this clause could be eliminated, as requested by the Association, without undue hardship to the Federation.

(c) *Section 6.* Inclusion of "Armistice Day" and "Picnic Day" as recognized holidays.

Section 6 of the Rules, Working Conditions and Wage Schedule (Exhibit 16), provides for eight holidays, namely, "New Year's Day," "Good Friday," "Empire Day," "King's Birthday," "Dominion Day," "Labour Day," "Thanksgiving Day," and "Christmas Day." On these days and on Sundays overtime is paid. The Association now desire to add "Armistice Day," and "Picnic Day" as recognized holidays, that is to say, days upon which overtime will be paid. The Federation have no objection to substituting "Armistice Day" for the "King's Birthday" and the Association agree, provided "Picnic Day" is included as a regular holiday. Now, all the holidays set forth in said section 6 with the exception of the "King's Birthday" are Dominion statutory holidays and "Armistice Day" is also a

Dominion statutory holiday. "Picnic Day" is purely a voluntary arrangement on which day the Association members and their friends have a picnic at some point near Vancouver and spend an enjoyable time when the cares of work are forgotten. The Federation as a body and its individual members, make substantial contributions to this event and it is the endeavour of all parties to arrange that the picnic day shall be fixed at a time when there are to be very few ships, if any, in port. Under these conditions we see no reasons why, "Picnic Day" should be placed in the same position as a statutory holiday or why the Federation should be penalized because as a result of some conditions over which it has no control it may happen some work has to be done on that day. We, therefore, recommend that "Armistice Day" be substituted for the "King's Birthday" and that "Picnic Day" be not included as a regular holiday.

(d) *Section 8.* Changing the two-hour minimum time to apply to any one job instead of any one day, and deleting note to subsection (a).

*Section 8 (a),* exhibit 16, reads as follows:—

"A minimum of two (2) hours' pay, straight or overtime as the case may be (clause 4, page 2) shall be paid for any work performed in any one day, except that if a man is discharged for sufficient cause only actual time worked will be allowed. Note.—Where waiting time is involved and actual work does not consume two (2) hours, men shall be paid for the actual time worked at straight or overtime rate, as the case may be (clause 4, page 2) and in addition for the actual waiting time (clause 12, page 6), the total of which must not be less than two (2) hours' pay at straight or overtime rate as the case may be."

This section was evidently intended to assure to the men a minimum remuneration of two hours' pay after they had reported for work; Also if on any one day a man worked for two or more employers and his working time was less than two hours, he got a minimum of two hours' pay. We think this might be changed by providing that the minimum should apply to the work of each employer, so that if he did work on two or three jobs for one employer, on any given day, and worked a total of less than two hours, he should receive two hours' pay from that employer; but if he worked for two or more employers on any given day, no matter how long he worked for each employer, he should get a minimum of two hours in each case.

The Association desire the note to section 8 to be struck out of the schedule. It will be observed that this note involves waiting time which is covered by sec. 12 of exhibit 16. This provides for payment at half time rates

to men who have been dispatched to work or report direct to the job and are waiting for the work to commence and are eventually put to work. The result of striking out the note accordingly would be that an employee reporting at the job and waiting for the work to commence and eventually being put to work would receive at least two hours' pay at full time rates, although he actually worked less than that period and in addition would receive pay for the time he was waiting, at half time rates. As an illustration if a longshoreman waited half an hour and then worked half an hour he would receive pay under section 12 at the waiting time rate for the one-half hour in addition to full pay for two hours at straight time or overtime as the case might be. We consider the present arrangement a very fair and reasonable one and can see no reason why an additional penalty should be imposed on the Federation as suggested by the Association.

(e) *Section 10.* Changing the maximum working time without eating from six hours to five.

While there was no evidence of abuse of the present arrangements, the Association's request as to this feature would seem reasonable, and the change from six to five hours is recommended.

(f) *Section 15.* Revision of list of Special Commodities to provide for minimum of one hour and adding: Salt Fish (in cases) and Salmon Eggs. All shovel work. All cargo injurious to eyes, lungs or skin, employers to supply respirators or goggles when required.

*Section 15* of exhibit 16 provides for an additional wage being paid to longshoremen handling any special commodity such as caustic soda, cement, fertilizer, green hides, etc., when in lots of twenty-five tons or over and the Association now ask that to this list be added salt fish, salmon eggs and all shovel work. Again, while we think that the practice in other ports is not at all conclusive as to what should be done in Vancouver, we note that the above-mentioned salt fish, salmon eggs and shovel work are not included in the special commodities covered by the same sort of rules in Seattle and Tacoma as shown by exhibits 49-A and 49-B, and moreover it appears that the Vancouver list includes several commodities which are not listed at these ports. There is no evidence as to the special commodities which would be handled by shovel work and no reasons have been given why this should be included in the special commodities list. From information which we have received, however, we think that salt fish and salmon eggs should be added to the list of special commodities. It

was noted that the Seattle and Tacoma rules with regard to special commodities only apply when in lots of thirty tons or over. We see no justification for eliminating the twenty-five tons minimum mentioned in exhibit 16.

With reference to the suggestion that the employer should supply respirators or goggles, when required, when cargo injurious to eyes, lungs or skin is being handled, we feel this would impose on the Federation a very onerous expenditure because it would be necessary to supply a large number of the members of the Association with these protective apparatus. It is obvious that each man must have his own respirator or goggles as it would not be sanitary or proper for one person to use another's. Then, again, if this apparatus were supplied by the Federation, some of the men might be careless in the care which they took of them, with resulting loss to the Federation. The respirators and goggles are required for the most part in the trimming of wheat, and wheat trimmers receive an additional ten cents per hour, not only because of the nature of their work, but no doubt because they have to supply themselves with these protective appliances. Under the circumstances we would not feel justified in recommending that the Federation supply respirators and goggles.

(g) *Section 16.* To allow for one-half hour to allow men to cool off from previous work before going into refrigerators without loss of pay.

We agree that it is in the interests of the Federation, as well as of the men that every precaution should be taken to see that the health of the men is not endangered and would recommend close supervision of this feature by both parties. After careful consideration, we do not see how any definite rule can be laid down which would prove workable in this case, because, owing to weather conditions, or other causes, it is impossible to say how long it will take men, under a given condition, to cool off, so that it would be safe for them to enter a refrigerator. We, therefore, think that the matter is one that must be left to the sound discretion of the foreman and is one which should receive the careful attention and supervision of the safety engineer. It must be remembered that only a small part of the gang, say, four men, actually go into the refrigerator, and half an hour's time allotted to these men to cool off means that the whole gang is laid off during that time. We feel that the matter could be covered by the Federation instructing its safety engineer and foreman to allow a sufficient time in each case, for the men to cool off, so there will be no danger to their health.

(h) *Section 23.* Allowing for protection of wheat trimmers against pouring grain while below decks, and of men working cargo in adjacent hatches against the wheat dust.

The Association in exhibit 61 has requested new rules covering the undermentioned features:

"(a) No grain shall be poured into an open hatch while men are working below decks."

They state they believe the above practice has been discontinued but would like the above rule written into the schedule in order to maintain this condition.

Apparently the practice of having men work in holds while the grain is being poured has been discontinued and if such is the case we see no reason why the proposed provision should not be put in the agreement.

"(b) When men are working in a hatch or adjacent to a hatch into which grain is being poured, and the entry of dust is not effectively shut off, men shall suspend work and receive suspended time allowance until the entry of dust is shut off or until pouring ceases."

They state that the rule is asked in order to protect cargo workers who have no respirators and who are therefore more susceptible to the effects of the dust. It is also a safety measure as the dust often becomes so thick that men cannot see the load coming down nor the hatch tender see if all is clear below when lowering load.

With reference to these features, while we feel it would not be possible to lay down any broad rule we strongly recommend that this matter be the subject of careful consideration of the Federation as well as close supervising by the safety engineer.

(i) *Section 26.* Providing against the necessity of carrying double lunches.

As the Federation agree that men shall not be called upon to supply more than one lunch, it is recommended that the rule be amended accordingly.

(j) *Section 27.* Providing that men sent to outports will be furnished free board and lodgings after work is finished and still transportation to Vancouver is provided.

No evidence at all was called upon this point, but the parties seemed to be agreed upon the principle involved and there should be no difficulty in arriving at an agreement on this point.

(C) *Adding an Additional Section to Provide that Men be Paid on the First Recognized Pay Day After Being Released from the Job, whether the Ship is Finished or Not.*

There is no evidence of this request ever having been made previously to the Federation. As a matter of fact, we are told, it is the custom for most of the employers to pay off at any time the men desire. We feel, however, that regular pay days should be instituted, the same to be no less frequent than one day per week.

*((D) In Addition to the Above, Certain Demands were Made at a Membership Meeting which have been Agreed or Partially Agreed to, Conditional upon Agreement being Finally Arrived at, to wit:*

"1. That no registered ship gangs with less than eleven men be dispatched.

"2. That all spare men be placed on the spare board for the work they follow. This has not been fully carried out by the Federation who refuses to recognize Association members not registered with the Federation in 1930."

These features appear to have been agreed upon or partially agreed upon conditional upon a final agreement being entered into between the Federation and the Association with the exception of the question of registration of members which we have dealt with under item (1) of the Association's claims.

"3. That no work be done on top of bulk grain where there is less than six feet of head room."

While no evidence was put in with respect to this feature, we are advised that there are certain Dominion regulations governing shipping which provide that no foreign-bound steamer shall proceed to sea without the cargo holds being completely filled, or other suitable arrangements made to preclude the possibility of cargo shifting. The point at issue in this instance is in connection with the shipment of bulk grain, it apparently being the practice when the hold is not completely filled with this class of cargo, to complete the required stowage with some other cargo such as lumber, sacked grain or general merchandise.

The contention of the Association with respect to this feature—exhibit 61—is that no work should be done on top of bulk grain where there is less than six feet of head room, the suggestion being that, if necessary, the remainder of the shipment be sacked and stowed in that manner.

In reply, the Federation submit this is a matter over which they have little, if any, control. They state further that in the majority of cases the full six feet of head room is available, and point out that, should it be necessary to sack the bulk grain, a penalty

to the ship would be incurred which would seriously affect the earnings of the ship and indirectly the traffic of the port.

From inquiries which have been made, it would appear that there are no fixed regulations with respect to this feature, the matter of proper stowage being left to the discretion of the Port Warden who supervises this operation and whose certificate must be secured before the vessel proceeds on its voyage.

Taking everything into consideration, a hard and fast rule would appear impracticable in this instance, but unquestionably, working under the conditions recited is more onerous than is ordinarily the case. Accordingly, we suggest that the situation be met through the payment by the Federation of ten cents an hour extra for this class of work, which would appear fair and reasonable under the circumstances.

We have now fully discussed and given our conclusions on all matters referred to the Board.

If it be the case that some of the members of the Federation have not been living up to the spirit of the agreement between the Federation and the Association, and have been "speeding up" the work unduly in order to obtain the greatest possible degree of efficiency we think such matters should be dealt with promptly by the officers of the Federation. Similarly, action might be taken with respect to the observance of the safety code. In this connection, we would recommend that the Federation instruct all its foremen in writing that the safety of men should be the first consideration and that the safety rules are to be observed absolutely and no man is to be in any way prejudiced by his complaint of a breach of the safety rules. Further, we believe, that the men should be circularized and encouraged to complain against breaches of the safety rules and be assured that such complaints will not in any way prejudice their positions.

In conclusion, and while relatively satisfactory relations would appear to have prevailed between the parties for the last ten years, it is evident the present difficulties have arisen from the depression and paucity of work available on the waterfront. Now that conditions seem to be improving we trust it may again be possible for the representatives of the Federation and the Association to come together and arrive at a satisfactory agreement.

Dated at Vancouver, British Columbia, this 30th day of June, 1934.

(Sgd.) HAROLD B. ROBERTSON,  
Chairman,

J. E. HALL,  
Member of the Board.

## Minority Report

### Introduction

Application having been made pursuant to the provisions of the Act by the Shipping Federation of British Columbia Limited on March 9, 1934, for the establishment of a Board of Conciliation and Investigation, and a statement in reply having been transmitted by the Vancouver and District Waterfront Workers' Association to the Registrar on March 15, 1934, a Board was duly established consisting of the following:—

Hon. Justice H. B. Robertson, Chairman.

J. E. Hall, Nominee of Shipping Federation of British Columbia Limited.

C. M. Stewart, Nominee of Vancouver and District Waterfront Workers' Association.

The Board commenced their hearings on April 9, and divided the sittings into two sessions owing to the fact that the Federation claimed that it would be useless to proceed further until the basis of an agreement was reached on their six points.

The sittings were prolonged through the necessity of the Chairman having to leave town, and the men have complained that this delay was prejudicial to their best interests.

The Board failed to reach a unanimous decision and the following is the minority report of the representative of the Association.

Evidence was first taken on the Federation's submission to Ottawa, and consisted in a huge mass of statistical data, which in my opinion had very little bearing on the case. The Shipping Federation took the dictatorial attitude at the very outset, that the six points mentioned in their application must be the basis of any agreement signed on the Vancouver Waterfront.

In the Federation's application for a Board of Conciliation to avert a strike on the Waterfront, made necessary by the passing of nine (9) by-laws by the Association, was not founded on fact. The passing of the by-laws by the Association was necessary to protect their members from discrimination by the Federation. For instance: the forming and employing of non-union gangs when Association men were available, also to assure the membership that the Association was a workers' organization representing the interests of the workers, and not a part of the Federation system to keep the workers under control.

A great part of the evidence of the Federation consisted of opinions of their members and of their office employees.

The evidence of the Association consisted of concrete realities from the day to day struggle of experienced longshoremen.

The morning of the first day's hearing, April 11, the Board was taken for a visit to the Federation Hall, also on board a C.P.R. liner loading at the C.P.R. Docks.

Mr. McLellan, spokesman for the Federation, implied that the Hall was kept largely for the convenience of the men. It was pointed out by Mr. Emery for the Association, that the Hall was really built and designed for the convenience of the Shipping Federation. So far as the men were concerned they had little or no comforts. Anyone knowing the history of the Vancouver Waterfront knows that Mr. Emery's contention was correct; that the Hall was built and designed to assist the employers at a time of labour trouble, such as, housing strike breakers, loading men in the Hall and driving them direct to the Docks without having to come into direct contact with pickets.

On our visit to the Empress liner I could not help but notice that the class of cargo, and the environment in the sheds was much better than on some ships and docks that had been visited by myself a few days previously. One thing very noticeable, especially on the ships, was the terrific speed-up. Although the men are not supposed to work (according to the safety blue book) underneath when a load is going up, the men in the hold would continue to prepare the slings when a load was directly overhead. I can only come to one conclusion: that it is fear of the consequences that makes men risk their lives in such a manner. Therefore I would strongly recommend that a Safety Engineer be appointed by the Government to see that the safety regulations are observed.

On Thursday, April 12, two ships were visited; one at La-Point Pier loading wheat, and the other at the Empire Dock. The Board got some idea of the horrible occupation of a wheat trimmer. These men had just finished work when we arrived so we did not actually see them at work, but from their appearance alone we got a good idea, and on looking into the hold where the wheat was being poured it was like nothing else than a thick fog. At this work the men must wear masks, supplied from their own meagre earnings. In conversing with some of the men I found that some of them are not able to buy respirators because of their low earnings and are consequently forced to wear pieces of gauze or old silk hose around their face to protect their lungs. Upon offering a cigarette to one of these men I also found that it was impossible for them to smoke for at least two hours after working in the wheat. If the Federation persists in

refusing to supply this much needed safety equipment, I would advise the Association to take the matter up with the Workmen's Compensation Board with the view of having the government supply the necessary equipment for the health and safety of the men.

In view of the fact that the Workmen's Compensation Act provides for compensation for occupational diseases in such occupations as mining, I would therefore recommend that the Association inquire into whether this also covers wheat trimmers, and if not the matter should be taken up with the view of having the Workmen's Compensation Act amended to cover wheat trimmers.

Another dangerous practice brought to our notice was the loading of Deck Cargo when men are working in the hold. This should be discontinued immediately. Human life should come before profits and reputations of foremen, but this does not seem to be the order on the Vancouver Waterfront.

Great emphasis has been laid by the Shipping Federation on the amicable relations existing for years on the Waterfront, but the Association representatives have proven conclusively that the discontent dates back many years, and the attempt of the Federation to bring in the publication "The Heavy Lift" as the trouble maker, was just another attempt of the employers to drag out the "red bogey."

Although only five agitators were said by the Federation to be the cause of the discontent on the Beach, when asked to name these men they were unable to do so.

The Federation made much capital out of the fact that the Association refused to co-operate with them on a relief scheme for destitute Longshoremen when the Federation put up five thousand dollars (\$5,000) for this purpose and asked that the Association put up a like sum. The Association has spent much more than the above sum in caring for their members. I consider it to be the duty of the employer and the State to care for the destitute and unemployed. The worker by so doing lowers still further his standard of living and removes the load from where it rightly belongs to his own shoulders.

Major Crombie, the Labour Manager for the Federation, gave evidence that he encourages individual workmen to give him information. This in my opinion is encouragement for any unprincipled member of the Association who wishes to better himself at the expense of his fellow workers, and is a good argument for dispatching by the Association.

The Federation points out to the Board that in past arbitrations they were never charged with the same offences as was done

before this Board. In looking over the evidence I can only conclude that past Boards had the same grounds for making the charges, but the Association being under the complete control of the Federation, the men, through fear of discrimination, refrained from making these charges.

No concrete proof was offered by the Shipping Federation to contradict the charge that the speed-up was the chief contributing factor to the great number of accidents on the Beach.

In reply to the Federation's claim Number One—To employ labour as required on the Waterfront—the Federation has failed to prove to the Board why it is necessary to claim this right. The Association does not expect the Federation to employ men when they are not required, but the Association does dispute the right of the Federation to engage non-Association men to do longshore work when there are Association men available.

2. To distribute the work as the needs of the industry demand.

The Association's claim is justified that they have an equal right to protect the interests of their members by refusing to sign an agreement which would leave them liable to be denied the right to earn a livelihood. Clause 4 and 13 of the Federation's Draft Agreement places the power in the hands of the Federation to decrease the number of men on the Association's books. This is denial of the first principle of a trade union. Under this clause, classification is dealt with, and the fallacy of this system has been shown to the Board by the recent experiences of men loading concentrates, which is the hardest work on the Waterfront. These men established a Port record and 29 per cent of them had been classified by the Shipping Federation.

In my opinion the Federation has failed to prove to the Board that any real attempt has been made to equalize earnings, but its feasibility has been shown the Board by men who were practical longshoremen.

To allow the Shipping Federation full authority to distribute the work is putting too much power into the hands of the Federation. Therefore I must recommend to the men that they refuse to sign any Agreement with this clause embodied in it.

3. To determine the number which the industry can support.

I do not fully understand why the Federation should desire this clause in the agreement, knowing that all the men who are in the Association to-day are there with the approval of the Federation, and I can only come to the conclusion that it is another means of keeping absolute control of the Association

by the Federation. It is not feasible to think that the Association would indiscriminately accept new members, but when new members are to be accepted, that must be the right of the Association to say who they shall have as members. The sixty (60) days probationary period is ample protection for the employer. The men fear, and rightly so, that a large fringe of surplus men and a small group of registered men would be used as a continual club over their heads, and I must recommend to the men that they strongly resist the inclusion of this clause in any agreement signed by them.

The sentiments of all Board members were that clauses 4, 5, and 6 be deleted, although we reached our conclusions from different angles. It would be impossible for any workers' organization to sign an agreement with any of these clauses embodied in it, as they are all anti-working class.

No. 4—Demands medical examination.

No. 5—Denies the right of the Association to participate in a sympathetic strike.

No. 6—Would deny the Association the right to control their members.

In comparison with the demands of the Shipping Federation who practically demanded that the Association cease to be a Labour organization, the demands of the Association are mild indeed.

On May 31st the Board reconvened to deal with this part of the case.

In the demand for higher wages, I consider that the increase of five cents (5c.) an hour asked is moderate. It is two cents (2c.) less than they received in 1932, and is less than the wages paid for the same class of work in any other Pacific Coast Port.

Recognition and 100 per cent of the work has been maintained by the militancy of the men. I would therefore recommend that these conditions be recognized and embodied in the agreement.

For Despatching by the Association the men put up a strong case. Even Federation witnesses swore on the stand that in two different ports, where this system is in operation, the arrangements are perfectly satisfactory for both employers and employees. (New Westminster and Tacoma).

Despatching by the employers is a sore spot to all Longshoremen. For instance: Fifteen thousand (15,000) workers are fighting a courageous battle in Pacific Coast Ports from Seattle to San Diego, and their chief demand is that despatching be in the control of the Union. If the Federation refuses to concede this demand I can see no alternative other than that the Vancouver Longshoremen will be forced to adopt the same course as the Longshoremen to the South.

Workmen's Compensation was gone fully into, and in my opinion the Shipping Federation has acted in this matter in a very arbitrary way. Previous to 1932 a Joint Agreement existed between the Federation and the Association, whereby thirty dollars (\$30) a week was agreed upon as a basis on which to compute the compensation. At the present time extreme cases of hardship exist where men have earned practically no wages, and compensation is based on the actual earnings. I see no reason why a man should be penalized because he has not had work in past months when his services were just as necessary to the employer at the time of the accident as a man who had been in regular employment.

I therefore recommend to the men that they demand the reinstatement of the thirty dollars (\$30) a week flat rate.

In the demand for equal Ship and Dock rate of wages I uphold the contention of the Association that both classes of work should receive the same remuneration. No logical reason has been advanced why Dock workers should receive four cents (4c) an hour less than Ship men. The argument of the Federation that Ship work is much more hazardous according to accident figures, loses its significance when we consider that for every man that works on the Dock, four men work on the Ship.

On Travelling Time, I support the claim of the Association that travelling time be restored on the basis of time spent on travelling, or on the findings of the Supplementary Report of Conciliation Board dated July 17, 1932. It is an imposition that men should be asked to spend time travelling to and from the Federation Hall for the convenience of the Stevedoring Companies in their own time without payment.

The Association in demanding a reduction of the maximum working day from ten (10) hours to eight (8) hours receives my fullest endorsement. The Association has proven conclusively that in so doing no hardship would be worked on the Shipping Industry, since the men have signified their willingness in cases of absolute necessity to work longer than eight (8) hours. Their objection is to extending this extra time longer than ten (10) hours, and I endorse their demand that double overtime be paid as a penalty for all work done in excess of ten (10) hours. This would assist in spreading employment, equalizing earnings and lessening the accident hazard, as brought out in the evidence before the Board, and I also endorse the demand that when a man has worked five (5) hours

or more in any one day, he should not be ordered back for work after supper when other men are available.

For Waiting and Suspended Time the demands of the men are more than moderate. His labour power is all a worker has to sell, and when he has to stand by or wait for the convenience of his employer, the employer should be made to pay the full wage whether it be in overtime hours or regular working hours.

In the removal of Special Exemptions concerning silk, mail, baggage and express cargo, in my opinion no sound reason has been offered by the Shipping Federation why the above-mentioned cargoes should receive more consideration than other commodities, and the clause should be changed in accordance with the wishes of the Association.

All the other changes desired by the Association in Schedule "A" were thoroughly discussed by the Board. The principle of regular working hours in my opinion is of paramount importance, and when we take into consideration that for an average of four (4) hours' work a Longshoremen may have to be away from home ten (10) hours, Saturday afternoon should be included in the overtime rates.

B. Section 5. The Board was of the unanimous opinion that this clause should be deleted.

C. Section 6. For the same reason that Saturday afternoon should be included in overtime rates, Picnic Day should also be recognized as a holiday.

D. Section 8. Should be changed as desired by the Association, otherwise abuse is liable to creep in.

E. Section 10. To change the maximum working time without eating from six (6) to five (5) hours, was endorsed by all members of the Board.

F. Section 15. Revision of list of special commodities should be changed as desired.

G. Section 16. Men should receive ample time to cool off in a restful manner at regular rate of pay, before entering refrigerator, as protection for health.

H. Section 23. } The demands of the  
I. Section 26. } men regarding these sec-  
J. Section 27. } tions are so reasonable  
they require no com-

ment, and I understand the Federation is prepared to make several of the above changes as desired.

In conclusion I will say that in my opinion a Conciliation Board hearing is a very refined form of the class struggle. I consider that the differences between employers and employees can never be solved by a Conciliation Board. Before and after the Board was in session I spent a great deal of time acquainting myself with conditions on the Waterfront, and although I believe that I have a more thorough understanding of the day to day life of the workers than my two colleagues, because I belong to the wage earning class myself.

I am therefore convinced that no three men, regardless of whether they have a thorough understanding of Longshore work or not, should be allowed to be the final arbiters in a dispute which involves the lives, health, and safety of working men and their families.

(Sgd.) CHARLES M. STEWART.

## CANADIAN NATIONAL RAILWAY EMPLOYEES' BOARD OF ADJUSTMENT No. 2

### Summary of Recent Decisions

REPORTS have been received of six cases recently settled by the Canadian National Railways Employees' Board of Adjustment No. 2. Outlines of previous cases were given in the LABOUR GAZETTE, May, 1934, page 408, and in previous issues. The issue of August, 1930, contained a general summary of the proceedings of the Board, covering the period from January 1, 1928, to December 31, 1929; and a similar summary of proceedings from September 1, 1925, the date of the inception of the Board, to December 31, 1927, appeared in the issue of October, 1928, page 1060. The text of the memorandum of the

agreement made between the railways and the employees concerned for the establishment of the Board was given in these summaries.

The Canadian National Railways Employees' Board of Adjustment No. 2 was established for the purpose of disposing of outstanding grievances or disputes that might arise from the application, non-application or interpretation of the schedule of working conditions for "Clerks and other Classes of Employees as herein named," which are not adjusted between the officers of the railway and the representatives of the employees. The members of the Board are appointed for a term of one

year, subject to reappointment. The Board is composed of four members selected by the management and four members selected by the representatives of the employees concerned. The decisions of the Board are binding upon the parties to the agreement. Provision was made in the agreement constituting the Board for the appointment of an arbitrator in any case in which the Board might be unable to agree upon an award.

**Case No. 139—Operating Department,  
Central Region**

A firebuilder, while engaged in his duties was ordered off the locomotive by the foreman and later dismissed from the service on the ground that he was under the influence of liquor while on duty and further that he refused to obey his foreman's orders. The former charge was denied by a number of the fellow-employees of the dismissed man, who claimed reinstatement, with payment at the schedule rate for all time lost. The management adduced evidence in support of the charges, and stated that the past record of the man was unsatisfactory.

The Board denied the claim of the employees.

**Case No. 143—Operating Department,  
Atlantic Region**

In December, 1931, the management found it necessary to make a reduction in the roundhouse at Dartmouth, N.S., the staff being adjusted to take care of the requirements. Instead of a foreman and four classified labourers, staff was set up consisting of a day foreman, a night working chargehand and one classified labourer, the latter working the day shift. As the duties of the night man were largely restricted to those of a watchman in charge of one engine as well as watching the premises, he was classified as a working chargehand and placed on a monthly rate without overtime, his hours of duty being from 7 p.m. to 7 a.m. with time off every alternate Saturday night.

The employees contended that the changing of the classification of one of the men from classified labourer to chargehand was a violation of Article 11, Rule D of the schedule. They also contended that this employee's classification, hours of service and rate of pay should be re-established in accordance with the provisions of the schedule. The employees claimed further that the employee concerned should receive overtime payment as provided in Article 7, Rule A, for all time worked in excess of eight hours on each day since his classification was changed.

The Board denied the claim of the employees.

**Case No. 144—Operating Department,  
Atlantic Region**

A lady employed in the superintendent's office applied for the position of roadmaster's clerk, but her application was denied by the management although as the senior applicant she was entitled to the promotion in accordance with Article 3, Rule C of the Schedule for Clerks and other Classes of Employees. The management considered that female employees should not be permitted to occupy positions as roadmasters' clerks, this being the view held also by managements of other railways. It was considered to be bad practice to allow female employees to be around the yards or tracks in the exercise of their duties, and this was one of the railway's rules regardless of any schedule application.

The Board denied the claim of the employees, holding that the management was justified in declining to promote the applicant, as certain of the duties which a roadmaster's clerk is required to perform made it undesirable that this position should be occupied by a female.

**Case No. 148—Sleeping, Dining and Parlour  
Car Department, Winnipeg, Manitoba**

The claimant in this case, a sleeping car porter at Winnipeg, was employed from time to time as a porter, commencing May, 1924, being occasionally laid off on account of reductions in staff. On the current seniority list, his name appeared with the seniority date July 5, 1930. On that date he was re-employed as a porter after an interval of unemployment of about five years, during which period he reported for work each spring. The employees contended that the man's seniority status should date from July, 1925, as under Article 8 of the 1920 schedule he was entitled to re-employment when the staff was increased, with seniority dating from the time he entered the service. The management denied the claim on the ground that the earlier periods of the claimant's services were not sufficient to provide a basis for a seniority claim as from 1925.

The Board sustained the employees' claim, holding that the porter was entitled to seniority as from May, 1924, in accordance with the schedule rules, as it was claimed by the employees that he regularly reported for work each spring during the years 1926-1929, this claim not being denied by the management; and also because the evidence showed that during these years other employees with less service than the claimant were given employment.

### Case No. 149—Sleeping, Dining and Parlour Car Department, Winnipeg, Manitoba

A sleeping car porter was employed by the former Grand Trunk Pacific Railway from February, 1915, to May, 1919, when he took part in a strike. He was next employed by the C.N.R. as temporary porter in 1921, and was laid off in January, 1922, in a reduction of staff; he was re-employed subsequently at various intervals, being dismissed for cause in March, 1923, and being next taken on as a porter at Winnipeg in June, 1923. The employees contended that his seniority should date from 1915, the management claiming on the other hand that June, 1923, was the correct limit of seniority in this case.

The case was first heard at the meeting of the Board in February this year, when it was referred back to the parties. The Board was later advised that a satisfactory settlement had been reached and a request for the withdrawal of the case was granted.

### Case No. 150—Sleeping, Dining and Parlour Car Department, Winnipeg, Manitoba

This case concerned the seniority rights of a dining car steward who entered the service

in 1919 as waiter, being promoted in July, 1920, to the position of steward. This position he held for about five and a half months, after which, owing to a reduction in staff, he reverted to the position of waiter, being subsequently employed at intervals in the positions of cafe car steward, dining car steward, and steward waiter. The employees claimed that the man's seniority as dining car steward should date from July, 1920, when he first became dining car steward. The management refused the claim, contending that the seniority should date from June, 1926, as prior to that date he was not considered to possess the qualifications necessary to fill permanently a steward's position.

The Board sustained the employees' claim that the claimant should be given seniority in accordance with schedule rules, holding that the contention of the management that he was not qualified could not be conceded in view of the fact that the claimant had been permitted to work as a steward for five and a half months.

## STRIKES AND LOCKOUTS IN CANADA DURING JUNE, 1934

THE following table shows the number of disputes, workers involved and time loss for June, 1934, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in working days
*June, 1934..	24	3,278	34,483
*May, 1934..	32	3,954	36,846
June, 1933..	13	3,097	37,500

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time is frequently not received until some time after its commencement.

The number of strikes and lockouts, as well as the numbers of workers involved and the time loss in man-working days in June was lower than in May. Only one dispute in June, that involving metal miners and smelter workers at Flin Flon, Man., involved a large number of workers or caused substantial time loss, whereas in May there were several disputes of importance, including loggers in Vancouver Island, five strikes of coal miners in Nova Scotia and New Brunswick, three strikes of pulp and paper workers in Ontario and Quebec. In comparison with June, 1933, there was a considerable increase in the number of disputes, but the numbers of workers involved and the time loss were about the same as a year ago, there being at that time six disputes, which involved relatively large numbers of employees.

Six disputes, involving 261 workers, were carried over from May and eighteen disputes commenced during June. Of these twenty-four disputes, eleven terminated during the month, five being in favour of the employer concerned, two in favour of the workers involved while compromise settlements were reached in four cases. At the end of June, therefore, there were thirteen disputes in progress recorded as strikes or lockouts, namely: pulpwood cutters, Strickland, Ont.; metal miners, Flin Flon, Man.; two disputes of fur

factory workers, Toronto, Ont.; overall factory workers, Toronto, Ont.; knitting factory workers, Toronto, Ont.; paper mill workers, Dolbeau, P.Q.; furniture factory workers, Toronto, Ont.; spring and mattress factory workers, Toronto, Ont.; sawmill workers, Newcastle, N.B.; compositors, London, Ont.; musicians (radio), Montreal, P.Q.; and musicians (radio), throughout Canada.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are not longer affected, but which the unions concerned have not declared terminated. Information is available as to four such disputes, namely: photo-engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; lithographers, Toronto, Ont., April 15, 1932, one employer; and moulders, Peterborough, Ont., February 27, 1934, one employer. The dispute involving women's clothing factory workers (cloakmakers) employed by several firms in Toronto, commencing March 22, 1934, and carried in the above list for some time, is reported by the union to have lapsed by the beginning of June, and has consequently been removed from the list.

A cessation of work on April 9, by ten employees, continuing for two days, in a knitting factory at St. Catharines, Ont., was reported too late for inclusion in the LABOUR GAZETTE for May or June. An adjustment of piece rates was made as a result of negotiations.

A dispute involving cordwood cutters at South River, Ont., commencing April 16, 1934, was recorded in the June issue of the LABOUR GAZETTE as lapsed on May 31, the strikers having been replaced. Toward the end of June it was reported that the strikers were still picketing and intervention of the police was required.

A minor dispute involving truck drivers on highway construction near Sarnia, Ont., on June 23, has been reported. It appears that a small number of truckers demanded an increase in pay for drivers with trucks from 80 cents per hour to \$1.25, and that work was resumed the next working day. It is reported that an adjustment in rates was made.

A dispute during June involving internes, medical doctors, at a hospital in Montreal, P.Q., has been reported in the press. Not being an industrial dispute, it is not included in the record.

Longshoremen at Vancouver, B.C., on June 22, refused to unload a boat loaded at a United States port by strike breakers, a strike at

various Pacific ports being in progress. As the employers of the regular longshoremen did not require their employees to handle this freight, it is not recorded as a strike. The agents of the steamship secured other men for the work.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistence for which work is performed or may be required, are not included in the record, no relation of employer and employee being involved.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

**SHOE FACTORY WORKERS, TORONTO, ONT.**—As stated in the June issue of the LABOUR GAZETTE, this dispute was terminated on June 2, the union reporting that an agreement had been signed.

**FUR DRESSERS AND DYERS, TORONTO, ONT.**—At the end of the month this dispute appears to have lapsed, the strikers having been substantially replaced.

**PAPER MILL WORKERS, DOLBEAU, P.Q.**—A representative of the provincial Government mediated in this dispute during June but the union refused the employer's offer of a wage increase of ten per cent and held out for recognition of the union and the union scale. At the end of the month the employer arranged to reopen the mills with newly engaged paper-makers but the union declared the strike still in effect.

**RIVERMEN (SORTERS), GATINEAU POINT, P.Q.**—Employees of one company ceased work on June 27, demanding an increase in wages from 25c.-29½c. per hour for a ten-hour day to 40 cents per hour for an eight-hour day or thirty-five cents per hour for a ten-hour day. At the end of June a settlement was reached providing for a rate of 32½ cents per hour for a ten-hour day, and work was resumed at the beginning of July.

**METAL MINERS, FLIN FLON, MAN.**—Employees of one company operating a metal mine and a smelter ceased work on June 11 demanding recognition of the Mine Workers Union of Canada, increase in wages, the eight-hour day for all employees, and other changes in working conditions. The increase in wages demanded was the cancellation of a previous reduction effected through a deduction from pay of 15-18 per cent. Municipal authorities interviewed the parties to the dispute but a settlement was not reached by the end of June.

**METAL MINERS, NORANDA, P.Q.**—A number of the employees of one company operating a mine and smelter ceased work on June 12, demanding recognition of the Mine Workers' Union of Canada and a ten per cent increase in wages. It is reported that about five hundred out of 1,500 employees did not report for work, but that only 200 or 300, chiefly miners, were on strike, the others being intimidated by pickets. The union, however, was reported to have 500 members. The employer immediately began to replace the strikers and operations were reported not to be seriously affected. By June 20, 300 had been replaced and picketing ceased. A number of strikers were reported to have been arrested on charges of distributing leaflets illegally, intimidation, unlawful assembly, etc., and toward the end of the month some of these were sentenced to fines or imprisonment.

**FUR WORKERS, TORONTO, ONT.**—Employees in four establishments ceased work on June 13, demanding increases in wages, partial restoration of reductions previously made, and an unemployment insurance fund to which employers and employees would contribute. Toward the end of the month, at the request of the union, the International Fur Workers' Union of the United States and Canada, the Toronto representative of the Department arranged a conference between the representatives of the parties to the dis-

pute. Early in July an agreement was signed providing for wage increases of five per cent for those receiving \$29 per week and over, seven per cent for those receiving \$20 up to \$29, and ten per cent for those under \$20 per week. The arrangement for unemployment insurance was left in abeyance. Work was resumed on July 9.

**FUR WORKERS (COLLARS, CUFFS, ETC.), TORONTO, ONT.**—Employees in one establishment ceased work on June 28 alleging that workers had been laid off when work was sent out to contractors contrary to the provisions of the agreement in effect up to June 1, 1934. At the end of the month the dispute was un-terminated.

**MEN'S CLOTHING FACTORY WORKERS, ST. HYACINTHE, P.Q.**—Employees in one establishment ceased work on June 7, demanding a thirty per cent increase in wages and recognition of the Amalgamated Clothing Workers of America, also a reduction in hours from fifty-five and over per week to forty-eight. It was reported that some employees had been dismissed for union activity. As a result of the mediation of a committee of the municipal council an agreement was reached with the union providing for wage increases of ten per cent for those receiving less than \$10 per week and fifteen per cent for the others; hours not to exceed fifty-five per week. Work was resumed on June 25.

#### STRIKES AND LOCKOUTS IN CANADA DURING JUNE, 1934\*

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
<b>(a) Strikes and Lockouts in Progress prior to June, 1934</b>			
<b>MANUFACTURING—</b>			
<i>Boots and Shoes (Leather)—</i>			
Shoe factory workers, Toronto, Ont.....	48	96	Commenced April 25, 1934; to secure union wages and working conditions; terminated June 2, 1934; in favour of workers.
<i>Fur, Leather, Etc.—</i>			
Fur dressers and dyers, To- ronto, Ont.....	60	1,500	Commenced May 28, 1934; for increased wages and recognition of union; lapsed by end of June; in favour of employer.
<i>Pulp and Paper—</i>			
Paper mill workers, Dolbeau, P.Q.....	42	1,092	Commenced May 23, 1934, for increased wages with recognition of union; un-terminated.
<i>Printing and Publishing—</i>			
Compositors, London, Ont....	77	1,000	Commenced Mar. 1, 1934; for renewal of union agreement; un-terminated.
<i>Other Wood Products—</i>			
Furniture factory workers, To- ronto, Ont.....	12	200	Commenced May 15, 1934; alleged violation of agreement; un-terminated.
<i>Miscellaneous—</i>			
Spring and mattress factory workers, Toronto, Ont.....	22	545	Commenced May 15, 1934; for increased wages and reduced hours; un-terminated.

\*In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which working time was lost to an appreciable extent.

STRIKES AND LOCKOUTS IN CANADA DURING JUNE, 1934—*Concluded*

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
<b>(b) Strikes and Lockouts Commencing during June, 1934</b>			
<b>LOGGING—</b>			
Pulpwood cutters, Strickland, Ont.....	52	1,000	Commenced June 8, 1934; for increased wages and recognition of camp committee; untermi- nated.
Rivermen (sorters), Gatineau Point, P.Q.....	55	220	Commenced June 27, 1934; for increased wages; terminated June 30, 1934; compromise.
<b>MINING, ETC.—</b>			
Metal miners, Flin Flon, Man...	1,073	19,314	Commenced June 11, 1934; for increased wages, 8-hour day, improved conditions and recognition of union; untermi- nated.
Metal miners, Noranda, P.Q....	300	1,200	Commenced June 12, 1934; for increased wages and recognition of union; terminated June 20, 1934; in favour of employer.
<b>MANUFACTURING—</b>			
<i>Fur, Leather, etc.—</i>			
Fur factory workers, Toronto, Ont.....	52	832	Commenced June 13, 1934; for increase in wages and for unemployment insurance; untermi- nated.
Fur factory workers (collars, cuffs, etc.), Toronto, Ont....	33	99	Commenced June 28, 1934; alleged violation of agreement <i>re</i> sending out work; untermi- nated.
<i>Textiles, Clothing, etc.—</i>			
Men's clothing factory work- ers, St. Hyacinthe, P.Q.....	120	1,800	Commenced June 7, 1934; for recognition of union, increased wages and reduced hours; terminated June 23, 1934; compromise.
Women's clothing factory work- ers, Montreal, P.Q.....	25	200	Commenced June 8, 1934; for recognition of union and increased wages; terminated June 19, 1934; in favour of employer.
Overall factory workers, Toronto, Ont.....	70	980	Commenced June 15, 1934; for increased wages; untermi- nated.
Knitting factory workers, Toronto, Ont.....	25	450	Commenced June 18, 1934; alleged violation of agreement and for reinstatement of discharged worker; untermi- nated.
<i>Other Wood Products—</i>			
Shingle weavers, Vancouver, B.C.....	50	200	Commenced June 19, 1934; against reduction in wages in violation of agreement; terminated June 22, 1934; in favour of workers.
Sawmill workers, Cabano, P.Q.....	272	680	Commenced June 18, 1934; for increased wages; terminated June 20, 1934; compromise.
Sawmill workers, Newcastle, N.B.....	500	1,000	Commenced June 29, 1934; for increased wages; untermi- nated.
<b>TRADE—</b>			
Sorters, etc. (waste materials), Toronto, Ont.....	70	280	Commenced June 6, 1934; for increased wages, reduced hours and union recognition; terminated June 9, 1934; compromise.
Sorters, etc. (waste materials), Toronto, Ont.....	20	20	Commenced June 27, 1934; for employment of union members only; lapsed by June 30; in favour of employer.
<b>SERVICE—</b>			
<i>Recreational—</i>			
Musicians (radio), Montreal, P.Q.....	50	750	Commenced June 11, 1934; for increased wages and employment of union members only; untermi- nated.
Musicians (radio), throughout Canada.....	200	1,000	Commenced June 16, 1934, in sympathy with musicians on strike in Montreal on June 11; un- termi- nated.
Caddies (golf), Toronto, Ont..	50	25	Commenced June 16, 1934; for increased wages; terminated June 16, 1934; in favour of employer.

**WOMEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.**—Employees in two establishments ceased work on June 8 demanding recognition of the Industrial Union of Needle Trades Workers and increases in wages up to the provincial minimum wage scale for women. The union then made a complaint to the Minimum Wage Board. Work was resumed on June 18 in one establishment, the strikers being replaced. In the other establishment the strikers resumed work on June 20, the employer having made adjustments in wages but refusing union recognition. In connection with picketing a number of strikers were arrested on charges of assault and remanded for trial.

**OVERALL FACTORY WORKERS, TORONTO, ONT.**—Employees in two establishments ceased work on June 15 demanding a wage increase of 25 per cent, being the restoration of one of the reductions previously made by agreement with the union, the United Garment Workers of America. Toward the end of the month negotiations were carried on through the conciliation of a committee of the Toronto District Labour Council and a settlement was reached early in July providing for a ten per cent increase in wages and forty-four hours per week with extra pay for the last four hours. The union label, which had been withdrawn by the union during the strike, was restored. Work was resumed on July 4.

**SAWMILL WORKERS, CABANO, P.Q.**—Employees in one establishment ceased work on June 18 to secure an increase in wages of four cents per hour, the rates in effect being between fifteen cents and sixty-seven and one-half cents per hour for a ten-hour day. As a result of the conciliation of the Secretary of the Quebec Board of Conciliation and Arbitration negotiations between the parties were carried on and a satisfactory settlement was reached, work being resumed on June 21.

**SAWMILL WORKERS, NEWCASTLE, N.B., AND VICINITY.**—Employees in three establishments ceased work on June 29 to secure a minimum wage of \$2 per day, ten hours. Early in July as a result of conciliation by the Premier of New Brunswick, the Minister of Lands and Mines, a settlement was reached. About fifty longshoremen at Nelson, N.B., were reported to be indirectly affected. A number of bridge construction employees at Morrissey Bridge left work for a few hours to join a parade in support of the strikers.

**SORTERS, ETC. (WASTE MATERIALS), TORONTO, ONT.**—Employees in one establishment ceased work on June 6 to secure increased wages with a minimum rate of 30 cents an hour, a reduction in hours to forty per week, time and one-half rates for overtime, and recog-

nition of the General Workers' Union, affiliated with the Workers' Unity League. As a result of negotiations a settlement was reached providing for forty-five hours per week, a minimum rate of 26 cents per hour with increases for male employees, recognition of the union shop committee, the agreement to be in effect for one year. Work was resumed on June 11.

On June 27 a number of the employees, about twenty, were reported to have again ceased work demanding the closed union shop, but these were replaced.

**MUSICIANS (RADIO), MONTREAL AND THROUGHOUT CANADA.**—The members of the Montreal local of the American Federation of Musicians employed at four radio broadcasting stations at Montreal ceased work on June 11, when their demands for a higher scale of wages and the employment of union musicians only were refused. It is reported that out of five hundred members of the union at Montreal, about fifty were employed chiefly at the radio stations. One of these stations being that of the Canadian Radio Broadcasting Commission, a sympathetic strike of union musicians was called on June 16 at all the other stations of the Commission throughout Canada. It is estimated that 200 of the musicians affected were employed on regular programs which averaged half of their time. At the end of the month the dispute was unternminated. Early in July a settlement was reached as a result of negotiations between the chairman of the commission and the international president of the union. As was the case before the dispute the union scale in each locality where musicians are organized is to be paid, employment not to be confined to members of the union but a new union scale to be negotiated for Montreal.

---

A conference of the mayors of Ontario, held at Galt on June 21-22, adopted resolutions asking the Dominion and provincial Governments to assume the entire cost of emergency unemployment relief and recommending the provincial Relief Board to consent to the substitution of cash relief for the present system of goods orders. The Dominion Government was asked to undertake at once a study of the best means of establishing unemployment insurance and minimum wages for men. Reduction of the age limit for old age pensions from 70 to 65 years was also proposed.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue of February, 1934, in the review of Strikes and Lockouts in Canada and Other Countries, 1933. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible directly from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

### Great Britain

The number of disputes beginning in May was 44, and 17 were still in progress from the previous month, making a total of 61 disputes in progress during the month, involving 18,700 workers, with a time loss of 133,000 working days for the month. Of the 44 disputes beginning in May, 7 were over demands for advances in wages, 5 over proposed wage reductions and 9 over other wage questions, 16 over questions respecting the employment of particular classes or persons and 7 over other questions. Settlements were reached in May of 45 disputes, of which 11 were settled in favour of workers, 19 in favour of employers, and 15 ended in compromises; in one other dispute, work was resumed pending negotiations.

No report of a settlement of a dispute of plasterers and labourers in the principal towns of Scotland, involving directly and indirectly 2,000 workers, which began March 1, for an increase in wages, has been noted.

### Czechoslovakia

The number of disputes for the year 1933 was 215, involving 510 establishments and directly involving 34,942 workers, with a time loss of 368,264 working days for the year.

### France

A strike of 10,000 workers in porcelain factories at Limoges, began June 18, against a 10 per cent reduction in wages.

### Latvia

The number of disputes for the year 1933 was 246, involving 4,323 workers, with a time loss of 24,002 working days for the year.

### United States

Preliminary figures for 1933 show 1,373 disputes beginning in the year, involving 774,763 workers, with a time loss of 13,455,758 working days. This is the largest number of disputes occurring during any year since 1923 and the largest number of workers involved in disputes in any year since 1922, but very considerably less than the numbers involved in the years 1919 to 1922 inclusive. Figures for time loss are only available since 1927, and although the time loss for 1933 was greater than in any year from 1929 to 1932 inclusive, it is less than half of the time loss for either 1927 or 1928.

The number of disputes beginning in March, 1934, was 129, and 88 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 44,769 and the time loss 1,133,734 working days.

A strike of 7,000 typewriter factory workers at Norwood, Ohio, Syracuse and Ilion, New York, which began May 9, was terminated June 18 with the granting of union recognition and substantial wage increases with a 40-hour week.

Street railway and electrical workers employed by a public utilities company at Milwaukee, Wisconsin, were on strike for four days. A settlement was reached June 30 through the intervention of federal government officials, and the company agreed to negotiate with their employees according to the provisions of the National Industrial Recovery Act.

The strike of longshoremen at ports on the Pacific Coast which began May 9 and was mentioned in the last issue of the *LABOUR GAZETTE*, was still in effect at the end of the first week of July. Disorders occurred when attempts were made by employers to open the ports under police protection.

The City Council of St. Johns, Quebec, has adopted a community garden plan for the unemployed. Unemployed persons desiring to participate in the plan are required to register their names at the office of the unemployment relief committee, and the city will rent land, and make it available for gardening.

## LABOUR LEGISLATION ENACTED BY THE PARLIAMENT OF CANADA IN 1934

THE Parliament of Canada which was in session from January 25 to July 3, 1934, enacted a number of laws of labour interest, including new statutes providing for unemployment relief and the construction of public works, a revision of shipping legislation and amendments to Acts relating to technical education and the regulation of companies.

### Relief Act, 1934

The text of the Bill which has now become the Relief Act, 1934, was printed in the April issue of the LABOUR GAZETTE at page 341. The Bill, which is, generally, similar in its terms to the Relief Act, 1933, passed without further change and received the Royal Assent on April 20, 1934.

### Technical Education Act, 1934

The Technical Education Act, 1934, extends for a further period of five years the time within which the unexpended portion of the ten millions dollars appropriated under The Technical Education Act, 1919, may remain available for the purposes of the Act.

### Picketing

Section 12 of an Act to amend the Criminal Code amends section 501 of the Code by adding as clause (g) of the section the proviso:—

(g) Attending at or near or approaching to such house or other place as aforesaid, in order merely to obtain or communicate information, shall not be deemed a watching or besetting within the meaning of this section.

This clause was originally enacted in Canada in 1876 as part of the section dealing with picketing which was adopted from the Conspiracy and Protection of Property Act, 1875, of the United Kingdom. The proviso was omitted from the section in 1892 when the criminal law of Canada was codified. The Trades and Labour Congress of Canada has for many years asked for the reinstatement of this clause.

The section now reads:—

Every one is guilty of an offence punishable on indictment or on summary conviction before two justices, and liable on conviction to a fine not exceeding one hundred dollars, or to three months' imprisonment with or without hard labour, who, wrongfully and without lawful authority, with a view to compel any other person to abstain from doing anything which he has a lawful

right to do, or to do anything from which he has a lawful right to abstain,—

- (a) uses violence to such other person, or his wife or children, or injures his property; or
- (b) intimidates such other person, or his wife or children, by threats of using violence to him, her or any of them, or of injuring his property; or
- (c) persistently follows such other person about from place to place; or
- (d) hides any tools, clothes or other property owned or used by such other person, or deprives him of, or hinders him in, the use thereof; or
- (e) with one or more other persons, follows such other person in a disorderly manner, in or through any street or road; or
- (f) besets or watches the house or other place where such other person resides or works, or carries on business or happens to be.
- (g) attending at or near or approaching to such house or other place as aforesaid, in order merely to obtain or communicate information, shall not be deemed a watching or besetting within the meaning of this section.

### Canada Shipping Act

The events leading up to the revision of the Canada Shipping Act were outlined by the Hon. Alfred Duranleau, Minister of Marine, to the House of Commons. When Confederation was formed in 1867, he stated, Canadian shipping was governed almost entirely by the merchant shipping laws or acts of the United Kingdom, because they were expressed to apply throughout the whole empire. Shortly after Confederation Canada commenced to enact merchant shipping legislation of her own under the authority granted by the British North America Act. When the revision of the Canadian statutes took place in 1906 the commissioners who were entrusted with that revision had to gather all these separate Acts and put them into one Act which they called the Canada Shipping Act; and from that date the Canada Shipping Act was amended from time to time. The British Merchant Shipping Act required that when the laws enacted by Canada or any other Dominion were different from those contained in the Imperial Act, they had to be reserved until they were confirmed and approved by His Majesty the

King. This situation remained until 1926 when at the Imperial Conference of that year representations were made as to the limitations contained in the British law, and it was resolved at that conference that an expert committee and sub-conference be set up to "study, to consider and report on the principles which should govern, in the general interest, the practice and legislation relating to merchant shipping in the various parts of the Empire, having regard to the changes in constitutional status and general legislation which have occurred since existing laws were enacted." This conference on the shipping laws met in London in 1929, and its recommendations were to the effect that the limiting provisions of the Imperial statutes should be entirely wiped out. The recommendation was given effect to in the Statute of Westminster in 1931. Thus, for the first time, Canada is entirely free to enact any legislation with regard to shipping matters, and when necessary to give her legislation an extra-territorial effect without any reference to or without limitation by the Imperial statutes.

In 1931 the different parts of the Empire came to an agreement which laid down the main lines along which legislation should be enacted in the different Dominions. This convention is known as the British Commonwealth Merchant Shipping Agreement, and covers briefly: (1) common statutes in ownership, registration, etc., of British ships; (2) standards of safety; (3) extra-territorial operation of laws; (4) equal treatment; (5) ships' articles, internal discipline, and engagement and discharge of seamen; (6) certificates of officers; (7) shipping enquiries; (8) relief and repatriation of seamen; wages and effects of deceased seamen; (9) offences on board ship, and (10) general provisions.

It was in the light of the Statute of Westminster and the shipping agreement that the Department of Marine undertook in 1932 and in the first part of 1933 to formulate a shipping code which when enacted would give Canada full power over Canadian ships wherever they might be, and over all other British and foreign ships when they were within Canadian territory. In the new draft code were incorporated the provisions of the Safety of Life at Sea and Load Line conventions which were adopted in London by the leading Maritime nations in 1929 and 1930. These conventions were enacted into law in Canada in 1931 (LABOUR GAZETTE, September, 1931, page 981).

The resulting Bill was presented in the Senate in 1933, where it was referred to the Standing Committee on Banking and Com-

merce. Subsequently the Bill was re-drafted and was re-introduced this year in its present form.

The revised Canada Shipping Act will come into effect on Proclamation of the Governor in Council and may be proclaimed in whole or in part, as may be deemed advisable. The Act comprises sixteen parts among which are parts dealing with recording, registering and licensing; certificates of officers; seamen; relief and repatriation of distressed seamen and seamen left abroad; sick mariners and marine hospitals; pilotage; steamship inspection service; wrecks, salvage and investigations into shipping casualties; navigation; collisions, limitation of liability; coasting trade of Canada. In addition there are a number of schedules containing the text of certain international conventions referred to in the Act as well as various forms and regulations. The statute incorporates numerous sections of the old Canada Shipping Act and of the Merchant Shipping Act of Great Britain, and the Safety of Life at Sea and Load Line Conventions Act. Sections which had been added from time to time to the Canada Shipping Act to put into effect Draft Conventions of the International Labour Conference have been included in the new statute. Of these the sections enacted in 1933 to implement the draft conventions of the 1929 Conference regarding the protection of workers loading and unloading ships and the marking of weight on heavy packages had not been proclaimed in force. The new statute also contains provisions implementing the Draft Convention covering seamen's articles of agreement, and that concerning the repatriation of seamen, both of which were adopted at the International Labour Conference of 1926 (LABOUR GAZETTE, July, 1926, pages 684-687). Part III of the Act deals with seamen.

#### *Engagement of Seamen*

The master of every British ship other than home-trade ships, inland waters ships and minor waters ships of less than fifty register tons must enter into an agreement with every seaman whom he engages in Canada under penalty of a fine of \$20. An agreement is to be signed by the master before being signed by a seaman, and must be in a form approved by the Minister of Marine and must show the surname and other names of the seaman, his age or date of birth, state clearly the rights and obligations of each of the parties, and contain the following particulars—the name of the vessel or vessels on board which the seaman undertakes to serve; either the nature and, as far as practicable, the duration of the

intended voyage or engagement, or the maximum period of the voyage or engagement, and the places or parts of the world, if any, to which it is not to extend; the number and description of the crew specifying how many are employed as sailors, if possible the place and date at which each seaman is to be on board, or to begin work; the capacity in which such seaman is to serve, the amount of his wages, and the scale of provisions to be furnished him; the time agreed upon, if any, which is to expire after arrival of the ship before the seaman shall be discharged; any regulations as to conduct on board and as to the fines, short allowance of provisions or other lawful punishment for misconduct which have been approved by the Minister and which the parties agree upon; particulars of the deck line and load lines specified in the ships' load line certificate. The agreement must be so framed as to admit of such stipulations, to be adopted at the will of the master and seaman in each case whether respecting the advance and allotment of wages or otherwise, as are not contrary to law or to the Seamen's Articles Convention. It must state the place at which it was completed and the date. If the master of a ship, registered at a port outside of Canada, has an agreement with the crew made according to the law of that port and engages single seamen in Canada those seamen may sign such agreement instead of one in the form approved by the Minister of Marine.

The agreement made in Canada in the case of foreign-going ships registered either within or without Canada, is to be signed by each seaman in the presence of a shipping master who is to give reasonable facilities for its examination by the seaman, cause it to be read and explained to him, or otherwise ascertain that he understands it before he signs it, and attest the signature. When the crew is first engaged the agreement is to be signed in duplicate, one part being retained by the shipping master and the other by the master and must contain a special place or form for the signatures and descriptions of substitutes or persons engaged subsequently to the first departure of the ship. Where a substitute is engaged to fill the place of a seaman who duly signed the agreement and whose services are lost by death, desertion, or other unforeseen cause, within twenty-four hours of the ship's putting to sea, the engagement is to be made before a shipping master if practicable, and if not, the master must as soon as possible cause the agreement to be read and explained to the substitute and signed by him before a witness. Agreements may be made for a voyage or, if the voyages of the ship

average less than six months, may extend over two or more voyages, in which case they are termed running agreements. Running agreements are not to extend beyond six months from the date of their making or the first arrival of the ship at her destination in Canada after that period or the discharge of cargo consequent upon that arrival. On every return to a port in Canada before the final termination of a running agreement the master must make thereon an endorsement as to the engagement or discharge of seamen, either that none has been made or is intended to be made before the ship leaves port or that all those made have been according to law. A maximum fine of \$100 may be imposed on a master wilfully making a false statement in such an endorsement. The master must deliver the endorsed agreement to the shipping master who, if satisfied that the provisions of the law have been complied with, will sign the endorsement and return it. The duplicate running agreement retained by the shipping master on the first engagement of the crew is to be kept by him until it expires.

In the case of home-trade ships for which an agreement with the crew is required, such agreement may be made either for service in a particular ship, or in two or more ships belonging to the same owner. In the latter case the names of the ships and the nature of the service must be specified. Engagement before a shipping master is at the option of the master of the ship, but if the engagement is not so made the master must, as soon as possible, cause the agreement to be read and explained to each seaman and signed in the presence of a witness. An agreement for service in two or more ships belonging to the same owner may be made by the owner. In the case of a ship making short voyages, running agreements with the crew may be made to extend over two or more voyages or for a specified time not exceeding six months but the owner or his agent may enter into time agreements, in forms sanctioned by the Minister, with individual seamen, to serve in any one or more ships belonging to such owner. Such agreements need not be limited to six months and a duplicate must be forwarded to the Minister within forty-eight hours after it has been made. The same rules as to endorsement of agreements on return and retention of duplicate agreements by the shipping master obtain in the case of home-trade ships as in the case of foreign-going ships.

With respect to inland waters ships and minor waters ships, crews and single seamen must, if the ship is over eighty tons register,

and may if she is of lesser tonnage, be engaged in the same manner as prescribed for home-trade ships. Other provisions relating to agreements in the case of inland and minor waters ships are similar to those for home-trade ships except that running agreements in the former case may extend to nine months and no rule is laid down for endorsement of agreement or retention of duplicates by the shipping master.

A foreign sea-going ship may not be given clearance without a certificate from the shipping master to the effect that the provisions of Part III of the Act have been complied with. The master of a foreign-going or home-trade ship whose crew has been engaged before a shipping master must, before finally leaving Canada, sign and send to the nearest shipping master a statement in approved form of every change which takes place in his crew before finally leaving Canada and such statement shall be admissible in evidence. A fine not exceeding \$25 may be imposed for failure without reasonable cause to comply with this provision. In the case of a foreign-going ship the shipping master is to grant the master a certificate that the law respecting the agreement with the crew has been complied with, and the certificate must be produced to the officer of customs before proceeding to sea. The master of such a ship must deliver his agreement with the crew to a shipping master within forty-eight hours of the ship's arrival at her final port of destination in Canada or of the discharge of the crew whichever first happens. A maximum penalty of \$25 may be imposed for non-compliance and clearance inward may not be granted to a ship until a certificate of delivery of the agreement is produced. The master of a home-trade, inland waters or minor waters ship of fifty tons or over must likewise deliver his agreement to a shipping master within twenty-one days after its termination under a like penalty and receive a certificate of such delivery.

At the beginning of every foreign voyage the master must cause a legible copy of the agreement to be posted in some place accessible to the crew. A fine not exceeding \$25 may be imposed for failure to comply with this provision. Any erasure, alteration or interlineation in an agreement, except for shipping substitutes, etc., is inoperative unless proved to have been made with the consent of all parties interested by the written attestation of a shipping master, justice of the peace or other public functionary, or, outside of His Majesty's Dominions by a British consular officer or, failing such, two respectable British merchants. Fraudulent alteration of an agreement is an indictable offence. Where the

master of a ship registered in Canada engages a seaman in any part of His Majesty's Dominions or in a port where there is a British consular officer, such engagement must be before a superintendent or officer of customs and at a port where there is a British consular officer the master must procure the sanction of such officer before carrying the seaman to sea, and if not contrary to the law of the port, engage the seaman before him. The master must request the officer to endorse upon the agreement an attestation to the effect that it has been signed in his presence and otherwise made as required by the Act, and if the officer is a British consular officer that it has his sanction. If such attestation is not made, the burden of proving that the agreement was made as required by the Act is upon the master. For failure to comply with these provisions a maximum penalty of \$100 may be imposed.

#### *Rating and Discharge*

A seaman is not to be entitled to the rating of A.B. (able-bodied seaman) unless he has served three years before the mast on a sea-going ship, but the employment of fishermen on decked deep sea fishing vessels is only to count as sea service up to two years of that employment; and the rating of A.B. will only be granted after at least one year's sea service in a trading vessel in addition to two or more years' sea service on board of decked fishing vessels.

When a seaman serving in a foreign sea-going ship or in a home-trade ship of over fifty tons register, whether registered in Canada or not, is, on the termination of his agreement, discharged in Canada, he must, whether the agreement be for the voyage or a running agreement, be discharged before a shipping master. If the master or owner of a home-trade ship of less than fifty tons register, or an inland waters or minor waters ship so desires, the seamen of that ship may be discharged in the same manner. A master or owner who contravenes this provision is liable to a fine not exceeding \$50.

The master must sign and give to a seaman discharged from his ship, either on his discharge or on payment of his wages, a certificate of discharge in approved form, specifying the period of his service and the time and place of his discharge, but not containing any statement as to his wages or the quality of his work unless requested by the seaman. Non-compliance renders a master liable to a fine not exceeding \$50.

Where a seaman is discharged before a shipping master, the master must make and sign a report, in approved form, of the con-

duct, character and qualifications of the seaman, or may state in the said form that he declines to give any opinion thereon, and, if the seaman so desires, the shipping master is to give him a copy of such report. The shipping master must forward such reports to the Minister to be recorded. Any person knowingly making a false report of character or forging or fraudulently altering a certificate or report or assisting in committing any of these offences or fraudulently using a certificate or report, is guilty of an indictable offence.

### *Wages*

Except where payment is by a share of the profits the master or owner of a foreign seagoing ship registered in Canada must pay each seaman his wages, if demanded, within three days after the delivery of the cargo, or upon the seaman's discharge, whichever first happens. Where a seaman is discharged before a shipping master in Canada his wages must be paid through or in the presence of the shipping master unless a competent court directs otherwise. A penalty of not more than \$50 is provided for a breach of this rule. The master must before paying off or discharging a seaman, deliver an account in approved form, of the seaman's wages and any deductions therefrom. The account must be delivered to the seaman twenty-four hours before his discharge or payment off, if he is not to be discharged before a shipping master. If he is to be so discharged, it must be given him before he leaves the ship or delivered to the shipping master twenty-four hours before the seaman's discharge or payment off. The penalty for failure to comply with this provision is a fine of not more than \$25. No deductions from wages are allowed unless included in the account except in respect of a matter happening after delivery. The master must keep a record of deductions and produce it, if required, at the time of paying wages. Where a master disrates a seaman he must enter a statement in the log book and furnish the seaman with a copy of the entry and any reduction of wages consequent on disrating is not to become effective until such entry is made and statement furnished. Payment of wages in currency other than that agreed upon is to be made at the rate of exchange for the money stated in the agreement.

An agreement may contain a stipulation for payment to or on behalf of the seaman conditionally on his going to sea of a sum not exceeding one month's wages. Any other agreement by or on behalf of an employer of a seaman conditionally on his going to sea

is void and money paid thereunder may not be deducted from the seaman's wages or recovered at law. Where a seaman wilfully or through misconduct fails to join his ship after negotiating an advance note received under his agreement or deserts before the note becomes payable, he is liable to a fine not exceeding \$25 or at the discretion of the court to imprisonment for a maximum period of twenty-one days. On being satisfied that a seaman has wilfully or through misconduct failed to join his ship, the shipping master is to make a report to the Minister who may direct that any of the seaman's certificates of discharge shall be withheld for such period as he may think fit, during which period any person having custody of the necessary documents may refuse to furnish copies of his certificates of discharge or extracts relating to service or character.

A stipulation by a seaman for an allotment of any part of his wages during his absence is to be inserted in the agreement with the crew and state the amounts and times of payment. Where the agreement is required to be made in proper form the seaman may require that a stipulation be inserted therein for the allotment by means of an allotment note of any part not exceeding one-half of his wages in favour of a near relative or of a savings bank. A shipping master or other person before whom a seaman is engaged must offer such allotment notes. Payment under such notes is to begin at the end of one month from the date of the agreement and to be made monthly thereafter and only in respect of wages earned before the date of payment. The sum received by a savings bank in pursuance of an allotment may be paid out only on application made by the seaman himself through a shipping master or the Minister or in case of the seaman's death by some person to whom his property may be paid under the Act. Where the balance of wages due a seaman exceeds \$50 the master must if the seaman so desires give him facilities for remitting so much of the balance as is in excess of \$50 to a relative or a savings bank in whose favour an allotment note may be made. He is under no obligation to give such facilities, however, while the ship is in port if the sum will become payable before the ship leaves port, or otherwise than conditionally on the seaman going to sea in the ship. A master failing to comply with this rule is liable to a fine not exceeding \$25.

Provisions relating to rights in respect of wages are similar to those of the former Canada Shipping Act. A section from the Merchant Shipping Act of Great Britain has been added, however, providing that when-

ever, in any proceeding relative to seamen's wages, it is shown that a seaman or apprentice has, in the course of the voyage been convicted of an offence by a competent tribunal and rightfully punished, the court may direct any part of the wages due the seaman, not in excess of \$15, may be applied to the costs incurred by the master in procuring the conviction and punishment. A new section provides that whenever the service of a seaman belonging to a ship registered in Canada, terminates, by mutual consent of seaman and master, at any port in or out of Canada before the date contemplated by the agreement such seaman is entitled to be paid off before he leaves the ship and his wages are to be payable up to the time he leaves her. Provisions dealing with the mode of recovering wages are also similar to those of the old Act.

A section of the Merchant Shipping Act has been adopted empowering a court hearing a dispute between a master or owner and a seaman or apprentice, to rescind any contract between the parties or any contract of apprenticeship upon such terms as the court may deem just.

#### *Property of Deceased Seamen*

Provisions adopted from the Merchant Shipping Act of Great Britain enable a master to sell by auction the effects of a deceased seaman, entering in the log book a description of each article and the sum received therefor. Where a seaman or apprentice dies and the ship touches a foreign port, remaining there for forty-eight hours, the master must report the death to the British consular officer, or, if the port be in the United Kingdom or one of His Majesty's Dominions to the Superintendent of a Mercantile Marine Office or the Chief Officer of Customs. Such officer may require the master to deliver to him the effects of the deceased seaman, giving a receipt, and endorse upon the agreement any particulars required by the Minister. The receipt must be delivered to a shipping master within forty-eight hours of arrival of the ship at her destination in Canada. In case the ship comes directly to Canada or the official at a foreign port has not required delivery of the effects, the master must deliver them to the shipping master at port of destination in Canada within forty-eight hours of arrival. A master failing to comply with these provisions is held accountable for the property of the deceased seaman to the Minister and liable to a fine not exceeding treble the value of the property not accounted for, or, if such value is not ascertained, not exceeding \$250. If the property is not duly delivered and accounted for the owner of the

ship is liable therefor and in default of payment is liable to the same penalty as the master. If a deceased seaman leaves property abroad but not on the ship the Superintendent of a Mercantile Marine Office or the chief officer of customs, in the case of the United Kingdom or a British Dominion, or the nearest British consular officer in other cases is authorized to take charge of the property for which he must account, and which he must forward to the Minister who will dispose of it according to the order of the court having jurisdiction in the matter. Where a seaman is lost with the ship, the wages due him may be recovered by the Minister in the same manner as the wages of the deceased seaman and apprentices. Any person is guilty of an indictable offence who for the purpose of obtaining for himself or any other person any property of a deceased seaman or apprentice forges or fraudulently alters any document or makes use of such forged or altered document or knowingly gives false evidence or makes a false representation.

#### *Discipline*

Provisions from the Merchant Shipping Act of Great Britain which have been added include one permitting a seaman who intends to absent himself from his ship or his duty, to give forty-eight hours' notice to the owner or master in which case the court is not to exercise any of the powers conferred by the Act for causing him to be conveyed on board as a deserter or absent without leave.

Provision is also made for the arrest of deserters from ships registered in other parts of His Majesty's Dominions and also if reciprocal facilities are given from ships registered in foreign countries. In the latter case an order of the Governor in Council is necessary before the provisions become effective.

In case of desertion from a ship in a port out of Canada the master must produce the entry of such desertion in the official log book to the person authorized by the Act to grant certificates for leaving seamen behind abroad and request that person to make and certify a copy of the entry, which copy he must transmit to the Minister. A shipping master must keep at his office a register of deserters and show the list on request to the master of a ship.

A fine imposed on a seaman for any act of misconduct for which his agreement imposes a fine is to be deducted in the following manner: If the offender is discharged in Canada and the offence and the entry in the log book required by the Act, are proved to the satisfaction of the shipping master before whom the offender or the crew, as the case may be, is discharged, the master or owner

is to deduct the fine from the wages of the offender. If the offender is discharged abroad and the offence is proved to the satisfaction of the proper authority by whose sanction he is discharged, the fine is to be deducted as aforesaid and an entry made in the official log book of the ship signed by the said authority. The master must pay the fine to the shipping master or proper authority under penalty. An act of misconduct for which a fine has been inflicted and paid by or deducted from the wages of a seaman may not be otherwise punished under the Act.

#### *Log Book and List of Crew*

The log-book and list of crew must be kept in a form approved by the Minister. Provisions regarding keeping of the log are similar to those in the old Act. Rules for the list of crew are adopted from the Merchant Shipping Act of Great Britain. The list must contain, among other particulars, the length and general nature of the voyage or employment; the names, ages and places of birth of all the crew including the master and apprentices, their ratings on board, their last ships or other employments, and the dates and places of their joining the ship; the names of any of the crew who have ceased to belong to the ship, and of any who have been maimed or hurt, with the times, places, causes, and circumstances thereof; the wages due at the time of death to any of the crew who have died, and the property belonging to any such with the manner in which it has been dealt with and the money for which any part has been sold. The master of a foreign seagoing ship must deliver the log-book of the voyage and the list of the crew to a shipping master before whom the crew is discharged within forty-eight hours after the ship's arrival at her port of destination in Canada or upon the discharge of the crew whichever first happens. The master or owner of a home-trade ship for which an official log is required must within twenty-one days of the thirtieth of June and the thirty-first of December in each year deliver the log and list of the crew for the preceding six months to a shipping master in Canada. The log must also be sent home in case of transfer of ownership or of loss or abandonment of ship.

#### *Relief and Repatriation of Distressed Seamen and Seamen Left Abroad*

The provisions relating to relief and repatriation of seamen are taken mainly from the Merchant Shipping Act of Great Britain, as amended in 1906, with a few additions to bring the law into harmony with the Draft

Convention on Repatriation of Seamen adopted at the International Labour Conference of 1926.

The Governor in Council is empowered to make regulations to carry into effect any scheme proposed by the government of any part of His Majesty's Dominions relating to the relief and repatriation of seamen; the payment of the expenses of medical attendance, maintenance, burial, and repatriation in cases of illness or injury; the dealing with effects of deceased seamen and with wages of seamen left behind by ships; and the recovery of any expenses connected with those matters. If a seaman is left behind out of Canada the master must enter in the log-book a statement of his effects left on board and the wages due him and on the termination of the voyage furnish within forty-eight hours to the proper officer accounts in approved form of such effects and wages, and of expenses caused to the master or owner by the absence of the seaman if such absence is due to desertion or other offence. The master must deliver the wages and effects to the proper officer if he will receive them and is entitled to be reimbursed out of them any sums shown in the reimbursement account. He may be required to furnish evidence as to such sums being properly chargeable. Where several seamen are left behind the accounts may, at the option of the master, be dealt with collectively. These provisions do not apply in cases where the master does not exercise his option to deal with the accounts collectively and where either the amount of wages less deductions for allotments and advances under the agreement appears to be less than \$25 or the master satisfies the proper officer that the net amount of wages due the seaman is less than \$20. Further exceptions are made for cases where the question of forfeiture of wages has been dealt with in proper legal proceedings and where the master satisfies the proper officer that the seaman has left no effects on board and no wages are due him.

The master may not discharge a seaman at any place out of Canada (except at a port in the country in which he was shipped) without the sanction of the proper authority endorsed on the agreement, but that sanction may not be refused where discharge takes place on termination of service. The authority may, and if not a merchant, must examine into the grounds of discharge and may administer oaths and may grant or refuse sanction but may not withhold it unreasonably. A master failing to comply with this provision is guilty of an indictable offence.

Where a master discharges a seaman out of Canada, he must give him a certificate of discharge in approved form.

Where the seaman's service terminates at a foreign port otherwise than by the consent of the seaman, the master must make provision for his maintenance and for his return to the port at which he was shipped or a port in the country to which he belongs or any other port agreed to by the seaman. If he is repatriated as a member of a crew, he is entitled to wages for any work done during the return voyage. Distressed seamen, whether British subjects or not, who have been domiciled in Canada for a year before the commencement of a voyage may be returned to a proper return port at the expense of the government in accordance with regulations made for that purpose. Clothing and maintenance until their departure for such port may also be provided. Fines and deductions from wages of seamen must be paid to the shipping master or to the proper authority out of Canada if he is satisfied that there has been an offence. Temporary provision for distressed seamen in Canada may be made by the Minister of Marine, the expenses of which may be recovered from the master, owner or agent of the vessel to which the seaman belongs.

Some amendments have been made in the part of the Act relating to Steamship Inspection Service, mainly bringing it into line with the provisions of the Merchant Shipping Act, 1932, in regard to the Safety and Load Line Conventions of the leading maritime nations, signed at London in 1929 and 1930 respectively. These conventions had been enacted in Canada by a statute of 1931, but are now made part of the Canada Shipping Act. The dockers' convention of the International Labour Conference of 1929 is dealt with by giving the Governor in Council power to make regulations for the protection of workers engaged in loading and unloading ships having regard in particular to the strength and fitness of the machinery and other equipment, the provision of safe gangways, stagings, rails, etc., and to the provision for caring for any injured workers. He may also appoint an inspector of ships' tackle. The marking of the weight on heavy packages is required in accordance with the draft convention of the International Labour Conference of 1929.

#### **Liability of Directors for Wages**

In the new Dominion Companies Act, the section of the former Act regarding the liability for the wages of the clerks, labourers, servants and apprentices of a company has

been replaced by a section similar to that of the Ontario Companies Act. As before, the directors of a company are jointly and severally liable for an amount not exceeding six months' wages due for work performed for the company. A director, however, is not liable under this section unless the company has been sued for the debt within one year after it has become due and execution is returned unsatisfied in whole or in part or unless the company has gone into liquidation or been wound up and a claim for the debt has been filed and proved. A director must be sued while he is a director of the company concerned or within one year after he has ceased to be a director. He is only liable for the amount remaining unsatisfied if execution has been made. If the claim is proved in liquidation or winding-up proceedings and the director pays the debt, he is entitled to any preference the creditor would have been entitled to.

#### **R.C.M.P. Pensions**

An Act to amend the Royal Canadian Mounted Police Act makes provision for pensions for widows and orphans of members of the Force. Under the former Act, free pensions of one-fiftieth of final pay and allowances for each year of service up to 35 years were provided for constables, but no provision was made for dependants. Officers could contribute five per cent of their pay on account of a similar pension for themselves with half the amount to widows and allowances to children. The amendment requires constables to contribute a minimum of five per cent of their pay towards a fund for pensions for their widows and children. Supplementary contributions may be made at a certain rate if the constable wishes to increase the pension.

#### **Public Works Construction Act**

The Public Works Construction Act provides for the construction of the public works specified in the Act at a cost not exceeding in the aggregate the sum of forty million dollars. In the preamble to the Act it is pointed out that this construction work is undertaken in the public interest to accelerate recovery to more normal economic conditions.

A joint conference of the needle trades in Quebec will be held at Montreal in September under the auspices of Mr. Gustave Francq, chairman of the Minimum Wage Board, for the purpose of discussing problems affecting these trades, in particular the wide spread in wages and hours of labour as between Montreal and outside districts.

## COLLECTIVE LABOUR AGREEMENTS EXTENSION ACT OF QUEBEC

### Applications for Extension of Agreements in (1) Shoe Industry at Montreal; (2) Construction Trades at Montreal; (3) Painting Trade at Quebec; (4) Electrical Industry at Three Rivers.

NOTICE of three applications for the extension of agreements under the provisions of the Collective Labour Agreements Extension Act of the Province of Quebec (LABOUR GAZETTE, May, 1934, page 417) were published in recent issues of the *Quebec Official Gazette* as follows:—

RESPECTING an application for the extension of a collective labour agreement by "La Fédération Catholique Nationale des Travailleurs en Chaussures du Canada," by the Quebec Shoe Manufacturers' Association and by The Shoe Manufacturers Association of Canada, Quebec Province Division.

Pursuant to article 4 of the Act respecting the extension of Collective Labour Agreements (24 Geo. V. ch. 56):—

Notice is hereby given by the Honourable Mr. C. J. Arcand, Minister of Labour, that, jointly, La Fédération Catholique Nationale des Travailleurs en Chaussures du Canada, The Quebec Shoe Manufacturers' Association and The Shoe Manufacturers' Association of Canada, Quebec Province Division, have presented, this day, a request to the effect that the collective labour agreement entered into between, on the one part: La Fédération Catholique Nationale des Travailleurs en Chaussures du Canada; and, on the other part: (a) The Quebec Shoe Manufacturers' Association (representing 22 companies, persons or corporations);\* (b) The Shoe Manufacturers' Association of Canada, Quebec Province Division (representing 32 persons or corporations);\* be made obligatory for all employees and employers of the boot and shoe industry according to the following conditions:

I. The minimum rates of wages for male employees engaged in the boot and shoe trade shall be fixed according to the trade classes A, B, C and D hereinafter designated and for each of the economic zones hereinafter described, wherein the boot and shoe factories above mentioned are operating. These wages shall be paid fully in cash.

**Class A.**—Comprises experienced operators with at least six months' experience in the operations on which they are employed, and includes: cutters of upper leather for outsides, by hand or clicking machine; assembling and lasting-room employees; lasting by hand or machine or assembling by hand or machine; operators on pull-over; nigger-head, side lasting, flat bed, stapling, heel and seat lasting, pounding, sole laying (whether by McKay, standard screw or cement process) machines; operators employed on welting, rough rounding, lockstitch, heeling, heel trimming, heel scouring, edge trimming, heel slugging, McKay sewing, puritan F. S., Littleway sewing, levelling, wood heel seat trimming, wood heel fitting, wood heel attaching (by machine or by hand), standard screw, pegging, loose nailing, heel slugging,

edge setting, sanding bottoms, Naumkeag, treeing; and cutters of outsoles, classifiers of leather soles or insoles, insole channellers, channellers of McKay outsoles, and strippers of sole leather.

1. In factories, situated at Montreal and within the radius of ten miles around the Island of Montreal; Operators with more than six months' experience: 40 cents per hour; Apprentices, the first six months: 26 cents per hour.

2. In factories situated in other municipalities having a population of 3,000 or more persons; Operators with more than six months' experience: 38 cents per hour; Apprentices, the first six months: 25 cents per hour.

3. In factories situated in municipalities with a population less than 3,000 persons; Operators with more than six months' experience: 36 cents per hour; Apprentices, the first six months: 24 cents per hour.

**Class B.**—Comprises experienced men having at least six months' experience in the operations on which they are employed not including Class A operators, but including: Sole laying, stitch separating, Goodyear levelling, jointing, heel seat nailing, heel breasting, in-seam trimming, heel finishing, bottom polishing, re-cutting blocked shoes, cutting middle soles, tap soles, slip soles, top pieces, insoles, leather box toes or counters, reducing shanks on McKay outsole, channel opening on outsoles, soles fitting (appareilleurs), moulding soles or insoles, rounding insoles.

1. In factories situated at Montreal, and within a radius of ten miles around the Island of Montreal; Operators with more than six months' experience: 34 cents per hour; Apprentices, the first six months: 21 cents an hour.

2. In factories situate in other municipalities having a population of 3,000 or more persons; Operators with more than six months' experience: 32 cents per hour; Apprentices, the first six months: 20 cents per hour.

3. In factories situated in municipalities with a population less than 3,000 persons; Operators with more than six months' experience: 30 cents per hour; Apprentices, the first six months: 19 cents per hour.

**Class C.**—Comprises experienced boys having six months' experience in the operations on which they are employed, not included in Class A or Class B operations, but including: cutting of trimmings and linings, sorting out lasts, tacking insoles (by machine or by hand), pulling out tacks, fastening shanks, bottom filling, pulling out lasts, examining and making minor repairs, repairing damaged shoes, welt beating, upper trimming, welt knife, fudge wheeling, re-lasting, second relasting, heel breast scouring, heel seat trimming, skiving welt butts, wheeling by hand, stamping bottoms, wheeling on bottoms, painting and gumming bottoms, brushing and cleaning uppers, cutting small leather pieces or cutting tongues, back straps, felt bottom filling, welted shanks, fabric box toes, heel pads, etc., skiving outsoles, insoles and shanks, gaugers, gemming or general table work.

1. In factories situated at Montreal, or within a radius of ten miles around the Island of

\*Names are omitted.

Montreal; Boys with more than six months' experience: 18 cents per hour; Apprentices, the first six months: 15 cents per hour.

2. In factories situated in other municipalities having a population of 3,000 or more persons; Boys with more than six months' experience: 17 cents per hour; Apprentices, the first six months: 14½ cents per hour.

3. In factories situated in municipalities with a population less than 3,000 persons: Boys with more than six months' experience: 16 cents per hour; Apprentices, the first six months: 14½ cents per hour.

*Class D.*—Comprises helpers not including men or boys employed on any Class A, Class B or Class C work but including: floor sweepers, messengers, boys employed as helpers or general assistants on any class of work or helpers to operators of machines or any other minor or general work of any nature, and boys employed in Chaking lasts, returning lasts to bins, cleaning uppers, soles, etc., wetting soles, rubbing down channels, cementing channels, glueing heels, channel turning, fastening shanks, inking edges and heels, etc.

1. In factories situated at Montreal and within a radius of ten miles around the Island of Montreal: 13 cents per hour.

2. In factories situated in other municipalities having a population of 3,000 or more persons: 12½ cents per hour.

3. In factories in municipalities with a population of less than 3,000 persons: 12½ cents per hour.

II. In the case of piece workers, it shall be sufficient that at least 80 per cent of the employees in each class, viz: A, B, C and D, hereinabove described, receive the minimum wage above set out.

III. The territorial jurisdiction determined in the present agreement shall extend to all the Province of Quebec.

IV. The present agreement shall be in force for a period of twelve months from the date of its approval by the Lieutenant-Governor in Council. It shall continue in force after such period unless notice of discontinuance be given in writing by one or the other of the contracting parties or by both. Such notice of discontinuance must be given on or before the first of May in any year and shall become effective the first of July following.

Within thirty days from the date of the publication of this notice, the Honourable Minister of Labour will receive objections which interested parties may desire to make against the request contained in the present petition.

Quebec, June 9, 1934.

GERARD TREMBLAY,  
Deputy Minister.

RESPECTING *an application for the extension of a collective labour agreement by the Chambre de Construction de Montréal, Incorporée, (Montreal Builders' Exchange, Inc.), le Conseil des Syndicats des Métiers de la Construction de Montréal Incorporé, and Le Conseil des Métiers de la Construction de Montréal et de la Banlieue.*

Pursuant to Article 4 of the Act respecting the extension of collective labour agreements (24 Geo. V, ch. 56):

Notice is given by the Honourable Mr. C. J. Arcand, Minister of Labour, that, jointly, the Chambre de Construction de Montréal, Inc. (Montreal Builders' Exchange, Inc.), the Conseil des Syndicats des Métiers de la Construction de Montréal and the Conseil des Métiers de la Construction de Montréal et de la Banlieue, have presented, this day, a petition to the effect that the collective labour agreement entered into between, On the one part:

La Chambre de Construction de Montréal, Inc., (Montreal Builders' Exchange, Inc.), having its head office at 118, New Birks Building, Montreal; and, on the other part: Le Conseil des Syndicats des Métiers de la Construction de Montréal, Incorporé, 1231 Demontigny Street East, Montreal; and Le Conseil des Métiers de la Construction de Montréal et de la Banlieue, 415 Sainte Catherine Street East, Montreal; be made obligatory for all employees and employers of the said trades, according to the following conditions:—

I. The rate of wages shall be the following for each of the trades mentioned below:—

Trade	Wage rate per hour
Bricklayers.. . . .	.70
Carpenters and joiners.. . . .	.60
Cement finishers.. . . .	.60
Electricians.. . . .	.65
Hod carriers.. . . .	.45
Labourers—common.. . . .	.35
Lathers—metal.. . . .	.65
Lathers—wood.. . . .	.55
Marble setters.. . . .	.70
Masons, stone.. . . .	.70
Ornamental iron workers:—	
Erectors.. . . .	.60
Helpers.. . . .	.50
Painters.. . . .	.60
Plasterers.. . . .	.67
Roofers—slate and tile.. . . .	.60
Roofers—composition.. . . .	.45
Sheet metal workers.. . . .	.60
Tile setters.. . . .	.65
Terrazzo Layers.. . . .	.55
Plumbers and Steamfitters.. . . .	.65
Stationary engineers.. . . .	.55

NOTE.—The labour contract entered into between the Chambre de Construction de Montréal, Inc., (Montreal Builders' Exchange, Inc.), and the Conseil des Métiers de la Construction de Montréal et de la Banlieue, has no fixation of the rate of wages of the two latter trades hereinabove indicated, to wit: plumbers and steamfitters and stationary engineers.

II. The hours of labour will be in conformity with the provisions of the Order in Council No. 1253 of June 14, 1933, for the putting into force of the Act respecting the limiting of working hours (23 Geo. V, ch. 40).\*

III. The territorial jurisdiction determined by the present agreement shall comprise and include in addition to the Island of Montreal and the Ile Bizard, the following counties: L'Assomption, Joliette, Terrebonne, Laval, Two Mountains, Argenteuil, Vaudreuil, Soulanges, Beauharnois, Chateauguay, Laprairie, Chambly and Verchères.

IV. Notwithstanding paragraph one (1) of the present conditions, it is stipulated and agreed that, in all the municipalities of the

\*Labour Gazette, July, 1933, page 701.

jurisdiction determined in the preceding paragraph (3) and whereof the population is less than 5,000 persons at the last census of the Dominion of Canada, the general building contracts whereof the total cost, salaries and material included, is less than \$5,000, shall be subject to the following rate of wages:—

Trade	Wage rate per hour
Bricklayers..	.50
Carpenters and joiners..	.45
Cement finishers..	.40
Electricians..	.45
Hod carriers..	.30
Labourers—common..	.25
Lathers—metal..	.40
Lathers—wood..	.35
Marble setters..	.50
Masons—stone..	.50
Ornamental iron workers:—	
Erectors..	.40
Helpers..	.35
Painters..	.40
Plasterers..	.40
Roofers—slate and tile..	.40
Roofers—composition..	.35
Sheet metal workers..	.40
Tile setters..	.40
Terrazzo layers..	.40
Plumbers and steamfitters..	.45
Stationary engineers..	.40

NOTE.—The labour contract entered into between the *Chambre de Construction de Montréal, Inc.*, (*Montreal Builders' Exchange, Inc.*), and *Le Conseil des Métiers de la Construction de Montréal et de la Banlieue*, has no fixation of the rate of wages of the two later trades hereabove indicated, to wit: Plumbers and steamfitters and stationary engineers.

It is however clearly understood and agreed that all general building contracts whose total cost, salaries and material included, amounts to \$5,000 and over and carried on within the same jurisdiction, the wage rates specified in paragraph one (1) shall govern.

V. It is expressly stipulated that building contracts granted and signed before the adoption of the Order in Council approving this petition, are not governed by the provision of the present agreement.

VI. The present agreement shall be in force from the date of the publication in the *Quebec Official Gazette* of the Order in Council approving the present petition, and shall remain in force until the 31st of March, 1935.

Within thirty days from the publication of the present notice, the Honourable Minister of Labour will receive objections which interested parties may desire to make against the request contained in the present petition.

Quebec, June 16, 1934.

GERARD TREMBLAY,  
Deputy Minister.

RESPECTING an application for the extension of a Collective Labour Agreement by the "Union Nationale Catholique des Peintres de Québec, Incorporée."

In conformity with article 4 of the Collective Labour Agreements Extension Act (24 Geo. V, ch. 56).

Notice is hereby given by the Honourable the Minister of Labour, Mr. C. J. Arcand, that "L'Union Nationale Catholique des Peintres de Québec, Incorporée" has this day presented a petition to the effect that the collective agreement entered into between, on the one part: (names of sixteen painting contractors omitted); and, on the other part: "L'Union Nationale Catholique des Peintres de Québec, Incorporée", be made obligatory for the employees and employers of the said trade, according to the conditions hereinafter set forth:

1. The words "journeyman painter" signify and include any person doing painting work either with a paint brush or pneumatic machine, varnishing, painting, decorating, papering or imitation or gilding.

2. Notwithstanding the foregoing definition (paragraph 1), any one holding a certificate of competence either from the Board of Examiners created in virtue of Article 7 of the Collective Labour Agreements Extension Act, or from his professional association, pursuant to article 10 of the same Act, shall be considered as a journeyman painter.

3. The salary of the journeymen painters shall be forty (40) cents per hour.

4. Any work done outside the regular hours will be paid time and a half until midnight, and double time after midnight.

5. For the carrying out of the provisions of article 12 of the Collective Labour Agreements Extension Act, the economic zone of the present agreement includes the judicial district of Quebec, without prejudice however as to the obligation for the parties signing the said agreement, to comply with the exigencies of the present agreement, when they will carry on their activities outside of the above stated territorial jurisdiction.

6. The hours of labour shall be in conformity with the provisions of Order in Council No. 1496 of the 12th of July, 1933, in conformity with the Act respecting the limiting of working hours (23 Geo. V, ch. 40).

7. The duration of the present agreement will extend from the date of the signing thereof to the 30th of April, 1935.

8. If the parties desire to modify or repeal the present agreement, they must give notice to that effect to the other party before the 1st of March, 1935.

Within thirty days from and after the publication of this notice, the Honourable the Minister of Labour will receive any objections which the interested parties may desire to make against the request contained in the present petition.

GERARD TREMBLAY,  
Deputy Minister.

Quebec, June 16, 1934.

RESPECTING an application for the extension of the collective labour by the *Union Nationale Catholique des Electriciens des Trois-Rivières*.

Pursuant to article 4 of the Act respecting the extension of collective labour agreements (24 Geo. V, Ch. 56):

Notice is given by the Honourable Mr. C. J. Arcand, Minister of Labour, that the *Union Nationale Catholique des Electriciens des Trois-Rivières* has presented this day a request to the effect that the collective labour

agreement entered into on the one part: (Various electrical contractors—names omitted). And on the other part: The Union Nationale Catholique des Electriciens des Trois-Rivières, be rendered obligatory for the employees and the employers of the aforesaid trade, according to the following conditions:

1. The electrical trade comprises electrical apprentices and journeymen, as defined by the Act respecting electricians and electrical installations (Ch. 178, R.S.Q., 1925, amended by 23 Geo. V, Ch. 70).

2. The rate of wages will be the following: Journeymen licensed by the Provincial Board of Examining Electricians 45 cents per hour.

Apprentices, first year, 15 cents per hour.

Apprentices, second year, 18 cents per hour.

Apprentices, third year, 20 cents per hour.

Apprentices, fourth year, 25 cents per hour.

3. The hours of labour shall comply with the provisions of the Order in Council No. 1496 of July 12, 1933 in the carrying out of the Act respecting the limit of working hours (23 Geo. V, Ch. 40); there shall be no work on Sundays, holidays of obligation, the feast of Saint Jean Baptiste, Good Friday and Labour Day.

4. In the case of non-application or of derogation granted by the proper authority, with regard to the hours of labour, the rate of time and one half will be paid to journeymen and apprentices for any overtime work.

5. The territorial jurisdiction determined by the present agreement comprises the district placed under the jurisdiction of the Board of Examining Electricians of Trois-

Rivières, to wit: the counties of Berthier, Maskinongé, Laviolette, Saint Maurice, Champlain, Nicolet and Yamaska.

6. The duration of the present agreement extends from the 1st of August, 1934, to the 1st of August, 1935.

7. The travelling expenses and time of travel of the workmen sent outside the town will be at the sole charge of the contractors; time and one-half will not be paid during the trip.

During the thirty days from the publication of this notice, the Honourable Minister of Labour will receive any objections which interested parties may desire to make against the request contained in the present petition.

Quebec, June 30, 1934.

GERARD TREMBLAY,

Deputy Minister.

### Other Applications

Applications for the extension of the following agreements under the provisions of the Act were recently noted in the *Quebec Official Gazette*, the agreements being outlined in this issue of the LABOUR GAZETTE in the article entitled "Recent Industrial Agreements and Schedules of Wages": (1) Between the Association of Construction Contractors of Sherbrooke and the Central Council of Catholic and National Unions of Sherbrooke; (2) Between general contractors and brick-laying masonry and plastering contractors on one hand and the Building Trades Council in Quebec and neighbouring counties.

## MINIMUM WAGES FOR WOMEN IN QUEBEC

### Orders Governing Food Industries and Stores

THE following orders of the Quebec Minimum Wage Board were published in the *Quebec Official Gazette*, June 30, 1934:

#### ANNEX "A"—ORDER NO. 14A\*

Montreal, May 31, 1934.

The operations performed by female workers in the food industries as covered by Order No. 14a may be described as follows:

Female work comprises all manipulations of the product immediately after baking or after the primary process in industries such as biscuit, candy, bread and cakes, chocolate, etc. In industries such as canning, preserving, etc., it starts just after reception. The manipulation of heavy containers weighing over 35 pounds is usually left to men.

#### OPERATIONS

To stack, spread, place, drop, cream, dip, top, double, bottle, deposit, divide, feed, ornament, separate, brush, detach, decorate, fill, glue,

pack, receive, wrap, form, set up, tie, close, label, stitch, prepare, cut, pick, sort, clean, wash, dry up, by hand, the products or merchandises and containers of all sorts, in trays on fixed tables or conveyers and on machines to stack, spread, place, drop, cream, stencil, dip, top, double, fill, ornament, deposit, pack, wrap, form, set up, tie, close, label, stitch, cut, clean, wash, dry up.

To inspect, check, count, measure, weigh, merchandises and containers.

To prepare samples.

To pick up and weigh broken and scraps.

To keep and check time and piece work.

To deliver and transfer between departments.

To clean, wash, and dry up returnable and non-returnable containers (except barrels), trays, machines, moulds, tables, recipients.

To sweep and keep up.

ORDER NO. 18.—*Governing female employees and males when replacing females in any class of employment in departmental stores, chain stores and retail stores.*

\*Order No. 14 (provisory) governing the food industries was given in the LABOUR GAZETTE, April, 1934, page 330.

**I. Minimum.**—No wage shall be less per week than is set forth in the following table:

Population groups	Experienced workers	Inexperienced help months
Montreal and Island	\$12 50	6 at \$ 7 00 6 at 8 00 6 at 9 50 6 at 11 00
Quebec, Three Rivers, Sherbrooke, Hull, and cities over 25,000 population	11 00	6 at 6 00 6 at 7 00 6 at 8 00 6 at 9 00

(a) These rates for a maximum of 48 hours, or for the usual number of hours normally worked per week in the establishment, if less than 48.

(b) Overtime must be paid for at proportionate rates.

(c) Part time employees are subject to the above minimum rates per hour plus an advance of 12½ per cent.

(d) Extra help engaged exclusively on Fridays and Saturdays shall not be counted as part time employees; they shall be paid at the regular rates but are not entitled to the 12½ per cent advance.

Population groups	Experienced workers	Inexperienced help months
Cities and towns between 10,000 and 25,000	\$10 00	6 at \$6 00 6 at 7 00 6 at 8 00 6 at 9 00
Cities and towns between 5,000 and 10,000	9 00	6 at 6 00 6 at 7 00 6 at 8 00

(a) These rates are for a maximum of 54 hours, or for the usual number of hours normally worked per week in the establishment, if less than 54.

(b) Overtime must be paid for at proportionate rates.

(c) Part time employees are subject to the above minimum rates per hour plus an advance of 12½ per cent.

(d) Extra help engaged exclusively on Fridays and Saturdays shall not be counted as part time employees; they shall be paid at the regular rates but are not entitled to the 12½ per cent advance.

**2. Maximum of Inexperienced Employees.**—The number of inexperienced employees shall not exceed twenty-five per cent of the total female working force.

**3. Deduction for Absence.**—No deduction below the minimum wage line for absence shall exceed the value of the time lost.

**4. Waiting Time.**—Any employee required to wait on the premises shall be paid for the time thus spent.

**5. Permits.**—On request of employees, the Board may issue special permits to workers who are physically handicapped or over 50 years of age to work for lower wages than prescribed in this Order. It may also grant permits of variation or suspension of any of these regulations in case of exceptional conditions. Employers and employees are invited to consult the Board regarding any problems which this Order may concern.

**6. Discharge of Employees.**—No employer shall discharge or threaten to discharge or in any way discriminate against any employee because such employee has lodged a complaint with the Board or has testified or is about to testify in any investigation or proceedings permitted or prescribed by or taken under the provisions of this Act.

**7. Penalties.**—Any violation of this Order is punishable by fine or imprisonment (See Section 12 of the Act).

**8. Definition.**—This Order governs all employees of departmental stores, chain stores, and retail stores of all descriptions, excepting employees of restaurants located in these establishments.

**9.** This Order shall not apply to individuals, firms or corporations employing not more than two female employees, nor to cities and towns with less than 5,000 population.

**10. Posting.**—Each establishment shall keep a copy of this Order posted in a conspicuous place where the employees have access.

**11.** This Order is subject to annual revision by the Board.

**12.** This Order shall come into force and be effective on September 1, 1934.

GUS FRANCO, Chairman,  
OMER BRUNET,  
C. J. GRIFFIN,  
EUG. RICHARD.

Montreal, June 20, 1934.

## BRITISH COLUMBIA BOARD OF INDUSTRIAL RELATIONS

### Orders under the Hours of Work Act, the Male Minimum Wage Act, and the Female Minimum Wage Act

THE Hours of Work Act which was passed by the British Columbia Legislature at its session this year (LABOUR GAZETTE, June, 1934, page 510), to take effect on proclamation, was, by an order issued by the Provincial Secretary on June 17, proclaimed as effective as from June 14, 1934. This Act is administered by the Board of Industrial Relations recently established under the provisions of the Male Minimum Wage Act (LABOUR GAZETTE, June, 1934, page 511), which Board also administers

that Act and the Female Minimum Wage Act. The Board consists of the following members: Mr. Adam Bell, Deputy Minister of Labour (chairman); Professor W. A. Carrothers (chairman of the Economic Council); Mrs. Helen Gregory MacGill, former judge of the Juvenile Court of Vancouver; Mr. James Thompson, past president of the Vancouver and District Trades and Labour Council; and Mr. C. J. McDowell, of McDowell and Mann, engineers, of Victoria.

## Hours of Work Act, 1934

The following regulations under the Hours of Work Act, 1934, were published by the Board of Industrial Relations on June 14:—

### REGULATIONS

#### *Lumbering East of the Cascades*

1. (a) Persons employed in sawmills, planing-mills, and shingle-mills situate in that part of the province lying east of the Cascade mountains may work one hour per day in excess of the limit prescribed by section 3 of the Act, but the total hours worked in any week shall not exceed fifty-four (54).

(b) In the industrial undertakings referred to in clause (a) of this regulation, the limit of hours of work thereby fixed may be exceeded by one hour per day on five days of each week for the purpose of making a shorter work-day on one day of the week, but the total hours worked in any week shall not exceed fifty-four (54).

(c) In sawmills, planing-mills, and shingle-mills situate in that part of the province lying east of the Cascade mountains, and which are operated with a single shift of engineers, firemen and oilers, the engineers, firemen, and oilers may work overtime to the extent of one and one-half hours per day, to cover preparatory and complementary work, in addition to the said fifty-four (54) hours per week set forth in clauses (a) and (b) of this regulation.

#### *Lumbering, Night Shift*

2. Persons employed in sawmills, planing-mills, and shingle-mills on night shifts may work a total of forty-eight (48) hours each week in five nights in lieu of forty-eight (48) hours each week in six nights, but the number of hours worked in any night must not exceed ten (10).

#### *Logging*

3. Persons employed in:—

- (1) The logging industry in: (a) Booming operations; or (b) Transporting logs by logging-railway, motor-truck, flume, horse, or river-driving; or (c) Transporting workmen or supplies for purposes of the said industry; (d) or in the operation and upkeep of donkey-engines.

#### *Fish-canning*

- (2) Canning fish or manufacturing by-products from fish, but not those engaged in salting fish; and in

#### *Cook and Bunk Houses*

- (3) Cook and bunk houses in connection with any industrial undertaking,—

are hereby exempted from the limits prescribed by section 3 of the said Act to the extent necessary to surmount extraordinary conditions which cannot reasonably be otherwise overcome.

#### *Engineers, Firemen, and Oilers*

4. In all industrial undertakings which use steam as a motive power and which are operated with a single shift of engineers, firemen, and oilers, the engineers, firemen, and oilers may work overtime to the extent of one and one-half hours per day to perform preparatory or complementary work, in addition to the maximum hours of work prescribed by section 3 of the Act.

#### *Shipping Staff*

5. Persons employed as members of the shipping staff in industrial undertakings where shipping operations are of an intermittent nature may work such hours in addition to the working hours limited by section 3 of the said Act as (but only so many as) shall be necessary to surmount extraordinary conditions which cannot reasonably be otherwise overcome.

In determining extraordinary conditions the decision of the Board shall be final, and where the Board is of opinion that, under the provisions of this regulation, the working hours limited by section 3 of the Act are being unduly exceeded, the Board shall, by written notification to the management, exclude the industrial undertaking from the provisions of this regulation for such period of time as the Board considers advisable.

#### *Emergency Repairs*

6. While engaged upon repair work requiring immediate performance, persons employed in shipyards, engineering works, machine shops, foundries, welding plants, sheet-metal works, belt works, saw works, and plants of a like nature may work such hours in addition to the working hours limited by section 3 of the said Act as (but not more than) may be necessary to prevent serious loss to, or interruption in the operation of, the industrial undertaking for which the repairs are being made.

#### *Seasonal Boxes and Shooks*

7. Persons employed in the manufacture of wooden boxes or wooden containers for shipment or distribution of fish, fruit, or vegetables may work during the months of June, July, August, and September in each year such hours in excess of the limit prescribed by section 3 of the said Act as may from time to time be necessary to fill urgent orders.

#### *Seasonal Soft Drinks Delivery*

8. During the months of May, June, July, August, and until the 15th day of September in each year, delivery salesmen engaged solely in the distribution of non-alcoholic bottled beverages may work such hours in excess of the hours limited by section 3 of the said Act as may be necessary to surmount exigencies of the trade.

#### *Laundries*

9. Persons employed in laundries may, in any week in which a public holiday (other than Sunday) occurs, work on each of the remaining working days of the week such hours in excess of the limit of hours prescribed by section 3 of the said Act as may be necessary to avoid serious interference with the business of the industry, but the total hours worked in any such week shall not exceed forty-eight (48).

#### *Seasonal Lithographing*

10. During the months of May, June, July, August, September, and October in each year persons employed in the lithographing industry may work such hours in excess of the hours prescribed by section 3 of the said Act as may from time to time be necessary to fill urgent orders. This exemption shall only apply when sufficient competent help is not available.

#### *Temporary Exemptions*

11. Temporary exemptions will be allowed by the Board by the granting of written temporary exemption permits limiting by their terms the

extent thereof, but only upon being satisfied by application in writing, signed by the applicant or some one thereunto duly authorized, of the urgency and necessity for the exemption, that it is of a temporary nature, and that no other means of adequately overcoming such temporary urgent condition is, or has been, reasonably available, and that the additional working hours applied for will not be more than will suffice for the extra pressure of work requiring the same.

#### *Overtime Record*

12. Every employer shall keep a record in the manner required by subsection (1) of section 9 of the said Act of all additional hours worked in pursuance of section 6 of the said Act or in pursuance of any regulation.

13. Every employer shall notify, by means of the posting of notices in conspicuous places in the works or other suitable place, where the same may readily be seen by all persons employed by him, the hours at which work begins and ends, and, where work is carried on by shifts, the hours at which each shift begins and ends; also such rest intervals accorded during the period of work as are not reckoned as part of the working hours; these hours shall be so fixed that the duration of the work shall not exceed the limits prescribed by the "Hours of Work Act, 1934," or by the regulations made thereunder, and when so notified they shall not be changed except upon twenty-four hours' notice of such change posted as hereinbefore specified, and in all cases of partial or temporary exemption granted by the Board of Industrial Relations under sections 11 and 12 of the Act or Regulation 11 above, a like notice of the change in working hours shall be posted, which notice shall also state the grounds on which the exemption was granted.

Made and given at Victoria, British Columbia, this 14th day of June, 1934.

BY BOARD OF INDUSTRIAL RELATIONS

### **Male Minimum Wage Act**

ORDER No. 6 *respecting a Minimum Wage in the Occupation of Taxicab Drivers\**

Pursuant to the provisions of the "Male Minimum Wage Act," being chapter 47 of the Statutes of British Columbia, 1934, the Board of Industrial Relations hereby orders:—

(1) That where used in this Order the expression "taxicab-driver" means and includes an employee in charge of or driving a motor vehicle with seating accommodation for seven passengers or less than seven passengers, used for the conveyance of the public and which is driven or operated for hire.

(2) The minimum wage for every employee employed as a taxicab-driver shall be the sum of two dollars and fifty cents (\$2.50) per day.

(3) This Order shall apply to taxicab-drivers and their employers in the City of Vancouver, the City of Victoria, the Municipality of the Township of Esquimalt, the Municipality of the District of Oak Bay, and the Municipality of the District of Saanich.

Dated at Victoria, B.C., this 13th day of June, 1934.

\* Previous orders under this Act were given in the LABOUR GAZETTE, May, 1934, page 419.

### **Female Minimum Wage Act**

ORDER No. 3A (EMERGENCY) *varying Order No. 3 relating to the Fruit and Vegetable Industry\**

Pursuant to sections 4 and 13 of the "Female Minimum Wage Act," being chapter 48 of the Statutes of British Columbia, 1934, the Board of Industrial Relations hereby orders that Order No. 3 of the Board relating to the Fruit and Vegetable Industry, dated the 2nd day of May, 1934, be varied as follows:—

1. By adding to clause 2 thereof the following proviso:—

"Provided that in cases where experienced female employees in the fruit and vegetable industry are required to work in excess of eight (8) hours but not exceeding ten (10) hours in any one day, in order to handle or deal with perishable fruits and (or) vegetables which have been delivered to the plant or plants of their employer or employers in larger quantities than can be handled or dealt with within eight (8) hours in any one day, the minimum wage for every such employee shall be not less than the sum of twenty-seven cents (27c.) per hour."

2. By adding to clause 3 thereof the following proviso:—

"Provided that in cases where inexperienced female employees in the fruit and vegetable industry are required to work in excess of eight (8) hours but not exceeding ten (10) hours in any one day, in order to handle or deal with perishable fruits and (or) vegetables which have been delivered to the plant or plants of their employer or employers in larger quantities than can be handled or dealt with within eight (8) hours in any one day, the minimum wage for every such employee shall be not less than the sum of twenty-five cents (25c.) per hour."

Dated at Victoria, B.C., this 12th day of June, 1934.

### **Minimum Wages in Manitoba**

The Minimum Wage Board of Manitoba, on June 15, published the following regulations:

(1) That all male workers of eighteen (18) years or over shall receive not less than 25 cents per hour, except where the worker is mentally deficient, physically unfit, or where exceptional circumstances prevail, when a special permit of exemption or modification may be procured from the Board.

The above-mentioned clause to be inserted in all regulations.

(2) That wages shall be paid weekly in cash and after each week's wages have been earned they shall be paid within three days, and that this clause be inserted in all the regulations.

\* Order No. 3 of the Board was given in the LABOUR GAZETTE, May, 1934, page 420.

## VOCATIONAL EDUCATION IN ONTARIO

*By Mr. F. S. Rutherford, Director of Vocational Education for Ontario*

UNDOUBTEDLY the greatest need of the world to-day is a revival of prosperity. Governmental and private agencies are employing their utmost resources to overcome the forces responsible for the present deplorable conditions of affairs, and to restore to their countries a measure of economic stability. The generation now at school will be confronted with similar perplexing problems in the future; and those in charge of the present educational machinery should not lose sight of the fact that the boys and girls of to-day will be the men and women of tomorrow upon whose shoulders these responsibilities will fall. The main aim of education, therefore, should be so to equip these future citizens, mentally, physically and morally, that they will be capable of adapting themselves to the revolutionary changes which are constantly taking place, and able to deal wisely and courageously with whatever problems may present themselves for solution.

The vocational schools hold a unique place within the educational system of Ontario. The courses are designed with the set purpose of training the youth of this province to take an active part in the industrial, commercial and agricultural development of the country.

Among the conclusions arrived at by the Dominion Commission on Industrial Training and Technical Education was "that education should have regard to the growth of the powers of the body, mind and spirit concurrently, and that it should have regard to the preparation of the pupil for later life as an individual, as a working earner, as a citizen, and as a member of the race." In Ontario the extension of the scope of education to include vocational as well as cultural training has exemplified these aims and proved of benefit to thousands of young people as a preparation for life, in training them for contact with the world of industry and commerce. It was early realized that technical education cannot stand alone, but must be supported by a sound general education side by side with a program of bodily development and character-building. The vocational school curriculum has been organized on these principles from the outset. The courses in the different years are soundly predicated upon proficiency in academic scholarship; and physical education and moral leadership are essential features of the plan.

Apart from the handicap imposed in certain localities by overcrowded conditions, all indications point to satisfactory progress having been maintained throughout the vocational

schools during the past year. Lack of accommodation, caused by the discontinuance of building and a steady increase in day school enrolment, has been overcome to some extent by "staggering" classes and otherwise dovetailing subjects of study. Day school enrolment rose from 24,513 in 1927-28 to 36,938 in 1932-33, an increase of over fifty per cent in five years, while building in the same period has remained practically at a standstill.

At the Vocational School Principals' Conference, held in Toronto this spring, the Principal of the London Technical and Commercial School outlined the highly successful "staggered" organization adopted in that institution by means of which the capacity of the school has been increased by one-half. A modified form of the same procedure has been introduced in several other centres where lack of space presented serious problems. This annual meeting of Vocational Principals constitutes a useful forum for the discussion of the particular problems affecting the organization and management of vocational schools or departments. Valuable contributions are made as to the relationship which should exist between the principal, the school board, and the department. Such topics as adult education, vocational guidance, accommodation and equipment, text-book revision and costs, staff duties and qualifications, and the courses of study best suited to particular needs, serve to form the basis of interesting and informative debate.

Departmental endeavour is now being concentrated on improving the teaching ability of the instructors, on the assumption that to produce a more efficient teacher is to help solve, to a large degree, the difficulties of the pupil. Quite voluntarily, many teachers have accepted a standing invitation to submit to the inspectors for examination and comment examples of their courses of study. Helpful suggestions have been made as to content matter and presentation, and constructive criticism has been offered where necessary. Experience has shown that the interchange of ideas thus established has been of considerable advantage to the teachers and incidentally to the children under their charge.

Instruction in industrial, home-making, technical and art subjects has continued along the usual channels during the past year. The investigating commissioners were unanimous that agriculture should be taught as a vocational subject. In this connection, despite discouraging apathy on the part of rural school

boards and others who should be deeply concerned in such a development, Ontario has consistently pressed forward towards the goal of eventually incorporating agricultural vocational classes in rural high schools, in addition to the stimulation which has been given this subject in public and separate schools throughout the province. At present there are three vocational agricultural high schools operating under the Vocational Education Act—at Beamsville, Renfrew and Ridgetown. In an endeavour to expand the work, an experiment is being conducted at Stamford High School with the express purpose of introducing into the high school curriculum a course of study of actual, practical value to a rural community. Such a course is intended, not only to give instruction in the fundamental sciences related to agriculture, but to provide an opportunity for the acquirement of considerable practical knowledge under actual farm conditions in co-operation with adjacent farms. Realizing that in many secondary schools serving rural areas, a large percentage of the pupils leaving school necessarily turn to cultivating the soil for a livelihood, the department is anxious to awaken in local school boards an interest in the benefits to be derived from the study of such scientific subjects as Bacteriology, Agricultural Chemistry, Soil Physics, Animal Husbandry and Farm Mechanics under practical farming conditions. It is not too much to assert that the future greatness of Ontario as an agricultural unit will depend upon the continued improvement of farming methods as a result of the application of science to agriculture. It is hoped that, following the continuance of the economic improvement already in evidence throughout the country, the Dominion Government will soon decide that the state of the treasury warrants the proclaiming of the Federal legislation-in-aid of 1931, and that agricultural education will be included in the subjects eligible for subsidy under the Act, along the lines of the former Agricultural Instruction Act. For those past school age, the Royal Commission suggested that the education provided should be in close correlation with their occupations. That evening vocational classes in Ontario for adults have filled this requirement is evidenced by the peak registration of the 1931-32 session, when 45,358 men and women enrolled for subjects allied to their daily vocations.

The protracted controversy among educationists as to what constitutes true education has of late years become far less marked. Extremist views on academic distinction have been modified, until now it is almost univers-

ally recognized that the requirements of industry and commerce demand intelligence of a high order necessitating special training. This special preparation might be described as the teaching of "applied intelligence" in contra-distinction to education solely as a means of culture. Public opinion has radically changed. No longer is matriculation regarded as the only hallmark of proficiency. Industrial and commercial leaders are demanding more and more the educational status attainable by training in a vocational school. The term "education" in future must be synonymous with development of the mental processes in conjunction with their application to the practical problems of life.

A wise provision of the Ontario Act was that relating to the appointment of Advisory Vocational Committees. The representatives of employers and employees on these committees, in which are vested the control and management of vocational schools, have been instrumental in popularizing the courses for which they were responsible jointly with their elected colleagues. Due to the influence of these practical advisers, schools are kept in touch with the latest developments in industry and commerce; essential local interests are safeguarded; and, because of this co-operation, because of the recognition accorded by both employers and employed, the movement has spread rapidly, and is continuing to expand with increasing vigour and vitality. A recent illustration of the recognition by industry of the value of vocational training is contained in the announcement of the General Motors Corporation of Canada that the suggestion had been made to branch managers to endeavour to infuse new blood into their organizations by the employment of at least one new junior each year; and that graduates of vocational schools would provide material of the right calibre.

One of the greatest, if not the chief difficulty, encountered in the early development of vocational education was the dearth of properly trained teachers in the practical subjects. There was no lack of material in the way of skilled mechanics, but experience showed that a skilled mechanic was not necessarily a good teacher. He seldom realized that his product was to be trained boys and girls rather than material things. Several methods of overcoming the difficulty were attempted. First, evening teacher-training classes were organized; next, summer courses were established. Neither method provided sufficient instruction in the principles of paedagogy or adequate practice in actual teaching. Eventually the present Training

College for Technical Teachers at Hamilton was established, and, from a twenty-week course which might be spread over two or even three years, the regulations now provide for a straight twenty-five weeks' training from September to April in each year.

The men and women who have successfully passed the tests, and become an integral part of the teaching profession of Ontario, deserve a word of tribute. Selected from industry because of their mechanical or professional skill, but lacking, perhaps, the most elementary conception of teaching, they set themselves industriously to master the difficult laws of paedagogy and psychology, and with a force of character and tenacity of purpose seldom equalled in any walk of life, earned the approbation of their mentors and the respect of their academic coadjutors. They have proved themselves competent instructors, and by participation in all the varied activities of school life, constituted themselves a strong factor in the success of vocational education.

The annual records again show a substantial advance in the enrolment of day school pupils, from 36,328 in the previous year to 36,938 in 1932-33. A great distance has been traversed since 1919-20 when the Dominion Act first came into operation. In that year the day school enrolment totalled only 4,790 pupils. Evening class registration for the period, unfortunately, shows a sharp decline from 45,338 to 33,860. Economic conditions are mainly responsible for this condition, many centres having been compelled, temporarily, to abandon their evening classes. Notwithstanding such set-backs, which are incidental at the present time to all walks of life, the outlook for the future of both day and evening classes is considered bright. The steady increase in enrolment from year to year is indicative of the popularity of the day school course as a preparation for living. The pupil is prepared both for work and to enjoy life in leisure. In the evening classes no field of endeavour is excluded, provided the vocational needs of the workers are definitely met by the courses pursued. The return of prosperity will, doubtless, witness a revival of interest in these night school opportunities, which, as an aid to the workers in improving

their present standing, obtaining promotion, or preparing for a change of occupation, will exercise a profound influence on rehabilitating the depleted corps of skilled workers occasioned by unemployment conditions during the past few years

#### COMPARATIVE STATISTICS

	1931-32	1932-33
Number of schools—		
Day.. . . . .	65	67
Evening.. . . . .	70	59
Enrolment of pupils—		
Day.. . . . .	36,328	36,938
Evening.. . . . .	45,338	33,860
Number of teachers—		
Day.. . . . .	1,405	1,480
Evening.. . . . .	1,619	1,173
Government grants.. . . .	\$1,470,865	\$1,429,215
Municipal expenditure.. .	7,143,645	7,225,613

The Dominion Royal Commission mentioned as a desirable consequence of technical training that the interest of boys and girls in their own training and instruction should be increased, and an understanding developed of their relation to working and living. In this regard, no one can enter one of the shops of a modern vocational school without being impressed by the attentive interest displayed by the students in their work. There is no doubt that the correlation of the work of the class-room with that of the shops and laboratories results in an appreciation by the pupils of the relationship of the one to the other. It is but a short step from this point to the realization of the necessity of fitting themselves into the larger pattern of community life.

Having reported in full to the Dominion Government from year to year on the steps taken in this Province in the ever-widening field of vocational effort, I think it may be confidently asserted that the fundamental objectives of the Dominion legislation, as set forth in the report of the investigating commission and in the agreements with the respective provinces, that the "preparation of the body, mind and spirit for following some useful occupation" and "the cultivation of the mental powers, the acquisition of knowledge and the development of the scientific spirit with direct reference to the occupation," have been assiduously pursued with no small measure of success. The schools are now thoroughly established, and the vocational idea has gathered a momentum that will overcome all obstacles in the future.

## WORKMEN'S COMPENSATION IN ALBERTA IN 1933

THE sixteenth annual report of the Alberta Workmen's Compensation Board shows that there was a substantial decrease in the number of accidents in the calendar year 1933. During the year there were 8,160 accidents of which 21 were fatal and 57 resulted in some degree of permanent disability, as compared with the 1932 total of 8,974 accidents, 31 fatalities, and 98 resulting in some permanent disability.

Cash receipts and expenditures for 1933 show that \$86,171.68 more was expended than was received from assessments. However, other incidental items such as interest on reserve to the credit of the Accident Fund, etc., deduced the deficit to a net of \$5,700.32 as compared to the 1932 deficit of \$156,454.66.

The amount collected from the assessment on the pay-roll of 1933 was \$653,427.25, as compared with \$704,808.42 collected in 1932. "It is apparent," the report states, "that there was either a reduction in wages or decreased industrial activity, for the period under review. There was a substantial reduction in expenditure for 1933 owing to there having been fewer accidents, with also a reduction of cost per accident. Administration costs also were reduced by \$9,853.55."

*Assessment Rates.*—Explaining the increase in assessment rates in certain industries such as lumbering, mining, building, road-construction, etc., the report states: "The Board has received a number of complaints from both employers and employees against these increases. It probably has never occurred to those who complain against the increase in rates of the last few years, that the expenditure of the Board is largely uncontrollable and fixed by statute. Pensions payable to widows, children and other dependants of workmen killed in industry, remain stationary and do not fluctuate with rising and falling wages. Pensions to permanently disabled workmen are based on the average earnings for the last eight years, and are, therefore, only remotely related to the prevailing rate of wages. It also costs as much per case to provide medical attention and hospital care in periods of low wages as in the more prosperous periods. Compensation for time loss to injured workmen, however, is based on average earnings at the time of the accident, and is therefore quite definitely related to the prevailing wages. It therefore follows that if all the expenditures made by the Board were in relation to the prevailing wages, the assessment rates would remain fairly stationary, but

where you have a falling wage rate with expenditures to a large extent fixed by statute and therefore stationary, increased assessments are unavoidable."

An analysis of assessment rates levied on employers per \$100 of pay-roll shows that among the industries with high assessment are the following: logging, \$12; sawmills, \$12 and \$10 (according to total amount of pay-roll); street construction, \$10; railway construction (with blasting), \$6; fishing, \$6; highway construction (with blasting), \$6; other highway construction, \$4.50; building construction (over four stories high), \$5; employment in and about coal mines, \$4.50.

In the same table is presented the medical aid rating under the various schedules, based on each shift or part of shift. Under the Alberta Act employers are authorized to deduct a sum, as determined by the Board, from the earnings of each workman. These deductions are credited to a medical fund from which payments are made for medical service and hospital attention to workmen injured in the course of employment.

The highest medical aid rating in 1933 occurred in logging, sawmills, and sash and door factories each with 10 cents; and in coal mining, steel construction, trenching, railway construction, and highway construction each with 7 cents.

During the year \$179,609.56 was collected from workmen for medical aid purposes and the amount expended was \$158,775.60. In connection with medical aid financing, it was explained that owing to a large deficit in the fund for 1932 it was found necessary to increase the rates in some classes. The medical profession agreed to a reduction in the scale of fees, and this factor together with the increased rates resulted in a small credit balance.

*Pension Reserve Fund.*—The act provides that pensions are payable to permanently disabled workmen and to widows of fatally injured workmen, for the remainder of their lives, and to the children of such fatally injured workmen, until they have reached the age of sixteen years, and in some cases to eighteen years of age. Provision has, therefore, been made for the payment of pensions by the creation of a fund for that purpose, called the Pension Reserve Fund.

There is at present \$2,818,149.81 to the credit of this fund, being the amount required to pay the respective pensions to 1,232 pensioners, 502 of whom are permanently disabled workmen, 292 widows of fatally injured workmen, and 438 dependent children.

The Act was amended in 1927, providing that pensions in respect of dependent children may, with the consent of the Board, be continued to the age of eighteen, in order to enable them to obtain a secondary education. One hundred and forty-two children have been granted this privilege. The privilege is only withdrawn when the child proves non-co-operative or incapable of taking reasonable advantage of the educational facilities so provided.

The amount transferred annually to the Pension Fund is determined by generally accepted actuarial tables, and the money credited to the fund is invested in securities.

*Rehabilitation.*—Dealing with its rehabilitation policy, the Board stated that while several workmen were given a course of training at the provincial Technical Institute, yet there is very little demand from injured workmen for rehabilitation by technical training, "there being but few who are so badly injured that they are unable to earn a living at their former occupation." Continuing, the Board observed: "There are probably some who might be benefited by technical training, but whose academic standing is such that it involves a long course of study, and they are either unwilling to make the sacrifice or the Board has reason to doubt the value of a vocational training in such cases. There is a much greater demand from workmen who are partially permanently disabled to be rehabilitated by the commutation of their pensions, so as to enable them to commence business in a small way, or to engage in farming. The policy of the Board is to help them to attain their desire in that regard, provided there are reasonable prospects of their being successful."

*Accident Prevention.*—The Board continued its campaign in the matter of accident prevention. Every accident is reviewed, and if there appears to have been negligence on the part of the employer or employee, as the case may be, an explanation is requested, and if it is a case of improperly guarded machinery, the Board insists that the defect be remedied.

It is pointed out that "there are still many, both employers and employees, who persist in careless practice despite the presence of safety devices" and that "no type of safety appliance seems to prevent accidents in such cases."

The payroll for all classes in 1933 amounted to \$60,254 750 and the total number of

employees in such classes was 56,921. Other statistics for the year were summarized as follows:

Number of employers within the scope of the Act as at December 31, 1933.	4,645
Number of accidents reported during the year 1933. . . . .	8,160
Number of accidents and claims not finally disposed of as at December 31, 1932. . . . .	595
Number of claims disposed of by award of pension or payment of compensation. . . . .	3,398
Number of claims disposed of by payment only on account for medical aid.	2,242
Number of accidents disposed of for which no application for compensation was received. . . . .	115
Number of accidents disposed of on which no compensation was due. . . . .	1,930
Number of claims on which further payments have to be made. . . . .	507
Number of accidents awaiting further reports and on which no payments have been made . . . . .	563

Of the total of 8,160 accidents, 57 involved some permanent disability and 8,082 were of a temporary nature. The mining industry was responsible for greatest number of accidents with a total of 2,538. Second in accident frequency was the group involving trucking, manufacture of textiles, bakeries, power laundries, elevators, etc., with 948 accidents. The most frequent cause of accidents was that designated as "falling objects or bodies" (2,123) followed by "handling objects" (1,933).

The time loss in non-fatal claims totalled 306,480 days. The average time loss in permanent disability cases was 86.55 days; and in temporary disability cases, 35.42 days. The average age of injured workmen was 37.26 years. The number of accidents to minors (under 20 years of age) was 352 and to those of advanced age (60 years or over) 176.

The Mine Rescue and First Aid branch details the training and extent of equipment at the various stations. Particulars are also given of the first aid work at these stations.

Included in the report is the annual review of the administration of the Electrical Protection Act. The largest program of work was that occasioned by the electrification of grain elevators. There was also considerable attention given to inspecting oil and gas wells, and oil and gasoline warehouses.

## SAFETY WORK IN THE PULP AND PAPER INDUSTRY

THE monthly magazine *Pulp and Paper of Canada*, in its June issue, summarizes the replies to a questionnaire in which persons engaged in the industry were asked as to the methods in use or suggested for the improvement of safety conditions in the operation of pulp and paper mills. "It is evidently general practice among pulp and paper mills," it is stated, "to have a safety committee. With the membership on this committee held in turn by different representatives from each department it rotates the contact of workmen with the administration of this work in the plant. In many, if not most, cases there is some particular point of safety work brought up and discussed at the meeting and in this way a great many men in the mill eventually get a sort of safety education. In some mills meetings of larger numbers of men are held at intervals and safety programs are arranged. Another method that helps in this work is the question box and the suggestion box. When the men in a plant have reached the state where they have enough interest to make suggestions for improvements that will reduce accidents, progress is certainly being made."

The replies deal with Safety First rules and equipment, mechanical safeguards, work in the woods, treatment of injured workers, company doctors, etc. Among other suggestions it is recommended that the provincial Workmen's Compensation Boards appoint an officer who will personally investigate claims in cases where the employers may have doubt of the occurrence of an "accident" as defined by the Act; that there should be greater co-operation between the companies and the Board; and that the services of the Industrial Accident Prevention Associations should be more generally used by the members.

### Prevention of Accidents

The essentials of accident prevention work are described by Mr. W. L. Eliason, safety engineer of the Ontario Paper Company, Limited. These essentials are educational work, mechanical safeguards, and management. Educational work should be carried on in schools, in the homes of the workers, at the plants, factories and offices, in pictorial form and otherwise. Although under present day manufacturing conditions 95 to 98 per cent of all industrial accidents are due to personal and not mechanical causes, it is important to reduce the remaining 2 to 5 per cent which are due to lack of mechanical safeguards. Mr. Eliason describes some essential types of safeguard. As to the interest of managements in

safe working conditions the writer claims that the results obtained in accident prevention to-day are due to safety organizations reinforced by plant management. A safety organization should be built up in each department of a plant.

### Company Hospital

Dr. Wright, resident physician, and H. C. Laundry, safety supervisor of the Spruce Falls Power and Paper Company, describe the work of the company's hospital at Kapuskasing, Ontario. This company has a centrally located first-aid room in charge of a trained first-aid man, and each year a St. John's Ambulance first-aid training class is instructed by the company doctor or one of his assistants, so that in every department trained employees are within call in case of emergency. An ambulance is kept at the mill to quickly transport accident cases to the Sensenbrenner Hospital, which is about three-quarters of a mile from the plant, and is equipped with every modern equipment.

The importance of adequate lighting in a modern plant is shown in an article by Messrs Oday and Rodgers of the General Electric Company at Cleveland, Ohio, and the proper use of safety signs and bulletins is described by Mr. J. H. Turner, director of safety for the Consolidated Paper Corporation.

### Work of Quebec Pulp and Paper Association

A summary is given of the last annual report of the Quebec Pulp and Paper Association. One of the principal activities of the Association during the year was the inspection of woods operations, undertaken for the purpose of reducing the number of accidents in the bush. While the cost of accidents in the mills was high, it was felt that the problem in the woods was even more serious. The duties of the inspectors are to report on the attitude of the company, doctor and employees towards accidents and accident prevention; to examine and report on first-aid equipment in camps and how this is being used; to report upon the qualifications of those, other than doctors administering first aid; to inspect the sanitary conditions in camps with reference to liability to infection and to watch for cases of malingering or where injured men are kept in jobbers' camps instead of being sent to depots or doctors; conditions of woods hospital; to assist and give instruction in forwarding adequate information on accident reports and to learn how and by whom reports are made out; to check whether family declaration of jobbers is being filled in and returned; to

study the type of accidents occurring in different localities, suggesting possible means of prevention and how cases of injured employees are taken care of; and to report the number of jobbers, sub-jobbers, approximate number of men and size of cut upon which the inspection is made. The co-operation received by the Association from the companies in this work and their desire that the inspectors advise the staff of the faults found, has led to improvements in the handling of accident cases in the woods. The Association has received the acknowledgment of several doctors that where formerly men arrived for treatment with badly infected wounds in most cases proper first-aid attention is now being given with the result that an appreciable saving in expense is being effected. The reports of the inspectors show, however, that there is a wide field to be covered and that it is quite necessary that re-inspection should be made to follow up the instructions and advice given during the first inspection.

#### **Compensation Costs Reduced**

The experience of the Canadian International Paper Company in reducing the costs of compensation is described by Messrs. Goulet and Bastin of the company's Causapscal depot. The company's regulations in this department are as follows: (1) all contractors are supplied free of charge with a complete first-aid cabinet. The cabinets are also replenished free of charge to the contractors; (2) small emergency packages are issued to be used when men are working at a distance from the camp or in side camps; (3) posters furnished by the Quebec Pulp and Paper Safety Association are displayed in all camps; (4) a circular letter pointing out the necessity and means of accident prevention is issued to the contractors, in their own language, at the beginning of the season; (5) a list of the men who have been injured more than once during the past three years is posted in all camps, contractors being advised to closely follow these men; (6) a weekly circular letter showing the number of cases reported during the week and to date, from each camp, without comments and instructions, is issued to contractors; this has been very effective; (7) first-aid manuals are available in all camps; (8) supervisor and assistant do not lose an opportunity to talk prevention to contractors and workers; (9)

workers are instructed to report to the contractor or to his clerk for the slightest injury; (10) clerk and contractors are requested not to let an injured man treat himself; (11) a weekly report from each camp is received at the District Office, showing the details of any case whatsoever, treated at the camp.

The writers show that the cost of accidents has been reduced during the past two years by the enforcement of the foregoing regulations through an adequate system of inspection.

#### **Difficulties of Safety Work in the Bush**

Other contributions include an account of the treatment and prevention of accidents in the woods by Mr. J. W. Sutherland, of the Canadian International Paper Company, in the Upper Gatineau Division; and a description by Dr. J. G. Hooper, of Grand'Méree, P.Q., of the functions of the company doctor in the bush. Dr. Hooper describes the difficulties of the work as follows:—

"The very nature of the work makes accident prevention difficult. The work is done during the worst months of the year and by unskilled labour with a large turnover. Many of the workmen are young, unskilled in the use of the axe, and careless. Their attitude is that, if they are injured, 'the insurance' will pay. Moreover, a considerable number are working on a 'piece-work' basis, and, in their rush, take unnecessary chances. On account of working outside in severe weather, many cases of minor injury must lose time that would be able to continue their work were they employed in a factory."

The writer suggests that "the most effective method of inducing the jobbers and sub-jobbers to take an active interest in safety work is to institute some system of merit-rating whereby the jobber who has a good accident experience would benefit. At the present time there is a feeling that this is not worth bothering about as they have to pay the same rate whether their accident experience is good or not. Were the jobber to receive some financial return for his efforts in keeping the accidents down, I think that there would be a considerable improvement which coupled with efficient medical work in the woods, should show excellent results."

## REPORT OF ONTARIO DEPARTMENT OF PUBLIC WELFARE

IN the third annual report since its establishment as a result of the recommendations of the "Ross" Commission on Public Welfare, the Department of Public Welfare of Ontario reviews its administrative activities during the year 1932-33. The department was created by Order in Council on September 16, 1930, and the following subjects were placed under its control: mothers' allowances; the old age pensions; soldiers' aid; veterans' welfare service; children's aid branch; industrial schools; Ontario training schools; houses of refuge and orphanages. Outlining the dominant characteristics of public welfare work, the Deputy Minister states: "First, the activities in this field cover the whole range of human life from the tiny child to the spent adult. Second, mental and medical clinics are being extensively used enabling the workers dealing with persons requiring adjustment to understand more clearly those who come under their care, and to approach their task in a more scientific way. Third, with children and adolescents being cared for there is a growing tendency to remove them from the school, shelter or orphanage, or wherever they may be, as soon as a proper social attitude is established and to place them in an approved foster home so that they may have the advantage of a normal home life."

*Mothers' Allowances.*—According to the thirteenth annual report of the Mothers' Allowances Commission, the number of widows receiving allowances on October 31, 1933, was 4,722—an increase of 68 over the year previous. In addition to this number, because of the total and permanent incapacitation of the husband, 2,149 mothers have been made beneficiaries under the Act—an increase of 147. The number of mothers receiving allowance because of desertion also shows an increase, there being 542—35 more than in the previous year. On the other hand there was a decrease of 35 in the number of allowances paid to foster mothers. The total number of beneficiaries receiving mothers' allowances at the end of the year was 7,653. As the report points out, the complete story of this work is reflected in the number of children given care and protection and an opportunity to attend school. During the year, 19,359 children received the benefits of mothers' allowances. Of these, 16,044 were attending school and 3,505 were of pre-school age. The average number of children per family receiving benefits was 2.88. In addition to dealing with 2,295 new applications and renewals, the Commission reviewed about 6,000 cases, making such

changes as it deemed advisable. There were 1,130 cancellations during the year for various causes, and 680 applicants were declared ineligible.

*Old Age Pensions.*—The fourth annual report of the Old Age Pensions Commission shows an increase of 3,681 pensioners during the year, bringing the total on the roll to 45,229. The statistics indicate that Ontario with a larger percentage of population over 70 years than any other province has the smallest percentage (34.7) of the population over 70 years receiving pension.

The administration of the Act falls into four departments, namely, the granting of new pensions, revision of pensions previously granted, the consideration of appeals, the recovery of refunds of pensions illegally obtained and the recovery of pension repaid from the estate of deceased pensioners.

During the year the average pension paid was \$18 per month and 16,303 new applications for pension were investigated. Owing to revision proceedings, 1,310 pensions were reduced while 5,136 pensions were cancelled by death and other causes.

Dealing with certain problems of pension administration the report states: "There are still those who, either through ignorance or motivated by dishonest purpose, obtain pension fraudulently, and that despite thorough investigation and the activity of the local Boards. During the year \$12,640.65 was recovered from persons receiving pension illegally. With the passing of time the question of the recovery of pension paid from the estates of deceased pensioners becomes more important. To prevent the transfer of property without the knowledge of the department and to establish rights as a creditor in the closing of the estate, a claim is filed against the estate of those seeking pension where the estate is large enough to warrant such action. The amount recovered during the year from this source was \$50,111.61."

*Care of Veterans.*—In the department are two organizations which operate in the interests of ex-soldiers. These are the Soldiers' Aid Commission and the Veterans' Welfare Service. The former directs its efforts towards emergency relief of veterans and their dependants. Since the Commission began to function 584 wards have been cared for and assisted in foster homes or educationally. Grants, totalling \$2,877.74, were made to 138 soldiers' widows; 790 grants totalling \$7,181.85

were made to ex-service men and their dependants, while 31 grants amounting to \$194.75 were made to ex-service men.

The Veterans' Welfare Service concentrates on trying to interest employers of labour in unemployed ex-service men. During the year employment was obtained for 235 veterans and their dependants and in 122 cases financial assistance was given. An experiment was also initiated in getting certain selected veterans back to the land.

*Child Welfare.*—Operating under the department are a number of agencies directly concerned with various phases of child welfare. Prominent among these is the Children's Aid Society and its branches functioning under the Children's Protection Act. During 1932-33, there were 720 children made permanent and 323 children made temporary wards of the society. The records indicate that there are

5,606 Protestant wards and 1,369 Catholic wards in the province under the supervision of the society.

Under the Legal Adoption Act, 854 children were adopted during 1932-33. There were 2,248 cases—an increase of 100—dealt with under the Unmarried Parents Act.

The report of the inspector of training schools, industrial schools, orphanages, refuges and children's shelters indicates that there are 158 charitable institutions, two training schools and five industrial schools in the province. In the 36 orphanages, 2,701 children were cared for during the year. In the 44 City Refuges and 3 Convalescent Homes, 5,843 persons were provided with accommodation. The three district Refuges provided lodgment for 213 inmates while the County Refuges housed 6,721 persons.

Reports were also presented concerning the activities of industrial and training schools.

## MINING IN BRITISH COLUMBIA IN 1933

THE annual report of the Minister of Mines, British Columbia, covering the calendar year 1933, indicates that the gross value of mineral production for the period was \$30,674,486, an increase of 8.61 per cent over the value of the output for 1932. In addition to a general review and statistical summary of the mining industry, mining and prospecting activities are outlined in detail, the volume also containing reports of resident mining engineers and of the inspectors of mines.

The mineral production of the province is divided into four main sections—metal minerals, coal, structural materials, and miscellaneous metals and minerals. Metal mining production, valued at \$23,641,738 in 1933, is the most important of the four divisions. Coal output valued at \$5,375,171, structural materials at \$1,024,045, and miscellaneous metals and minerals valued at \$633,532 follow in order of value importance.

By value, the various products of the mineral industry are ranked in the following order in 1933: lead, zinc, coal, gold, copper, silver, structural materials, miscellaneous metals and minerals.

*Labour and Employment.*—In 1933, there were 3,094 persons employed in and about the coal mines of the Province, a decrease from the preceding year of about 14.2 per cent. During the year twenty seven coal companies operated twenty-nine collieries, with forty mines employing 2,241 men underground. In the supervision of underground employees there were twenty-two managers, one safety

engineer, twenty-four over-men, sixty-five fire-bosses and shot-lighters, a total of 111, or one official for every twenty persons employed underground. In metalliferous mines, the number employed totalled 3,121 as compared with 2,225 in 1932.

*Accidents.*—There were three fatal accidents in coal mining in 1933 as compared with eight in 1932. The ratio of accidents per 1,000 persons employed was 0.97 as compared with 2.21 in 1932. In 1931 the ratio was 1.22; in 1930, 11.62; in 1929, 2.38; in 1928, 2.64; in 1927, 2.10; in 1926, 1.88; in 1925, 1.10; in 1924, 1.66; the average for the ten-year period being 2.79.

The number of fatal accidents per 1,000,000 tons produced during 1933 was 2.37 as compared with 5.21 in 1932 and 2.81 in 1931. The average for the ten-year period was 6.42 fatalities per 1,000,000 tons mined.

The number of tons mined per fatal accident during 1933 was 421,582 tons, compared with 191,871 tons in 1932, and the ten-year average of 154,455 tons.

There were ten fatal accidents in and about metalliferous mines in 1933, being a decrease of one from the total of 1932. The ratio of fatal accidents was 3.20 in 1933 as compared with 4.83 in 1932, and with the ten-year average of 2.68.

*Mine Safety and First Aid.*—The report of the chief inspector of mines deals particularly with accidents, mine safety and first aid. An outline is given of the activities in connection with ventilation, mine-air sampling and coal dust, together with a list of approved electric

safety lamps. Reference was also made to the work of the four government rescue stations strategically located in the mining districts. In the larger coal mining districts of Crow'snest, Cumberland and Nanaimo, experienced teams maintain a regular schedule of training throughout the year and so keep in readiness for any emergency calls.

In dealing with accident costs, the report points out that compensation to the extent of over \$250,000 is paid annually to men injured in mines; that this sum is only partial compensation for wages lost due to injuries and does not in any way compensate for the suffering resulting from injuries; that the employer also suffers a financial loss due

to disruption of operations when an accident occurs and the further possible loss in training new men. "Many accidents," the report continues, "also involves property damage so that it may reasonably be said that the toll of accidents directly and indirectly cost the miners and mining industry of British Columbia almost \$1,000,000 annually. Therefore, entirely apart from the greater humanitarian view-point, accident-prevention is a worthwhile work on the part of all connected with mining."

The chief inspector concludes by outlining the safety and first aid methods employed in various mines.

## REGULATIONS GOVERNING PRODUCTION AND SALE OF COAL IN SASKATCHEWAN

**R**EGULATIONS under the Coal Mines Licensing and Regulation Act, passed by the Saskatchewan Legislature at its last session (LABOUR GAZETTE, June, 1934, page 515), were published in the *Saskatchewan Gazette*, June 30, 1934. The following principles are laid down as the basis of the regulations, which are for the purpose of more effectively supervising the production and sale of coal:—

"Coal constitutes a major source of heat and energy for the people of Saskatchewan and the industry engaged in its production and distribution fills an important and necessary place in the economic structure of the nation. The industry therefore owes a duty to the public, its employees, its customers and to those whose money is invested and used in the industry. This duty includes the obligation to deal fairly with its employees; to mine its products efficiently; to promote applied research and the proper use of coal and to eliminate waste; to sell at a fair price; to foster orderly, economical channels of distribution from mines to the ultimate consumer; to develop new uses; to approve and encourage sound and fair trade practices in the mining and distribution of coal and to prevent unfair practices. Fair and constructive competition is to be encouraged but unfair competition must be eliminated."

The definition of "retailer" in the regulations is that laid down by the Western Canada Fuel Association. The fee for a licence is fixed at \$25. The applicant for a licence must furnish proof satisfactory to the Minister that the wages of all employees have been heretofore paid and satisfied in accordance with the provisions of the Mines Act and amendments thereto, that all royalties on coal mined have been paid and that all

assessments made pursuant to the provisions of the Workmen's Compensation Act have been paid and satisfied. The licence granted to any person shall be forthwith revoked in the event of such person neglecting or refusing to pay the wages of his employees in accordance with the provisions of the Mines Act or neglecting or refusing to pay royalties due or accruing due or assessments under the Workmen's Compensation Act. No licence shall be granted to any person in respect to any mine if the previous licensee of such mine has had his licence revoked, except under terms and conditions imposed by the Minister and under no circumstances until any wages owing by such previous licensee have been fully paid and satisfied.

The section relating to prices is as follows:—

"The Minister having in mind competitive markets and general economic conditions shall specify and prescribe what in his opinion are fair minimum prices for the different grades and qualities and sizes of coal and shall as occasion or circumstances require revise and alter such minimum prices from time to time and such minimum prices until revised and altered shall be as follows:—

Minimum price on all small sizes \$1.25 per ton.

Stove 3" by 2" or less, minimum \$1.60 per ton in blue and red area.

Special, Winnipeg and Regina, \$1.40 per ton.

Cobble and lump—blue area, \$2.10 per ton; red area, \$1.85 per ton; Winnipeg, \$1.75 per ton; Regina, \$1.70 per ton.

Furnace lump (mixed stove, cobble and lump)—trucking area, \$1.60 per ton. The above prices are all f.o.b. the nearest railway

station to the mine. Prices charged for coal loaded in trucks at the mine 25 cents per ton higher than prices of coal loaded into railway cars.

"Every applicant for a licence must undertake not to sell or exchange coal below the specified minimum prices, the regulations laying down strict rules governing sale and purchase.

"Every applicant for a licence is required to furnish a schedule of the rates of wages paid or proposed to be paid to his employees and no revision or alteration of such rates shall be made until the expiration of one

month following the filing by the applicant with the minister of a schedule showing the proposed changes. The minister shall revoke the licence of any licensee who pays his employees otherwise than according to the schedule filed with the minister.

"Every licensee is required to keep accurate books and records of wages paid and coal sold (showing grades, qualities, sizes and prices) and shall produce such books and records for inspection of the minister upon his request."

The regulations took effect as from June 12, 1934.

## LABOUR MEASURES ENACTED BY UNITED STATES CONGRESS

### Act to Create a National Labour Board

The United States Congress, towards the end of June, passed an Act "to equalize the bargaining power of employers and employees, to encourage the amicable settlement of disputes between employers and employees, to create a National Labour Board, and for other purposes." The bill as originally introduced by Senator Wagner (New York) was amended by the Senate Committee on Education and Labour, the Act as passed incorporating the amendments proposed by the Committee. The Committee point out that the Act aims primarily to clarify rather than to extend the existing relations between employers and employees, and to provide for a means of enforcement. The language of earlier statutes, particularly section 7 (a) of the National Industrial Recovery Act, had been considered ambiguous and misleading both to employers and workers.

The preamble to the act states: "It is hereby declared to be the policy of the United States to remove unnecessary obstructions to the free flow of commerce, to encourage the establishment of uniform labour standards, and to provide for the general welfare, by establishing agencies for the peaceful settlement of labour disputes, and by protecting the exercise by the worker of complete freedom of association, self-organization, and designation of representatives of his own choosing, for the purpose of negotiating the terms and conditions of his employment or other mutual aid or protection."

Excluded from the operation of the Act are domestic servants, agricultural labourers, individuals employed by their parents or spouses, persons subject to the Railway Labour Act, and persons employing less than ten employees; the Industrial Adjustment

Board thus having jurisdiction over disputes of a certain magnitude which affect commerce.

The term "representatives" as used in the Act includes any individual or labour organization designated by employees to act for them or any individual or employer organization designated by an employer to act for him. The term "labour organization" means any organization or any agency or employee representation committee, in which employees participate and which exists for the purpose, in whole or in part, of dealing with employers concerning hours of labour, wages or working conditions. The term "employer organization" means any organization or any agency or employers representation committee which exists for the purpose, in whole or in part, of dealing with employees concerning hours of labour, wages or working conditions.

### Unfair Labour Practices

Four unfair labour practices are listed in the Act, it being declared "unfair"—(1) For an employer to attempt, by interference or coercion, to impair the exercise of employees of the right to form or join labour organizations, to designate representatives of their own choosing, and to engage in concerted activities for the purpose of collective bargaining or other mutual aid or protection; (2) For employees to attempt, by interference or coercion, to impair the exercise by employers of the right to join or form employer organizations and to designate representatives of their own choosing for the purpose of collective bargaining; (3) For an employer to interfere with or dominate the administration of any labour organization or contribute financial support to it: provided, that, subject to rules

and regulations prescribed by the Secretary of Labour, an employer shall not be prohibited from permitting an employee, individually, or local representatives of employees, to confer among themselves or with management during working hours without loss of time while engaged in the business of a labour organization; (4) For an employer, by discrimination in regard to hire or tenure of employment or any term or condition of employment, or by contract or agreement, to encourage or discourage membership in any labour organization: provided, that nothing in this Act, or in the National Industrial Recovery Act, or in any code or agreement approved thereunder, or in any other statute of the United States, shall preclude an employer from making an agreement with a labour organization (not established, maintained, or controlled by any unfair labour practice) to the effect that a person seeking employment shall be required, as a condition of employment, to join such labour organization, if the agreement is sought by the majority of employees in the unit covered by it when made. Nothing in this proviso shall be construed by the Board to indicate that any employer is bound to enter into an agreement conditioning employment upon membership in any labour organization."

### National Industrial Adjustment Board

A National Industrial Adjustment Board is created in the Department of Labour. Three members representing the general public, appointed by the President with the advice and consent of the Senate for terms of five years at a salary of \$10,000 each, form the nucleus of the Board and are always eligible to sit on cases. In addition there are two panels representing employers and employees. These persons are likewise appointed by the President with the advice and consent of the Senate, but they serve only for 1-year terms, and receive \$20 *per diem* only when engaged in the performance of their duties. It is intended that the persons representing employers and employees shall serve in rotation, at the designation of the chairman of the Board, but in such a way that there shall always be one representative of employers and one representative of employees upon the Board.

The Board has authority to make regulations to carry out the provisions of the Act.

When a person is supposed to have engaged in one of the four unfair labour practices defined in the above section 3, and the practice has led or threatens to lead to a labour dispute that might affect commerce or obstruct the free flow of commerce, the Board is given power to prevent the practice and take appropriate steps to correct the injustice. Usually the Board will act only when a case is drawn to its attention by the Secretary of Labour (who through the Conciliation Service of the Department of Labour will presumably first utilize every appropriate means for a voluntary adjustment of the matter); but in exceptional cases, the Board by a vote of a majority, may on its own motion decide to hear the case. Hearings can be conducted by the Board or by an agent or agency designated by it, but decisions must be by the Board.

Voluntary arbitration by the Board is provided when the parties agree to submit the dispute to arbitration. This is in no sense a compulsory power but merely gives the Board the right to act in a way already tested under the Railway Labour Act.

In a dispute as to who are the representatives of the employees the Board is authorized to take a secret ballot or to use other suitable methods. Since the dispute may relate only to a single craft or a single plant the Board is given the power to determine the appropriate unit for the election. In some cases it may decide that the appropriate unit is the whole plant; in other cases a particular craft. In cases in which a poll is taken of several different units, it is provided that each unit may be given representation in proportion to its membership. If an election is held in only a single unit, no matter how large, then there is no occasion for "representation in proportion to its membership," since its membership bears no mathematical relation to any other group. Within any single unit the Board may, but need not, determine that representatives agreed upon by the majority of employees shall represent the entire unit for the purpose of negotiating agreements.

President Roosevelt, by an executive order dated June 30, appointed the following members of the National Labour Relations Board: Lloyd Garrison, of Wisconsin (chairman); Henry Alvin Millis, of Illinois, and Edwin S. Smith, of Massachusetts.

## Act to Amend the Railway Labour Act

An Act to amend the Railway Labour Act, approved May 20, 1926, and to provide for the prompt disposition of disputes between carriers and their employees, was passed by the United States Congress in June. The provisions of the earlier Act were outlined in the LABOUR GAZETTE, May, 1926, page 423. The new Act amends the Railway Labour Act by re-writing it and making several far-reaching and important changes in the operation of the adjustment boards to settle grievances and the work of the mediation board. The Senate Committee on Interstate Commerce, in their report on the bill, stated that Congress passed the Railway Labour Act with the joint approval of both the representatives of the railroads and the railway labour organization. They believed it would enable them to settle their differences without the element of compulsion. "They have tried this act for nearly 8 years. It has served a most useful purpose and brought about many good results, but both the representatives of the railroads and of the employees agree that it needs improvement. This bill is intended to provide the needed amendments."

The most important change in the present Act is the creation of what is termed the "National Adjustment Board." This Board will have four divisions corresponding to occupational classes. Each division will have a neutral member, so that these divisions will be able to make decisions. The regional boards will be created for temporary periods, but their members are to be chosen in the same manner as the members of the National Board of Adjustment and their decisions are to be binding and enforceable in the courts in the same manner. The four divisions of the National Adjustment Board are to be independent of one another. Each division is to adjust the disputes and grievances of a certain group of crafts, as specified in the

Act. It may be subdivided to take testimony, but the entire division makes the decision. Thus, there will in effect be 18 boards for the taking of testimony and 4 to make decisions. Each division will be composed of an equal number of representatives of the railroads and employees respectively, and each will compensate its representatives. In case of a deadlock, the members of the division may select a neutral member. If they cannot agree, then the National Mediation Board will select the neutral member, and he will be paid by the Government.

The Act also provides for the establishment of regional or system boards of adjustment, if the railroads and the employees desire to set up such boards voluntarily. The Act prohibits any carrier from providing financial assistance to any union of employees from funds of the carrier. It also prohibits the railroads from interfering in any manner whatsoever with employees joining or refusing to join any organization or union. The bill specifically provides that the choice of representatives of any craft shall be determined by a majority of the employees voting on the question.

Section 4 abolishes the present Board of Mediation, consisting of 5 members, and establishes a new board called the "National Mediation Board," consisting of 3 members. This new and smaller Board will have power to select and appoint employees to act as mediators under the instruction of the Board with the same freedom to delegate its work as the Interstate Commerce Commission now possesses. This board will appoint the neutral members when necessary to obtain decisions of the National Board of Adjustment and is also authorized to set up a neutral committee to determine what employees shall vote in the elections to determine the representative in any grievance.

## Retirement System for Railroad Employees

An Act "to provide a retirement system for railroad employees, to provide unemployment relief, and for other purposes," was passed by the United States Congress in June. It provides for a 4-year period during which the fullest opportunity will be had for collecting information, making investigations and actuarial studies. This will serve as the basis upon which specific action can be taken, assuring the adequacy and permanency of the retirement system provided therein and making it possible to provide adequate retirement annuities to aged railroad employees.

All carriers coming within the scope of the Railway Labour Act are to be treated as one employer for the purposes of the Act.

The old-age pension or annuity is to be based upon the wages and the length of service of employees upon all railroads, with specified maximum limits. The payments are to be provided through funds created by joint contributions from the railroads and the employees. The Treasury of the United States is made the depository for these funds. The payments to be made from such funds are

limited to the amounts provided by the railroads and the employees, and no burden is placed on the Public Treasury.

The employees are to contribute 2 per cent of the compensation paid to them by the carrier and the carrier is to contribute an amount equal to twice the amount contributed by its employees. The carriers are required to deduct the amount of each employee contribution from the compensation paid to such employee and shall pay all such employee contributions together with the carriers' contribution into the Treasury of the United States.

The administration of the system is to be under the direction and supervision of a Board composed of three members, to be appointed by the President of the United States, with the advice and consent of the Senate.

The amount of the pension or annuity is to be 2 per cent of the basic wage of the employee multiplied by the number of years of service, but is not to exceed 60 per cent of the basic wage for service rendered prior to the effective date and not to exceed 75 per cent of the average wage for service rendered after the effective date. The basic wage is to be determined upon average compensation as defined in the bill, but no compensation in excess of \$400 per month is to be recognized in determining the basic wage.

Pensions are to be payable from and after age 65, or upon completion of 30 years of service. Retirement is to be compulsory at age 65, with a provision for an agreement by the employee and the railroad to extend the employment from year to year, but not beyond

age 70. Compulsory retirement at age 65 shall not apply to officials of carriers until 5 years after the act takes effect. If the pension payments are begun before age 65 upon completion of 30 years of service, the maximum pension payment is reduced from the 60 per cent maximum by 4 per cent of the basic wage for each year the employee is less than 65 years of age when the pension payments are begun. Thus, at age 60 the maximum pension is 40 per cent and at age 55 it is 20 per cent, and no pension at all is payable below age 51. The reduction in the maximum does not apply where the employee is retired by the railroad for mental or physical disability.

The average wage of \$1,667 per year will produce an average monthly annuity of \$83.33. On the basis of present pay rolls of approximately \$1,500,000,000 the contributions of the carriers and their employees at the initial 2 per cent would produce \$90,000,000.

The Senate Committee on Interstate Commerce in their report on the bill outline its provisions, and conclude: "If it be good business judgment to replace worn-out and depreciated equipment with new and efficient equipment, it is equally in the interest of efficient and economical operation to retire those employees who have worn themselves out through long years of arduous toil in the performance of faithful service to the industry and thereby bring into the industry that proportion of younger and more active employees. If this be done, it will not only result in benefit to the industry, but will serve to extend to these aged employees the satisfaction of a well-earned reward which has been paid for by years of their devotion to the service."

## SOFT COAL MINING CODE IN THE UNITED STATES

### New Provision for 35-Hour Week and Higher Wages

THE code of Fair Competition for the bituminous coal industry in the United States was recently amended so as to provide for shorter hours and higher wages. The original code, signed by President Roosevelt on September 18, was outlined in the *LABOUR GAZETTE*, October, 1933, page 991. It fixed April 1, 1934, as the date on which its provisions relating to labour should expire. It provided also for the possible amendment of these provisions by collective agreement between employers and workers. On March 29 an agreement was reached between the employers of the Appalachian region, who control about 70 per cent of the coal output of the United States, and the representatives of the United Mine Workers of America in regard to the rates of wages to come into effect from

April 1, in place of those laid down in the Code. The employers in other districts, however, reserved their right to object to the application of this agreement to their mines, and the meeting adjourned until April 9. Following this adjournment, General Johnson, Administrator of National Recovery, approved on March 31, 1934, subject to a hearing on April 9, an amendment to the Code imposing a seven-hour day and 35-hour week with basic minimum wages of \$5 a day in the north and \$4.60 in the south.

This measure led to a revival of disputes in the industry, the employers in the south protesting that the abolition of the local differential wage scales meant ruin to them, and the miners declaring strikes against the opposition of the employers to the amendment. The pub-

lie hearing was held on April 9 and the following days. It was accompanied and followed by many discussions between the different parties, the employers of the Appalachian region and the workers calling, among other things, for the maintenance of the terms of the amendment of March 31. On April 22, an agreement was reached between employers and workers, which amicably ended the disputes.

On the same day the Administrator of National Recovery issued an order modifying the amendment of March 31, and fixing new conditions in regard to wages applicable under the Code as from April 1, 1934.

The order makes no change in the hours of work provisions of the amendment of March 31, which fixed the maximum hours of all workers, except members of the executive, supervisory, technical and confidential staff, at seven in the day and 35 in the week (as against eight in the day and 40 in the week laid down by the Code) at the usual working place and exclusive of the lunch period. The amendment provides for exemption in case of accident, and in the case of workers whose daily duties include the handling of man-trips, and workers required to remain on duty while the men are entering and leaving the mines. It exempts from the provisions as to the maximum hours of work certain classes of workers, including those engaged in the transportation of coal or the manufacture of coke and those engaged at power houses, substations and pumps, and provides that other classes of workers may be exempted by joint agreements negotiated in accordance with the Code, which should not, however, provide for work in excess of eight hours in the day and 40 in the week.

As regards wages, the order of April 22 fixes the basic minimum wage rate as follows: \$3.80 a day (an increase of 40 cents over the rate originally fixed in the Code) in the Alabama district; \$4.35 a day (an increase of 60 cents over the minimum fixed in the Code, and a

reduction of 25 cents from the rate fixed by the amendment of March 31) for the Southwestern district, including Missouri, Arkansas, Oklahoma and Kansas; \$4.24 a day (an increase of 40 cents over the Code rate and a reduction of 20 cents from the amendment rate) in the so-called J-1 district of Tennessee, including Marion, Grundy, Sequatchi, White, Van Buren, Warren and Bledsoe counties; \$4.60 (an increase of 60 cents over the Code rate and the same as the amendment rate) for the West Kentucky district and the Southern Appalachian district.

In the Fairmont district of West Virginia, where the dispute centered on the allowances for loading and cutting, the new schedules provide for an addition of  $2\frac{1}{2}$  cents a ton for loading and  $\frac{1}{2}$  cent a ton for cutting, and the basic rate of \$5 a day fixed by the amendment. It is provided that the minimum rates for tonnage and other piece work shall be further increased, if necessary, by an amount sufficient to maintain the customary relationship in the industry between the piece-work rates and rates for day labour.

The order also contains two provisions of special importance, which appear to meet the demand for uniformity put forward by the mine workers in the resolution referred to above. One of these, with the object of protecting the standards of living of high-wage districts, prohibits the employers in a low-wage district from selling coal in other areas at prices lower than those prevailing there. The second lays down that full study shall be made by the National Recovery Administration as to adjustments in the price structure within the bituminous coal industry equitably required in consideration of the rates of pay in effect in the several districts of said industry, and that to that end there shall be created a Bituminous Coal Research Unit within the Research and Planning Division of the Administration to conduct the study, advise the Administrator on approval of proposed prices, and make recommendations concerning the readjustment of the price structure.

### Effect of Codes on Hours of Work and Earnings

The results of the application of the industrial codes under the National Industrial Recovery Act and related policies are summarized in the May issue of the *Monthly Labour Review*, official publication of the United States Department of Labor. This review indicates the trend of employment, hours, earnings and production in the United States under the N.R.A. during the period from October, 1932, to March, 1934.

From March to July, 1933, before the adoption of the codes of fair competition, average

weekly hours, total employment, and total pay-rolls increased, due largely to expanding production. In spite of increased production, average hourly earnings declined, although *per capita* earnings were somewhat larger, due to longer hours per week. After July, during the operation of codes and the President's Re-employment Agreement, average hours per week declined sharply, due in part to declining production, but in those industries where production did not decline the effects of the codes

were apparent in a general reduction of average hours per week. In both manufacturing and non-manufacturing industries reporting to the United States Bureau of Labor Statistics, there was a general upturn after July, 1933, in average hourly earnings, total employment, total pay-rolls, and *per capita* earnings, and at the same time there were sharp declines in average hours per week and in total production.

It is pointed out that under the codes although a considerable degree of flexibility was permitted, the usual provision in regard to hours was a maximum of 40 hours per week. Child labour was prohibited, the usual minimum age being 16 years.

In the 78 manufacturing industries reporting hours to the Bureau of Labor Statistics, average hours per week declined from 39.5 in October, 1932, to 36.6 in March, 1933, and increased to 42.5 hours in July, 1933. During the period of codes they declined, by March, 1934, to 36.3 hours, or 15 per cent. In the 78 manufacturing industries and 14 non-manufacturing industries combined the trends were similar, but the increase from October, 1932, to July, 1933, and the decline from July, 1933, to March, 1934, were both somewhat smaller than in manufacturing industries alone.

This reduction in hours is attributed to the codes and in this respect the report observes:

"One factor in the reduction of average hours per week after July, 1933, was the decline in production. Ordinarily a curtailment of production finds expression partly in a reduction in the number of employees, and since the index of employment in manufacturing industries increased 13 per cent as compared with a 15 per cent decrease in average hours per week, the codes were obviously an important factor in reducing the length of the working week."

### Federal Emergency Relief in United States

A report on federal emergency relief work in the United States since May, 1933, is given in the May issue of the *Monthly Labor Review*, published by the United States Department of Labour. The machinery of the Federal Emergency Relief Administration was established by the Relief Act of 1933 and provided with funds to the amount of \$500,000,000, of which half was to be disbursed to the States, on a basis of \$1 of Federal money for each \$3 of public money from all sources spent for unemployment relief in each State during the preceding three months. The other half was to be used for grants to States whose relief needs were so great and whose financial resources so depleted as to make necessary some funds in addition to the matched allotments.

### Labour and Consumers' Advisers to Code Authorities

The National Recovery Administrator on March 31, 1934, announced his intention of appointing labour and consumers' advisers to the Administration member or members of code authorities and directed all industries operating under approved codes to create industrial relations committees or boards for the adjustment of labour complaints and disputes, if this had not already been done. This action is in the line with the intention of the Administration to concentrate its energies on problems of administration, particularly now that the period of codification of industry is drawing to a close.

Appointment of labour and consumers' advisers to Administration members of code authorities will be made by the National Recovery Administrator from lists of nominees submitted by the Labour Advisory Board and Consumers' Advisory Board, respectively. These appointees will not be members of code authorities and will attend meetings only on invitation, but they will have free access to the minutes of meetings and may "appear before the code authorities to make statements on specific subjects."

All industries must have machinery to adjust individual labour complaints and labour disputes and must set up at once either or both types of machinery if this has not already been done. Those industries having such machinery in operation are directed to report to the Administrator immediately on the personnel, scope, and functioning of the committees. Membership of each committee should include equal numbers of representatives of both employers and employees with an additional member chosen by them jointly to act as chairman.

During the period from May, 1933 (when the new administration of relief began to function), until February, 1934, disbursements of over \$400,000,000 were made by this organization.

In addition to general unemployment relief, this money has financed drought relief, grants to self-help groups of unemployed, civil-works projects, adult education, and the distribution of surplus commodities. The number of families given relief declined from 4,452,000 in May, 1933, to 2,560,000 in January, 1934. One phase of the work was the Civil Works Administration which was created to provide work for 4,000,000 persons. By January 18, 1934, there were 4,029,474 workers engaged in civil works jobs, and \$345,357,616 had been disbursed in wages.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Eighteenth Session of the International Labour Conference

THE Eighteenth Session of the International Labour Conference (League of Nations), constituted under the provisions of the Treaties of Peace, was held at Geneva, Switzerland, from June 4 to June 23, 1934. Seventeen previous sessions of the International Labour Conference have been held as follows: Washington, D.C., 1919 (LABOUR GAZETTE, December, 1919); Genoa, Italy, 1920 (LABOUR GAZETTE, October, 1920); Geneva, 1921 (LABOUR GAZETTE, January, 1922); Geneva 1922 (LABOUR GAZETTE, December, 1922); Geneva, 1923, (LABOUR GAZETTE, December, 1923); Geneva, 1924 (LABOUR GAZETTE, August, 1924); Geneva, 1925 (LABOUR GAZETTE, July, 1925); Geneva, 1926 (8th and 9th Sessions) (LABOUR GAZETTE, July, 1926); Geneva, 1927 (LABOUR GAZETTE, July, 1927); Geneva, 1928 (LABOUR GAZETTE, July, 1928); Geneva, 1929 (LABOUR GAZETTE, July, 1929); Geneva, 1929 (LABOUR GAZETTE, December, 1929); Geneva, 1930 (LABOUR GAZETTE, July, 1930); Geneva, 1931 (LABOUR GAZETTE, July, 1931); Geneva, 1932 (LABOUR GAZETTE, May, 1932); and Geneva, 1933 (LABOUR GAZETTE, August, 1933).

The Treaty of Peace requires that "the meetings of the general conference of representatives of the members shall be held from time to time as occasion may require, and at least once in every year." It will be observed that two sessions of the conference were held in 1926 and also in 1929.

Each Member State is entitled, under the terms of the Treaties of Peace, to send four delegates to the International Labour Conference, two of whom must be government delegates and the two others are to be delegates representing, respectively, the employers and the workpeople of the country, chosen in agreement with the industrial organizations, if such organizations exist, which are most representative of employers or workpeople, as the case may be, in the respective countries. Each delegate may be accompanied by advisers not exceeding two in number for each item of the agenda.

The decisions of the Conference may take the form of either a Recommendation or a Draft Convention. A two-third majority of the votes cast by the delegates is required for the adoption of any Recommendation or Draft Convention by the Conference. The Recommendations and Draft Conventions are afterwards transmitted through the Secretariat of the League of Nations to the different countries represented in the International Labour Organization for acceptance or otherwise. Each country is obliged under the

Treaties, within the period of one year at most from the closing of the Conference, or if it is impossible owing to exceptional circumstances to do so within one year, then at the earliest practicable moment and in no case later than eighteen months from the closing of the Conference, to bring the respective Recommendation or Draft Conventions before the authority or authorities within whose competence the matter lies for the enactment of legislation or other action.

In Canada, the provisions of the different Draft Conventions and Recommendations have been examined in all cases by the Law Officers of the Crown to determine whether the subject-matters were within federal or provincial jurisdiction, and they have thereupon been brought before the Dominion Parliament and the respective Provincial authorities, together with the law officers' reports on the subject of jurisdiction.

### Conference Agenda

The agenda of the eighteenth session of the Conference comprised seven items, namely: (1) Reduction of hours of work (second discussion); (2) Unemployment insurance and various forms of relief for the unemployed (second discussion); (3) Methods of providing rest and alternation of shifts in automatic sheet-glass works (second discussion); (4) Maintenance of acquired rights and rights in course of acquisition under invalidity, old age and widows' and orphans' insurance on behalf of workers who transfer their residence from one country to another (first discussion); (5) Workmen's compensation for occupational diseases; partial revision of the Convention concerning workmen's compensation for occupational diseases; (6) Employment of women on underground work in mines of all kinds (first discussion); and (7) Partial revision of the Convention concerning employment of women during the night.

### Decisions of the Conference

The following is a summary of the decisions of the Conference:—

*Reduction of Hours of Work.*—As there was twice a failure to secure the necessary quorum for adoption of the two proposed Draft Conventions the Conference adopted by 75 votes to 37 a resolution requesting the International Labour Office to obtain further information and the Governing Body to place once more this question upon the agenda of the next session of the Conference, for the adoption of one or more Draft Conventions.

*Unemployment Insurance, Etc.*—By 80 votes to 8, the Conference adopted a Draft Convention providing for the maintenance of a scheme to ensure benefits or allowances to persons involuntarily unemployed.

By 72 votes to 19, the Conference adopted a Recommendation indicating a number of general principles best calculated to promote a satisfactory organization of unemployment insurance and assistance.

Two resolutions were also adopted without opposition relating respectively to the possible future adoption of a convention to cover agricultural workers, and also of one concerning the right of destitute foreign unemployed workers to receive relief grants on the same terms as nationals.

*Rests and Shifts in Glass Works.*—By 87 votes to 28 the Conference adopted a Draft Convention for the regulation of hours of work in automatic sheet-glass works.

It also adopted a resolution in favour of the study of rest systems in other branches of the automatic glass industry.

*Maintenance of Rights of Migrant Workers.*—By 99 votes to nil the Conference decided to place on the agenda of the next session of the Conference the question of the maintenance of pension rights of migrant workers.

*Workmen's Compensation.*—By 104 votes to 11, the Conference adopted a Draft Convention revising in part one adopted in 1925 concerning workmen's compensation for occupational diseases so as to provide for the addition of certain diseases and poisonings (including silicosis), to the schedule.

By 72 votes to 1 a resolution was adopted relating to dust prevention and research into silicosis and recommending that the question of adding certain other occupational diseases to the schedule be placed on the agenda of the next session.

*Employment of Women in Mines.*—By 92 votes to nil the Conference decided to place the question of the employment of women on underground work in all mines on the agenda of the 1935 session.

*Night Work of Women.*—By 120 votes to 1 the Conference adopted a Draft Convention partially revising the Draft Convention which was adopted by the Conference in 1919 as regards women holding managerial positions and as regards the definition of "night."

The following resolutions were also adopted by the Conference:—

By 78 votes to nil a Resolution recalling the guiding principles embodied in the resolution addressed last year to the Monetary

and Economic Conference, and expressing the hope that the League of Nations would take action to ensure that national economic measures now in contemplation or in course of execution should take account of these principles, and especially of the need for freeing the channels of international trade. The Resolution also suggested that in view of the possible social effects of such measures the Governing Body should follow developments and, so far as its competence permitted, consider the expediency of intervening.

The Conference also adopted by 84 votes to 1 a Resolution in favour of the continued study of public works policy and an endeavour, in co-operation with the League of Nations, to facilitate the adoption and execution of public works of an international character.

A Resolution relating to social conditions in the Saar Territory obtained a simple majority (50 votes to 10) but was not carried owing to the absence of a quorum.

### Countries Represented

The number of Member States represented at this session of the Conference was 48. There were present 83 Government delegates, 29 employers' delegates and 30 workers' delegates, making a total of 142. There were also 201 advisers in attendance. A list of the countries represented follows: Albania, Argentine Republic, Australia, Austria, Belgium, Bolivia, British Empire, Canada, Chile, China, Colombia, Cuba, Czechoslovakia, Denmark, Estonia, Finland, France, Greece, Guatemala, Hungary, India, Irish Free State, Iraq, Italy, Japan, Latvia, Liberia, Lithuania, Luxemburg, Mexico, Nicaragua, Norway, Netherlands, Persia, Peru, Poland, Portugal, Rumania, Siam, Sweden, Switzerland, Spain, Turkey, Union of South Africa, Uruguay, Venezuela and Yugoslavia.

In addition, the United States and Egypt, although not members of the International Labour Organization, were represented by observers who participated in the proceedings of the Conference.

The United States delegation consisted of three members, namely: Mr. Hugh S. Hanna, Chief of the Editorial and Research Division of the Bureau of Labour Statistics, American Department of Labour; Mr. Elmer F. Andrews, Industrial Commissioner for the State of New York; and Mr. John L. Lewis, President of the United Mine Workers of America.

### Canadian Delegation

The Canadian delegation to the Conference was made up as follows:—

*Government Delegates—*

Dr. W. A. Riddell, Canadian Advisory Officer, League of Nations, Geneva, Switzerland; and

Mr. P. E. Renaud, Secretary, Office of the Canadian Advisory Officer, League of Nations, Geneva, Switzerland.

*Advisers to Government Delegates—*

Mr. G. A. Gagnon, Vice-President of the Federation of Catholic Workers of Canada, Chicoutimi, P.Q.; and

Mr. W. T. Burford, Secretary-treasurer of the All-Canadian Congress of Labour, Ottawa, Ontario.

*Employers' Delegate—*

Mr. W. D. Black, Chairman of the Commercial Intelligence Committee, Canadian Manufacturers' Association, Hamilton, Ontario.

*Adviser to Employers' Delegate—*

Mr. H. W. Macdonnell, Secretary of the Industrial Relations Committee, Canadian Manufacturers' Association, Toronto, Ontario.

*Workers' Delegate—*

Mr. Tom Moore, President of the Trades and Labour Congress of Canada, Ottawa, Ontario.

*Adviser to Workers' Delegate—*

Mr. Percy R. Bengough, Vice-President of the Trades and Labor Congress of Canada, Vancouver, B.C.

Dr. W. A. Riddell served as Chairman of the Government group of delegates in attendance at the Conference, and Mr. Tom Moore as Vice-Chairman of the workers' group. Canada was represented also on a number of the most important committees of the Conference, namely: on the Selection Committee by Dr. Riddell and Mr. Moore; on the Committee on Unemployment Insurance by Dr. Riddell, Mr. Black and Mr. Moore; on the Committee on the Maintenance of Pension Rights by Mr. Renaud; on the Committee on Occupational Diseases by Dr. Riddell and Mr. Burford; on the Committee on the Reduction of Hours of Work by Mr. Bengough.

**Officers of the Conference**

The following were elected as officers of the Conference:—

*President*—Mr. Justin Godart, French Government delegate.

*Vice-Presidents*—Mr. Castille Najera, Mexican Government Delegate; Mr. Gérard, Belgian Employers' Delegate; and Mr. Johanson, Swedish Workers' Delegate.

*Secretary-General*—Mr. Harold Butler, Director of the International Labour Office.

**Opening Proceedings**

Mr. C. V. Bramsnaes, as Chairman of the Governing Body, presided at the opening of the proceedings. He began by paying tribute to two former presidents of the Conference who had died since the last Session: Viscount Burnham of London, and the Honourable Senator G. D. Robertson, former Minister of Labour of Canada. In them, he said, the International Labour Organization had lost two faithful friends.

It was encouraging, he observed, that notwithstanding the difficulties of the present time and the need for economy which all governments had to bear in mind, the States Members were taking part in the work of the Conference as fully as previously. "It really seems," he said, "as if the lowest point of the depression has been passed, and as if the world, after all the distress and uncertainty of the last few years, is gradually tending towards convalescence. But organization is necessary if that recovery is to be permanent. In many countries there is a steady decrease in unemployment—an aspect of the depression in which this Organization is specially interested. The currents of international trade are beginning to flow more smoothly and, although the time when the world economic system will recover lasting stability is still distant, it is at least permissible to hope that there will be no further relapse.

"One fact in particular should be recognized. During the difficult period through which the world has just passed, there has not, as has been the case in previous periods of depression, been any breakdown of the social progress already realized . . . . May it not be said that, if for the first time in the history of periods of depression through which the world has passed an encouraging element is to be noted, that fact is to a large extent due to the existence of the International Labour Organization, an institution in which Governments, employers and workers all work together, and to the vitality which that Organization has shown?"

Mr. Justice Godart, on taking the chair as President of the Conference, stated that the increase in the number of ratifications of Conventions of the International Labour Conference showed that in spite of all obstacles and in however fragmentary and amorphous a fashion there was being built up a real international labour code. Steadily and persistently, if not rapidly, the International Labour Organization had made a contribution the value of which was incontestable to the pacific work of the League of Nations. Further, the application of the 29 Conventions

now in force was steadily being made more effective. Labour legislation was originally conceived as a system of protective measures. It provided for the remedy of recognized abuses. The Labour Part of the Treaties of Peace, made at the conclusion of the Great War, inaugurated, however, a new phase of civilization by subordinating the unbridled search for profit to the moral law, and by affirming that workers are not mere economic units, but first and foremost human beings.

"But can it be said that all that is necessary will have been done when the system of labour legislation is complete, when really humane conditions of labour, in the narrow sense of conditions which safeguard the physical and mental well-being of the individual, are established and applied throughout the world? That is by no means the object of Part XIII. Neither its letter nor its spirit implies any such restriction. Its intention is that labour should enjoy full social justice. Social justice is of course established by protective measures, and by the intervention of the law in relations between employers and employed. But both employers and employed are dominated by other powers—those of finance and of the machine—whose unrestricted liberty impedes the rule of social justice. And in this sphere, even more than in that of protective legislation, it will be found that what benefits labour also benefits the employer, who suffers severely from the lack of organization in industry and from the excessive keenness of competition.

"The program laid down by Part XIII is thus one of constructive development. By carrying out that program, the International Labour Organization will do increasingly good service to the organization of production; and by endowing labour with an international system of law, which will safeguard national systems, it will continue its contribution towards establishing the reign of justice and of peace, which are the necessary conditions for the creation of wealth and general prosperity."

### **The United States to Join the International Labour Organization**

Announcement was made by Mr. Butler of the receipt of a message from the United States officially communicating a joint resolution passed by the House of Representatives and Senate of the United States on June 18, authorizing the President of the United States to accept membership in the International Labour Organization. The text of the resolution is as follows:—

"Whereas progress toward the solution of the problems of international competition in industry can be made through international action concerning the welfare of wage earners; and

"Whereas the failure of a nation to establish humane conditions of labour is an obstacle in the way of other nations which desire to maintain and improve the conditions in their own countries; and

"Whereas the United States early recognized the desirability of international co-operation in matters pertaining to labour and took part in 1900 in establishing, and for many years thereafter supported, the International Association for Labour Legislation; and

"Whereas the International Labour Organization has advanced the welfare of labour throughout the world through studies, recommendations, conferences, and conventions concerning conditions of labour; and

"Whereas other nations have joined the International Labour Organization without being members of the League of Nations; and

"Whereas special provision has been made in the constitution of the International Labour Organization by which membership of the United States would not impose or be deemed to impose any obligation or agreement upon the United States to accept the proposals of that body as involving anything more than recommendations for its consideration; Therefore be it

"*Resolved, etc.,* That the President is hereby authorized to accept membership for the Government of the United States of America in the International Labour Organization, which, through its general conference of representatives of its members and through its International Labour Office, collects information concerning labour throughout the world and prepared international conventions for the consideration of member governments with a view to improving conditions of labour.

"Sec. 2. That in accepting such membership the President shall assume on behalf of the United States no obligation under the covenant of the League of Nations."

Mr. Riddell, Canadian Government delegate, said: "It is a matter of the greatest satisfaction to the Canadian delegation to have listened to the communication which has just been made to this Conference. As one of the two nearest neighbours of the United States, Canada naturally welcomes this announcement with the greatest pleasure and gratification. I believe there is no doubt whatever that an invitation will be extended at

once, or as soon as it can be properly arranged, to the United States to become a Member of this Organization. As representative of a country that has long enjoyed close and friendly relations with the United States of America, I should like formally to propose that this invitation be extended. I should further like to congratulate all those who have been associated with this movement for bringing this great industrial country into close relationship with the International Labour Organization. The President of the United States, and all those who have collaborated with him, deserve our best thanks for strengthening in this way the work of social reconstruction for the world."

The Mexican Government delegate, also speaking as the representative of a State adjoining the United States, cordially associated himself with the proposal of the Canadian delegate to send an invitation.

The president of the conference said he was sure he voiced the opinion of all the delegates in declaring that the conference was highly gratified at the prospect of the collaboration about to be established with the United States of America. Their entry into the Organization would be for them, as for the countries which were already members, a new force of organization and of progress. That force would tend not merely to protect the workers in his personality and in his employment, but also to promote continuous and increasing solidarity between all who produced, and to place civilization more and more under sure safeguards.

In helping the conference to promote the full measure of social justice, the United States would be giving valuable assistance, material and moral, in the constructive promotion of peace. On this occasion, so momentous for the International Labour Organization and for the cause of peace, the conference conveyed to the American Congress, President Roosevelt and the American people its heartfelt greetings, and welcomed them as collaborators.

Mr. Andrews (Observer, United States) briefly acknowledged the welcome. The United States delegation, he said, were sincerely appreciative of the privileges of being there and hoped they would be able to contribute something to the conference. They knew they would take away a great deal of information which would be helpful to people in their country.

A formal resolution was adopted as follows:—

"The International Labour Conference takes note of the communication of 22nd June, 1934, addressed to the Director of the International Labour Office by the authorized repre-

sentative of the Government of the United States of America, heartily welcomes the decision of the Congress of the United States authorizing the President to accept on behalf of the Government of the United States membership in the International Labour Organization, recalling that it has always been the firm conviction of the organization that its ends could be more effectively advanced if the membership of the organization could be made universal, hereby decides to invite the Government of the United States to accept membership in the International Labour Organization, it being understood that such acceptance involves only those rights and obligations provided for in the constitution of the organization and shall not involve any obligations under the Covenant of the League of Nations, and further decides that, in the event of the Government of the United States accepting membership, the Governing Body is hereby authorized to arrange with the Government of the United States any questions arising out of its membership, including the question of its financial contribution."

### Discussion of the Director's Annual Report

The annual report of the Director of the International Labour Office, of which a summary appeared in the June issue of the *LABOUR GAZETTE*, at pages 537-541, gave rise to a long discussion in which delegates of all groups and from many countries exchanged views on the economic situation, its remedies, its social repercussions, the activity of the International Labour Organization, etc. There was general agreement that a way out of the present economic depression could be found only along the path of international co-operation, and that the Organization should play an active part in promoting a movement in that direction.

Dr. W. A. Riddell thanked the Chairman of the Governing Body and the Director of the International Labour Office for the sympathetic references which had been made to the death of the Honourable Senator G. D. Robertson, who had been recognized as an able champion of the cause of labour and a true friend of international collaboration.

He commented with pleasure and satisfaction on the presence at the Conference of a delegation from the United States of America. The report of the Director of the International Labour Office presented in a clear and summarized form the outstanding economic, financial and social problems confronting the world. The emphasis laid last year on the economic and financial foundations for social progress was even more evident in this year's report. The primary task of the International

Labour Organization was undoubtedly to bring about world equilibrium in the social sphere. If this goal was to be achieved, its members must be fully acquainted with the trends and changes taking place in the economic and financial structure upon which it rests. Dr. Riddell said he sometimes wondered if we are fully aware of the significance for the International Labour Organization of some of the experiments in social and political structure which are being worked out at the present time, and if it is not possible that consideration may soon have to be given to the reform of the Labour Part of the Treaties of Peace, which was based upon a recognition of three parties in industry, namely, governments, employers and workers, whereas systems have recently been coming into existence in a number of member countries which recognize only one party—the State. This change in the situation must be seriously taken into account if the International Labour Organization is to function in accordance with its present constitution, otherwise fundamental constitutional reforms would become imperative. He emphasized the need of keeping the International Labour Organization truly international. During the last year he believed the Director had made serious efforts to bring this about and the speaker paid tribute to the staff of the International Labour Office for the increased interest they had shown in the problems of states far removed from Geneva. The Office, however, was largely under the control of the Governing Body, and if this interest is to be sustained, it would only be brought about by having a Governing Body which is fully representative of countries outside of Europe.

The effects of the depression in Canada had, he said, been very similar to those in other important industrial and agricultural countries. Canada's efforts to recovery have not been as spectacular or as radical as those of certain other countries mentioned in the Report. These efforts have rather taken a middle course. We have not been the first to cast the old aside, nor yet the last to try the new. Our scheme of recovery has combined both the old and the new. A series of Relief Acts passed by the Dominion Parliament has empowered the Government to enter into agreements with the Provinces respecting relief measures. These have included measures of both an emergency and permanent character. The emergency measures provide for direct relief: public works, financial assistance to Provinces, public bodies, etc.; land settlement under which heads of families are given assistance in order that they may become self-sustaining; camps for single home-

less persons, where they are provided with food, fuel, clothing and shelter, and, so far as possible, employed in useful work. The measures of a more permanent character provide relief for agriculture through the granting of financial and marketing assistance, improving facilities for debt readjustment and the establishment of marketing boards with wide powers. "The Government," Dr. Riddell said, "had under consideration the question of unemployment insurance, and in 1933 it called a Dominion-Provincial Conference to deal with this problem. Unfortunately, difficulties of a constitutional character have prevented the adoption, so far, of a scheme. The Government, however, still favours the adoption of a system of unemployment insurance, and I am sure that the Convention which is being drawn up in this Conference will be of great help to the Government in drafting the final scheme.

"Happily, 1934 seems to be giving evidence so far that the worst of the depression is over and that we may expect a steady, if slow, recovery. International co-operation, however, is necessary if recovery is to be assured, and if it is to be brought about within a reasonable time.

"In the international field, the Canadian people are still firmly attached to the collective system. In this connection, I am happy to state that the Canadian Government has, during the present Session of Parliament, introduced legislation which, if adopted, will enable it to ratify two more International Labour Conventions—those concerning seamen's articles of agreement and the repatriation of seamen."

Mr. E. F. Andrews, of the United States delegation, observed: "A significant fact mentioned in the Report of the Director is that, while generally throughout the world there has been little progress in the enactment of legislation benefiting the workers—which to us means the benefit of society at large—there have been but few retrogressions and little undoing of the good that has been accomplished in the past. If we take into account the rigid economics made necessary for all countries, it might well have been otherwise, particularly as social and protective laws might have been repealed or their enforcement limited under the guise of budgetary savings.

"During the past year, in addition to our Federal program to aid industry and the workers, various States have broadened their workmen's compensation laws and their labour laws. Never in any one year in the history of our country have the individual State Governments passed so much progressive

legislation. A number of States have enacted minimum age laws for women and minors, laws providing for minimum wages and limiting hours for men employed on public works.

\* \* \* \*

"I suppose no one expects any recovery program to reach its full measure of success in so short a period as a year, in view of the depth of the depression into which the world had fallen and the length of time during which it has remained there. But we are making the expected steady progress, and on a basis which will lead to social and economic wellbeing. As to the forty-hour week: I am not sure that this or even a week of shorter hours—such as is provided in some of the most successful Codes—has by itself contributed to our recovery. A limited work week in the United States has been accompanied by minimum-wage regulation to maintain or increase the earnings and purchasing power of the workers; and both have, in justice to the employer, been associated with fair trade practice provisions to protect him against unfair competition and to assure him a fair profit.

"In the second place, the industrial Codes developed under the N.R.A. were in themselves part of a much larger program, usually referred to as "The National Recovery Program" which, in addition to the N.R.A., included in its aims an improvement in the conditions of agriculture through a measure of production control, the carrying out of an extensive plan of public works, Government aid in the building and financing of homes, a rather vast power and reclamation project in part of the State of Tennessee and adjacent States, a subsistence homesteads movement, etc. This program was designed to increase business activity directly through the purchase of considerable quantities of materials and supplies with Government funds, and indirectly to accomplish the same end through a general increase in the purchasing power of the people.

"Not all of the items in the National Recovery Program were put into effect immediately, but each of them was at least under way within a comparatively few months.

"As a result of the more or less simultaneous action of so many influences, it is practically impossible to isolate the effect of any particular factor, such as the shortened work week. There are indeed critics who assert that any evident improvement which has occurred in our economic life during the past year has not been due to the National Recovery Program at all but has been but the result of certain connected economic and

psychological factors of more or less worldwide influence. I believe, however, that the number of such critics is small, and that the great majority of students of the United States and of our citizens generally are convinced that the recovery experiment has been due to the carrying out of the policies incorporated in the National Recovery Program of President Roosevelt."

\* \* \* \*

In closing, Mr. Andrews said, "it might be appropriate to mention the great current need of closer relationship of employer and employee. Where collective bargaining does not exist, it should be mandatory if the workers wish it. If this sounds too much on the side of labour, possibly the appropriate legislation would also protect industry against unreasonable strikes and unstable trade unions. But I like a system where employers and workers can in a friendly way discuss their common problems and, failing in agreement, have the knowledge that there is existing machinery for fair and final arbitration without recourse to strikes or lockouts. May I appeal to the employers and workers of all countries represented here for a spirit of mutual confidence and trust, believing that that is the surest road to a peaceful world of good fellowship."

### The Director's Reply

Dr. Butler, in closing the debate on his annual report as Director, stated that it had showed "the determination of the Conference to grapple with human misery and with the distress which the breakdown of the economic system has produced, and to do everything in its power to ward off the dangers of social collapse, which recent events have so forcibly illustrated." He justified the large proportion of the report that was devoted to economic questions, and to the subject of economic control or planning. "What I tried to do in my report," he said, "was to show that at present there is a great deal of confused thinking on the whole subject. I pointed out that all social legislation and all collective bargaining is to some extent an interference with the free play of economic forces—an interference deliberately conceived with a social purpose in view. The value of social protection, and the healthy influence of agreements freely negotiated between representative bodies of employers and workers, is hardly open to serious doubt. With planning and control of that kind I should most certainly be in sympathy. Indeed, it is the basic notion upon which the International Labour Organization is founded. Wherever, there-

fore, economic control is definitely directed towards social progress, I for one should unhesitatingly favour it."

However, Mr. Butler continued, there were other forms of economic planning that were not socially desirable, such as interference with international trade and exchange restrictions. The real problem was how to reconcile the national economic systems that had been built up behind tariff walls and exchange restrictions, with the need for freer movement of goods, capital and services between nations. The solution of this problem was bound up with that of increasing the world's wealth in order to raise the standard of living and expand social services. Intelligent control of the monetary systems, a more equitable distribution of income, a better equilibrium between industry and agriculture, were the objects of this type of planning, which aimed at achieving the economy of abundance placed within reach by the technical progress of production. Mr. Butler referred to the various experiments in economic control, remarking that the task of the International Labour Office was to discover what types of economic organization or planning would best promote the course of social progress.

The Director discussed exchange depreciation and other types of monetary policy, referring to the United States plan for increasing the volume of effective demand on the whole market by means of controlled expenditure, financed if necessary by controlled credit expansion. He next made reference to questions relating to the work of the office, and on the question of staff mentioned the endeavour that had been made to increase the representation of overseas countries, of which efforts Dr. Riddell, speaking for Canada, had expressed his appreciation. He dealt also with constitutional questions, including the proposal for the enlargement of the Governing Body.

"If this organization had not existed," said Mr. Butler in conclusion, "I am convinced that the social evils produced by the depression would have been far graver than they have actually been, little as any one is disposed to minimize them.

"We may well hope that the worst is now over; but recovery is very slow and cannot be expected to accelerate unless a vigorous effort towards international reconstruction is made. What is now wanted is a lead, a lead inspired not merely by a nice calculation of immediate gains and losses, but by a vision of the immense possibilities of the future. It is only by a new start—a new international deal—that the balance between production and distribution, between industry and agriculture, the stabilization of exchanges and the

resumption of international trade, can be achieved. Only then will the spectre of unemployment fade and the way to higher wages and expanding purchasing power be opened.

"When this lead is given, when the time comes to rebuild the international economic edifice on broader and surer foundations, this organization will be called upon to bear its share of the burden and its share of the honour, to which its constancy to its principles, during these times of trial will have most fully entitled it."

### Election of New Governing Body

In consequence of its ratification by the States whose representatives compose the Council of the League of Nations and by three-fourths of the members, there came into force on June 4 the 1922 amendment to Article 393 of the Treaty of Versailles and to the corresponding Articles of the other Treaties of Peace, the text of which is as follows:—

The International Labour Office shall be under the control of a Governing Body consisting of thirty-two persons:—

Sixteen representing Governments,  
Eight representing the employers, and  
Eight representing the workers.

Of the sixteen persons representing governments, eight shall be appointed by the members of chief industrial importance, and eight shall be appointed by the members selected for that purpose by the government delegates to the conference, excluding the delegates of the eight members mentioned above. Of the sixteen members represented six shall be non-European States.

Any question as to which are the members of chief industrial importance shall be decided by the Council of the League of Nations.

The persons representing the Employers and the persons representing the workers shall be elected respectively by the Employers' delegates and the workers' delegates to the conference. Two employers' representatives and two workers' representatives shall belong to non-European states.

The period of office of the Governing Body shall be three years.

The method of filling vacancies and of appointing substitutes and other similar questions may be decided by the Governing Body subject to the approval of the conference.

The Governing Body shall from time to time, elect one of its number to act as its chairman, shall regulate its own procedure, and shall fix its own times of meeting. A special meeting shall be held if a written

request to that effect is made by at least twelve of the representatives on the Governing Body.

The period of office of the Governing Body elected in 1931 having expired, the election of the new Governing Body took place under the terms of the amended article. The governments of the eight countries which are of "chief industrial importance" in the membership of the International Labour Organization retain their seats in the Governing Body. They, as decided by the Council of the League of Nations in 1922, are as follows (in the alphabetical order of the names in the French language): Germany, Belgium, Canada, France, Great Britain, India, Italy and Japan. The eight other governments elected were: Spain, China, Poland, Finland, Argentine Republic, Czechoslovakia, Brazil and Mexico. The following persons were chosen to represent the employers' and workers' groups respectively:—

*Employers' Group*—Mr. Gemmil (South Africa); Mr. Olivetti (Italy); Mr. Lambert-Ribot (France); Mr. Forbes Watson (British Empire); Mr. Oersted (Denmark); Mr. Tzaut (Switzerland); and Mr. Ychourtchine (Yugoslavia).

*Workers' Group*—Mr. Cabellero (Spain); Mr. Hayday (British Empire); Mr. Johanson (Sweden); Mr. Joshi (India); Mr. Jouhaux (France); Mr. Mertens (Belgium); Mr. Tom Moore (Canada); and Mr. Yonekubo (Japan).

It will be noted that besides being included in the Government Group, Canada is repre-

sented in the Workers' Group by Mr. Tom Moore.

In referring to the importance attaching to the coming into operation of the amendment to Article 393, which had been hanging fire for some twelve years, Mr. Butler, the secretary-general of the conference, said: "For the first time you have now elected an enlarged Governing Body. I believe that that is a necessary and timely change which is in the best interests of the development of our work here. It is a change which, I think, corresponds to the changes which have taken place in the world at large. It will mean that we shall have more co-operation and closer touch with countries overseas, and not only with their governments but with their employers and workers as well. To reinforce that tendency, we have had the welcome news of the probable entry into the organization of the United States of America. I do not think that I need say anything now to enlarge on the immense importance of that event. Taken together, these two developments undoubtedly means that the organization has received a reinforcement, a rejuvenation of its blood which is going to enable it to go forward with renewed strength and renewed confidence, and to show the workers that the trust which they have placed in the organization has not been and will not be misplaced."

The full texts of the Draft Conventions and of the recommendation adopted by the conference follow:—

### DRAFT CONVENTION ENSURING BENEFIT OR ALLOWANCES TO THE INVOLUNTARILY UNEMPLOYED

The General Conference of the International Labour Organization of the League of Nations, Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Eighteenth Session on 4 June, 1934, and Having decided upon the adoption of certain proposals with regard to unemployment insurance and various forms of relief for the unemployed, which is the second item on the Agenda of the Session, and Having determined that these proposals shall take the form of a Draft International Convention, adopts, this 23rd day of June of the year one thousand nine hundred and thirty-four, the following Draft Convention which may be cited as the Unemployment Provision Convention, 1934:—

#### Article 1

(1) Each Member of the International Labour Organization which ratifies this Convention undertakes to maintain a scheme ensuring to persons who are involuntarily unemployed and to whom this Convention applies:

- (a) benefit, by which is meant a payment related to contributions paid in respect of the beneficiary's employment whether under a compulsory or a voluntary scheme; or

- (b) an allowance, by which is meant provision being neither benefit nor a grant under the ordinary arrangements for the relief of destitution, but which may be remuneration for employment on relief works organized in accordance with the conditions laid down in Article 9; or
- (c) a combination of benefit and an allowance.
- (2) Subject to this scheme ensuring to all persons to whom this Convention applies the benefit or allowance required by paragraph 1, the scheme may be
  - (a) a compulsory insurance scheme;
  - (b) a voluntary insurance scheme;
  - (c) a combination of compulsory and voluntary insurance schemes; or
  - (d) any of the above alternatives combined with a complementary assistance scheme.
- (3) The conditions under which unemployed persons shall pass from benefit to allowances, if the occasion arises, shall be determined by national laws or regulations.

#### Article 2

- (1) This Convention applies to all persons habitually employed for wages or salary.
- (2) Provided that any Member may in its national laws or regulations make such exceptions as it deems necessary in respect of:

- (a) persons employed in domestic service;
  - (b) homeworkers;
  - (c) workers whose employment is of a permanent character in the service of the government, a local authority or a public utility undertaking;
  - (d) non-manual workers whose earnings are considered by the competent authority to be sufficiently high for them to ensure their own protection against the risk of unemployment;
  - (e) workers whose employment is of a seasonal character, if the season is normally of less than six months' duration and they are not ordinarily employed during the remainder of the year in other employment covered by this Convention;
  - (f) young workers under a prescribed age;
  - (g) workers who exceed a prescribed age and are in receipt of a retiring or old age pension;
  - (h) persons engaged only occasionally or subsidiarily in employment covered by this Convention;
  - (i) members of the employer's family;
  - (j) exceptional classes of workers in whose cases there are special features which make it unnecessary or impracticable to apply to them the provisions of this Convention.
- (3) Members shall state in the annual reports submitted by them upon the application of this Convention the exceptions which they have made under the foregoing paragraph.
- (4) This Convention does not apply to seamen, sea fishermen, or agricultural workers as these categories may be defined by national laws or regulations.

#### Article 3

In cases of partial unemployment, benefit or an allowance shall be payable to unemployed persons whose employment has been reduced in a way to be determined by national laws or regulations.

#### Article 4

The right to receive benefit or an allowance may be made subject to compliance by the claimant with the following conditions:

- (a) that he is capable of and available for work;
- (b) that he has registered at a public employment exchange or at some other office approved by the competent authority and, subject to such exceptions and conditions as may be prescribed by national laws or regulations, attends there regularly; and
- (c) that he complies with such other requirements as may be prescribed by national laws or regulations for the purpose of showing whether he fulfils the conditions for the receipt of benefit or an allowance.

#### Article 5

The right to receive benefit or an allowance may be made subject to other conditions and disqualifications, in particular those provided for in Articles 6, 7, 8, 9, 10, 11 and 12. Any conditions or disqualifications other than those provided for in the said Articles shall be indicated in the annual reports submitted by Members upon the application of this Convention.

#### Article 6

The right to receive benefit or an allowance may be made conditional upon the completion of a qualifying period, involving:

- (a) the payment of a prescribed number of contributions within a prescribed period preceding the claim to benefit or preceding the commencement of the period of unemployment;
- (b) employment covered by this Convention for a prescribed period preceding the claim to benefit or an allowance or preceding the commencement of a period of unemployment; or
- (c) a combination of the above alternatives.

#### Article 7

The right to receive benefit or an allowance may be made conditional upon the completion of a waiting period the duration and conditions of application of which shall be prescribed by national laws or regulations.

#### Article 8

The right to receive benefit or an allowance may be made conditional upon attendance at a course of vocational or other instruction.

#### Article 9

The right to receive benefit or an allowance may be made conditional upon the acceptance, under conditions prescribed by national laws or regulations, of employment on relief works organized by a public authority.

#### Article 10

(1) A claimant may be disqualified for the receipt of benefit or of an allowance for an appropriate period if he refuses an offer of suitable employment. Employment shall not be deemed to be suitable:

- (a) if acceptance of it would involve residence in a district in which suitable accommodation is not available;
- (b) if the rate of wages offered is lower, or the other conditions of employment are less favourable:
  - (i) where the employment offered is employment in the claimant's usual occupation and in the district where he was last ordinarily employed, than those which he might reasonably have expected to obtain, having regard to those which he habitually obtained in his usual occupation in that district or would have obtained if he had continued to be so employed;
  - (ii) in all other cases, than the standard generally observed at the time in the occupation and district in which the employment is offered;
- (c) if the situation offered is vacant in consequence of a stoppage of work due to a trade dispute;
- (d) if for any other reason, having regard to all the considerations involved including the personal circumstances of the claimant, its refusal by the claimant is not unreasonable.

(2) A claimant may be disqualified for the receipt of benefit or of an allowance for an appropriate period:

- (a) if he has lost his employment as a direct result of a stoppage of work due to a trade dispute;

- (b) if he has lost his employment through his own misconduct or has left it voluntarily without just cause;
  - (c) if he has tried to obtain fraudulently any benefit or allowance; or
  - (d) if he fails to comply with the instructions of a public employment exchange or other competent authority with regard to applying for employment, or if it is proved by the competent authority that he has failed or neglected to avail himself of a reasonable opportunity of suitable employment.
- (3) A claimant who on leaving his employment has received from his employer in virtue of his contract of service compensation for and substantially equal to his loss of earnings for a certain period may be disqualified for the duration of that period for the receipt of benefit or of an allowance. A discharge allowance provided for by national laws or regulations shall not be deemed to be such compensation.

#### Article 11

The right to receive benefit or an allowance may be limited in duration to a period which shall not normally be less than 156 working days per year, and shall in no case be less than 78 working days per year.

#### Article 12

(1) Benefit shall be payable irrespective of the needs of the claimant.

(2) The right to receive an allowance may be made conditional upon the need of the claimant being proved in such manner as may be prescribed by national laws or regulations.

#### Article 13

(1) Benefit shall be payable in cash, but supplementary grants to facilitate the re-employment of an insured person may be in kind.

(2) Allowances may be in kind.

#### Article 14

There shall be constituted in accordance with national laws or regulations tribunals or other competent authorities for the purpose of determining questions arising on applications for benefit or an allowance made by persons to whom this Convention applies.

#### Article 15

(1) The claimant may be disqualified for the receipt of benefit or of an allowance in respect of any period during which he is resident abroad.

(2) Special provisions may be prescribed for frontier workers employed in one country and resident in another.

#### Article 16

Foreigners shall be entitled to benefit and allowances upon the same conditions as nationals. Provided that any Member may withhold from the nationals of any Member or State not bound by this Convention equality of treatment with its own nationals in respect of payments from funds to which the claimant has not contributed.

#### Article 17

The formal ratifications of this Convention shall be communicated to the Secretary-General of the League of Nations for registration.

#### Article 18

The Convention shall be binding only upon those Members of the International Labour

Organization whose ratifications have been registered with the Secretary-General.

It shall come into force twelve months after the date on which the ratifications of two Members have been registered with the Secretary-General.

Thereafter, this Convention shall come into force for any Member twelve months after the date on which its ratification has been registered.

#### Article 19

As soon as the ratifications of two Members of the International Labour Organization have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify them of the registration of ratifications which may be communicated subsequently by other Members of the Organization.

#### Article 20

A Member which has ratified this Convention may denounce it after the expiration of five years from the date on which the Convention first comes into force, by an act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

Each Member which has ratified this Convention and which does not, within the year following the expiration of the period of five years mentioned in the preceding paragraph, exercise the right of denunciation provided for in this Article, will be bound for another period of five years and, thereafter, may denounce this Convention at the expiration of each period of five years under the terms provided for in this Article.

#### Article 21

At the expiration of each period of five years after the coming into force of this Convention, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the Agenda of the Conference the question of its revision in whole or in part.

#### Article 22

Should the Conference adopt a new Convention revising this Convention in whole or in part, then, unless the new Convention otherwise provides,

(a) the ratification by a Member of the new revising Convention shall *ipso jure* involve the immediate denunciation of this Convention, notwithstanding the provisions of Article 20 above, if and when the new revising Convention shall have come into force;

(b) as from the date when the new revising Convention comes into force this Convention shall cease to be open to ratification by the Members.

This Convention shall in any case remain in force in its actual form and content for those Members which have ratified it but have not ratified the revising Convention.

#### Article 23

The French and English texts of this Convention shall both be authentic.

## RECOMMENDATION CONCERNING UNEMPLOYMENT INSURANCE AND VARIOUS FORMS OF RELIEF FOR THE UNEMPLOYED

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Eighteenth Session on June 4, 1934, and

Having decided upon the adoption of certain proposals with regard to unemployment insurance and various forms of relief for the unemployed, which is the second item on the Agenda of the Session, and

Having determined that these proposals shall take the form of a Recommendation, adopts, this twenty-third day of June of the year one thousand nine hundred and thirty-four, the following Recommendation:

The Conference,

Having adopted a Draft Convention ensuring benefit or allowances to the involuntarily unemployed;

Considering that this Draft Convention lays down the minimum conditions to be complied with by every scheme of unemployment insurance or assistance;

Considering that it is desirable to indicate a number of general principles which practice shows to be best calculated to promote a satisfactory organization of unemployment insurance and assistance;

Recommends that each Member should take the following principles and rules into consideration:

1. In countries where compulsory insurance against unemployment is not in operation, steps should be taken to create such a system as soon as possible.

2. In countries in which compulsory or voluntary unemployment insurance is in operation, a complementary assistance scheme should be maintained to cover persons who have exhausted their right to benefit and in certain cases those who have not yet acquired the right to benefit; this scheme should be on a different basis from the ordinary arrangements for the relief of destitution.

3. All schemes for the payment of unemployment benefit or allowances should cover not only persons who are wholly unemployed, but also persons who are partially unemployed.

4. (a) Unemployment insurance and assistance schemes should be applied as soon as possible to all persons who are employed under a contract of service, and to persons employed under a contract of apprenticeship with money payment. If, however, exceptions are considered necessary, they should be confined within the narrowest possible limits.

(b) Such persons should be covered either by insurance or assistance until they reach the age at which they are entitled to an old age pension.

(c) If circumstances make it difficult to apply the general provisions relating to unemployment insurance to a particular class of workers, special arrangements should be made for the insurance of such workers. These special arrangements should aim in particular at ensuring adequate proof of unemployment and at adapting the benefit to the normal earnings of the workers concerned.

(d) Whenever possible, and in particular whenever satisfactory measures of supervision can be applied, special provision should be made for the relief in case of unemployment of persons of comparatively small means who work on their own account.

5. Where it is considered advisable to fix a maximum remuneration as a criterion of liability to insurance, only such workers should thereby be excluded as are in receipt of remuneration sufficiently high for them to ensure their own protection against the risk of unemployment, the ultimate object being to include all workers manual and non-manual irrespective of income.

6. The qualifying period permitted by the Draft Convention should not exceed twenty-six weeks' employment in an occupation covered by the scheme, or the payment of twenty-six weekly contributions or the equivalent, within twelve months preceding the claim for benefit, or alternatively fifty-two weeks' such employment, or fifty-two weekly contributions or the equivalent, within twenty-four months preceding the claim for benefit.

7. The period during which benefit is payable under national laws or regulations should be as long as is consistent with the solvency of the scheme; and every effort should be made to pay allowances as long as claimants are in need of them.

8. Subject to the provisions concerning partially unemployed persons, of Articles 3 and 7 of the Draft Convention, and of paragraph 3 of the present Recommendation, the waiting period permitted by the Draft Convention should not exceed eight days per spell of unemployment.

9. In deciding whether employment in an occupation other than that in which a claimant has previously been engaged is "suitable employment" for the purpose of the disqualification permitted by the Draft Convention, account should be taken of the length of the claimant's service in the previous occupation, his chances of obtaining work in it, his vocational training, and his suitability for the work.

10. Disqualification for the receipt of benefit or allowances on the ground that a claimant has lost his employment by reason of a stoppage of work due to a trade dispute should be confined to cases in which the claimant is directly interested in the dispute, and should in all cases cease when the stoppage of work ceases.

11. (a) The obligation to attend a course of vocational or other instruction permitted by the Draft Convention as a condition for the receipt of benefit or allowances should be imposed only if the unemployed person will derive an advantage therefrom either from the point of view of physical or mental well-being or of vocational or general capabilities.

(b) When imposing on an unemployed person an obligation to accept employment on relief works, account should be taken of his age, health, previous occupation and suitability for the employment in question.

(c) Only works of an exceptional and temporary character, organized by the public authority by means of funds specially allocated for the relief of the unemployed should be considered as relief works.

12. Part of the money allocated to the relief of unemployment should be available for the purpose of facilitating the return of unemployed persons to employment, such as vocational and other training, and the payment of fares to unemployed persons who find employment in a district other than that in which they have been residing.

13. There should be a periodical review by the competent authority of the financial position of insurance funds in order that they may be kept as far as possible solvent and self-supporting. The financial arrangements should so far as possible include provisions to enable the scheme to surmount changes of short duration in the level of unemployment without change of the conditions governing the scheme.

14. An emergency fund should be created for the purpose of ensuring the payment, during

periods of particularly severe unemployment, of the allowances provided for under national laws or regulations.

15. Provision should be made for the participation of representatives of the contributors in the administration of insurance schemes.

16. Equality of treatment should be applied in appropriate cases not only to the nationals of Members bound by the Convention but also to those of Members and States which, without having ratified the Convention, effectively apply its provisions.

17. States should regulate by means of bilateral agreements with neighbouring States the conditions under which benefit or allowances shall be paid to unemployed workers in frontier zones who have their residence in one country and who work in another.

## DRAFT CONVENTION FOR THE REGULATION OF HOURS OF WORK IN AUTOMATIC SHEET-GLASS WORKS

The General Conference of the International Labour Organization of the League of Nations, Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Eighteenth Session on June 4, 1934, and

Having decided upon the adoption of certain proposals with regard to the regulation of hours of work in automatic sheet-glass works, which is the third item on the Agenda of the Session, and

Having determined that these proposals shall take the form of a Draft International Convention,

adopts, this 21st day of June of the year one thousand nine hundred and thirty-four, the following Draft Convention which may be cited as the sheet-glass works Convention, 1934:

### Article 1

(1) This Convention applies to persons who work in successive shifts in necessarily continuous operations in sheet-glass works which manufacture by automatic machines sheet glass or other glass of the same characteristics which only differs from sheet glass in thickness and other dimensions.

(2) By necessarily continuous operations are meant all operations which, on account of the automatic and continuous character of the feeding of the molten glass to the machines and the working of the machines, are necessarily carried on without a break at any time of the day, night or week.

### Article 2

(1) The persons to whom this Convention applies shall be employed under a system providing for at least four shifts.

(2) The hours of work of such persons shall not exceed an average of forty-two per week.

(3) This average shall be calculated over a period not exceeding four weeks.

(4) The length of a spell of work shall not exceed eight hours.

(5) The interval between two spells of work by the same shift shall not be less than sixteen hours: Provided that this interval may where necessary be reduced on the occasion of the periodical change-over of shifts.

### Article 3

(1) The limits of hours prescribed in paragraphs 2, 3 and 4 of Article 2 may be exceeded and the interval prescribed in paragraph 5 reduced, but only so far as may be necessary to avoid serious interference with the ordinary working of the undertaking,

(a) in case of accident, actual or threatened, or in case of urgent work to be done to machinery or plant, or in case of *force majeure*; or

(b) in order to make good the unforeseen absence of one or more members of a shift.

(2) Adequate compensation shall be granted for all additional hours worked in accordance with this Article in such manner as may be determined by national laws or regulations or by agreement between the organizations of employers and workers concerned.

### Article 4

In order to facilitate the effective enforcement of the provisions of this Convention every employer shall be required:

(a) to notify, by the posting of notices in conspicuous positions in the works or other suitable place or by such other method as may be approved by the competent authority, the hours at which each shift begins and ends;

(b) not to alter the hours so notified except in such manner and with such notice as may be approved by the competent authority; and

(c) to keep a record in the form prescribed by the competent authority of all additional hours worked in pursuance of Article 3 of this Convention and of the compensation granted in respect thereof.

### Article 5

The formal ratifications of this Convention shall be communicated to the Secretary-General of the League of Nations for registration.

### Article 6

The Convention shall be binding only upon those Members of the International Labour Organization whose ratifications have been registered with the Secretary-General.

It shall come into force twelve months after the date on which the ratifications of two Members have been registered with the Secretary-General.

Thereafter, this Convention shall come into force for any Member twelve months after the date on which its ratification has been registered.

#### Article 7

As soon as the ratifications of two Members of the International Labour Organization have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify them of the registration of ratifications which may be communicated subsequently by other Members of the Organization.

#### Article 8

A Member which has ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention first comes into force, by an act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

Each Member which has ratified this Convention and which does not, within the year following the expiration of the period of ten years mentioned in the preceding paragraph, exercise the right of denunciation provided for in this Article, will be bound for another period of ten years and, therefore, may denounce this

Convention at the expiration of each period of ten years under the terms provided for in this Article.

#### Article 9

At the expiration of each period of ten years after the coming into force of this Convention, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the Agenda of the Conference the question of its revision in whole or in part.

#### Article 10

Should the Conference adopt a new Convention revising this Convention in whole or in part, then, unless the new Convention otherwise provides,

- (a) the ratification by a Member of the new revising Convention shall *ipso jure* involve the immediate denunciation of this Convention, notwithstanding the provisions of Article 8 above, if and when the new revising Convention shall have come into force;
- (b) as from the date when the new revising Convention comes into force this Convention shall cease to be open to ratification by the Members.

This Convention shall in any case remain in force in its actual form and content for those Members which have ratified it but have not ratified the revising Convention.

#### Article 11

The French and English texts of this Convention shall both be authentic.

### DRAFT CONVENTION CONCERNING WORKMEN'S COMPENSATION FOR OCCUPATIONAL DISEASES (REVISED 1934)

The General Conference of the International Labour Organization of the League of Nations, Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Eighteenth Session on 4 June, 1934, and Having decided upon the adoption of certain proposals with regard to the partial revision of the Convention concerning workmen's compensation for occupational diseases adopted by the Conference at its Seventh Session, which is the fifth item on the Agenda of the Session, and Considering that these proposals must take the form of a Draft International Convention,

adopts, this 21st day of June of the year one thousand nine hundred and thirty-four, the following Draft Convention which may be cited as the Workmen's Compensation (Occupational Diseases) Convention (Revised), 1934.

#### Article 1

1. Each Member of the International Labour Organization which ratifies this Convention undertakes to provide that compensation shall be payable to workmen incapacitated by occupational diseases, or, in case of death from

such diseases, to their dependants, in accordance with the general principles of the national legislation relating to compensation for industrial accidents.

2. The rates of such compensation shall be not less than those prescribed by the national legislation for injury resulting from industrial accidents. Subject to this provision, each Member, in determining in its national law or regulations the conditions under which compensation for the said diseases shall be payable, and in applying to the said diseases its legislation in regard to compensation for industrial accidents, may make such modifications and adaptations as it thinks expedient.

#### Article 2

Each Member of the International Labour Organization which ratifies this Convention undertakes to consider as occupational diseases those diseases and poisonings produced by the substances set forth in the Schedule appended hereto, when such diseases or such poisonings affect workers engaged in the trades, industries or processes placed opposite in the said Schedule, and result from occupation in an undertaking covered by the said national legislation.

## SCHEDULE

*List of diseases and toxic substances.*

Poisoning by lead, its alloys or compounds and their sequelae.

Poisoning by mercury, its amalgams and compounds and their sequelae.

Anthrax infection.

Silicosis with or without pulmonary tuberculosis, provided that silicosis is an essential factor in causing the resultant incapacity or death.

Phosphorus poisoning by phosphorus or its compounds, and its sequelae.

*List of corresponding trades, industries or processes.*

Handling of ore containing lead, including fine shot in zinc factories.

Casting of old zinc and lead in ingots.

Manufacture of articles made of cast lead or of lead alloys.

Employment in poly-graphic industries.

Manufacture of lead compounds.

Manufacture and repair of electric accumulators.

Preparation and use of enamels containing lead.

Polishing by means of lead files or putty powder with a lead content.

All painting operations involving the preparation and manipulation of coating substances, cements or colouring substances containing lead pigments.

Handling of mercury ore.

Manufacture of mercury compounds.

Manufacture of measuring and laboratory apparatus.

Preparation of raw material for the hat-making industry.

Hot gilding.

Use of mercury pumps in the manufacture of incandescent lamps.

Manufacture of fulminate of mercury primers.

Work in connection with animals infected with anthrax.

Handling of animal carcasses or parts of such carcasses including hides, hoofs and horns.

Loading and unloading or transport of merchandise.

Industries or processes recognized by national laws or regulations as involving exposure to the risk of silicosis.

Any process involving the production, liberation or utilization of phosphorus or its compounds.

Arsenic poisoning by arsenic or its compounds, and its sequelae.

Poisoning by benzene or its homologues, their nitro- and amido-derivatives, and its sequelae.

Poisoning by the halogen derivatives of hydrocarbons of the aliphatic series.

Pathological manifestations due to:

(a) radium and other radio-active substances;

(b) X-rays.

Primary epitheliomatous cancer of the skin.

Any process involving the production, liberation or utilization of arsenic or its compounds.

Any process involving the production, liberation or utilization of benzene or its homologues, or their nitro- and amido-derivatives.

Any process involving the production, liberation or utilization of halogen derivatives of hydrocarbons of the aliphatic series designated by national laws or regulations.

Any process involving exposure to the action of radium, radio-active substances, or X-rays.

Any process involving the handling or use of tar, pitch, bitumen, mineral oil, paraffin, or the compounds, products or residues of these substances.

*Article 3*

The formal ratifications of this Convention shall be communicated to the Secretary-General of the League of Nations for registration.

*Article 4*

The Convention shall be binding only upon those Members of the International Labour Organization whose ratifications have been registered with the Secretary-General.

It shall come into force twelve months after the date on which the ratifications of two Members have been registered with the Secretary-General.

Thereafter, this Convention shall come into force for any Member twelve months after the date on which its ratification has been registered.

*Article 5*

As soon as the ratifications of two Members of the International Labour Organization have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify them of the registration of ratifications which may be communicated subsequently by other Members of the Organization.

*Article 6*

A Member which has ratified this Convention may denounce it after the expiration of five years from the date on which the Convention first comes into force, by an act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

Each Member which has ratified this Convention and which does not, within the year following the expiration of the period of five years mentioned in the preceding paragraph, exercise the right of denunciation provided for in this Article, will be bound for another period of five years and, thereafter, may denounce this Convention at the expiration of each period of five years under the terms provided for in this Article.

#### Article 7

At the expiration of each period of ten years after the coming into force of this Convention, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the Agenda of the Conference the question of its revision in whole or in part.

#### Article 8

Should the Conference adopt a new Convention revising this Convention in whole or in

part, then, unless the new Convention otherwise provides,

(a) the ratification by a Member of the new revising Convention shall *ipso jure* involve the immediate denunciation of this Convention, notwithstanding the provisions of Article 6 above, if and when the new revising Convention shall have come into force;

(b) as from the date when the new revising Convention comes into force this Convention shall cease to be open to ratification by the Members.

This Convention shall in any case remain in force in its actual form and content for those Members which have ratified it but have not ratified the revising Convention.

#### Article 9

The French and English texts of this Convention shall both be authentic.

### DRAFT CONVENTION CONCERNING EMPLOYMENT OF WOMEN DURING THE NIGHT (REVISED 1934)

The General Conference of the International Labour Organization of the League of Nations, Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Eighteenth Session on June 4, 1934, and

Having decided upon the adoption of certain proposals with regard to the partial revision of the Convention concerning employment of women during the night adopted by the Conference at its First Session, which is the seventh item on the Agenda of the Session, and

Considering that these proposals must take the form of a Draft International Convention,

adopts, this 19th day of June of the year one thousand nine hundred and thirty-four, the following Draft Convention which may be cited as the Night Work (Women) Convention (Revised), 1934:

#### Article 1

For the purpose of this Convention, the term "industrial undertaking" includes particularly:

- (a) Mines, quarries, and other works for the extraction of minerals from the earth;
- (b) Industries in which articles are manufactured, altered, cleaned, repaired, ornamented, finished, adapted for sale, broken up or demolished, or in which materials are transformed; including ship-building, and the generation, transformation, and transmission of electricity or motive power of any kind;
- (c) Construction, reconstruction, maintenance, repair, alteration, or demolition of any building, railway, tramway, harbour, dock, pier, canal, inland waterway, road, tunnel, bridge, viaduct, sewer, drain, well, telegraphic or telephonic installation, electrical undertaking, gas work, water work, or other work of construction, as well as the preparation for or laying the foundations of any such work or structure.

The competent authority in each country shall define the line of division which separates industry from commerce and agriculture.

#### Article 2

For the purpose of this Convention, the term "night" signifies a period of at least eleven consecutive hours, including the interval between ten o'clock in the evening and five o'clock in the morning.

Provided that, where there are exceptional circumstances affecting the workers employed in a particular industry or area, the competent authority may, after consultation with the employers' and workers' organizations concerned, decide that in the case of women employed in that industry or area, the interval between eleven o'clock in the evening and six o'clock in the morning may be substituted for the interval between ten o'clock in the evening and five o'clock in the morning.

In those countries where no Government regulation as yet applies to the employment of women in industrial undertakings during the night, the term "night" may provisionally, and for a maximum period of three years, be declared by the Government to signify a period of only ten hours, including the interval between ten o'clock in the evening and five o'clock in the morning.

#### Article 3

Women without distinction of age shall not be employed during the night in any public or private industrial undertaking, or in any branch thereof, other than an undertaking in which only members of the same family are employed.

#### Article 4

Article 3 shall not apply:

- (a) In cases of *force majeure*, when in any undertaking there occurs an interruption of work which it was impossible to foresee, and which is not of a recurring character.
- (b) In cases where the work has to do with raw materials or materials in course of treatment which are subject to rapid deterioration, when such night work is necessary to preserve the said materials from certain loss.

*Article 5*

In India and Siam, the application of Article 3 of this Convention may be suspended by the Government in respect to any industrial undertaking, except factories as defined by the national law. Notice of every such suspension shall be filed with the International Labour Office.

*Article 6*

In industrial undertakings which are influenced by the seasons and in all cases where exceptional circumstances demand it, the night period may be reduced to ten hours on sixty days of the year.

*Article 7*

In countries where the climate renders work by day particularly trying to the health, the night period may be shorter than prescribed in the above articles, provided that compensatory rest is accorded during the day.

*Article 8*

This Convention does not apply to women holding responsible positions of management who are not ordinarily engaged in manual work.

*Article 9*

The formal ratifications of this Convention shall be communicated to the Secretary-General of the League of Nations for registration.

*Article 10*

The Convention shall be binding only upon those Members of the International Labour Organization whose ratifications have been registered with the Secretary-General.

It shall come into force twelve months after the date on which the ratifications of two Members have been registered with the Secretary-General.

Thereafter, this Convention shall come into force for any Member twelve months after the date on which its ratification has been registered.

*Article 11*

As soon as the ratifications of two Members of the International Labour Organization have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify them of the registration of ratifications which may be communicated subsequently by other Members of the Organization.

*Article 12*

A Member which has ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention first comes into force, by an act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

Each Member which has ratified this Convention and which does not, within the year following the expiration of the period of ten years mentioned in the preceding paragraph

exercise the right of denunciation provided for in this Article, will be bound for another period of ten years and, thereafter, may denounce this Convention at the expiration of each period of ten years under the terms provided for in this Article.

*Article 13*

At the expiration of each period of ten years after the coming into force of this Convention, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the Agenda of the Conference the question of its revision in whole or in part.

*Article 14*

Should the Conference adopt a new Convention revising this Convention in whole or in part, then, unless the new Convention otherwise provides.

- (a) the ratification by a Member of the new revising Convention shall *ipso jure* involve the immediate denunciation of this Convention, notwithstanding the provisions of Article 12 above, if and when the new revising Convention shall have come into force;
- (b) as from the date when the new revising Convention comes into force this Convention shall cease to be open to ratification by the Members.

This Convention shall in any case remain in force in its actual form and content for those Members which have ratified it but have not ratified the revising Convention.

*Article 15*

The French and English texts of this Convention shall both be authentic.

The death occurred recently of William B. Wilson, prominent in the labour movement of the United States. He was born in Scotland in 1862, emigrating with his parents in 1870, when the family settled in Pennsylvania. He was elected to the Federal House of Representatives from the fifteenth Pennsylvania district in 1906 and served continuously until March 3, 1913, when he was appointed first secretary of the Department of Labour by the late President Wilson, and administered that office until 1921. The establishment of the Department of Labour is said to be largely due to his efforts as chairman of the Labour Committee of the House of Representatives. His contact with the labour movement dated from 1879 when he joined the Knights of Labour. He was active in the merging of that organization with the United Mine Workers of America. For eight years, from 1900 to 1908, he was secretary-treasurer of the United Mine Workers of America. During his six years in Congress he was credited with piloting through legislation respecting seamen, immigration, and the eight-hour day for federal employees.

## EMPLOYMENT CONDITIONS IN CANADA AT THE END OF JUNE, 1934

### Reports of the Superintendents of the Employment Service

**T**HE employment situation at the end of June, 1934, was reported by the Superintendents of the Employment Service to be as follows:

Due to improved weather conditions, crops in the Maritime Provinces were advancing rapidly, although insect pests had injured the fields in some districts. Fishermen were reporting good fares. Activity continued in the pulpwood industry, where many cutters were employed, and nearly all small mills were busy. Coal mines in the New Glasgow area operated from two to six days per week, while those in Cape Breton and vicinity worked five and a half and six days. The iron and steel group was busy, also gas and oil companies, confectioners, bakers and mineral water manufacturers. Other concerns reported business quiet. Several new building permits were issued for the erection of small dwellings and minor repair work, while road and other relief projects helped provide employment for unskilled labour. Passenger traffic by auto, rail and boat was heavy over the holiday week end and transportation of freight, particularly lumber and flour, was good. Retail houses stated business was favourable, with collections fair. A considerable demand existed for women domestics and many good placements were made.

There were some gains reported in placements of farm help in the Province of Quebec. Logging also was fairly active, especially at Hull and Rouyn, and an increasing number of prospectors was busy in the mining district about Rouyn, although a partial strike of miners had somewhat affected the conditions there. Manufacturing centres reported the situation as follows: Hull, paper and match factories working at full capacity; Montreal, metallurgy, rubber, boots and shoes quiet, tobacco and cigars satisfactory, clothing busy; Quebec, Sherbrooke and Three Rivers, factories working only to partial capacity or on reduced time, except clothing establishments, which were nearly normal. Building construction in Montreal showed some improvement in the demand for skilled labour, but scarcity of work continued for unskilled help. Other cities in the province also noted more activity in building, particularly at Three Rivers, where the erection of buildings was underway in connection with the three hundredth anniversary of the founding of the city. Transportation by rail and water was heavy. Trade was better and placements of women workers were numerous.

The call for farm labour was good in Ontario, with experienced men scarce in some localities. Men to cut, peel and pile pulpwood in the logging industry were in great demand, but owing to low pay or various other reasons it was sometimes difficult to supply the number of men required. Great activity also was shown in the sawmills and in the mining camps, the two chief mines in the Sudbury area giving employment to nearly 6,000 residents of the district. Considerable activity was noted in different manufacturing lines, although automobile and agricultural implement factories were somewhat slacker than usual, due to the time of the year. Iron and steel, electrical equipment, textiles, food supplies, fruit and vegetable canneries and planning mills, however, were particularly busy, other groups maintaining the general improvement noted, but without further increases in staffs. Some slight improvement was noted in building construction, but federal relief projects continued to provide employment for a large number of unskilled workers. Railway maintenance was at its height, with a small demand for men. Transportation showed little change, but trade was better. Difficulty was experienced in securing efficient female applicants for some of the vacancies listed in the women's domestic section; the call for casual workers, however, remained steady.

Better weather conditions had greatly benefited the crops throughout the Prairie Provinces, and although hail storms had wrought considerable damage in some districts, the outlook was brighter and the demand for farm help greater. Logging, except at Edmonton, was quiet, also mining. Manufacturing remained unchanged. Building construction was very slack. No large new contracts were underway, the main work available consisting of small jobs, repairs or alterations. Highway work continued in several localities and extra railway gangs were being hired at Prince Albert, preference to be given to unemployed railway men. The slight improvement noted in wholesale and retail trade was sustained, but collections were slow. A greater call prevailed for day-workers and domestics in the women's section, with a number of unfilled vacancies listed.

Little demand existed for general farm labour in British Columbia. Picking, packing and handling of the fruit crop afforded work for a number of men and women, but

there was sufficient help at hand to meet all emergencies. Logging was active with all mills, except those at Vancouver, running full time. Mining was fairly brisk and development work was proceeding on many properties. Manufacturing remained unchanged. Little building construction was in evidence, although a few homes were being built or some repairs made. Relief camps, which provided the only outlet for surplus labour,

continued to operate. Longshore work was rather quiet, due to strike conditions in the United States, but lumber movement by rail and water continued heavy. Dry docks and shipyards were fairly busy. Merchants reported that trade was good. A slight decrease was recorded in vacancies for women workers, as families left the cities for the summer months, but all hotel and camp orders listed were easily filled.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN MAY, 1934

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on June 1 was 8,640, the employees on their payrolls numbering 899,286 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for May was 1,705 having an aggregate membership of 156,963 persons. It should be un-

derstood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

### (1) The Employment Situation at the Beginning of June, 1934, as Reported by Employers

According to data tabulated by the Dominion Bureau of Statistics from 8,640 firms throughout Canada, there was an important expansion in industrial activity at the beginning of June, resulting in the greatest increase in employment that has been reported in any month since June 1, 1930. The payrolls of the reporting employers increased from 856,548 on May 1 to 899,286 at the beginning of June, or by 42,738 persons. This gain of five per cent in the month was considerably larger than that reported on the same date in 1933 and was more than twice as great as the increase reported in either 1932 or 1931. The index on June 1, 1934, stood at 96.6, as compared with 92.0 in the preceding month, and 80.7 on June 1, 1933. On the same date in the twelve preceding years, the index (average 1926=100) was as follows:—1932, 89.1; 1931, 103.6; 1930, 116.5; 1929, 122.2; 1928, 113.8; 1927, 107.2; 1926, 102.2; 1925, 95.6; 1924, 96.4; 1923, 98.5;

1922, 90.3 and 1921, 87.7. The increase on June 1, 1934, considerably exceeded the average increase indicated between May and June in the years since 1920.

Pronounced advances were reported in manufacturing, the additions to staffs exceeding those noted on the same date in other years of the record, except 1922, 1923, 1928 and 1933; the favourable movement extended to nearly all classes of factory employment. In the non-manufacturing industries, all the major groups also showed improvement. There was lowered employment only in logging, and this was of a seasonal character. Trade, mining and services reported increases which compared favourably with the movement indicated on the corresponding date in 1933. The expansion in construction provided work for a substantial number of workers, and was greater than on June 1 of last year, partly owing to unemployment relief work on the highways.

### Employment by Economic Areas

Improvement was indicated in all of the five economic areas, firms in Ontario employing the greatest number of extra workers.

*Maritime Provinces.*—Slight gains were noted in the Maritime Provinces, according to statistics received from 619 employers with a combined working force of 69,565 persons, as compared with 69,475 on May 1. This increase was smaller than that reported on June 1 of last year, when considerably more workers had been taken on as an unemployment relief measure. Manufacturing (particularly in the lumber, iron and steel and pulp and paper divisions), and construction registered heightened activity. On the other hand, transportation and logging were seasonally slacker. Employment generally was in considerably larger volume than on June 1, 1933.

considerably more persons than that noted on the same date of last year, when the index was much lower. Statements were tabulated from 2,076 firms employing 247,876 workers on June 1, or 14,760 more than in their last monthly report.

*Ontario.*—Employment in Ontario showed a decided advance which greatly exceeded that recorded on June 1, 1933, when the index was over twenty points lower. The payrolls of the 3,786 co-operating establishments aggregated 395,760 employees, as against 373,518 on May 1. Construction registered the greatest expansion and manufacturing also showed a large increase; the metal, food, lumber, rubber, clay, glass and stone, pulp and paper and electric current divisions showed decided improvement. Important gains also occurred in mining, transportation, services and trade.

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

*Quebec.*—Transportation, construction and manufacturing recorded important increases in personnel in Quebec, and there were also gains in logging, mining, trade and services. Within the manufacturing division, pulp and paper, lumber, clay, glass and stone, textile, iron and steel, mineral product and food factories reported the greatest improvement, while leather, tobacco and wood distillates were slacker. The gain indicated by the co-operating establishments provided work for

*Prairie Provinces.*—Construction (especially railroad construction), transportation, services, logging and manufacturing reported improvement in the Prairie Provinces; the food and lumber industries showed the greatest advances in the factory employment group. The employers whose statistics were tabulated employed 112,271 persons, as against 107,159 in the preceding month. Much smaller increases were indicated on June 1, 1933, and the index then was lower.

*British Columbia.*—An aggregate payroll of 73,814 workers was employed by the 877 reporting firms, which had 73,280 at the beginning of May. This increase was smaller than that noted on the same date in 1933. The index of employment, however, was higher than on June 1 of last year. Manufacturing recorded the most noteworthy expansion on the date under review; within this group, the improvement was unusually pronounced in edible animal products, but there were also gains in lumber mills, iron and steel and metal factories. Among the non-manufacturing groups, mining, communications and logging recorded heightened activity.

Table 1 gives index numbers by economic areas.

### Employment by Cities

The trend of employment was upward in seven in the eight cities for which separate compilations are made; Montreal, Quebec City, Toronto, Ottawa, Hamilton, Winnipeg and Vancouver all showed considerable gains, while a decline was noted in Windsor and the adjacent Border Cities.

*Montreal.*—Further improvement was recorded in Montreal, where the 1,212 co-operating firms employed 127,823 persons, an increase of 4,968 over their May 1 staffs. Manufacturing, especially of food, mineral and iron and steel products, reported increases, and construction and transportation were also busier. The index, at 86.3, was higher than in June, 1933, and the gains then indicated were smaller.

*Quebec.*—Continued increases were registered in Quebec City, chiefly in manufacturing, construction and trade. Statements were tabulated from 159 establishments having 12,687 workers, as against 12,485 in the preceding month. Larger advances had been indicated at the beginning of June of a year ago, but the index then was lower.

*Toronto.*—Returns were furnished by 1,277 employers in Toronto with 113,285 persons on their payrolls, compared with 112,138 on May 1. Manufacturing as a whole was brisker; there were losses in textile factories, but large gains in food, printing and publishing, textile and some other industries. Firms in transportation, services and trade also increased their employees. The index was higher than on June 1, 1933, when an expansion had also been indicated.

*Ottawa.*—Manufacturing showed heightened activity in Ottawa, particularly in lumber and pulp and paper mills. The gain, however, was not so great as at the beginning of June of last year, when a larger increase had occurred. A combined working force of 13,038 employees

was recorded on June 1, 1934, by the 163 co-operating firms, who had had 12,824 on their staffs in the preceding month.

*Hamilton.*—Considerable improvement was noted in Hamilton, where 256 employers reported 27,608 workers on their paylists, as compared with 26,748 at the beginning of May. This was the most decided increase for June 1, since 1923, except in 1928 and 1933. Most of the increase took place in manufacturing, notably in textile, clay, glass and stone and iron and steel plants, while construction was also rather more active. Employment was quieter than on the same date of a year ago, when an exceptionally large increase was shown.

*Windsor and the adjacent Border Cities.*—Employment in the Border Cities showed a decrease on June 1, when data were received from 153 firms with 14,297 employees, or 268 fewer than at the beginning of May. Most of the loss took place in automobile factories, while other groups reported only slight changes. A decrease had also been registered on June 1, 1933, and employment was then in lesser volume.

*Winnipeg.*—An aggregate working force of 34,791 persons was indicated by the 419 employers whose statistics were received, and who had 34,423 employees on May 1. This increase was not so large as the one noted at the beginning of June of last year, but the index then was lower. A large share of the gain recorded on the date under review was in manufacturing and construction, while other groups showed only slight changes.

*Vancouver.*—Manufacturing and services reported gains in Vancouver, the improvement in the former occurring largely in food and iron and steel factories. Statements were tabulated from 370 employees with 27,035 workers in their employ, as compared with 26,853 on May 1. A somewhat larger increase had been indicated on June 1 of a year ago, but the index was then lower.

Index numbers by cities are given in Table 2.

### Manufacturing Industries

There was a strongly upward movement in manufacturing, which extended to most of the industries so classified, and to the five economic areas, with the result that factory employment showed the greatest advance recorded in any month since February 1, 1930, except February 1, 1934, while the index number of employment, at 93.2, was the highest since September, 1931. The increase was larger than the average seasonal gain recorded on June 1 as compared with May 1 in the years since 1921; the advance also exceeded

that indicated on June 1 in any previous year of the record, with the exception of 1922, 1923, 1928 and 1933. Statements were tabulated from 5,225 manufacturers employing 464,879 operatives, as compared with 450,068 in the preceding month. Gains were registered in the lumber, pulp and paper, fish-preserving, vegetable food, iron and steel, non-ferrous metal, clay, glass and stone, rubber, electric current and mineral product industries. The increases in lumber and pulp and paper were particularly noteworthy. Tobacco factories were seasonally slacker. Employment was in larger volume than on June 1, 1933, though the gain then reported in employment in manufacturing had been on a larger scale.

*Animal Products, Edible.*—There were further and more pronounced increases in the number employed in this group, particularly in the fish-preserving division in the Maritime Provinces. Statistics were tabulated from 275 firms employing 21,530 persons, as compared with 19,171 in the preceding month. This advance was practically the same as that reported on June 1, 1933, when the index was a few points lower.

*Fur and Fur Products.*—There was an upward trend in employment in fur factories, 51 of which enlarged their payrolls from 1,570 persons at the beginning of May to 1,781 on June 1. A rather larger gain had been indicated on the same date last summer, when activity was at a slightly higher level.

*Leather and Products.*—Employment in this group showed a slight falling-off in the latest month, while a gain had been indicated in the same month last year; the index then stood at 91.7, compared with 99.9 on the date under review. The working forces of the 258 co-operating employers totalled 20,129 persons, as against 20,206 in the preceding month. Although some branches of the leather industry showed improvement, losses occurred in footwear factories in Quebec and Ontario.

*Lumber and Products.*—Continued, seasonal expansion took place in lumber mills, and there were also gains in container factories and other wood-using industries. Returns were compiled from 787 manufacturers in the lumber group having 37,056 workers on their staffs, compared with 32,965 at the beginning of May. All provinces shared in the up-

June 1.....	96.6	98.4	90.9	104.4	89.5	89.1
Relative Weight of Employment by Economic Areas as at June 1, 1934.....	100.0	7.7	27.6	44.0	12.5	8.2

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada by the firms making returns for the date under review.

ward movement on June 1, but Ontario and the Maritime Provinces showed the largest increases. Rather smaller additions to staffs were made on the same date last year, when the index was much lower.

*Plant Products, Edible.*—Gains were noted in this group at the beginning of June, when 1,658 persons were added to the forces of the 411 co-operating manufacturers, who had 27,995 employees. Fruit and vegetable canning, sugar and syrup and baking and confectionary establishments reported most of the improvement, which occurred largely in Ontario and Quebec. A similar increase was registered on June 1, 1933, but employment then was in smaller volume than on the date under review.

*Pulp and Paper Products.*—All branches of this group showed expansion, that in pulp and paper establishments being most pronounced. The index number stood at 93.6, compared with 85.7 at the beginning of June of last year; the gains then recorded, however, were rather larger. An aggregate payroll of 56,270 workers was reported by the 554 establishments whose statistics were compiled; these had employed 54,234 in the preceding month.

*Rubber Products.*—Fifty rubber factories recorded a combined working force of 12,273 persons, or 535 more than in their last return. Employment was in much larger volume than at the beginning of June a year ago, when a smaller increase had been indicated.

*Textile Products.*—As usually noted in the early summer, there was a downward movement in the textile industry on the date under review, chiefly in the garments and personal furnishings group in Ontario. On the other hand, thread, yarn and cloth factories were rather busier. Data were received from 903 firms employing 93,102 persons, as against 93,614 in the preceding month. Although a gain had been reported on June 1, 1933, the index was then some 16 points lower than at the date under review.

*Tobacco, Distilled and Malt Liquors.*—Activity in this group showed a seasonal falling-off, according to 156 employers whose staffs decreased from 14,069 in the preceding month to 13,914 on the date under review. Distilled and malt liquor manufacture in Ontario recorded most of this decline. The index number on June 1, 1933, was lower than on the date under review; the downward movement

April 1.....	82.1	95.4	92.7	97.6	83.0	102.9	79.7	84.8
May 1.....	82.9	96.3	92.9	100.8	83.9	109.3	81.2	85.9
June 1.....	86.3	97.9	93.9	102.4	86.7	107.1	81.9	86.3
Relative Weight of Employment by Cities as at June 1, 1934.....	14.2	1.4	12.6	1.4	3.1	1.6	3.9	3.0

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated city to the total number of all employees reported in Canada by the firms making returns for the date under review.

then indicated, however, had involved a larger number of workers.

*Clay, Glass and Stone Products.*—Further improvement was noted in building material plants, 192 of which employed an aggregate working force of 8,049 persons, or 932 more than on May 1. The index stood at 73.5; this was considerably higher than that recorded on June 1, 1933, when a much smaller increase had taken place. Ontario and Quebec reported the bulk of the gain, which occurred in all branches of building materials.

*Electric Current.*—An advance as compared with May was shown in electric current plants, in which activity was lower than on the same date in 1933. The 96 co-operating companies increased their staffs by 266 workers to 13,548 at the beginning of June, 1934. Quebec recorded the greatest improvement.

*Electrical Apparatus.*—Heightened activity was shown in electrical appliance factories, 108 of which increased their payrolls by 283 employees to 11,181 on the date under review. A recession had been recorded on June 1, 1933, and employment then was at a much lower level.

*Iron and Steel Products.*—There was a further increase in the iron and steel group, mainly in iron and steel fabrication works. Indeed, increases were shown in all divisions of this group except land vehicle factories, which showed curtailment. The general advance is especially interesting because it reverses the trend in employment usually shown in this group at the beginning of June. Returns were tabulated from 809 manufacturers employing 101,325 persons, compared with 99,345 on May 1. Improvement was noted in all provinces except the Prairie Provinces, that in Ontario being greatest. Smaller gains had taken place on June 1, 1933, and the index was then many points lower.

*Non-ferrous Metal Products.*—These industries reported heightened activity, according to 145 firms employing 17,477 persons, compared with 16,756 in the preceding month. The increase took place very largely in Ontario. Similar gains had been recorded at the beginning of June of a year ago, when employment was in smaller volume.

*Mineral Products.*—Continued seasonal advances were noted generally in this group, although not so large as those indicated on

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES

(AVERAGE CALENDAR YEAR 1926=100)

—	All industries	Manufacturing	Logging	Mining	Communications	Transportation	Construction	Services	Trade
June 1, 1921.....	87.7	87.8	85.4	92.8	91.2	90.6	68.7	86.7	91.8

Relative Weight of Employment by Industries as at June 1, 1934.....	100.0	51.7	2.3	5.4	2.3	10.5	15.1	2.7	10.0

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada by the firms making returns for the date under review.

June 1, 1933, when the index number was, however, many points lower. An aggregate payroll of 13,544 persons was reported for June 1, 1934, by the 118 co-operating employers, who had 13,073 workers on May 1.

*Miscellaneous Manufacturing Industries.*—Production in the manufacturing establishments listed under this heading showed an increase, 116 workers having been added to the forces of the 99 firms whose returns were tabulated, and who employed 4,833 at the beginning of May.

### Logging

Employment in logging camps showed a decrease, chiefly in the Maritime Provinces and Ontario, although firms in Quebec and British Columbia were busier. Returns were received from 268 firms employing 20,733 persons, or 1,578 less than on May 1. Heightened activity had been indicated on June 1, 1933,

when the index was many points lower at 40.7 as compared with 75.0 on the date under review.

### Mining

*Coal.*—Employment in the Prairie coal fields showed a loss, while very little general change occurred in the Maritime Provinces and British Columbia. Statements were compiled from a total of 97 operators with 21,533 employees, or 244 less than at the beginning of May. The index was slightly higher than on June 1, 1933, when a small gain had been recorded.

*Metallic Ores.*—An advance was shown in metallic ore mines, mainly in Ontario and British Columbia; 99 employers enlarged their staffs from 20,080 workers on May 1, to 20,777 on the date under review. A smaller gain took place at the beginning of June of last year, when the index was nearly 40 points lower than on June 1, 1934.

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

Industries	Relative Weight	June 1, 1934	May 1, 1934	June 1, 1933	June 1, 1932	June 1, 1931	June 1, 1930	June 1, 1929
<i>Manufacturing—</i>								
Animal products—edible.....	51.7	93.2	90.2	80.0	86.0	99.4	113.6	121.2
Fur and products.....	2.4	115.8	103.2	110.4	106.3	112.3	116.9	119.5
Leather and products.....	0.2	86.5	76.9	87.1	86.0	102.9	98.9	102.5
Boots and shoes.....	2.2	99.9	99.9	91.7	90.5	91.2	88.6	91.0
Lumber and products.....	1.5	105.9	106.7	100.1	98.3	99.2	88.4	92.6

Plant products (n.e.s.).....	1.1	96.7	95.0	79.2	81.0	90.5	101.3	109.4
Tobacco.....	1.5	107.0	108.5	102.5	112.4	115.1	126.3	125.2
Distilled and malt liquors.....	0.9	99.7	100.4	98.2	107.1	105.7	113.5	112.8
Wood distillates and extracts.....	0.6	116.6	119.2	107.9	119.7	128.9	146.4	145.1
Chemicals and allied products.....	0.1	121.4	136.7	100.2	78.8	107.0	138.1	186.5
Clay, glass and stone products.....	1.1	123.5	125.2	111.1	114.1	119.0	120.7	117.6
Electric current.....	0.9	73.5	64.1	51.9	83.1	111.3	130.3	131.3
Electrical apparatus.....	1.5	107.9	105.8	112.1	117.4	124.2	139.7	132.3
Iron and steel products.....	1.2	103.5	100.5	84.0	109.9	134.7	158.2	139.0
Crude, rolled and forged products.	11.3	77.1	75.7	61.7	69.4	97.2	115.8	133.2
Machinery (other than vehicles)...	1.3	92.2	91.8	53.4	58.8	97.3	122.8	143.9
Agricultural implements.....	1.0	78.9	76.3	62.8	78.6	98.1	126.8	133.3
Land vehicles.....	0.5	47.0	45.4	33.5	27.4	36.4	75.4	124.9
Automobiles and parts.....	5.3	78.8	79.4	68.4	73.8	94.3	114.6	131.5
Steel shipbuilding and repairing...	1.8	117.7	116.8	75.0	86.3	99.7	138.3	182.9
Heating appliances.....	0.2	61.0	51.2	50.6	65.4	87.5	122.6	135.2
Iron and steel fabrication (n.e.s.)...	0.4	88.1	85.0	70.0	76.5	103.5	113.2	137.9
Foundry and machine shop products.....	0.5	63.8	56.5	46.4	66.0	125.4	162.8	178.2
Other iron and steel products.....	0.5	79.7	77.2	61.2	74.3	90.6	115.9	137.2
Non-ferrous metal products.....	1.6	79.1	75.5	63.4	75.3	92.1	111.0	117.4
Non-metallic mineral products.....	1.9	111.0	106.5	81.0	78.4	116.6	128.0	136.5
Miscellaneous.....	1.5	134.5	129.7	121.9	123.3	127.0	149.1	136.7
	0.5	112.5	109.4	97.8	97.5	108.6	113.6	113.2

The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

*Non-Metallic Minerals (other than coal).—*According to data received from 75 firms in this group, they employed 6,197 persons, or 744 more than in the preceding month. Employment was much more active than on the same date of last year, when smaller additions to staffs had been reported by the co-operating firms.

### Transportation

*Street Railways and Cartage.*—An increase was registered in local transportation on June 1, when 189 companies added 315 employees to their payrolls, bringing them to 24,153. A decrease had been noted at the beginning of June, 1933, when the index was rather higher than on the date under review.

*Steam Railways.*—Improvement was indicated in steam railway operation, in which the 98 co-operating employers enlarged their staffs from 56,250 in the preceding month to 56,784 on June 1. The Maritime Provinces reported seasonal reductions, while there were increases in the remaining provinces. Employment was at a higher level than on June 1 of last year, when smaller gains had been recorded.

*Shipping and Stevedoring.*—There were pronounced seasonal losses in employment in the Maritime Provinces, but the trend was decidedly upward in Quebec and Ontario. Statistics were received from 94 firms with 13,873 employees, as compared with 12,520 in the preceding month. Small gains were noted on June 1, 1933, and the index then was rather higher.

### Communications

Improvement was indicated on telegraphs and telephones. The 83 companies and branches reporting had 20,530 persons on their paylists at the beginning of June, or 293 more than on May 1. Employment was at a lower level than on the same date a year ago, when a small loss had been indicated.

### Construction and Maintenance

*Building.*—An aggregate staff of 19,142 was reported by the 623 contractors furnishing statistics, who had 16,855 workers on May 1. Activity increased in all provinces except British Columbia, where very little change was indicated, but the largest gains were in Ontario. Building generally was more active than on the same date of a year ago; the expansion then reported had been on a smaller scale.

*Highway.*—The 315 highway and road contractors furnishing returns had 89,195 persons in their employ, or 18,194 more than at the beginning of May. This improvement (shared

in by all provinces except British Columbia) was much more extensive than that noted on June 1, 1933, and the level of employment then was very much lower; this was partly due to the greater volume of unemployment relief work reported on the date under review.

*Railway.*—Continued advances were registered by the track departments of the railways, in which activity was greater than at the beginning of June of last year. The working forces of the 33 co-operating employers totalled 27,717 persons, as against 23,874 in the preceding month. The most noteworthy increases were in the Prairie Provinces, while all provinces showed improvement except the Maritimes.

### Services

Hotels and restaurants showed their customary seasonal increase, and laundries and dry-cleaning establishments also reported improved conditions. Statements were compiled from 411 firms employing 24,103 workers, as compared with 23,342 on May 1. The index, at 115.4, was some nine points higher than on the same date in 1933.

### Trade

Improvement was indicated in retail and wholesale trade; 1,030 establishments reported 89,670 employees, or 728 more than in their last return. A smaller increase had been noted on June 1, 1933, when the index was some seven points lower. Most of the improvement on the date under review took place in retail establishments.

### TABLES

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada on the date under review.

Silicosis and tuberculosis among the lead and zinc miners of the tri-state district of Oklahoma, Kansas, and Missouri are the subject of the report of a survey conducted by the United States Bureau of Mines at the Picher (Okla.) clinic in co-operation with the Metropolitan Life Insurance Company and the Tri-State Zinc and Land Ore Producers Association. The primary object of the clinic is to reduce the prevalence of silicosis and tuberculosis in the mining field. According to the statistics, 21.33 per cent in 1928 and 21.82 per cent in 1929 of the men at work had silicosis.

## (2) Unemployment in Trade Unions at the close of May, 1934

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged at work other than their own trades or who are idle due to illness are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

There was a further increase in the volume of work afforded local trade union members at the close of May as manifest by returns compiled from a total of 1,705 labour organizations covering a membership of 156,963 persons. Of these 28,994 were unemployed on the last day of the month, a percentage of 18.5 compared with 19.1 per cent in April. The situation was also more favourable than in May of last year when 23.8 per cent of idleness was recorded. Ontario unions, with a gain in activity of around 3 per cent, showed the most important variation from April, the majority of trades and industries

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADE UNIONS

sharing in this better employment movement. Activity for New Brunswick, Manitoba, Saskatchewan and British Columbia unions also tended upward from the previous month, the improvement in British Columbia being but fractional. Alberta unions registered a drop in available work of about 2 per cent from April, unemployment in the coal mines affecting the situation in this province adversely. Retarded activity in the manufacturing industries, and the building and construction trades of Quebec was the chief factor in the employment lull noted from that province. In Nova Scotia there was but a slight falling

off in activity from April, caused, as in Alberta, by quietness in the coal mine industry. All provinces participated in the favourable employment trend noted from May a year ago, Nova Scotia and Ontario unions particularly showing extensive employment advances. In New Brunswick the gains were on a considerably smaller scale, though noteworthy, the improvement recorded from Manitoba and Saskatchewan being of moderate proportions. In the remaining provinces the situation tended but slightly upward.

Unemployment affecting trade union members in the largest city in each province, with the exception of Prince Edward Island, is tabulated separately each month. Activity for Halifax members during May showed a substantial drop from April, noteworthy curtailment of employment also being indicated by Edmonton unions. In Montreal, Saint John and Regina likewise, the tendency was slightly unfavourable. Improved conditions, however, from April were reflected by Vancouver, Winnipeg and Toronto unions.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919.....	3.1	2.0	3.4	2.7	2.1	3.2	2.0	7.9	3.4
Average 1920.....	1.8	2.0	7.2	3.4	3.1	3.2	2.8	11.3	4.9

In making a comparison with the returns for May of last year Edmonton unions alone recorded employment losses during the month reviewed, which were of substantial proportions. Vancouver and Toronto members, however, were afforded considerably more work than in May a year ago and increases in activity, of slightly lesser degree, were reported by Halifax, Saint John, Winnipeg and Regina unions. Moderate employment expansion was also noted in Montreal.

Appearing with this article is a chart which illustrates the trend of unemployment by months from January, 1928, to date. The downward tendency manifest by the curve since the close of January prevailed throughout May, an indication of a steadily increasing volume of available work. In this employment trend the curve paralleled the course of the corresponding month of 1933, though the level reached at the close of the month denoted a greater employment prevalence than in May a year ago.

There was a slight increase in activity recorded by members in the manufacturing industries during May, unemployment standing at 15.6 per cent, contrasted with 16.4 per cent at the close of April. The percentage for May was based on the returns compiled from 469 organizations with 48,165 members, 7,505 of whom were out of work on the last day of the month. Improvement on a large scale, however, was indicated from May of last year when 28.5 per cent of unemployed members was reported. General labourers, papermakers and cigar makers reported noteworthy employment advances from April and activity for glass, wood, garment, iron and steel, textile and brewery workers, and printing tradesmen also tended upward, although the gains were not outstanding. The percentage of idleness indicated by metal polishers and fur workers were identical with those of April, and among leather workers, and meat cutters and butchers the change was so slight as to be almost negligible. Bakers and confectioners, however, suffered appreciable losses in available work, and nominal recessions occurred among hat and cap workers. Extensive improvement in conditions from May of last year was shown by iron and steel, garment, leather, wood, brewery and glass workers, paper makers and cigar makers. Hat and cap, unclassified and jewellery workers also reported gains in activity on a noteworthy scale during the month reviewed. In the printing trades and among meat cutters and butchers moderate advances in employment were noted, bakers and confectioners indicat-

TABLE II.—PERCENTAGES OF UNEMPLOYMENT IN TRADE INDUSTRIES BY GROUPS OF INDUSTRIES

Month	Fishing	Lumbering and Logging	Mining	Manufacturing Industries	Vegetable products	Pulp and paper	Pulp and paper mill workers	Printing and lithographing	Electric current	Wood products	Fibres, textiles and textile products	Garment workers	Hat, cap and glove workers	Animal products	Iron and its products	Non-ferrous metals	Clay, glass and pottery products	Mineral products	Miscellaneous manufacturing industries	Building and construction	Transportation	Shipping and stevedoring	Steam railway operation	Local transportation	Communication	Telephone operation	Trade (retail shop clerks)	Services	Governmental	Miscellaneous	All occupations

May, 1934	0.2																																

ing a better trend of activity, though the change was slight. Metal polishers, however, reported a large increase in slackness from May, 1933, and activity for fur workers was considerably retarded. The employment tendency for textile workers was less favourable, though the change from May last year was fractional only.

Employment recessions on a rather small scale were registered by coal miners during May from the previous month, the 53 unions from which reports were tabulated, with an aggregate of 15,379 members, showing 22.2 per cent of unemployment, as contrasted with 19.3 per cent in April. Minor declines in activity also, were indicated from May of last year when 21.5 per cent of the members reported were without work. Some lessening of the unemployment volume was indicated in the British Columbia mines from April, but in Nova Scotia and Alberta slacker conditions prevailed. A slightly greater volume of activity was apparent, however, in the Nova Scotia mines than in May of last year. There was, on the contrary, a substantial drop in employment afforded British Columbia miners from May, 1933, while in Alberta little change occurred, the tendency being unfavourable. Besides the miners who were entirely out of work during May a considerable number worked at reduced time.

The building and construction trades, with 204 unions reporting in May a membership total of 17,029 persons, showed that 10,847, or a percentage of 63.7 were idle at the end of the month, as compared with 61.3 per cent in April. A more favourable employment trend was noted from May of last year, when 65.6 per cent of inactivity was recorded. Bridge and structural iron workers reported the largest percentage increase in activity over April, which, however, involved few members. Improvement in the situation, on a smaller scale, was reflected by painters, decorators and paperhangers and steam shovelmen, while carpenters and joiners, bricklayers, masons and plasterers showed slight gains only. Electrical workers, chiefly in the Province of Quebec, and tile layers, lathers and roofers reported pronounced employment recessions from the previous month, and activity for granite and stone cutters, plumbers and steam fitters, and hod carriers and building labourers was somewhat curtailed. All tradesmen indicated employment recovery from May of 1933, this improved situation being particularly noticeable among bridge and structural iron workers, granite and stonecutters, and tile layers, lathers and roofers, though the gains apparent

among plumbers and steamfitters, while of much lesser degree than those previously mentioned, were still noteworthy. From the remaining tradesmen the increases in activity reported were of more moderate degree.

Heightened activity, on a small scale was reflected in the transportation industries during May as compared with either the previous month or May of last year according to the reports received from 746 associations embracing a membership of 53,743 persons. At the close of the month 5,347, or a percentage of 9.9, were idle, contrasted with unemployment percentages of 11.4 in April and 12.2 in May, 1933. Improvement in conditions in the steam railway division, which constituted about 77 per cent of the total membership in the transportation industries, accounted mainly for the favourable tendency in the group as a whole, though employment increases on a small scale were noted by navigation workers. Teamsters and chauffeurs showed an unchanged situation from April and among street and electric railway employees the trend was toward lessened activity, though conditions remained much the same as in the previous month. The gains in activity reported over May, 1933, in the transportation industries were confined entirely to the steam railway division, depression among navigation workers being more marked during the month reviewed. Street and electric railway employees, and teamsters and chauffeurs, however, maintained the same level of activity as in May last year.

The 6 unions of retail clerks, from which reports were tabulated during May, representing a membership of 1,835 persons, showed that 122, or 6.6 per cent, were without employment on the last day of the month, contrasted with 6.8 per cent in April and with 0.6 per cent in May a year ago.

Activity for civic employees remained in practically the same volume during May as in the preceding month, as manifest by the reports tabulated from 70 associations with a membership covering 6,954 persons. Of these, 128 or 1.8 per cent, were idle at the end of the month, compared with 1.7 per cent in April. More active conditions prevailed than in May a year ago, when 5.2 per cent of the members reported were unemployed.

The situation in the miscellaneous group of trades varied but little during May from the previous month, though the tendency was favourable, while improvement on a noteworthy scale was evident from May, 1933. Reports for May were received from 109 organizations in this group of trades, repre-

senting 3,703 members, 545 or 14.7 per cent of whom were idle at the end of the month, as compared with 15.2 per cent of unemployment in April and with 21.6 per cent in May last year. Hotel and restaurant employees were afforded a better volume of work than in April, and among unclassified workers gains, on a smaller scale, occurred. Activity for theatre and stage employees, on the contrary, eased off slightly, while among barbers and stationary engineers and firemen practically the same situation obtained as in April. All tradesmen participated in the favourable movement shown from May last year, hotel and restaurant employees particularly being much busier during the month reviewed, and the gains noted by theatre and stage employees, unclassified workers, and stationary engineers and firemen were, also, of considerable magnitude. Barbers, however, reported but fractionally improved conditions.

A slight drop in activity was evident among fishermen during May from both the

preceding month and May a year ago, 4.3 per cent of idleness being reported at the close of the month reviewed, in contrast with 2.2 per cent in April and 2.1 per cent in May, 1933.

Marked employment expansion was indicated by lumber workers and loggers during May from the previous month, the 4 unions making returns with 1,388 members showing 6.1 per cent of idleness, compared with an unemployment percentage of 29.9 in April. The situation was also decidedly better than in May a year ago, when 31.5 per cent of the members reported were without work.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1933, inclusive, and also the percentage of unemployment by provinces for May of each year from 1919 to 1931, inclusive, and for each month from January, 1932, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Office Reports for May, 1934

The volume of business transacted by the offices of the Employment Service of Canada during the month of May, 1934, as shown by the average daily placements effected, showed gains of 25 per cent and 31 per cent over those recorded during April, 1934, and the corresponding month a year ago. Farming showed a decline under both comparisons and trade a minor loss from the previous month, but all other groups showed gains, the highest in each instance being in construction and maintenance, services, logging and manufacturing.

The accompanying chart shows the trend of employment from January, 1932, to date, as represented by the ratio of vacancies offered and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen from the graph that the trend of the curves of vacancies and placements in relation to applications was decidedly upward during the month under review, and at the close of the period was about four points above that registered at the end of May a year ago. The ratio of vacancies to each 100 applications was 58.9 and 63.8 during the first and the second half of May, respectively, in contrast with ratios of 57.9 and 59.5 during the same periods of 1933. The ratios of placements to each 100 applications during the month under review were 54.7 and 60.5 as compared with 54.4 and 56.9 during May a year ago.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during May, 1934, was

1,667 as compared with a daily average of 1,346 in the previous month and with 1,258 in May, 1933.

The average number of applications for employment received by the offices during the month under review was 2,714 in comparison with 2,515 in April and with 2,143 in May last year.

The average number of placements made daily by the offices of the Service during May, 1934, was 1,565, of which 904 were in regular employment and 661 in work of one week's duration or less, as compared with a total daily average of 1,249 in the previous month. Placements during May last year averaged 1,191 daily, consisting of 530 placements in regular and 661 in casual employment.

During the month of May, 1934, the offices of the Service referred 42,544 persons to vacancies and effected a total of 40,688 placements. Of these, the placements in regular employment were 23,492, of which 19,090 were of men and 4,402 of women, while placements in casual work numbered 17,196. The number of vacancies reported by employers was 32,745 for men and 10,593 for women, a total of 43,338, while applications for work numbered 70,548, of which 57,017 were from men and 13,531 from women workers. Reports for April, 1934, showed 32,287 positions available, 60,349 applications made, and 29,968 placements effected, while in May, 1933, there were recorded 32,693 vacancies, 55,706 applications for work, and 30,952 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1924, to date:—

Year	Placements		
	Regular	Casual	Totals
1924 .....	247,425	118,707	366,132
1925 .....	306,804	106,021	412,825
1926 .....	300,226	109,029	410,155
1927 .....	302,723	112,046	414,769
1928 .....	334,604	135,724	470,328
1929 .....	260,747	137,620	398,367
1930 .....	187,872	180,807	368,679
1931 .....	175,632	295,876	471,508
1932 .....	153,771	198,443	352,214
1933 .....	170,576	181,521	352,097
1934 (5 months) .....	84,247	82,604	166,851

group than during May of last year, which accounted for the decline under this comparison. This loss was offset, in part, by gains in logging and services. Small changes only were recorded in all other groups. Industrial divisions in which most of the placements were effected during the month were: logging, 62; construction and maintenance, 1,012; and services, 520, of which 310 were of household workers. There were 147 men and 90 women placed in regular employment during the month.

#### NEW BRUNSWICK

There was a decline of nearly 3 per cent in the number of positions offered through Employment Offices in New Brunswick during May when compared with the preceding

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o-o

#### NOVA SCOTIA

Opportunities for employment, as indicated by orders received at Employment Offices in Nova Scotia during May, were 24 per cent better than in the preceding month, but nearly 12 per cent less favourable than during the corresponding month last year. There was a gain of nearly 26 per cent in placements when compared with April, but a decline of nearly 12 per cent when compared with May, 1933. Although a large number of workers was sent to employment on highway construction, considerably fewer placements were made in this

month and of over 22 per cent in comparison with the corresponding month last year. Placements also were over 6 per cent less than in April and nearly 27 per cent below May, 1933. The decline in placements from May last year was due to less workers being sent to employment on highway construction; the only other reduction reported was in manufacturing, and this was quite small. Small gains were recorded in transportation, services and logging. Placements in the construction and maintenance group numbered 164, and in services 589; of the latter, 441 were of household workers. During the month 189 men and 79 women were placed in regular employment.

## QUEBEC

During the month of May positions offered through Employment Offices in the Province Quebec were over 19 per cent higher than in the preceding month and nearly 37 per cent in excess of the corresponding month of last year. There was a gain also in placements of 18 per cent when compared with April and of nearly 26 per cent in comparison with May, 1933. All industrial divisions, except manufacturing, participated in the increase in placements over May of last year, the largest gains being in services, logging and construction and maintenance. Placements by industrial divisions included: manufacturing, 97; logging, 214; farming, 54; construction and maintenance, 437; trade, 114; and services, 2,306, of which 1,811 were of household workers. Placements in regular employment numbered 1,031 of men and 1,396 of women.

## ONTARIO

Employment opportunities, as indicated by orders received at Employment Offices in Ontario during May, were nearly 70 per cent better than in the preceding month and nearly 55 per cent above the corresponding month of last year. Placements also were over 75 per cent above April and nearly 56 per cent higher than in May, 1933. The substantial gain in placements over May of last year was mainly due to work provided in relief unemployment on highway construction and maintenance, although there were large increases in services, logging and manufacturing. Placements in farming and mining were also higher. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 758; logging, 955; farming, 775; mining, 97; transportation, 115; construction and maintenance, 14,790; trade, 316; and services, 5,488, of which 2,338 were of household workers. During the month 11,931 men and 1,500 women were placed in regular employment.

## MANITOBA

Employment Offices in Manitoba were notified of nearly 26 per cent more vacancies during May than in the preceding month and 39 per cent more than during the corresponding month of last year. There was a gain of over 25 per cent in placements, when compared with April, and over 45 per cent in comparison with May, 1933. Increased placements in construction and maintenance, with smaller gains in logging and services, accounted for the increase over May of last year: the only decline of importance was in farming. Industrial divisions in which most

of the placements were effected during the month were: logging, 176; farming, 217; construction and maintenance, 1,294; and services, 941, of which 754 were of household workers. There were 1,569 men and 367 women placed in regular employment during the month.

## SASKATCHEWAN

The demand for workers, as indicated by orders received at Employment Offices in Saskatchewan during May, was over 21 per cent less than in the preceding month and over 19 per cent below the corresponding month of last year. Placements also were nearly 22 per cent less than in April and nearly 21 per cent fewer than in May, 1933. A decline in farm placements from May of last year, augmented by a small loss under construction and maintenance, accounted for the reduction for the province as a whole. Small gains only were reported in other groups. Placements by industrial divisions included: manufacturing, 57; farming, 500; construction and maintenance, 480; and services, 884, of which 602 were of household workers. Placements in regular employment numbered 639 of men and 405 of women.

## ALBERTA

During the month of May, orders received at Employment Offices in Alberta called for nearly 3 per cent less workers than in the preceding month and nearly 2 per cent less than during the corresponding month of last year. There was a decline also in placements of nearly 4 per cent, when compared with April, and of over 2 per cent in comparison with May, 1933. Increased placements over May of last year in construction and maintenance, transportation and manufacturing were more than offset by losses in logging, farming and services. Placements by industrial divisions were: manufacturing, 45; logging, 81; farming, 642; transportation, 81; construction and maintenance, 1,287; and services, 515, of which 381 were of household workers. Regular employment was procured for 1,451 men and 309 women during the month.

## BRITISH COLUMBIA

Orders received at Employment Offices in British Columbia during May called for nearly 2 per cent more workers than in the preceding month and over 31 per cent more than during the corresponding month of last year. There was a gain of nearly 1 per cent in placements when compared with April and of nearly 30 per cent in comparison with May, 1933. The gain in placements over May of last year was almost entirely due

\* 70 Placements effected by offices since closed.

to work provided on highway construction, supplemented by smaller increases in farming and manufacturing. The only decline was in services. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 95; farming, 135; construction and maintenance, 3,347; and services, 599, of which 430 were of household workers. There were 2,133 men and 256 women placed in regular employment during the month.

### Movement of Labour

During the month of May, 1934, the offices of the Employment Service of Canada made 23,492 placements in regular employment, 10,671 of which were of persons for whom the employment found was outside the immediate vicinity of the offices at which they were registered: of the latter, 674 were granted the Employment Service reduced transportation rate, 521 going to centres within the same province as the despatching office and 153 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Persons benefiting by the reduced rate in Quebec during May were 35 in number, these being bushmen who secured their certificates at the Hull City office for transportation to Pembroke. Offices in Ontario transferred 370 workers at the reduced rate during May, 362 of whom went to provincial employment and 8 outside the province. Travelling from Port Arthur 138 bushworkers, 51 mine workers, 20 highway construction cookees, 4 labourers, 3 cooks, 2 waitresses, 1 housekeeper and 1 farm hand proceeded to centres within the territory covered by that city office. The Port Arthur zone was also the destination of 17 building construction workers sent from St. Catharines, and of one cafe cook transferred from Toronto. To employment within their respective zones Sudbury despatched 50 bushworkers and Fort William 17 bushworkers, 3 cooks and one store clerk. The Timmins office shipped 4 miners to Sault Ste. Marie and 5 mine workers within the Fort William zone. Bound for the Oshawa zone 8 automobile metal finishers journeyed from Stratford and one from Windsor. The Sudbury zone also received one powder man from Pembroke and the Sault Ste. Marie

zone 3 mine workers from Sudbury. The North Bay office assisted in the transfer of 30 pulpcutters and one boat operator to Timmins. The movement outside the province was from Timmins, from which centre 6 mine carpenters were conveyed to Rouyn and 2 mine mechanics to Amos. The Winnipeg office was responsible for all certificates issued in Manitoba during May, which totalled 138. Of these, 29 were granted to workers going to employment within the Winnipeg zone, included among whom were 22 farm hands, 5 farm household workers, one hotel porter and one cafe waitress. Journeying outside the province 93 bushmen, 6 mine workers, 2 cafe employees, 1 carpenter and 1 farm hand were conveyed to Port Arthur, 1 farm hand and 1 hotel waitress to Regina, and 2 farm hands and 2 farm domestics to other Saskatchewan centres. Transfers at the reduced rate in Saskatchewan during May were 3 in number, the Prince Albert office effecting the despatch of 2 cooks and the Regina office of 1 teacher to employment within their respective zones. Alberta offices granted 93 certificates for reduced transportation during May, 92 of which were for provincial points and 1 outside the province. The latter was secured at the Edmonton office by a farm hand proceeding to Saskatoon. Provincially, from Edmonton 44 boat builders, 22 transportation workers, 6 farm hands, 1 farm domestic, 7 bushmen, 3 sawmill labourers, 2 cooks, 1 truck driver, 1 housekeeper and 1 fire ranger were shipped to various points within the Edmonton zone, and 1 farm hand to Drumheller. The Drumheller zone was also the destination of 1 farm hand despatched by the Calgary office. From Calgary, in addition, 1 farm housekeeper was carried at the special rate to Edmonton and 1 farm hand to a point within the Calgary zone. In British Columbia 35 persons travelled at the reduced rate during May, these going to provincial employment. The Vancouver office assisted in the despatch of 4 mine workers to Penticton, 1 miner and 1 hotel employee to Kamloops, and of 15 mine workers, 4 power construction workers, 3 hotel employees and 1 survey worker to situations within the Vancouver zone. For employment within its own zone Prince Rupert transferred 6 miners.

Of the 674 persons who took advantage of the Employment Service reduced transportation rate during May 359 were transported by the Canadian National Railways, 247 by the Canadian Pacific Railway, 48 by the Temiskaming and Northern Ontario Railway and 20 by the Pacific Great Eastern Railway.

#### (4) Building Permits issued in Canada in May, 1934

The value of the building permits issued by 61 cities during May, 1934, was higher by 31.0 per cent than in April, 1934, and was also higher by 42.4 per cent than in May, 1933. According to statements tabulated by the Dominion Bureau of Statistics, the authorizations amounted to \$2,942,096, as compared with \$2,246,317 in the preceding month, and \$2,065,372 in May, 1933. In connection with these figures, it should be noted that though the improvement is not very large, there is an increase over the total for each of the first four months of this year and also over May, 1933, while the aggregate for the first five months of 1934 exceeds by 16.7 per cent that for the same period of 1933.

Some 50 cities furnished detailed statistics, showing that they had issued almost 300 permits for dwellings valued at approximately \$1,200,000 and for some 2,200 other buildings estimated to cost over \$1,400,000. In addition, Brantford reported the authorization of a large engineering project. In April, authority was given for the erection of some 250 dwellings and 1,600 other buildings, valued at approximately \$800,000 and \$1,400,000 respectively.

Nova Scotia, Quebec, Ontario, Manitoba and Saskatchewan reported increases in the value of the permits issued as compared with April, 1934, that of \$382,735 or 76.7 per cent in Quebec being the most pronounced.

As compared with May, 1933, Nova Scotia, New Brunswick, Quebec, Ontario, Saskatchewan and Alberta registered increases; of these that of \$349,888 or 65.8 per cent in Quebec was most noteworthy.

Of the four larger cities, Montreal and Toronto construction showed improvement both as compared with last month and also with the same month of 1933; Winnipeg registered a gain as compared with April, 1934, but a loss as compared with May, 1933, while in Vancouver there was a decrease in both comparisons. Of the other centres; Halifax, Sydney, Fredericton, Moncton, Shawinigan Falls, Three Rivers, Westmount, Belleville, Hamilton, London, Niagara Falls, Ottawa, Peterboro, Stratford, St. Catharines, Sarnia, Sault Ste. Marie, Sandwich, Brandon, Regina, Saskatoon, Edmonton, Medicine Hat, Kamloops and New Westminster recorded increases in the value of the building authorized as compared with either the preceding month or the same month of last year.

*Cumulative Record for First Five Months, 1934.*—The following table gives the value of the building authorized by 61 cities in May and in the first five months of each year since 1920, as well as index numbers for the latter, based upon the total for 1926 as 100. The average index numbers of wholesale prices of building materials in the first five months of the same years are also given (1926=100).

Year	Value of permits issued in May	Value of permits issued in first five months	Indexes of value of permits issued in first five months (1926=100)	Average indexes of wholesale prices of building materials in first five months (1926 average = 100)
	\$	\$	p.c.	p.c.
1934.....	2,942,096	7,852,733	13.1	83.4
1933.....	2,065,372	6,726,695	11.2	75.2
1932.....	5,488,845	19,312,720	32.1	78.8
1931.....	12,115,291	50,356,550	83.9	83.6
1930.....	20,321,160	66,792,498	111.2	95.5
1929.....	24,185,738	96,792,675	161.2	99.4
1928.....	27,515,522	79,285,027	132.0	95.8
1927.....	20,138,657	62,479,480	104.1	96.1
1926.....	18,504,296	60,042,369	100.0	101.3
1925.....	15,520,435	50,983,833	84.9	103.1
1924.....	14,807,589	46,544,689	77.5	111.3
1923.....	18,937,638	57,946,608	96.5	111.1
1922.....	19,527,061	54,040,922	90.0	107.9
1921.....	14,466,878	41,530,750	69.2	134.4
1920.....	13,082,015	47,640,916	79.3	144.7

The aggregate for the first five months of 1934 was lower than in the same period of any previous year of this record except 1933. The average index number of wholesale prices of building materials, however, was lower than in any of the years since 1920 except 1932 and 1933.

Tables of unemployment and employment, published by the International Labour Office at Geneva on July 1, show an improvement in the world situation for the fifth consecutive quarter. If the figures for the latest month for which statistics are available are compared with those of twelve months previously, thus eliminating seasonal movements, it is seen that unemployment is lower in practically every country, the only exceptions being Bulgaria, France, the Irish Free State, Poland and Portugal. The largest percentage increases occurred in the United States, Germany, Canada, Estonia and South Africa. Considerable increases are also recorded in Great Britain, Japan, Latvia and Sweden. These increases are confirmed by the statistics of unemployment in the same countries.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

### Great Britain

THE British *Ministry of Labour Gazette*, June, 1934, summarized the employment situation as follows:—

Among the workpeople, numbering approximately 12,883,000, insured against unemployment in Great Britain and Northern Ireland and working in practically every industry except agriculture and private domestic service, the percentage unemployed at May 14, 1934 (including those temporarily stopped as well as those wholly unemployed), was 16.3, as compared with 16.7 at April 23, 1934, and with 20.4 at May 22, 1933. The percentage wholly unemployed at May 14, 1934, was 13.6, as compared with 14.1 at April 23, 1934; while the percentage temporarily stopped was 2.7, as compared with 2.6. For males alone, the percentage at May 14, 1934, was 19 and for females, 9.2; at April 23, 1934, the corresponding percentages were 19.3 and 9.6.

At May 14, 1934, the number of persons on the Registers of Employment Exchanges in Great Britain was 1,658,677 wholly unemployed, 341,028 temporarily stopped, and 90,676 normally in casual employment, making a total of 2,090,381. This was 57,814 less than at April 23, 1934, and 492,498 less than at May 22, 1933. The total included 1,706,797 men, 52,560 boys, and 289,664 women and 41,360 girls.

In Great Britain and Northern Ireland, the total number of persons on the Registers of Employment Exchanges at May 14, 1934, was 2,148,488.

### United States

*Manufacturing Industries.*—Factory employment showed a gain of 0.1 per cent from April to May, while pay rolls fell off 0.3 per cent.

The Bureau of Labor Statistics' general index of factory employment for May, 1934, is 82.4, this being the highest point reached since November, 1930. The May pay-roll index (67.1), while slightly lower than the April index, stands above the level of the pay-roll indexes recorded in any month between July, 1931, and March, 1934. During the preceding 15-year period, 1919-1933, inclusive, for which data are available in this Bureau, only

4 years showed gains in factory employment from April to May, while 8 years showed gains in payrolls.

The May, 1934, factory employment index is 31.6 per cent higher than the May, 1933, index (62.6). A similar comparison of pay-roll indexes shows a gain of 57.1 per cent in May, 1934, over the May, 1933, index (42.7).

The base used in computing these indexes is the average for the 3-year period, 1923-1925, which is taken as 100. (Prior to March, 1934, the indexes of factory employment and payrolls, which the Bureau of Labor Statistics published, were not adjusted to conform with the trends shown by biennial census reports and were constructed with the 12-month average of 1926 taken as 100. Computed on the old basis the employment index for May stands at 78 and the payroll index at 61.8.)

The indexes of factory employment and payrolls are computed from reports made by representative establishments in 90 important manufacturing industries of the country. In May reports were received from 22,705 establishments employing 3,810,136 wage earners, whose weekly earnings during the pay period ending nearest May 15 were \$75,500,000. More than 50 per cent of the wage earners in all the manufacturing industries of the country were covered in these reports.

*Non-Manufacturing Industries.*—Increases in employment from April to May were shown in 13 of the 15 non-manufacturing industries surveyed, while gains in payrolls were registered in 12. The most pronounced gain in employment (11.4 per cent) was in quarrying and non-metallic mining, this being a continuation of the gains shown in March and April. The corresponding gain in payrolls was 17.3 per cent. Building construction, excluding P.W.A. projects, showed gains in employment and payrolls, of 10.4 per cent and 12.4 per cent, respectively, these being seasonal. Coal mining made a partial recovery from the decreases shown last month, anthracite gaining 9.5 per cent in employment and bituminous coal, 6.3 per cent. The corresponding gains in payrolls were 23.9 per cent and 5.9 per cent, respectively.

Two industries, metalliferous mining and hotels, had decreases in both employment and payrolls from April to May. These decreases

were caused by strikes in the former industry, and seasonal shut-downs of winter hotels in the latter.

According to a recent statement by William Green, president of the American Federation of Labour, 10,267,000 persons were estimated

to be out of work in private industry at the beginning of June. This indicates that 3,400,000 more are in employment than at the low point of March, 1933, but that employment remains at 160,000 below the high of September, 1933.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

**T**HE Department of Labour is furnished from month to month with information regarding the contracts awarded by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government with respect to contracts "for construction, remodelling, repair or demolition of any work" is set forth in an Act of Parliament adopted on May 30, 1930, entitled "The Fair Wages and Eight-Hour Day Act" (chapter 20-21, Geo. V). The full text of this measure appeared in the *LABOUR GAZETTE*, April 1930, page 383. The Fair Wages and Eight-Hour Day Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repairs or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or, except in cases of emergency, as may be approved by the Minister.

The Fair Wages Policy was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by Order in Council of April 9, 1924. The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wages rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of contract.

In addition to the requirements of the Fair Wages and Eight-Hour Day Act, government contracts for the construction, remodelling, repair or demolition of any work, contain a number of other provisions for the protection of the workmen employed, which are sanctioned by the foregoing Orders in Council.

It is further provided in the foregoing Orders in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings; harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees; mail bags, letter boxes, and other postal stores; and any other articles and things hereinafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions, which are referred to in the Orders in Council as "B" conditions (the Conditions of the Fair Wages Orders in Council with reference to building and construction works being designated as "A" conditions), including the following Fair Wages Clause:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor

until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

Both in the case of contracts for building and construction work, and in the "B" conditions sanctioned by Orders in Council applicable to contracts for the manufacture of certain classes of supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates and working hours.

The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and address of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages, rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefore may be filed with the Minister of the Department with which the contract has been made and payment of such claim may be made by the latter.

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially directed by the Fair Wages Orders in Council to do all in their

power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of certain classes of supplies listed in the Fair Wages Orders in Council it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any disputes which may arise.

During the past month statements were received in the Department of Labour showing that the following contracts, containing fair wages conditions, have been recently executed by the Government of Canada:—

DEPARTMENT OF NATIONAL DEFENCE  
*Contracts in Group "B" (Manufacture of Supplies, etc.)*

The following is a statement of contracts awarded by the Department of National Defence during the month of June, 1934, for various classes of manufactured goods, which contracts included in all cases the "B" labour conditions above referred to:—

Goods contracted for	Contractor
Tent poles.....	J. A. Belford, Ottawa, Ont.
Wooden airscrews.....	Canadian Vickers, Ltd., Montreal, P.Q.
Doublets.....	Workman Uniform Co., Ltd., Montreal, P.Q.
Tent marquee walls.....	Roebuck & Sharp, Midland, Ont.
Steel rods.....	Dominion Reinforcing Steel Co., Ottawa, Ont.
Conversion of harness.....	Hugh Carson Co., Ottawa, Ont.
Cement.....	Canada Cement Co., Ltd., Montreal, P.Q.
Steel sash.....	Truscon Steel Co., Walkerville, Ont.
Reinforcing steel.....	Dominion Reinforcing Steel Co., Ottawa, Ont.
Seamen's overcoats.....	Clayton & Sons Ltd., Halifax, N.S.
Blue cloth.....	Dominion Woollens & Worstedes Ltd., Toronto, Ont.
Cement.....	Canada Cement Co., Montreal, P.Q.
Cloth trousers.....	Needlecraft Mills Ltd., Ste. Hyacinthe, P.Q.
Drill shirts.....	Sterling Shirts & Overalls Mfg. Co., Cap de la Madeleine, P.Q.
Folding tables.....	Knechtels Ltd., Hanover, Ont.

DEPARTMENT OF PUBLIC WORKS  
*Contracts in Group "A" (Construction, etc.)*  
Construction of a breakwater at Port Mouton, N.S. Name of contractors, Messrs. M. A. Condon & Sons, Kentville, N.S. Date

of contract, June 7, 1934. Amount of contract, approximately \$5,396.04. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages, not less than	Hours of labour, not more than, per day
	\$ per hour	
Timberman or cribman (using such tools as broad-axe, adze, saw, hammer, auger).....	0 37½	8
Blacksmith.....	0 45	8
Labourers.....	0 30	8
Boatmen.....	0 30	8
Teamsters.....	0 30	8
Driver, team and wagon.....	0 55	8
Motor truck driver.....	0 35	8

Construction of wharf improvements at Baie Ste. Catherine, P.Q. Name of contractors, Warren & Simard, Inc., La Malbaie, P.Q. Date of contract, May 31, 1934. Amount of contract, approximately \$6,567. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages, not less than	Hours of labour, not more than, per day
	\$ per hour	
Blacksmith.....	0 45	8
Boatmen.....	0 30	8
Carpenters and joiners.....	0 50	8
Divers.....	1 00	8
Hoist operators (gas).....	0 45	8
(steam).....	0 55	8
Labourers.....	0 30	8
Powderman.....	0 40	8
Teamster with horse and cart.....	0 45	8
Teamster with team and wagon.....	0 55	8
Timbermen and cribmen (using such tools as broad-axe, adze, saw, hammer, auger).....	0 37½	8

Construction of wharf improvements at Matane, P.Q. Name of contractors, Laflamme & Laflamme, Ltd., Montreal, P.Q. Date of contract, June 9, 1934. Amount of contract, approximately \$5,790. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages, not less than	Hours of labour, not more than, per day
	\$ per hour	
Machinist.....	0 55	8
Blacksmith.....	0 45	8
Carpenter and joiner.....	0 50	8
Compressor operator.....	0 40	8
Drill runner (machine).....	0 40	8
Fireman (stationary).....	0 35	8
Hoist operator (steam).....	0 55	8
Labourers.....	0 30	8
Painters.....	0 50	8
Pile driver runner.....	0 55	8
Driver, horse and cart.....	0 45	8
Driver.....	0 30	8
Timberman and cribmen (using such tools as broad-axe, X-cut saw, adze, auger, hammer).....	0 37½	8

## ROYAL CANADIAN MOUNTED POLICE

### Contract in Group "A" (Construction, etc.)

Construction of alterations and repairs to Building No. 15, "B" Block, R.C.M. Police, Regina, Sask. Name of contractor, the Bird Construction Co., Ltd., Regina, Sask. Date of contract, June 18, 1934. Amount of contract, \$11,079. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages, not less than	Hours of labour, not more than, per day
	\$ per hour	
Bricklayers and masons.....	1 00	8
Plasterers.....	1 00	8
Tile setters.....	1 00	8
Plumbers and steamfitters.....	0 90	8
Electricians.....	0 80	8
Carpenters.....	0 75	8
Sheet metal workers.....	0 75	8
Sheet metal roofers.....	0 75	8
Painters.....	0 60	8
Patent roofers.....	0 60	8
Labourers.....	0 40	8

N.B.—In any cases where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.\*

## POST OFFICE DEPARTMENT

Following is a statement of payments made in June, 1934, for supplies ordered by the Post Office Department under contracts which were subject to regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages, and the performance of the work under proper sanitary conditions:—

Nature of orders	Amount
Making Metal Dating Stamps and Type, Brass Crown Seals, Cancellers, etc.—	
Pritchard-Andrews Co. of Ottawa, Ltd., Ottawa, Ont.....	428 90
Making and Repairing Rubber Stamps, Dates, etc.—	
Pritchard-Andrews Co. of Ottawa, Ltd., Ottawa, Ont.....	174 14
Making and Supplying Letter Carriers' Uniforms—	
E. Guillet & Sons Co., Ltd., Marieville, P.Q.	95 40
Oxford Woollen Mills Ltd., Oxford, N.S.....	1,529 85
Miner Rubber Co., Ltd., Granby, P.Q.....	902 00
Needlecraft Mills Ltd., Ste. Hyacinthe, P.Q.	16,337 06
Yamasks Garments Ltd., Ste. Hyacinthe, P.Q.....	3,041 67
Kaufman Rubber Co., Ltd., Kitchener, Ont..	1,749 84
Tower Canadian Ltd., Toronto, Ont.....	1,741 02
J. A. Humphrey & Son, Ltd., Moncton, N.B.	2,382 01
Tayside Textiles Ltd., Perth, Ont.....	4,551 34
Mail Bag Fittings—	
F. W. Carling, Ottawa, Ont.....	1,243 60
Walter H. Wickware, Ottawa, Ont.....	190 00

## Fair Wages Conditions in Harbour Commission Contracts

Under the Fair Wages Order in Council it is provided that certain conditions, referred to therein as "A" Conditions, shall, as far as practicable, be observed by the department or departments of the Government of Canada in connection with all agreements made by the Government involving the grant of Dominion public funds in the form of subsidy, advance, loan or guarantee for any of the purposes mentioned. Under this authority, fair wages conditions are prepared from time to time in the Department of Labour for insertion in contracts awarded by the Harbour Commissioners throughout Canada. The labour conditions in question are similar to those which are applicable to contracts awarded by the several departments of the Dominion Government and include either a fair wages schedule or the General Fair Wages Clause.

The Department of Labour has been notified that the following contract has been

awarded under the above-mentioned conditions:—

### Vancouver Harbour Commissioners—

Laying of asphalt paving on the approaches to the Second Narrows Bridge, Vancouver, B.C. Name of contractors, the Carter-Halls-Aldinger Co., Ltd., Winnipeg, Man. Date of contract, May 30, 1934. Amount of contract, \$5,022. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages, not less than	Hours of labour, not more than, per day
	\$ per hour	
Roller engineer.....	0 87½	8
Rigger.....	0 90	8
Asphalt rakers.....	0 60	8
Asphalt layers.....	0 50	8
Common labourers.....	0 45	8

## FAIR WAGE SCHEDULE FOR PUBLIC AND CERTAIN PRIVATE CONSTRUCTION WORKS IN MANITOBA

UNDER the authority of section 11 of the Fair Wage Act of Manitoba, 1916 (Consolidated Amendments, 1924, chapter 69), the provincial Minister of Public Works has approved the following schedule, effective June 15, 1934, until altered, as establishing the minimum rate per hour and the maximum working hours applicable on public works for building construction under contract, and on private works as described in the Act. "Private works means the building, construction, remodelling, demolition or the repairing, at a cost exceeding \$100, of any building or construction work within the Greater Winnipeg Water District, or any city or town which has a population exceeding 2,000, or any other portion of the province to which the provisions of this Act are extended by the Lieutenant-Governor in Council, but shall not include work which is done on property by, or under the immediate direction and control of, the owner, tenant or occupant thereof, if such work be not undertaken with a view to sale or rental of the property." On "private work" the schedule will not be effective if contracts for the work have actually been made prior to June 22, 1934. The schedule is signed by Mr. A. MacNamara, chairman of the Fair Wage Board and Assistant Deputy Minister of Public Works; Mr. E. McGrath for the Bureau of

Labour, and the Hon. W. R. Clubb, Minister of Public Works.

Any complaint or claims from workmen will receive prompt attention if addressed to the Bureau of Labour, Legislative Buildings, Winnipeg.

### Fair Wage Schedule

The following schedule shall apply from and after June 15th, 1934, on "Public Works" and on "Private Work" on contracts not made prior to June 22nd, 1934.

"Winnipeg and Environs" means Winnipeg and within a radius of thirty miles.

"Other than Winnipeg and Environs" means all portions of the province outside said radius of thirty miles.

Occupation	Winnipeg and radius of 30 miles	Other than Winnipeg and radius of 30 miles	Maximum hours per week
	Minimum	rate per hour	
Asbestos workers—	\$	\$	
(a) Journeymen.....	.70	.70	44
(b) Improvers.....	.60	.60	44
Asphaltners—			
(a) Finishers.....	.52½	.52½	44
(b) Men engaged preparing, mixing, heating material..	.45	.45	48
Blacksmiths.....	.65	.60	44
Bricklayers.....	1.00	.90	44
Helpers—			
(a) Continuously employed at mixing and tempering mortar.....	.47½	.42½	48

Occupation	Winnipeg and radius of 30 miles	Other than Winnipeg and radius of 30 miles	Maximum hours per week	Occupation	Winnipeg and radius of 30 miles	Other than Winnipeg and radius of 30 miles	Maximum hours per week
	Minimum	rate per	hour.		Minimum	rate per	hour
<b>Helpers—Concluded</b>	\$	\$		<b>Plasterers—Concluded</b>	\$	\$	
(b) Attending on or at scaffold.....	.42½	.37½	48	cluding the making of putty and operation of machinery).....	.47½	.42½	48
Bridge and structural steel and iron workers.....	.75	.75	44	Plumbers.....	.90	.80	44
Carpenters.....	.75	.70	44	(b) Helpers (all men assigned to help tradesmen).....	.47½	.42½	48
Cement finishers (in warehouse or large floor area jobs).....	.60	.55	48	Sheet metal workers.....	.70	.65	44
Electrical workers (inside wiremen, licensed jourmen).....	.85	.75	44	Steamfitters.....	.90	.80	44
<b>Labourers—</b>				(b) Helpers (all men assigned to help tradesmen).....	.47½	.42½	48
(a) Skilled.....	.42½	.37½	48	Stonecutters.....	.90	.80	44
(b) Unskilled.....	.37½	.32½	48	Stonemasons (general).....	1.00	.90	44
Rule—That at least 25% of the men employed on any contract be paid the rate for skilled men.				Stonemasons (residence basement rubble work).....	.80	.75	44
<b>Lathers (metal, wood)—</b>				Note.—With the object of further developing the use of "rubble stone" for basement work, a special rate for this class of stonemason work has been set.			
(a) Metal lathers.....	.75	.70	44	(b) Helpers—			
(b) Wood lathers.....	.70	.65	44	(1) Continuously employed at mixing and tempering mortar.....	.47½	.42½	48
Marble setters.....	.95	.95	44	(2) Attending on or at scaffold.....	.42½	.37½	48
(b) Helpers (all men assigned to help tradesmen).....	.47½	.42½	48	Teamsters.....	.37½		54
Mosaic and tile setters.....	.90	.90	44	(b) Teamsters with teams.....	.65		54
(b) Helpers (all men assigned to help tradesmen).....	.47½	.42½	48	<b>Terrazzo workers—</b>

RULE—All men hired in Winnipeg to go into the country to work on buildings shall be paid the City Schedule rate, excepting where other definite agreements are made.

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In each agreement, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Manufacturing: Pulp, Paper and Paper Products

THOROLD, ONTARIO.—ONTARIO PAPER COMPANY AND THE INTERNATIONAL BROTHERHOOD OF PAPER MAKERS, INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS AND OTHER UNIONS

Agreement to be in effect from May 1, 1934.

A previous agreement was summarized in the LABOUR GAZETTE, August, 1932, page 968, and September, 1931, page 1036. Since that time, certain wage changes have been made. The present agreement coming into effect May 1, 1934, restores the wage schedule which was in effect immediately prior to May 26, 1933, such rates to be made effective as from April 1, 1934, with a minimum rate of 40 cents per hour for the lowest paid class of work. This is a wage increase of approximately 7 per cent over the rates in effect during the past year. These rates are to be effective until

such time as any general increase is made in the rates paid in comparable newsprint mills in the United States, when this Company agrees to meet such general increases so far as the minimum rate and percentage increase are concerned, and the unions agree upon demand of the Company to meet the hours of work and working conditions in the United States mills granting these increases. Such increases to be made effective from the same date as in such United States mills. At the same time, conferences to be held between the Company and the unions to consider the question of the 6-hour day and any other problems which may arise.

**IROQUOIS FALLS, STURGEON FALLS, ESPANOLA, SAULT STE. MARIE AND FORT WILLIAM, ONTARIO.—ABITIBI POWER AND PAPER COMPANY LIMITED AND THE INTERNATIONAL BROTHERHOOD OF PAPER MAKERS, THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS AND OTHER UNIONS**

Agreement to be in effect from May 1, 1934.

Separate agreements covering these various mills were summarized in the *LABOUR GAZETTE* as follows: Iroquois Falls in December, 1931, and November, 1932; Sturgeon Falls, Espanola and Sault Ste. Marie in May, 1926, December, 1931, and November, 1932; Fort William in May, 1926, and November, 1932. An agreement from June 1, 1933, amending these by providing for wage decreases of 7 or 7½ per cent was reported in the *LABOUR GAZETTE*, October, 1933, page 1034. The new agreement coming into effect May 1, 1934, provides for the continuance of the previous agreements with the following changes:

Wage rates to be those in effect immediately prior to June 1, 1933, such rates to be made effective from April 1, 1934. A minimum rate of 40 cents per hour for the lowest paid class of work to be established. These rates to remain in effect until such date as any general increases in the rates being paid in newsprint paper mills in the United States which are comparable to the mills of the Abitibi Power and Paper Company Limited are made generally effective, at which time the Company agrees to meet such general increases so far as minimum rate and percentage increases are concerned, and such increases to be made effective from the date on which they came into effect in such United States mills. At that same time, joint conferences to be held between the Company and the unions to discuss the question of the six-hour day and any other problems which may arise for consideration.

**FORT WILLIAM, ONTARIO.—GREAT LAKES PAPER COMPANY LIMITED AND THE INTERNATIONAL BROTHERHOOD OF PAPER MAKERS, THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS AND OTHER UNIONS**

Agreement to be in effect from May 1, 1934. This agreement continues the one previously in effect which was summarized in the *LABOUR GAZETTE*, October, 1932, page 1110 and July, 1933, page 730, with the following changes:

The wage rates to be restored to the schedule in effect immediately prior to May 16, 1933,

such rates to be effective from April 1, 1934, with a minimum rate of 40 cents per hour. These wage rates are to continue in effect until May 1, 1935, or until such time as an increase becomes effective in newsprint mills in the United States comparable to this mill, whichever happens first, when upon one week's notice, the International unions to have the right to consider the agreement open.

### **Manufacturing: Printing and Publishing**

**TORONTO, ONTARIO.—THREE DAILY NEWSPAPER PUBLISHERS AND THE MAILERS UNION No. 5 (INTERNATIONAL TYPOGRAPHICAL UNION)**

The agreement which came into effect June 1, 1929, and was summarized in the *LABOUR GAZETTE*, June, 1930, page 715, and was amended as noted in the *LABOUR GAZETTE*, July, 1933, page 731, has again been renewed from June 1, 1934, to May 31, 1937, with the following exceptions:

Wages per week for journeymen mailers for both day and night work: \$39 from June 1, 1934, to May 31, 1935; \$40 from June 1, 1935, to May 31, 1936, and \$41 from June 1, 1936, to May 31, 1937. (The rate in effect from June 1, 1933, to May 31, 1934, was \$37.50 per week.)

Wages for apprentices from \$16.50 per week for the first half of third year to \$25.75 during the last half of fifth year for the year June 1, 1934, to May 31, 1935, with increases of from 25 to 75 cents per week in each class in each of the following two years, making the rates for the year 1936 to 1937 from \$17 per week for first half of third year to \$27 per week in second half of fifth year.

Hours are unchanged at 48 per week for day work and 42 for night work.

### **Manufacturing: Fur, Leather and Leather Products**

**PROVINCE OF QUEBEC.—QUEBEC SHOE MANUFACTURERS ASSOCIATION, THE SHOE MANUFACTURERS ASSOCIATION OF CANADA (QUEBEC PROVINCE DIVISION) AND THE NATIONAL CATHOLIC FEDERATION OF SHOE WORKERS**

The agreement between the above parties is printed on page 636 in connection with the application to have it made to apply to all employers and employees in the shoe manufacturing industry throughout the Province of Quebec, under the Labour Agreements Extension Act, 1934 (*LABOUR GAZETTE*, May, 1934, page 417), the agreement to be in effect from the date of the Order in Council approving it, for one year.

### **Construction: Buildings and Structures**

**QUEBEC AND SIX NEIGHBOURING COUNTIES, P.Q.**

—GENERAL CONTRACTORS AND BRICKLAYING, MASONRY AND PLASTERING CONTRACTORS AND THE BUILDING TRADES COUNCIL OF THE NATIONAL CATHOLIC UNIONS.

Agreement to come into effect from the date of the publication in the Quebec Official Gazette of the Order in Council ordering that the agreement apply to and be binding upon all employers and employees in the several trades mentioned in the agreement (under the Labour Agreements Extension Act, *LABOUR GAZETTE*, May, 1934, page 417) and to remain in effect

until April 30, 1935, and for another year, if no notice of change given.

Hours to be in conformity with the Limitations of Hours Act, Quebec, 1933, under which they were limited to 40 per week, except for contracts for provincial or municipal governments, for school corporations, parish trustees, etc., or for buildings to which provincial or municipal governments contributed half or more of the cost, when two 6-hour shifts to be established, each man limited to 6 hours per day, 6 days per week, a 36 hour week.

Overtime: time and one-half until midnight; thereafter double time.

Wages per hour in the city of Quebec, Levis and within a radius of 10 miles of their limits: bricklayers, masons and plasterers 70 cents, carpenters and joiners 50 cents, common labourers and helpers, mortar makers, celanite mixers, plaster pourers and hod carriers 35 cents, drillers 45 cents, wood lathers 45 cents, metal lathers 50 cents, engineers for stationary and portable engines 50 cents.

Wages per hour in all other municipalities in the jurisdiction of the union having a population of less than 5,000 persons where the general building contracts including wages and material is less than \$5,000: bricklayers, masons and plasterers 55 cents, carpenters and joiners 45 cents, common labourers and helpers, mortar makers, celanite mixers, plaster pourers and hod carriers 30 cents, drillers 40 cents, wood lathers 40 cents, metal lathers 45 cents, engineers for stationary and portable engines 45 cents.

#### QUEBEC, P.Q.—PAINTING CONTRACTORS AND THE NATIONAL CATHOLIC UNION OF PAINTERS.

Agreement to be in effect from date of signing to April 30, 1935.

An application was made to have it made applicable to all employers and employed painters in the judicial district of Quebec, under the Labour Agreements Extension Act (LABOUR GAZETTE, May, 1934, page 417) and the agreement is printed on page 638 of this issue in connection with such application.

The provision for limitation of hours is the same as noted above for other building trades in Quebec.

#### THREE RIVERS AND NEIGHBOURING COUNTIES, QUEBEC.—CERTAIN ELECTRICAL CONTRACTORS AND THE NATIONAL CATHOLIC UNION OF ELECTRICIANS OF THREE RIVERS.

Agreement to be in effect from August 1, 1934, to August 1, 1935.

This agreement is printed on page 638 of this issue in connection with an application to have it extended under the Labour Agreements Extension Act (LABOUR GAZETTE, May, 1934, page 417).

The provision for limitation of hours is the same as noted above for building trades in Quebec City and vicinity.

#### SHERBROOKE AND DISTRICT, QUEBEC.—BUILDING CONTRACTORS ASSOCIATION OF SHERBROOKE AND THE CENTRAL COUNCIL OF NATIONAL CATHOLIC UNIONS OF SHERBROOKE.

Agreement to be in effect from the publication in the Quebec Official Gazette of the Order in Council making it applicable to all employers

and employees in these trades in the county of Sherbrooke and seven neighbouring counties and is to remain in effect until April 30, 1935.

Contracts signed before the adoption of such Order in Council to be exempt from the provisions of the agreement.

Hours to be the same as in the general contractors agreement in Quebec City and district, summarized above.

Wages per hour: bricklayers, plasterers and masons 60 cents; journeymen carpenters and joiners 50 cents (apprentices from 30 cents in first year to 45 cents in fourth year); journeymen painters 45 cents (apprentices from 25 cents in first year to 40 cents in fourth year); labourers (unclassified workmen) 30 cents; painters and paper hangers 50 cents.

#### ISLAND OF MONTREAL, ILE BIZARD AND THIRTEEN NEIGHBORING COUNTIES, QUEBEC.—THE BUILDERS EXCHANGE, INCORPORATED (MONTREAL) AND THE BUILDING TRADES COUNCIL OF THE NATIONAL CATHOLIC UNIONS.

Agreement made June 2, 1934, but only becomes effective when an Order in Council is passed ordering that this agreement is to apply to and be binding upon all employers and employees in the several trades mentioned in this agreement (Labour Agreements Extension Act, LABOUR GAZETTE, May, 1934, page 417) when it will remain in effect until March 31, 1935. This agreement is printed on page 637 of this issue in connection with the application to have it so extended.

Hours to be the same as in the general contractors agreement in Quebec City and district, summarized above.

#### MONTREAL AND DISTRICT, QUEBEC.—THE BUILDERS EXCHANGE AND THE BUILDING TRADES COUNCIL OF MONTREAL AND DISTRICT OF THE INTERNATIONAL UNIONS.

An agreement was made similar to the one with the Building Trades Council of National Catholic Unions, summarized above, except that wage rates for plumbers and steamfitters and for stationary engineers were not included.

#### EDMONTON, ALBERTA.—EDMONTON GENERAL CONTRACTORS ASSOCIATION AND THE BRICKLAYERS AND MASONS INTERNATIONAL UNION No. 1.

Agreement to be in effect from May 1, 1934, to April 30, 1935. Agreement for the next year to be negotiated in February, 1935.

No union members or group of members to contract for or to be employed directly by owners for any work in excess of \$200.

Foremen must be union members.

Hours: 8 per day, 5 days per week, a 40-hour week, but if any work done on Saturday morning, it is to be at regular rate. For country work, longer hours may be worked by agreement, but not to exceed 9 hours per day.

Overtime: time and one-half; Sundays and holidays, double time.

Wages for journeymen bricklayers and masons: \$1 per hour. Foreman over five bricklayers to be paid 10 cents per hour extra, foreman over 10 or more bricklayers 15 cents per hour extra.

For work out of city, transportation to be paid by employers.

One apprentice allowed for every five bricklayers.

Wages for apprentices to be 25 per cent of journeymen's scale for first year, 35 per cent for second year, 50 per cent for third year and 70 per cent for fourth year.

And dispute to be settled by a joint committee, whose decision will be final. No strike or lockout to occur before a dispute has been brought before this committee.

## Transportation and Public Utilities:

### Water Transportation

MONTREAL, QUEBEC.—THE HARBOUR COMMISSIONERS OF MONTREAL AND THE INDEPENDENT ASSOCIATION OF HARBOUR EMPLOYEES OF THE PORT OF MONTREAL.

Agreement to be in effect from May 1, 1934, to May 1, 1935.

This agreement and wage scale is the same as that in effect for the year 1933 to 1934, which was summarized in the LABOUR GAZETTE, June, 1933, page 649, September, 1932, page 1020, June, 1931, page 712, July, 1929, Page 807 and September, 1927, page 1004.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, JUNE, 1934

### Cost of Living, Prices of Staple Articles and Index Numbers

THE cost per week of the family budget in terms of retail prices was again lower, due mainly to lower costs of foods, and the Dominion Bureau of Statistics index number of wholesale prices was somewhat higher, due mainly to higher prices for certain farm products.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was \$7.38 at the beginning of June as compared with \$7.53 for May; \$6.84 for June, 1933; \$11.10 for June, 1930; \$11.06 for June, 1926; \$11.16 for June, 1921; \$16.92 for June, 1920 (the post war peak); and \$7.49 for June, 1914. The most important decreases occurred in the prices of butter, potatoes and sugar, while less important decreases occurred in the prices of veal, mutton, lard and cheese. Prices of beef, pork, flour, beans and tea were slightly higher. Including the cost of fuel and rent with that of foods the total budget averaged \$15.78 at the beginning of June as compared with \$15.96 for May; \$15.41 for June, 1933; \$21.44 for June, 1930; \$21.31 for June, 1926; \$21.74 for June, 1921; \$26.92 for July, 1920 (the post war peak); and \$14.27 for June, 1914. Fuel was slightly lower due to lower prices for anthracite coal. Little change occurred in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based on prices in 1926 as 100 was higher at 72.1 for June as compared with 71.1 for May. Comparative figures for certain previous dates are 67.6 for June, 1933; 87.7 for June, 1930; 100.1 for June, 1926; 97.8 for June, 1922; 164.3 for May, 1920 (the post war peak); and 64.4 for June, 1914. One hundred and twelve prices quotations were higher, seventy-eight were lower and three hundred and seventy-seven were unchanged.

In the grouping according to chief component materials seven of the eight main groups were higher and one was lower. The groups which advanced were: the Vegetable and Vegetable Products group because of higher prices for grain, flour, bran and shorts which more than offset lower prices for palm oil, rubber and granulated sugar; the Animals and their Products group, because of higher prices for hogs, fresh and cured meats, hides and eggs which more than offset lower prices for steers, calves, lambs, leather and milk; the Fibres, Textiles and Textile Products group, owing mainly to higher prices for raw cotton; the Wood, Wood Products and Paper group, because of higher quotations for certain lines of lumber; the Iron and its Products group, chiefly because of an advance in the price of shovels, the Non-Metallic Minerals and their Products group, due to increased prices for anthracite coal and sulphur; and the Chemicals and Allied Products group, chiefly because of higher prices for copper sulphate. The Non-Ferrous Metals and their Products group declined, because of lower prices for antimony, copper, lead, tin and zinc.

In the grouping according to purpose both consumers' goods and producers' goods advanced. In the former, foods were substantially higher, chiefly because of advances in the prices of flour and milled products, fruits, meats and eggs. In producers' goods the advance was due to higher prices for materials for the textile and clothing industries, for the milling industries, as well as for miscellaneous producers' materials.

In the grouping according to origin both raw and partly manufactured goods and fully and chiefly manufactured goods were higher. Canadian farm products, articles of marine origin and articles of forest origin advanced. Articles of mineral origin were unchanged.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of June of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located but still fairly central, without modern conveniences.

The figures as to rental are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amounts due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which statistics were available when first published in the LABOUR GAZETTE in January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

### Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and

1926, weighted according to the importance of each item in workingmen's family expenditure, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

### Retail Prices

Beef prices were slightly higher in most localities, round steak being up from an average of 17.9 cents per pound to 18.2 cents and rib roast from 16.7 cents per pound to 17.1 cents. Veal and mutton were lower, the former being down from an average price of 12.2 cents per pound in May to 11.9 cents in June and the latter from 22.1 cents per pound to 21.6 cents. The price of pork advanced in most localities averaging 20 cents per pound as compared with 19.7 cents the previous month. The price in June, 1933, was 15.7 cents per pound. Lard declined from an average price of 13.1 cents per pound in May to 12.9 cents in June.

The price of fresh eggs was unchanged from the level of the preceding month at 22.3 cents per dozen, as compared with 19.2 cents in June, 1933. Prices were considerably lower in the prairie provinces than in other parts of the Dominion. The price of milk was unchanged at an average price of 9.8 cents per quart. Dairy butter was down from an average price of 24.4 cents per pound in May to 23.3 cents in June and creamery from 27.8 cents per pound in May to 25.3 cents in June. Comparative prices a year ago were 20.9 cents per pound for dairy butter and 23.9 cents for creamery.

Bread was unchanged at an average price of 5.8 cents per pound, while flour was fractionally higher at an average price of 3.2 cents per pound. Onions were again higher averaging 5.4 cents per pound in June as compared with 4.1 cents in May. Potatoes were generally lower, the average price being down from \$1.32 per ninety pounds to \$1.20. The price of granulated sugar was down from 7.9 cents per pound in May to 7 cents in June. The decline followed a decrease of 1 cent per pound in the excise tax effective May 21st. Anthracite coal was down in the average from \$15.06 per ton in May to \$14.77 in June.

### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices generally averaged higher in June than in May. No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, was up from an average price of 70.6 cents per bushel in May to 77.1 cents in June. Unfavourable crop conditions in Europe were mentioned as an important influence in this advance. In coarse grains western oats were up from an average price of 34.6 cents per bushel to 37.8 cents, flax from \$1.573 per bushel to \$1.612, rye from 46.4 cents per bushel to 53.4 cents, and barley from 38.1 cents per bushel to 43.6 cents. Flour at Montreal was up from \$5.20 per barrel in May to \$5.70 in June. Granulated sugar at Montreal was down \$1 per cwt. to \$5.18 following the reduction of 1 cent per pound in the excise tax. Ceylon rubber at New York declined from 13.9 cents per pound to 13.4 cents. In live stock choice steers at Toronto declined from \$5.84 per hundred pounds to \$5.57 and at Winnipeg from \$4.92 per hundred pounds to \$4.70. Calves at Toronto were substantially lower at \$5.56 per hundred pounds as compared with \$6.33 the previous month. Bacon hogs at Montreal advanced from \$8.68 per hundred pounds to \$9.37, at Toronto from \$8.55 per hundred pounds to \$9.22 and at Winnipeg from \$7.73 per hundred pounds to \$8.35. Lambs at Toronto declined from \$10.56 per hundred pounds to \$8.88. Fresh eggs at Montreal averaged slightly higher in June at 21.6 cents per dozen as compared with 21 cents in May. Butter prices also showed little change, creamery prints at Montreal being up from 22.5 cents per pound to 22.9 cents and at Toronto from 23.4 cents per pound to 23.7 cents. The price of raw cotton at New York continued to advance, being up from an average price of 11.4 cents per pound in May to 12.1 cents in June. Report of a plan by the United States government to buy cotton for relief purposes was given as an important influence affecting the price. The price of raw wool was considerably lower being down from 20.5-22 cents per pound to 17.5-19.5 cents. Common fir lumber was \$2 per thousand board feet higher at \$19 while cedar boards were \$1 per thousand board feet higher at \$16.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE accompanying tables, which appear quarterly, give the official and certain other index numbers of cost of living, retail and wholesale prices in Great Britain and several of the principal commercial and industrial countries. The following notes afford information as to significant changes according to groups of commodities in some of these countries. The index numbers of the cost of living are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

## Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1924=100, was 61.7 for May, a decline of 0.5 per cent from the previous month. Foods were 0.5 per cent higher, but industrial materials were 1 per cent lower due principally to considerable decreases in the prices of coal and of wool.

The *Statist* index number, on the base 1867-1877=100, was 81.1 at the end of May, an advance of 0.1 per cent for the month, due to higher food prices, chiefly animal foods. Industrial materials, on the other hand, were slightly lower for the month, on the average, due principally to a decline of 2.4 per cent in the minerals group.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July 1914=100, was 138 at June 1, an increase of one point for the month, due to higher prices for food and clothing, partly offset by a slight decline in the fuel and light group.

## Austria

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base: first half of the year 1914=100, was 110.3 for June, a decrease of 0.1 per cent for the month. A decrease in the industrial materials group

(a) Average for year. (b) First of month. (c) 15th of month. (d) End of month.

(e) New series. (f) Sum totals of the prices per pound of 96 articles of common consumption.

(g) Until end of 1927, "Dr. Lorenz". (h) Prior to 1926, number of commodities was 236.

(i) Paper currency basis; index number on pre-war currency suspended from April, 1933.

(Continued from page 713)

was partly offset by an increase in the food group.

**COST OF LIVING.**—The official index number, on the base July 1914=100, was 104.9 for June, an advance of 0.7 per cent for the month.

### France

**WHOLESALE PRICES.**—The General Statistical Office index number, on the base 1914=100 (gold index) was 76 for May, a decline of one point for the month. With the exception of the sugar, coffee and cocoa group, all groups showed small declines for the month.

### Germany

**WHOLESALE PRICES.**—The Federal Statistical Office index number, on the base 1913=100, was 96.2 for May, an increase of 0.4 per cent for the month. Except for decreases in mineral products, textiles and artificial fertilizers, the advance was general, the principal change in any one group being a rise of 11.3 per cent in rubber.

**COST OF LIVING.**—The official index number, on the base 1913-1914=100, was 120.3 for May, a decrease of 0.2 per cent for the month, due to decreases in the food, heat and light and sundries group, partly offset by a small advance in clothing.

### United States

**WHOLESALE PRICES.**—The United States Bureau of Labour Statistics, on the base 1926=100, was 73.7 for May, an advance of 0.5 per cent over the April level and is 17½ per cent higher than for May, 1933. Advances were

shown for the month in foods, fuel and lighting materials, metals and metal products, building materials, housefurnishing goods and miscellaneous commodities, while there were decreases in hides and leather products, textile products and chemicals and drugs; there was no change in the farm products group.

*Bradstreet's* index number (continued by Dun and Bradstreet, Incorporated) which is the sum total of the prices per pound of 96 commodities of common consumption, was \$9.1404 at June 1, a decrease of 0.2 per cent for the month. Decreases in live stock, hides and leather, textiles, metals, naval stores and building materials were partly offset by increases in breadstuffs, provisions, fruits, coal and coke, oils and miscellaneous commodities.

*Dun's* index number (continued by Dun and Bradstreet, Incorporated) which is based on the cost *per capita* of a year's supply of commodities, was \$163.985 at June 1, an increase of 1.65 per cent over the previous month's level. Increases in breadstuffs, meat and miscellaneous commodities were partly offset by declines in dairy and garden produce, other food, clothing and metals.

**COST OF LIVING.**—The index number of the National Industrial Conference Board, on the base 1923=100, was 78.6 for May, an advance of 0.3 per cent for the month, due chiefly to small increases in food prices and rent, partly offset by a seasonal decline in coal prices.

The index number of the Department of Labour and Industries, Massachusetts, of the cost of living in Massachusetts, on the base 1913=100, was 131.6 for May, an increase of 0.6 per cent for the month, due to increases in food, clothing and sundries, partly offset by a decline in the fuel and light group.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Question of Lawfulness of Picketing Employer's Premises

Two men were convicted in British Columbia under Section 501 (f) of the Criminal Code, which declares that every one is guilty of an indictable offence "who, wrongfully and without lawful authority, with a view to compel any other person to abstain from doing anything which he has a lawful right to do, or to do anything from which he has a lawful right to abstain . . . (f) besets or watches the house or other place where such other person resides or works, or carries on business, or happens to be." They were accused of watching and besetting a theatre in New Westminster with a view to compelling the man-

ager to abstain from employing moving picture operators not affiliated with the local labour council. Owing to a wage dispute employees belonging to the union affiliated with the council notified the manager of the theatre that they would strike unless their demands were complied with. The outcome of this demand was that other projectionists, properly licensed but not members of said union, were employed. In protest the accused donned yellow slickers bearing on the back the legend: "The Edison Theatre does not employ Union Picture Projectionists affiliated with the New Westminster and Vancouver Trades and Labour Council," and so equipped walked up and down the adjacent street. The statements so made were true. The accused did not accost

anyone or interfere in any way with patrons going into or leaving the theatre. Some loss of business, however, followed, by reason of these activities.

The accused appealed from their conviction on a stated case, claiming that under the provisions of the provincial Act relating to Trade Unions\* no civil liability follows the commission of such actions as those complained of.

The British Columbia Court of Appeal was equally divided in their opinion, and the appeal was accordingly dismissed. The judgments of Chief Justice Macdonald and Mr. Justice McPhillips were for dismissal, Mr. Justice Martin and Mr. Justice M. A. Macdonald allowing the appeal.

The Chief Justice, after stating the facts, said:—

"The defendants' proceedings were peaceful; their counsel contended their proceedings were not unlawful because their object was not to injure the respondent but to right a trade grievance. Their said conduct did affect adversely the respondent's trade receipts and profits but very slightly. The appellants so beset the theatre for about one hour when they were arrested. It was argued that they were entitled to the benefit of the Act relating to Trade Unions, R.S.B.C., 1924, ch. 258, which is in effect a copy of a like section in the English Trade Disputes Act and which until repealed in 1892 formed part of the said sec. 501. The Act relating to Trade Unions is applicable to civil cases for damages and has no reference whatever to crime and the corresponding English cases must therefore be read with this distinction between the Imperial Act and our Code as it is at present.

"The real question for decision here is: 'Was the appellants' conduct wrongful and illegal?' That question was dealt with and considered in *Reners v. Regem* (1926) (LABOUR GAZETTE, June, 1926, page 618), where the Court sustained a conviction for besetting and watching where the appellants picketed a coal mine in Alberta. Judgment of the majority of the Court was delivered by Newcombe, J., and Idington, J., delivered a separate judgment arriving at the same conclusion. The judges in that case were principally concerned with the judgment in the Court below of Clarke, J. A., who dissented and who applied the language of the Trade Disputes Act, 1906, ch. 47, to the case there at bar, notwithstanding that the words in question had been eliminated from the Code. He appears to have reasoned by analogy that the words besetting and watching meant the same in both cases.

"In *Reners* case, *supra*, the acts of the appellants were much more aggressive and injurious than in this case where the besetting and watching were peaceful. The words of sec. 501 are that persons are guilty of the offence, 'who, wrongfully and without lawful authority, with a view to compel any other person to abstain from doing anything which he has a lawful right to do, or to do anything from which he has a lawful right to abstain. . . . (f) besets or watches the house or other place where such other person resides or works, or carries on business or happens to be.'

"The majority of the Court in *Reners* case found the defendants guilty and sustained the judgment below.

"Sec. 501 applies to persons, 'who, wrongfully and without lawful authority, with a view to compel' the theatre company to abstain from reducing the appellants' wages, which it had a lawful right to do, beset or watch the house or other place where such other person resides or works, or carries on business or happens to be. There is nothing in the section relating to the purpose for which the acts complained of were done. The appellants beset and watched the theatre, whether peacefully or not makes, in my opinion, no difference. The offence falls within the very language of the section and since they did these things without lawful authority they were guilty of the crime aimed at by the said section and, in my opinion, the appeal should be dismissed."

Mr. Justice Martin found that from a civil point of view, in British Columbia, the accused were conducting themselves in a legal manner and were not liable for any loss to the theatre occasioned by their actions, because in doing what they did they had the "lawful authority" of the provincial Act relating to Trade Unions, 1924, ch. 258, secs. 2 and 3, as their justification and their actions did not amount even to "peaceful picketing" of the mildest type, but at most to "watching" only, and not besetting, in the true sense; and the "watching" was of the kind justified by said secs. 2 and 3. By the expression "lawful authority" in sec. 501 of the Criminal Code the Dominion Parliament evidenced its intention to recognize the admitted powers of provincial Legislatures to deal with trade disputes under their jurisdiction over "Property and Civil Rights in the Province," and where the old common law civil relations between employer and employed have been constitutionally altered by such Legislatures a course of conduct which under that old law was unlawful became one which was done by lawful authority; and, therefore, if the "besetting or watching" here complained of amount to no more than is authorized by the B.C. Act

\* The text of this Act was given in the LABOUR GAZETTE, March, 1927, page 342.

relating to Trade Unions then that particular conduct is excluded from the penal operation of sec. 501 by its own terms. There is nothing unreasonable in the view that the Dominion Parliament has decided to co-operate with the provinces in dealing with trade union disputes, and has made the special local conception that where acts are done in pursuance of civil rights conferred by a provincial Legislature they are done by "lawful authority." Furthermore, Parliament must have had the provincial Legislature in mind when it referred to a "lawful authority," because, under the circumstances, it was obviously not referring to its own powers by that inapt reference, and there was no other constitutional "authority" that had any jurisdiction over the matter in any respect except the provinces. Therefore, the provinces must by clear implication be taken to be referred to just as effectually as if the expression had been "lawful provincial authority" or "lawful authority of the Attorney-General of the province." The appeal should be allowed.

Mr. Justice McPhillips was of the opinion that unquestionably the accused did beset and watch the theatre premises contrary to section 501 (f) of the Criminal Code, in that there was wrongful interference with the business of the theatre. He cited the decision in *Schuberg versus Local 118, International Alliance of Theatrical Stage Employees* (LABOUR GAZETTE, March, 1927, page 339; April, 1927, page 473 and previous issues). He concluded that the appeal should be dismissed.

Mr. Justice M. A. Macdonald found that because the "watching and besetting" was carried on without creating a nuisance and without violence or intimidation, the acts of the accused were not "wrongful" at common law, or committed "without lawful authority" within the meaning of Section 501 of the Criminal Code, and that the appeal should be allowed.

*Rex versus Richards and Woolridge* (British Columbia) 1934 *Western Weekly Reports*, vol. 2, page 390.

#### **Employer not responsible for risk not reasonably foreseeable**

An employee of the Canadian National Railways met with an accident on June 20, 1927,\* from the effects of which he died on July 28 under the circumstances described below. His children brought an action in the Superior Court at Montreal for \$10,000 damages for loss of support under articles 1053, 1054 and 1056 of the Civil Code.

\* The Act establishing a Workmen's Compensation Commission in Quebec was not enacted until 1931.

Article 1053 provides that "every person capable of discerning right from wrong is responsible for the damage caused by his fault to another, whether by positive act, imprudence, neglect or want of skill."

Article 1054 provides that "masters and employers are responsible for the damage caused by their servants and workmen in the performance of the work for which they are employed."

The Superior Court dismissed the action.

The deceased had been engaged with two other men in transferring, from a shed to wagons, iron beams weighing 3 tons each and from 40 to 50 feet by 7 to 8 inches in extent. For this work the workmen were equipped with a wooden block placed at the end of the steel beam on which rested a 12-foot plank to serve as a lever for raising the beam so that a chain could be passed over it. At the end of the beam there was a hole into which the plank was inserted, two workmen leaning on the plank so as to raise the beam and thus enable the deceased to pass the chain over it. On the occasion in question, the two workmen fixed the chain and let down the beam without drawing out the plank. One end of the beam rested on another beam, the other end resting on the chain. The two men then left the plank to look after the chain block about 20 or 24 feet away, and in the interval the beam moved, some part of the apparatus having been touched by one of the men, and fell on the end of the plank, which flew into space, inflicting the fatal injury on the deceased.

The late Mr. Justice Martineau, in the Superior Court, dismissed the action on the ground that the accident was due to the faulty arrangement of the material, for which the deceased himself was presumably to blame, the cause of the accident being otherwise unknown. He held that the company was not responsible under Article 1053 or 1054, the accident not having been caused by the natural movement of the material but by the natural movement of the men handling the material.

The Quebec Court of King's Bench affirmed this decision, the Chief Justice and Judge Rivard dissenting, and on further appeal by the plaintiffs the Supreme Court of Canada also affirmed the dismissal of the action.

Mr. Justice Cannon, in the Supreme Court, outlined the circumstances of the accident, and expressed the opinion that no negligence by the deceased had been proved. He pointed out that inert objects remain subject to physical law, and to the play of natural forces (gravity wind, etc), which may cause them

to escape from the control of their guardian. The court of first hearing, in his opinion, had erred in laying the burden of proof on the plaintiffs. "On the contrary", he said, "it is incumbent upon the defendant to establish the fact that the beam escaped from the victim's control through his own fault, or that the defendant could not, by reasonable means, have prevented this loss of control. But could the defendant," he asked, "be said to have failed to take preventive measures when it had been impossible for him to foresee a combination of circumstances that might lead to a movement of the plank or of the chain?" He believed that this was a pure accident, which could not have been avoided by the defendant through any reasonable precautions. It was no part of the Court's duties to suggest precautions which had not been suggested by either party, and as to which neither party had expressed an opinion. The Court was not in a position to express any views in such matters besides those expressed by the interested parties.

Chief Justice Sir Lyman Duff, in the course of his judgment, said: "I have given the case the most anxious consideration and have come to the conclusion that the respondents have neglected no precaution, and have disregarded no risk, which one could find to have been reasonably appropriate or foreseeable."

*Colpron versus Canadian National Railways* (Quebec), Supreme Court of Canada (1934) *Dominion Law Reports*, vol. 2, page 737.

### Employee's negligence and Employer's liability

The Supreme Court of Canada reversed the judgment of the Ontario Court of Appeal in *Lewis versus Nisbet and Auld, Ltd.*, a new trial being ordered to be limited to the assessment of damages on the basis of the findings. The previous stages of this case were outlined in the LABOUR GAZETTE, July, 1933, page 750.

A workman was employed by the owner of an office building at Toronto in the capacity of janitor and caretaker. He was required to attend to all minor repairs and to report to his employer any defect in the building. In May, 1930, while he was cleaning a window on the fourth floor he fell and was seriously injured. Action to recover damages was commenced by the workman, but in December, 1931, he died as the result of pneumonia, his death not being attributed to the accident. The action was then revised in the name of the administratrix of the deceased as plaintiff. At the trial the jury allowed damages of \$12,000, finding that the accident was caused by the

defective condition of the sill, that the plaintiff was acting within the scope of his employment at the time, and that he had not been guilty of negligence contributing to the accident.

The Ontario Court of Appeal allowed the appeal of the employer against this judgment, Mr. Justice Middleton holding that the deceased had not adopted the ordinary method of cleaning windows, but had gone partly outside on the outer sill to clean the panes; that the defective condition of the sills was not apparent without a thorough examination; and that it was the duty of the deceased to report any defect to the managers of the building.

Section 119 (1) of the Ontario Workmen's Compensation Act gives a right of action to a workman for personal injury caused to him "by reason of any defect in the condition or arrangement of the ways. . . . buildings or premises connected with, intended for, or used in, the business of his employer."

On appeal by the plaintiff the Supreme Court of Canada held that the applications of Section 119 is not limited to cases where the defect is one which concerns the particular duties which the workman's contract of service requires him to perform, but extends to a case where the workman is in fact injured by reason of a defect in the condition or arrangement of any portion of the building "connected with, intended for, or used in the business of his employer." The clear intention of sections 119, 120 and 121 is, it was held, that the workman shall be entitled to recover for a personal injury sustained by him while in the service of his employer, whether the injury be caused by reason of a defect arising without negligence on the part of the employer, or whether the injury be caused by the negligence of the employee; and the fact that some negligence of the employee may have contributed to the injury makes no difference so far as the liability of the employer is concerned except as to the assessment of the quantum of damages.

*Lewis versus Nisbet and Auld, Ltd.* (Ontario), Supreme Court of Canada (1934) *Dominion Law Reports*; volume 3, page 241.

### Compensation Board must pay cost of Medical Services

On page 390 of the issue of the LABOUR GAZETTE, for April, 1934, appeared an outline of a case in which a doctor brought an action against the Workmen's Compensation Board of New Brunswick, claiming payment for medical services provided by them for certain employees under the provisions of the Workmen's Compensation Act. The

Board stated that the doctor had failed to make reports in these cases, or had delayed forwarding reports as required by the Act, and declined to pay the amounts claimed. In the King's Bench Division of the New Brunswick Supreme Court, Chief Justice Barry gave judgment in favour of the plaintiff for \$4,228, the Board to pay the costs of the action. He pointed out that the Workmen's Compensation Act was broadly designed "to rehabilitate and aid in getting injured workmen back to work, and to assist them in lessening or removing any handicap resulting from their injuries"; and that "for the attainment of those objects the Board is given large discretionary powers. Such being the policy of the Act," his Lordship continued, "it should, in my opinion, receive a broad and liberal construction, free from entangling technicalities which do not affect the merits of the case, and administered without too close an attention to slight deviations from the letter of the law, which, if strictly adhered to, might in many cases defeat the very object which the Legislature had in view."

On appeal by the Board, the New Brunswick Supreme Court, Appeal Division, affirmed this judgment.

Mr. Justice Baxter pointed out that "section 39 (1) of the Workmen's Compensation Act makes it clear that a workman entitled to compensation, or who would be so entitled if he had been disabled for seven days, is entitled to such medical and surgical aid as

may be necessary, for which the Board must pay. It is a statutory duty and not a matter of voluntary contract." Furthermore, even if the report required by section 31 (11)\* were intended to cover ordinary reports, it would not be treated as a term of a contract so as to relieve the Board, in case of non-compliance therewith, from liability for services rendered. "I think this subsection is directed towards special reports, but even if it is intended to cover ordinary reports required by the Board, it cannot be treated as a term of a contract; while the Board can do so, it has not provided a penalty for a violation of this provision of the Act. I am therefore of opinion that the appeal must be dismissed."

However, the conduct of the plaintiff in delaying his reports was declared to be not deserving approbation: "he was not asked or required to do a single thing that was unreasonable; he could have had the whole amount of his claim as it was earned without any delay, and the necessity for litigation has been caused almost wholly by himself." Owing to an error of \$28 in the claim, judgment was reduced to \$4,200.

*Fleck versus Workmen's Compensation Board* (New Brunswick) 1934, *Dominion Law Reports*, vol. 3, page 301.

\* "Every physician, surgical hospital official or nurse attending, consulted respecting, or having the care of any workman, shall furnish to the Board from time to time without additional charge, such report as may be required by the Board in respect to such workman."

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**I**NDUSTRIAL employment in Canada at the beginning of July showed further marked improvement, according to the Dominion Bureau of Statistics, which tabulated returns from 8,716 firms (each employing a minimum of 15 persons) in all industries except agriculture, fishing, hunting and highly specialized business. The staffs of these firms aggregated 941,165 workers, or 41,414 more than they employed on June 1. The index (based upon the average for the calendar year 1926 as 100), stood at 101.0, compared with 96.6 in the preceding month and 84.5 on July 1 of last year. On the same date in the twelve preceding years, the index was as follows: 1932, 88.7; 1931, 103.8; 1930, 118.9; 1929, 124.7; 1928, 117.7; 1927, 109.7; 1926, 105.0; 1925, 98.0; 1924, 97.1; 1923, 100.7; 1922, 92.2 and 1921, 88.6. The increase on July 1, 1934, was decidedly greater than the advance usually indicated between June and July in the experience of the last thirteen years. The favourable movement noted since April has provided work for nearly 91,700 persons, besides increasing the working hours of others previously employed. During the period April to July in 1933, the co-operating firms added some 79,000 persons to their staffs, while in 1932 and 1931 the gains reported during the same quarter of the year resulted in employment for only slightly over 11,000 and 38,000, respectively.

At the beginning of July, 1934, the percentage of idleness registered by local trade unions stood at 18.0 in contrast with 18.5 per cent at the beginning of June, 1934, and with 21.8 per cent at the beginning of July, 1933. The percentage for July was based on the reports tabulated by the Department of Labour from 1,702 labour organizations with a total membership of 159,722 persons.

Reports received by the Department of Labour from the offices of the Employment Service of Canada indicated a gain in the volume of business transacted in June, 1934, over that of the previous month and likewise over June last year, these computations being based on the average daily placements ef-

fectured during the periods under review. The deciding factor in each instance was the gain reported in the construction and maintenance group, where many placements were recorded on highway construction under the federal relief plan. Vacancies in June, 1934, numbered 45,529, applications, 67,506 and placements in regular and casual employment 43,621.

In retail prices the cost per week of a family budget of staple foods, fuel and lighting and rent at the beginning of July was \$15.84 as compared with \$15.78 for June; \$15.48 for July, 1933; \$21.26 for July, 1930; \$21.30 for July, 1926; \$21.53 for July, 1921; \$26.92 for July, 1920 (the post war peak); and \$14.17 for July, 1914. The slight advance in July of this year as compared with June was due mainly to the somewhat higher cost of foods. In wholesale prices the index number calculated by the Dominion Bureau of Statistics was fractionally lower in July at 72.0 as compared with 72.1 for June. Comparative figures for certain dates are 70.5 for July, 1933; 97.2 for July, 1929; 100.1 for July, 1926; 104.8 for July, 1921; 164.3 for May, 1920 (the post war peak); and 64.4 for July, 1914.

The most recent statistics available reflecting industrial conditions in Canada are given in a table on page 723. The index of the physical volume of business corrected when necessary for seasonal variation, while considerably lower in June than in the preceding month was higher than any other month since May, 1931, and 16.5 per cent higher than a year ago. Of the chief factors included in the index those used as indicators of mineral production, manufacturing, construction, electric power output, car loadings, imports and exports were lower in June than in May, while trade employment was higher. All of these factors were, however, higher than in June of last year. Information available for July shows wholesale prices slightly lower than in June but somewhat higher than in July, 1933. Sugar manufactured for the four weeks ended July 14 was much greater than for the corresponding period last year. Car loadings were slightly lower than in June but substantially higher than in July, 1933. Contracts awarded were slightly downward both as compared

with the preceding month and with July, 1933. Figures for employment continued favourable.

The figures for strikes and lockouts in Canada in July showed considerable increases, not only in the number of disputes but in workers involved and in time loss incurred, there being four strikes involving relatively large numbers of employees and causing considerable time loss, namely: metal miners and smeltermen at Flin Flon, Man., coal miners at Stellarton, N.S., men's clothing factory workers at Montreal, P.Q., and women's clothing factory workers at Toronto, Ont., the first three of these being untermated at the end of the month. The total number of disputes recorded for July was 33, involving 11,073 workers and causing a time loss of 65,064 man working days. In June there were on record 24 disputes, involving 3,278 workers, with a time loss of 34,483 working days, and in July, 1933, only nine disputes involving 1,884 workers and 9,090 working days' time loss. Thirteen of the disputes during the month were carried over from June, and twenty commenced during July. Twenty-two out of the thirty-three disputes were terminated by the end of the month, seven in favour of the workers involved, eleven in favour of the employer concerned, while four were partially successful or ended in compromises. The eleven disputes untermated at the end of the month involved 5,847 employees. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or definitely declared terminated by the unions involved.

#### **Department of Labour in Manitoba.**

By a proclamation published in the *Manitoba Gazette*, July 21, the Department of Labour Act, passed by the Manitoba legislature in 1931, subject to proclamation at a later date, was declared to be in effect as from July 6, 1934. This legislation was noted in the *LABOUR GAZETTE*, July, 1931, page 766. It provided for the creation of a provincial Department of Labour to administer the Bureau of Labour Act, 1915, and certain specified acts relating to industrial workers. The duties of the Bureau now include the collection and publication of information and statistics relating to employment, wages and hours of labour, co-operation, strikes, lockouts or other labour difficulties, trade-unions, labour organization and other subjects of interest to labour.

#### **New Brunswick Accident Prevention Association.**

The first annual meeting of this Association was held recently at Saint John. Reference to its formation was made in the *LABOUR GAZETTE*, November, 1933, page 1061. President A. F. Blake pointed out that the problem of the Association was considerably different from that of the large safety organizations elsewhere because of the limited industrial development in New Brunswick and the small size of most of the establishments. In most plants the safety director was the manager, the safety engineer was the mechanic, the doctor and nurse were combined in the bookkeeper and the hospital was a first aid cabinet. But it was surprising what the manager, mechanic and bookkeeper could accomplish when they did their best and many a bad infection had been prevented or a life saved with a first aid cabinet. The secretary pointed out that the number of firms represented by the Association was only about 1,600, and that regularly organized safety work, with special safety supervisors, shop committees, etc., was practically impossible in the smaller establishments. Nevertheless there was ample scope for safety work, and the Association had made a good start at it.

#### **National Labour Relations Board in United States.**

The article on page 653 of last issue dealing with "Labour Measures enacted by the United States Congress," contained an outline of the proposed Act to create a National Labour Board. It should be noted that while the bill was introduced in the Congress and was reconsidered and amended as described, it was not finally passed. On account of substantial opposition to the bill that developed during the last days of the Congress it became evident that it could only be passed with difficulty, if at all, and consequently the Administration leaders substituted for the bill a resolution intended to provide the means for dealing with the critical labour situation. This joint resolution empowered the President "to establish a Board or Boards authorized and directed to investigate issued, facts, practices or activities of employers or employees in any controversies arising under Section 7 (a) of said Act (i.e. the National Industrial Recovery Act), or which are burdening or obstructing or threatening to burden or obstruct the free flow of interstate commerce..." Such Boards are empowered to conduct elections to ascertain the chosen representatives of em-

ployees for collective bargaining and to order the production of pertinent documents or the appearance of witnesses to carry out the provisions of the resolution. It was under this joint resolution that the President appointed the National Labour Relations Board, which has taken the place of the National Labour Board. The members of the new Board, as already stated, are as follows: Lloyd Garrison of Wisconsin (chairman); Henry Alvin Millis, of Illinois; and Edwin S. Smith, Massachusetts.

**Principles  
Observed by  
Railroad  
Labour Board  
of United  
States.**

The National Labour Board of the United States has published the first volume of its decisions, covering the cases in which decisions were rendered between August, 1933, and March, 1934 (The establishment of

this Board was noted in the *LABOUR GAZETTE*, September, 1933, page 874). Senator Wagner, the chairman of this Board, claims that these decisions form "a sound contribution to the formulation of a national labour policy." Some of the principles followed in the making of the decisions are stated as follows:—

**Arbitration.**—Where the parties have not been able to settle their difficulties by collective bargaining, the National Labour Board has frequently recommended arbitration. In some cases the board has acted as arbitrator itself upon a joint submission of a dispute by the parties (particularly wage disputes). All arbitration, however, has been voluntary and based upon the joint submission and consent of the parties.

**Collective bargaining.**—The board has held that the employees' right to bargain collectively imposes a corresponding duty on the employer. Collective bargaining has been construed to mean the exertion of every reasonable effort to reach an agreement. The board has deprecated the calling of a strike without attempt at negotiations or the presentation of grievances on the part of the employees.

**Company union.**—The board has ruled that organization is a matter exclusively within the control of the employees. It has counseled a "hands off" policy on the part of employers. It has condemned the initiation of a company union by an employer and the participation by him in its affairs, where such initiation and participation has, in effect, been an interference with the employees' self-organization, or resulted, in fact, in the domination of the organization by the employer and where the employees have not clearly consented thereto.

The board has drawn a distinction between employee representation plans which were fully submitted to the employees for their acceptance or rejection and plans which were imposed upon them. It has held that the fact that election of representatives has been conducted under a plan, does not constitute an approval of the plan itself.

**Disclosure of employees' names.**—It is unnecessary for a collective-bargaining agency to disclose the names of those it represents, when it seeks to bargain collectively with the employer.

**Election.**—The board has employed the device of an election by secret ballot under Government supervision, when the employer has questioned the authority of any agency to act as the representative of employees. The board has held that the manner of conducting an election is entirely within the discretion of the employees, and that the election is entirely within the discretion of the employees, and that the employer in no way can interfere with the conduct of the election.

**Jurisdictional disputes.**—Where, in the construction of Government projects, the conflicting labour organizations are unable to settle the dispute by negotiation or are unwilling to submit the dispute to a board of arbitration, or where the American Federation of Labor has failed to adjust the controversy, the employer may then determine which union shall receive the disputed work.

**Majority rule.**—The representatives selected by the majority of the employees within a given plant or department, are the sole collective-bargaining agency for the plant or department.

**Preference list.**—In a ruling terminating a strike, the board has frequently recommended that an employer, if business conditions do not permit him to reinstate the strikers at once, should place them on a preferential list and reinstate them in order of seniority before hiring any new employees.

**"Representatives of their own choosing."**—The employees may select any representatives whom they choose as their agents for the purposes of collective bargaining. The employer may not restrict their right of free choice in any way. Representatives may not be restricted to fellow employees. Since the word "representatives" in section 7 (a) is used in its generic sense, employees may select a union as their representative.

**Seniority.**—Reinstatement and placing on a preferential list in order of seniority after a strike has frequently been recommended in order to avoid all question of possible discrimination.

Violence.—The board has ruled that striking employees who have been proven guilty of violence in the course of a strike need not be reinstated.

### Conference of Clothing Trades in Quebec.

A joint conference is to be held at Montreal in September under the auspices of the Quebec Minimum Wage Board, to consider the question of the revision of Orders No. 8, 8a, and 8b, governing female employees in women's and boys' clothing. (The text of these orders appeared in the *LABOUR GAZETTE*, May, 1930, page 522). The conference will consider the problems arising out of the difference in the prescribed minimum wages for the Montreal and outside districts, and endeavour to draft minimum wages scales which will equalize competition between all sections of the industry; a definite classification of work ordinarily done by women will also be considered. Attending the conference will be representatives of the employees and of clothing manufacturers in Montreal and in cities, towns and municipalities in the Province. The *Canadian Textile Journal*, July 13, referring to the forthcoming conference, said: "Concerning revised wage rates for the entire industry it is felt that the recent movement of additional clothing establishments from Montreal to country districts where low wage rates prevail has intensified competitive trading. The volume of the business received by the clothing trade during the first half of 1934 has greatly exceeded orders during the same period of last year but it is claimed that profits have been small and that much of the merchandise has been sold at cost of production. This condition would be rectified, it is claimed, if minimum wage rates in city and country shops were re-arranged on a new basis, with special consideration given to manufacturers in country towns who have to employ large numbers of inexperienced labour and are otherwise at a disadvantage in regard to labour when compared with city shops. Efforts will also be made to obtain strict enforcement of minimum wage laws in all sections of the industry."

"Regarding the definite classification of work ordinarily done by women it is felt that the substitution of male for female labour at lower rates of wages should cease, as the practice has forced a considerable number of women from employment. In certain industries the Minimum Wage Commission has already classified the type of work to be done by women and it is felt that a similar practice can be followed for the needle trades. The recommendation will be made and probably adopted that should an

employer hire a boy to do work which is ordinarily done by a girl he must pay the boy the same wages as laid down for a girl of the same experience."

### Women's Minimum Wages in Stores in Quebec.

In the June, 1934, issue of the *LABOUR GAZETTE*, reference was made to a conference of interested parties, called by the Minimum Wage Board of Quebec to fix a minimum wage for female employees in commercial establishments in the Province. This conference was held in Montreal on June 18, and was attended by fifteen representatives each of the employers and employees, together with five representatives of the general public, these representatives being selected by the parties concerned from various cities of the province. As a result, Order No. 18, published on pages 639-640 of the last issue, was issued by the Board. An advisory committee, composed of five representatives each of the employers and the employees was selected by the joint conference to act with the Minimum Wage Board in settling all differences and misunderstandings that might arise in the interpretation of the Order. The representatives of the employers were: Messrs. R. Messier, Montreal; R. Pouliot, Retail Merchants Association, Quebec; M. Locke, T. Eaton Company, Montreal; M. Boucher, Dupuis & Frères, Montreal; R. C. Walker, F. W. Woolworth Co. Ltd., Montreal. The representatives of the employees were: Miss Brodie, F. W. Woolworth Co. Ltd., Montreal; C. Marchand, Dupuis & Frères, Montreal; A. Wallace, James A. Ogilvy, Montreal; Mrs. A. Poitras, formerly of the Robert Simpson Company, Montreal; Abbé Jules Lefrançois, representative of the stores' employees of Quebec City.

### Unemployment Relief measures considered by Ontario mayors.

The mayors and reeves of Ontario municipalities laid their views on the subject of unemployment relief before the Hon. David Croll, provincial Minister of Health, in an interview at Toronto on July 26. There was a general disposition to regard relief as a permanent problem, several proposals being made for its solution. Among other proposals unemployment insurance on a contributory basis was favoured by many of the delegates; another suggestion was that the age limit for old age pensions be lowered from 70 to 65 years; the retirement on pensions of all workers at an age when their further employment becomes difficult was also proposed. The question of distributing relief

in the form of cash payments or by vouchers redeemable at stores in goods was debated, the opinion of the delegates being divided.

#### **Agricultural teaching in Ontario schools.**

The annual report of the Department of Education of Ontario for the year 1933 notes the recent expansion of agricultural teaching in both elementary and secondary schools in the province. In the syllabus of instruction this is one of the optional subjects. Last year it was taught in over 5,000 of the elementary schools of which 400 were urban schools, and in over 100 of the secondary schools in which over 13,000 pupils received instruction in Agriculture. In co-operation with the Department of Agriculture the Department, it is stated, has been training teachers well qualified to teach the subject. In some schools a department of Agriculture has been established under the High Schools Act, and in others it has been established under The Vocational Education Act. The trustees of other schools are already moving in the same direction. "In the inquiries that are being constantly received from ratepayers and trustees and even from pupils there is ample proof that this policy is meeting with favour and there is no reason why the secondary schools should not assume a still more important place in the life of many municipalities than they hold at present.

"In many secondary schools serving rural areas, a large proportion of the pupils leave school to return to the farm. When it is realized that, from their attendance at school, these boys and girls should secure instruction and knowledge of value to them in their future vocation of farming, a greater development on this type of education may result."

As to the general policy of the Department in connection with vocational education the report states: "It cannot be too often repeated that it is not the aim or intention of the Department to turn out specialized mechanics, but rather to prepare students for contact with the world of industry and commerce by producing trained, intelligent and adaptable citizens capable of adjusting themselves to changing conditions. Emphasis is more and more being placed upon the development of character, in the expectation that dependability and moral force, coupled with intelligence, when allied to vocational training, will constitute an effective means of preparation for citizenship."

#### **Vocational education in United States**

An Act to provide for the further development of vocational education in the several States was passed by the United States Congress at its recent session. It is designed to cover a period of three years as an emergency measure during the present depression. The sum of \$3,000,000 is to be paid annually, commencing with the fiscal year commencing June 1, 1934, one-third to be allotted to agricultural education, one-third to home economics, and one-third to trade and industrial education. The Senate Committee to which the bill was referred expressed the belief that "trade and industrial education should be included in order to assist those young people who, because of lack of employment, are going back to school to learn trades." The committee, in their report, give the following outline of the history of federal participation in vocational education:—

"The Smith-Hughes Act, which was passed by Congress in 1917, provided for aid by the Federal Government, under a match-fund agreement, to the several States, in the field of vocational education, for the benefit of agricultural education, home economics, and trade and industrial education. This is permanent legislation. Starting with the year 1918, \$500,000 was appropriated for agricultural education and \$500,000 for home economics and trade and industrial education, home economics not to receive more than 20 per cent of the latter appropriation. This appropriation of \$1,000,000, which was to be divided as listed above, was to increase each year by \$500,000 until in 1926, the sum of \$6,000,000 was reached, and from 1926 thereafter it was to remain at \$6,000,000. In 1933 the appropriations were reduced 10 per cent by an Act approved June 30, 1932, which reduction amounted to \$600,000. In 1934 the appropriations were further reduced by an Act approved March 20, 1933, which reduction amounted to approximately \$400,000. Thus in 1934 agricultural education, under the Smith-Hughes Act, received \$2,270,250; trade and industrial education, \$1,830,000; and home economics, \$457,500. In addition, under the Smith-Hughes Act, \$1,000,000 is allotted each year for maintenance of teacher training; and in 1934, \$910,000 was actually appropriated.

"In 1929 Congress passed the George-Reed bill, the purpose of which was to add funds to the original Smith-Hughes Act in the field of agricultural education and home economics, excluding trade and industrial education. The appropriation was to be divided equally between agriculture and home economics. This

Act provided for \$500,000 for the first year, 1930, and to be increased \$500,000 each year for 4 years. Therefore, on June 30, 1934, the Act expires. In 1933, instead of receiving the \$2,000,000 authorized under the Act, only \$1,500,000 was received under the provisions of the Economy Act. Instead of receiving the \$2,500,000 for 1934, \$1,275,000 was appropriated under the Independent Offices Act of June 16, 1933.

"The committee believes there is no question of the great value of vocational education in each of these phases mentioned. Vocational education has made a splendid social contribution, as is evidenced by hearings held by the committee in the House of Representatives."

#### **Frequency of pneumonia among iron and steel workers.**

The frequency of pneumonia among iron and steel workers is the subject of Public Health Bulletin No. 202, recently published under the direction of the Surgeon General of the United States. The inquiry arose out of reports received by the Public Health Service indicating that iron and steel workers experienced pneumonia at uncommon frequency as compared with the general wage-earning population. The highest pneumonia rates were among workers in blast furnaces, coke plants, open hearths, rod and wire mills and among general labourers. Departments showing high pneumonia rates tended also to experience abnormal incidence rates of influenza and grippe. The problem, it is stated, appears not to be confined to pneumonia alone, but to involve most of the diseases of the organs of respiration. Factors apart from working conditions, such as seasonal variation in the frequency of pneumonia, influenza epidemics, economic status of the workers, their age, nationality, extent of addiction to alcoholic stimulants, and prevalence of pneumonia in the community, were found to be of insufficient influence to account for the major part of the excess respiratory sickness in the departments studied. Among the remedial measures suggested in the report is the use of mechanical devices to reduce effective temperatures, such as forced airblasts; adequate provision of change houses for employees; provision of shelters for men exposed to the elements; prohibition of double shift work, especially in winter, since fatigue lowers resistance to pneumonia; education in industrial safety; and a visiting nurse service functioning as part of the employee sick-benefit organization.

#### **Census of unemployment in United States to be taken November 12.**

The United States Congress at the recent session made provisions for a census of unemployment, to be taken as of November 1934, for the purpose of obtaining information concerning the numbers, classes, and geographical distribution of unemployed persons and their dependents and concerning employment and occupations necessary to aid in the formulation of a program of unemployment relief.

The Director of the Census, in a memorandum on the bill, pointed out that since the census of 1930 was taken there have been extensive and unusual movements of population from city to country, directly reversing the former trend to city; and that within large metropolitan areas there has been a movement from congested centres to suburbs or to outlying districts. There has been what amounts to almost a depletion of certain industrial areas, accompanied by a corresponding influx into farm and rural districts. He declared that a census was need to show the scale of these shifts of population and the regions and types of population affected. Reliable population figures, the Director continued, are necessary in manufacturing, marketing, building, public health, education, charities, and relief work, unemployment, agriculture, transportation, taxation, and in almost every other field of industrial or social activity. Unless there is a population census midway between the decennial censuses the data needful for these purposes will not be available for the latter half of the present decade.

#### **Payment of wages for holidays in Great Britain.**

In a study of the provisions of a number of collective agreements in Great Britain in regard to payment of wages of holidays, published in the *Ministry of Labour Gazette*, July, 1934, it is shown that the majority of the agreements listed provide that payment shall be made for public holidays and for a certain additional period, varying in different cases, usually from three to twelve days in each year. Payment for this period is usually conditional on the employee having had six or twelve months' service, either at the date of the holiday or at dates specified in the agreement; while in a number of cases the extent of the holiday is directly governed by the length of service. The service qualification is occasionally linked with a stipulation regarding good time-keeping,

absence without sufficient cause for more than a specified number of days during the qualifying period resulting in loss of payment for the holiday. Instances also occur of payment for holidays being made conditional on good conduct and the rendering of satisfactory service.

The regulations of the Ontario Liquor Control Board, pursuant to the Liquor Control Act (Ontario), contain the following provision: "No person under the age of eighteen years may be employed in an authorized premises in the sale or serving of beer or wine at meals, and no person who is not a male over the age of twenty-one years shall be employed in any beverage room."

A recent amendment to the Retail Code under the National Industrial Recovery Act in the United States provides that retail merchants who offer merchandise for sale on the deferred payment plan, with the representation that there is no additional charge, but at the same time give discounts on identical goods sold for cash, shall be held guilty of an unfair trading practice.

The Honourable G. M. Weir, provincial Secretary for British Columbia, announced on July 20 that provision for a provincial system of unemployment insurance would probably be made at the next session of the legislature, failing the establishment of a national scheme. The provincial Department of Labour, he said, is now investigating the feasibility of such a system.

During July there were reported to the Ontario Workmen's Compensation Board 5,489 accidents, this being the largest number reported during any month since October of 1930, it compares with 4,886 accidents during June and 3,298 during July a year ago. The fatal accidents numbered 27, as compared with 29 in June. The benefits awarded amounted to \$377,816.76, of which \$307,884.84 was for compensation and \$69,931.92 for medical aid, as compared with \$380,059.55 awarded during June.

Unemployment-benefit payments in the United States have been provided for under a number of definite plans maintained by employers, by trade unions, or by employers and trade unions jointly. A recent study has been made by the Bureau of Labour Statistics of the experience of these funds since the latter part of 1932, when the last previous study was made. It is considered remarkable that the majority of the plans have been able

to continue the payment of benefits during the depression, even though in many cases on a restricted scale. Only one company plan has been suspended since 1932 and the majority of the trade-union plans were kept in operation even though frequently the money was paid out as fast as collected. Difficulty was experienced by the collective-agreement plans, only five remaining in effect in the first part of 1934.

The 21st Abstract of Labour Statistics of United Kingdom, recently published, summarizes in one volume the principal statistics relating to labour in Great Britain and Northern Ireland. This publication appears at intervals of about three years. The statistics are presented in fourteen main sections, dealing respectively with the following subjects: population; employment, unemployment and unemployment insurance; wages and hours of labour; profit-sharing and co-partnership; wholesale and retail prices and cost of living; strikes and lock-outs; employers' associations, and trade unions and other employees' associations; co-operative societies, friendly societies and building societies; national health insurance; contributory and old age pensions; industrial accidents and diseases, and workmen's compensation; poor relief; migration; and building plans approved.

### Regulation of Taxicab Fares in Quebec

At its last session, the Quebec Legislature passed an Act respecting adoption by city, town, or municipal corporations of tariffs affecting certain public carriers, by which the regulation of taxicab fares in towns or cities are placed under the Quebec Public Service Commission. This legislation, which is now cited as "Certain Public Carriers' Tariffs Act (Revised Statutes, 1925, chap. 113B) provides that: "Every municipal corporation with population of 30,000 or more must, and every municipal corporation with population under 30,000 may, within three months from the going into force of the act, place in force a tariff of trip rates which a public carrier must charge in the territory within the corporation's jurisdiction. Every tariff so established must be submitted to Quebec Public Service Commission for approval within 15 days after adoption. The Commission may approve the tariff submitted, or amend it by increasing or decreasing the trip rates specified. The tariff as approved, or amended, is to go into force from the date of the Commission's order, from and after which it is unlawful for a public carrier to charge a rate other than that fixed by the tariff."

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

THE findings of the Board of Conciliation and Investigation which dealt with a dispute between various firms, members of the Shipping Federation of British Columbia, Limited, and certain of their employees being members of the Vancouver and District Waterfront Workers' Association, were printed in full in the July issue of the *LABOUR GAZETTE*, page 596. The Shipping Federation informed the Department of Labour on July

13 that they were willing to abide by the terms of the majority report of the Board. The longshoremen, however, at a mass meeting held on July 15 rejected the Board's findings. Direct negotiations between representatives of the Shipping Federation and the Waterfront Workers Association looking to a settlement of the dispute were subsequently resumed and at the end of July were understood to be still in progress.

## CONCILIATION WORK OF THE DEPARTMENT OF LABOUR FROM APRIL 1, 1934, TO JULY 31, 1934

CONCILIATION proceedings are carried on for the most part under the provisions of the Conciliation and Labour Act, which empowers the Minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming directly under the Industrial Disputes Investigation Act, namely, mines and public utilities, preliminary inquiries and mediation by officers of the Department result in the settlement of the matters in dispute without the necessity of the establishment of Boards of Conciliation and Investigation.

The Department of Labour has on its staff conciliators and mediators who are stationed at Vancouver, Toronto, Ottawa, and Montreal. The territory of the officer resident in Vancouver comprises the four western provinces. The conciliation officer resident in Toronto confines his activities to Ontario, while the officer in Montreal covers the province of Quebec and the Maritime Provinces. The headquarters of the Chief Conciliation officer are at Ottawa.

These officers are also charged with certain duties arising out of the administration of the Fair Wages Policy applying to contracts let by the Dominion Government and to works aided by federal funds.

The following statement covers the more important conciliation matters dealt with during the period from April 1, 1934, to July 31, 1934 (An article covering the period December 1, 1933, to March 31, 1934, appeared in the *LABOUR GAZETTE*, April, 1934, page 313).

*Waterfront Workers, Vancouver, B.C., and District.*—Early in the fall of 1933 negotiations were entered into between the Shipping Federation of British Columbia and representatives of the Vancouver and District Waterfront Workers' Association respecting wages and working conditions. These negotiations continued from time to time over a period of several months but failed to settle the matters in dispute. On February 17, 1934, an officer of the Department of Labour, who had been in touch with this matter throughout, directed the attention of the interested parties to the requirements of the Industrial Disputes Investigation Act. Subsequent negotiations proved ineffective and the Shipping Federation made application for the establishment of a Board of Conciliation and Investigation, which reached the Department on March 14. The report of the Board appears in the July, 1934, issue of the *LABOUR GAZETTE*.

*Street Railway Employees, Toronto, Ont.*—On March 29, 1934, an application was received in the Department of Labour for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act from officials of the Toronto Railway Employees' Union, a dispute having arisen over a wages reduction which had been proposed by the Toronto Transportation Commission and rejected by the employees. Two conciliators of the Department held conferences in Toronto on April 10 and 11 with the union officials and the general manager of the Commission in an attempt to solve the dispute without the necessity of Board procedure, but it developed that a basis of settlement could not be reached and a Board was subsequently established.

*Fire Fighters, Victoria, B.C.*—An application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act was received in the Department of Labour on April 13, 1934, from the members of Local 258 of the International Association of Fire Fighters, employed by the City of Victoria, to deal with a dispute relating to the employees' request for the restoration of the wage rates previously in effect. The secretary of the Association and His Worship the Mayor were advised that fire fighters do not come within the direct scope of the Act and that a Board could be established only with the joint consent of the parties directly interested. Consent was not forthcoming, however, from the civic authorities. The western representative of the federal Department of Labour held conferences in Victoria with the parties concerned and some headway was made toward a solution of the problem. The latter part of June the Department was advised that the Municipal Council of the City of Victoria had referred the dispute to a Select Committee of the City Council to be constituted and to function under the powers conferred by sections 48 and 49 of the Municipal Act.

*Fire Fighters, Saskatoon, Sask.*—Early in April, 1934, a dispute arose between the City of Saskatoon and Local No. 80 of the International Association of Fire Fighters due to the proposal of the City Council to further reduce the wages of the fire fighters. A conciliator of the Department of Labour held conferences in Saskatoon with His Worship the Mayor, the City Commission and the president of the Fire Fighters' Union but his efforts to settle the matter were unsuccessful, and on April 11 the employees made application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act. The secretary of the union and the Mayor of Saskatoon were advised that fire fighters do not fall within the direct scope of the Act and that a Board could be established only upon the joint consent of the parties directly concerned. The City's consent, however, was not obtained.

*Automobile Accessory Workers, East Windsor, Ont.*—Employees of the Canadian Motor Lamp Company, Limited, East Windsor, Ont., ceased work on April 6, 1934, demanding increased wages; an eight-hour day; time and one-half for overtime; abolition of piece work and the bonus system; the establishment of shop committees; and the recognition of the Auto Workers Industrial Union, which is affiliated with the Workers' Unity League of Can-

ada. Subsequently the company management offered substantial wage increases, although not to the extent demanded, but refused to establish shop committees or to recognize the union. At the request of the Police Commission of East Windsor to the Minister of Labour a conciliation officer visited Windsor on April 21 and held conferences with the interested parties. In addition to the wage revision previously offered by the employers it was agreed that as the cost of living in the district increased the new day rates would be increased proportionately; that all employees would be welcomed back without discrimination; and, while refusing to recognize the union or shop committees, the employers approved of and agreed to the suggestion that the Minister of Labour or the Police Commission of East Windsor could at any time make an investigation as to the relationship existing between the management and the employees. This arrangement proved satisfactory to the employees and the strike was called off on Sunday, the 22nd, the employees returning to work the following morning.

*Freight Trainmen, Motormen and Polemen, Niagara, St. Catharines and Toronto Railway.*—On April 7, 1934, an application for the establishment of a Board of Conciliation and Investigation was received in the Department from the Niagara, St. Catharines and Toronto Railway Company to deal with a dispute which arose when the freight trainmen, motormen and polemen employed on this railway refused to accept a further deduction in wages of five per cent in addition to the ten per cent already in effect, making a total deduction of fifteen per cent from wages calculated at the schedule basic rates. Subsequently separate conferences took place between departmental officers and the parties directly involved in the dispute and finally, on May 3, a joint conference, arranged by the Department of Labour, was held in the offices of the Canadian National Railway at Montreal. The negotiations which took place on this occasion, and in which a mediator from the Department took part, resulted in a basis of settlement being reached, which was shortly thereafter covered by a signed agreement, and consequently the Board application was withdrawn.

*Coal Miners, Edmonton, Alta.*—A request was received in the Department of Labour on April 20, 1934, from the United Mine Workers of America for the services of a conciliator in connection with a dispute at the Ottewell Mine, Edmonton, Alta., relating to wage rates and recognition of the union. It

was intimated that if a solution of the difficulty was not found application would be made for the establishment of a Board of Conciliation and Investigation. A departmental officer was instructed to take the matter in hand, and conferences between the interested parties followed. The assistance of the departmental officer proved successful and the dispute was terminated by a signed agreement.

*Coal Miners, Edmonton, Alta.*—On April 20, 1934, the attention of the Department of Labour was called to a dispute which had arisen at the Edina Mine, Edmonton, Alta., concerning the interpretation of the seniority clause of the existing agreement, and it was intimated that application for the establishment of a Board of Conciliation and Investigation might be made. A mediator of the Department was assigned to this case and his conferences with the company's officials and officers of the union resulted in an undertaking that an independent chairman would be appointed to decide the issue. The dispute was therefore disposed of in this manner.

*Clothing Workers, Toronto, Ont.*—In April, 1934, there appeared to be the likelihood of a strike taking place in Toronto involving a number of clothing manufacturers and certain of their employees being members of the Amalgamated Clothing Workers' Union. Mediators of the Department of Labour discussed the various angles of the situation with union representatives and with officials of one of the large clothing establishments in which plant trouble was most likely to develop. These discussions proved helpful and the anticipated difficulties failed to materialize.

*Plumbers, Saskatoon, Sask.*—A strike of plumbers employed in a number of establishments in Saskatoon occurred on March 1, 1934, the existing agreement having expired and a dispute arisen as to the hourly wage rate to be effective thereafter. Early in April a conciliator of the Department of Labour brought the disputants together in conferences which resulted in a settlement, and the strike terminated on April 25.

*Coal Miners, Minto, N.B.*—Approximately 200 coal miners employed by the Minto Coal Company, Minto, N.B., ceased work on April 3, 1934, demanding increases in wages for shift miners, increases in shift rates, a seven hour instead of an eight hour day bank to bank, improvements in working conditions, and recognition of the recently organized New Brunswick Miners' Union. Later in the month the strikers were joined by the employees of the Welton and Henderson (Black Diamond) Mine. On April 20 officials of the

union, on behalf of employees of the Minto Coal Company, the Miramichi Lumber Company, Welton and Henderson, Limited, Rothwell Coal Company, the Newcastle Coal Company, the Avon Coal Company and Harvey Welton, requested that a Board of Conciliation and Investigation be established. A conciliation officer of the Department visited Minto and discussed the situation with the employees, explaining that the men who had gone on strike prior to making application for a Board of Conciliation and Investigation had violated the provisions of the Industrial Disputes Investigation Act. The officers of the union agreed that the strikers would return to work. The two employing companies, however, refused to take their men back unless they applied individually for employment at the mines, and would give no undertaking that they would then be restored to their former positions. The men accepted the conditions offered and work was resumed on May 7.

*Plumbers and Steamfitters, Halifax, N.S.*—In April, 1934, Local Union No. 56 of the United Association of Journeymen Plumbers and Steamfitters, Halifax, N.S., demanded the restoration of the 85 cent hourly rate formerly in effect, the men having been working for the previous year at a rate of 70 cents under protest. A number of master plumbers, it was reported, agreed to this and a strike was declared against the establishments failing to meet the higher rate. An officer of the Department of Labour who was in Halifax the latter part of May on other business discussed the situation with the general organizer of the union and with the secretary of the Halifax Constructive Mechanical Trades Exchange and made certain suggestions as to a basis of settlement. A further conference between the interested parties resulted in an agreement being signed on June 1st providing for a rate of 75 cents per hour.

*Bakery Workers, Windsor, Ont.*—Early in May, 1934, a request was received in the department from Local No. 3 of the Canadian Bakery Workers' Union, Windsor, Ont., for mediatory assistance in connection with a dispute relating to wages and hours prevailing in a number of bakery establishments in that city, and a conciliator was accordingly instructed to proceed to Windsor. Conferences were held with union officials and officials and proprietors of a number of bakery concerns but, due to various obstacles such as price cutting and outside competition, it was not found possible to bring about an agreement. The way, however, was paved for co-operation between the employees and employers for the

purpose of eliminating certain unsatisfactory conditions inimical to both.

*Locomotive Engineers and Locomotive Firemen, Stellarton, N.S.*—Two applications for the establishment of Boards of Conciliation and Investigation were received in the Department of Labour on May 2, 1934, one from the locomotive engineers and one from the locomotive firemen employed on Territory "C," District No. 1 of the Atlantic Region of the Canadian National Railways, to deal with a dispute which arose as the result of changes made in what is known as the Montreal Agreement by the management of the Railway Company and the general committees representing the locomotive engineers and locomotive firemen and enginemen, which restricted certain rights formerly exercised by the Stellarton groups. A conciliator of the Department of Labour had a conference with the Stellarton enginemen and firemen at New Glasgow, N.S., on May 25 and all angles of the situation were discussed. Subsequently on June 15 conferences were held in the offices of the Department in Ottawa with the Assistant Grand Chief Engineer of the Brotherhood of Locomotive Engineers, and with the Vice-President of the Brotherhood of Locomotive Firemen and Enginemen. At these conferences it was agreed that these two officials would visit Stellarton as early as convenient and confer with the local committees in order that the situation might be fully clarified and the dispute disposed of if possible.

*Fur Workers, Toronto, Ont.*—Fur workers, members of the International Fur Workers' Union of the United States and Canada, employed by the A. Allan Fur Company, the Sellers Gough Fur Company, the Brodey-Drainin Fur Company, Limited, and the Holt Renfrew Fur Company, Limited, Toronto, ceased work on June 13, 1934, demanding higher wages and the establishment of an unemployment insurance fund. The Toronto representative of the Department interviewed the representatives of the strikers and also representatives of the employers, and conferences were arranged which resulted in a settlement being reached early in July providing for wage increases of 5 per cent for those receiving \$29 per week and over, 7 per cent for those receiving \$20 to \$29 per week, and 10 per cent for those receiving under \$20 per week. The matter of unemployment in-

surance remained in abeyance. Work was resumed on July 9.

*Pulp, Sulphite and Paper Workers, Ottawa, Ont.*—During the latter part of June employees of the Booth Paper Mills, Limited, Ottawa, members of the International Brotherhood of Pulp, Sulphite and Paper Workers, were pressing for an increase in wages in excess of that voluntarily made effective by the Company a short time previously, and a strike was threatened. Both of the parties directly interested made it known that the conciliation service of the Department of Labour would be appreciated. This service was gladly made available and subsequent negotiations brought about a settlement of the dispute on July 23. While no further general increase was granted, the Company made some seventy-three wage adjustments in various classifications.

*Motor Bus Employees, Vancouver, B.C.*—On July 13, 1934, representatives of the employees of the Pacific Stages, Limited, called upon the western representative of the Federal Department of Labour in Vancouver and informed him of negotiations then proceeding with the employing company in respect to wages and working conditions, and intimating that it was their intention to apply for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act. The departmental officer, in the capacity of mediator, held conferences with the parties directly interested and finally, on July 23, a settlement was reached, the company undertaking to sign an agreement with the Amalgamated Association of Street and Electric Railway, Bus and Coach Employees of America for a period of one year from July 1. Wage rates were increased approximately 7½ per cent and made retroactive to July 1.

*Checkers and Coopers, Montreal, P.Q.*—For the past several months negotiations have been taking place from time to time between a committee representing the checkers and coopers, etc., employed by the various steamship companies in the port of Montreal, affiliated with the Shipping Federation of Canada, Inc., respecting wages and working conditions. A mediator of the Department of Labour has been in close touch with the interested parties and, although an agreement has not as yet been reached, considerable progress in this direction has been made.

## CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

### Summary of Recent Proceedings

FOUR new decisions, and supplementary hearings in two earlier cases, were given recently by the Canadian Railway Board of Adjustment No. 1. Earlier decisions were outlined in the *LABOUR GAZETTE*, May, 1934, page 406, and in previous issues; and the fifth report of the proceedings of the Board, covering the period from October 1, 1930, to September 30, 1933, was issued as a supplement to the issue of December, 1933.

The Board was established under a voluntary agreement concluded in 1918 between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. It has power to determine all differences arising between the railway companies and members of any of the six railway brotherhoods, "including the interpretation of wage schedules or agreements having due regard to the rights of the several classes of employees and of the railways respectively."

The Board consists of six representatives of the railway companies and six representatives of labour, one for each of the following railway Brotherhoods; the Brotherhood of Locomotive Engineers; the Brotherhood of Locomotive Firemen and Enginemen; the Order of Railway Conductors; the Brotherhood of Railroad Trainmen; the Order of Railroad Telegraphers; and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

#### Case No. 432.—Canadian National Railways (Central Region) and Brotherhood of Railroad Trainmen.

This case centered about the complaint of yardmen assigned to the 14th seniority district on account of the refusal of the company to re-establish homestead rights. The employees contended that for the past two or three years complaints had been received by the Grand Lodge of the Brotherhood from certain lodges on the 14th district that yardmen at certain points were entirely out of employment, while men, many years their junior in yards not far distant and on the 14th district were regularly employed.

An exchange of official correspondence submitted by the employees showed that the district lodges were circularized by the late general chairman of the Brotherhood to ascertain if they would be agreeable towards the abolition of homestead rights for all yardmen in

the district and the establishing of one seniority list without any location, thereby enabling the senior man to have his choice of work available. Five lodges declared favourably for the proposal and three were opposed. Notwithstanding the opposition of these three lodges, an arrangement was entered into with the company whereby the 14th Seniority District became one promotion district for yardmen, and senior yardmen were accorded the right to work in preference to junior men.

An appeal was taken from this agreement entered into by two officers of the Brotherhood and the railway, which appeal was sustained by the Brotherhood Board of Directors. Accordingly the Chairman of the Brotherhood applied to have the agreement set aside and the homestead rights previously prevailing restored.

The company claimed that the agreement was working out satisfactorily and that its abrogation and the attendant restoration of homestead rights to yardmen in the district would result in the same problems which brought about the arrangement.

The Board decided that the question was not one of an interpretation of an agreement, and that such action did not come within its jurisdiction. It added that "homesteading rights in yard service having been abolished by mutual agreement between representatives of the Railway and of the employees, the existing arrangement should be maintained until changed by mutual agreement."

#### Case No. 433.—Canadian Pacific Railway (Western Lines) and Brotherhood of Locomotive Engineers.

An engineer was ordered for switching service in Souris Yard on September 20, and before being relieved from duty he assisted three trains out of Souris. The dispute was in connection with the payment for the last of these three helping trips. The engineers contended that since the engineer in this case had completed his work in the yard, as indicated by the releasing of his train crew, and Souris being his initial station, he was entitled to a new day under Article 2, Clause (d) third paragraph, reading as follows: "Should engineer be used out of initial point after completing a day, a new day will commence."

The company claimed that this clause was not applicable to switching service, and that at Souris it had been the practice to use

switching engines to assist out of the terminal. After citing the clauses which it contended were germane to the case, the company declared that with the exception of thirty minutes hosting time at *pro rata* rates and fifty-five minutes overtime at time and one-half, the engineer had been paid in accordance with the schedule provision.

The Board recommended that on the question at issue the parties should endeavour to negotiate between themselves an agreed application of the schedule rules as to the conditions affecting engine crews in switching service assisting trains out of Souris.

**Case No. 434.—Canadian National Railways (Central Region) and Order of Railroad Telegraphers.**

Two assistants were employed at Aurora Station, one on clerical duties, with salary of \$90 per month and with seniority dating from August 23, 1917, the other being classified as shedman with salary of \$103 per month and seniority dating from April 11, 1918. The clerk was on sick leave from January 14 until April 12, 1933. Effective February 4, 1933, the clerical position at Aurora was abolished.

The statement of the employees indicated that when the clerical position at Aurora was abolished the clerk immediately claimed the remaining position there which was his right as provided in Clause (g) of Article 23, Schedule of Rules and Wages for Telegraphers and Assistants. After making this choice, the clerk subsequently notified his superintendent that he wished to withdraw his claim to the position at Aurora, and while doing so did not make any claim to the position held by the "junior permanently located assistant" on that Division.

The employees contended that it had always been the understanding and practice that when a position was abolished the employee to be displaced was the junior permanently located of that date only. In this case the junior permanently located assistant's position was at Gravenhurst. The clerk, it was contended, had the right to claim this position, and when he did not do so on cancelling his claim to the Aurora position, he automatically reverted to the spare list. Further, the superintendent agreed to the clerk's reversion to the spare list, but on April 15 cancelled this agreement, allowing the clerk to displace a permanently located assistant at Newmarket.

The employees contention was that the displaced assistant at Newmarket should have been allowed to work until May 23, 1933, and that he should have been paid for the time lost on account of being irregularly displaced.

The railway maintained that Article 23, Clause (g) referred to by the employees contained no reference to any time limit within which an assistant shall exercise his seniority when displaced. The company could not subscribe to the contention of the employees that it had always been the understanding and practice that when a position was abolished the employee to be displaced was the most junior permanently located of that date only. "It has never been the practice, the schedule does not so stipulate, and neither does reason dictate, that an assistant on sick leave, when his position is abolished, must declare at once or within any specific length of time, his intention of resuming duty at any particular station when the time comes for him to return to duty on some problematical date in the future." On these grounds, the company maintained that there had been no violation of schedule rules.

The Board denied the claim of the employees.

**Case No. 435.—Canadian National Railways (Atlantic Region) and Order of Railroad Telegraphers.**

Prior to November 1, 1933, a station agent and a freight agent were employed at Truro. At that date a terminal agent was appointed and took over the duties previously performed by the station agent and freight agent. The employees claimed that when on October 14, 1933, the railway bulletined for applications following a vacancy at Truro the term "agent" was applied to the position. Then when on November 1, 1933, an appointment was made to assume the duties of both positions, the term "terminal agent" was applied. The employees contention was that the prefixing of the word "terminal" to the telegrapher's schedule position of "agent" at Truro should not be considered as sufficient to grant the railways the privilege of assigning other than the senior qualified telegrapher to the scheduled position of agent at Truro, and that the senior qualified applicant for the position bulletined October 14, should have been appointed.

The railway in its statement declared that when the regular assigned agent at Truro bid in a vacancy at Amherst it was decided to consolidate the positions at Truro and appoint a terminal agent at a suitable salary. This decision was not made until some days after the agent's position had been advertised. However the bulletin was subsequently cancelled and the freight agent at Truro was appointed terminal agent. This man, it was claimed, was four years senior to the senior applicant for the

position of agent; his salary as freight agent was greater than the agent's, and when it was decided to consolidate the work and thereby effect economies, he was considered the logical choice for the position.

The Board sustained the claim of the employees to the extent that the new position of agent should now be bulletined as a new position and a senior qualified applicant be assigned.

**Case No. 408.—Canadian National Railways (Atlantic Region) and Brotherhood of Railroad Trainmen.**

This case, which was outlined in the *LABOUR GAZETTE*, February 1933, page 127, was reopened owing to the disagreement between the employees and the railway on the application of the Board's decision. Accordingly, both parties appealed for an interpretation of the ruling. In the summer of 1931 a baggageman was assigned to supervise the express matter that arrived at Cape Tormentine in the baggage car until such express reached Borden and was there handed over to the connecting baggageman. He was also required to accompany the express and to maintain supervision on the return trip. For this additional service he was paid under the provision of Rule No. 12 relating to extra service. A question arose as to the point where the extra service should begin and end under this rule. At the original hearing the Board ruled that that it commenced at the time when the express car at Cape Tormentine leaves the station for the ferry dock and continued until the returning express car arrived at Cape Tormentine Station from the ferry dock.

In applying this decision of the Board a dispute arose as to the point from which time should be counted for the extra service performed by the train baggageman between Tormentine and Borden. The Board in further elucidating its decision ruled that extra time under the provisions of Article 12 (d) of the schedule is payable to the baggageman for all time during which he performed extra service beyond that performed by the balance of the train crew working as a unit.

**Case No. 426.—Canadian National Railways (Atlantic Region) and Brotherhood of Maintenance of Way Employees.**

In a supplementary hearing of Case No. 426 (*LABOUR GAZETTE*, May, 1934, page 406) consideration was given to the question of the proper application of the Board's decision to

specific cases in which the parties disagree. At the original hearing the decision of the Board was that when reduction in staff is made, carpenters and bridgemen who take jobs as labourers in bridge and building gangs are entitled to 42 cents per hour. Such carpenters and bridgemen working in gangs in which other labourers are paid 42 cents per hour should receive the 42 cents per hour rate. This 42 cents per hour rate does not necessarily apply to laid off carpenters and bridgemen, who, of their own choice, accept work in an extra gang. It was recommended by the Board that all claims in question should be analysed between the company and the employees on this basis, and if any questions remain in such cases they would be further considered by the Board upon presentation of specific information.

There was a difference of opinion in the matter of the presence or absence of other labourers employed in the gang at the 42 cent per hour rate and how this factor would affect the application of the 42 cent per hour rate to bridge and building men who take jobs as labourers.

The Board's decision was as follows: "In the opinion of the Board there need not necessarily be other labourers in a Bridge and Building Gang receiving the 42 cent rate to entitle a demoted carpenter or bridgeman working as a labourer to receive such rate. The Board's decision was not intended to mean that the company did not have the right to work extra gangs under the jurisdiction of a Bridge and Building foreman in the Maintenance of Way Department."

The Canadian Union of Municipalities at the 34th annual convention of the organization, held at Quebec in July, adopted a resolution suggesting that the Dominion Government should assume entire responsibility for the administration and cost of direct relief, it being claimed that unemployment and relief were national problems. Another resolution recommended provincial legislation to provide wider powers to municipalities in regard to taxation. The duties and responsibilities imposed on municipalities by provincial governments for services which are of a national character, the resolution stated, have been increased without a corresponding provision for raising necessary revenues, thereby placing an inequitable burden on real estate, almost the only source of direct revenue now open to municipalities.

## STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1934

THE following table shows the number of disputes, workers involved and time loss for July, 1934, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in working days
*July, 1934...	33	11,073	65,064
*June 1934...	24	3,278	34,483
July 1933...	9	1,884	9,090

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported, are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time is frequently not received until some time after its commencement.

The figures for July show considerable increases over those for June, there being four disputes involving relatively large numbers of employees as well as an increase in the number of disputes with small numbers involved. In June there was only one dispute involving a large number of employees, that of metal miners and smeltermen at Flin Flon, Man., which continued into July. In July last year there were four disputes involving fairly large numbers of employees, and these caused most of the time loss during the month.

Thirteen disputes, involving 2,170 workers, were carried over from June, and twenty disputes commenced during July. Of these thirty-three disputes, twenty-two terminated during the month, eleven being in favour of the employers concerned, seven in favour of the employees involved, while the results of four were recorded as compromises or partially successful. At the end of July, therefore, there were eleven disputes in progress recorded as strikes or lockouts, namely: paper mill workers, Dolbeau, P.Q.; compositors, London, Ont.; coal miners, Stellarton, N.S.; shoe factory workers, Brampton, Ont.; shoe factory

workers, Toronto, Ont.; shoe factory workers, New Toronto, Ont.; women's clothing factory workers, cloakmakers, etc., Winnipeg Man.; women's clothing factory workers, cloakmakers, etc., Toronto, Ont.; men's clothing factory workers, Montreal, P.Q.; toy factory workers Toronto, Ont.; and scrap iron and metal workers, Winnipeg, Man.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not declared terminated. Information is available as to five such disputes, namely: photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; lithographers, Toronto, Ont., April 15, 1932, one employer; moulders, Peterborough, Ont.; February 27, 1934, one employer; and shoe factory workers, Montreal, P.Q., commenced July 5, 1934, one employer, this last being added to the list this month.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistence for which work is performed or may be required, are not included in the record, no relation of employer and employee being involved.

A minor dispute involved five employees in one bakery in Winnipeg, Man., for one day, July 5, 1934, demanding increases in wages, the eight hour day, recognition of the Food Workers' Industrial Union and a shop committee. These demands were conceded and an agreement was signed, a similar agreement being reported to have been signed by twelve other bakery employers. This agreement is summarized elsewhere in this issue.

Longshoremen at Vancouver, B.C., on July 20 refused to load a boat involved in a dispute on the Pacific coast in the United States. As the employers did not require the men to perform this work, it is not recorded as a strike. The agents for the steamship did not succeed in having the ship loaded with lumber and after a few days she proceeded to a port in the United States for a cargo.

A dispute involving pulp and paper mill employees at Kapuskasing, Ont., has been reported in the press as resulting in a strike commencing on July 4 to secure wage increases and union recognition. Information received

(Continued on page 739)

## STRIKES AND LOCK-OUTS IN CANADA DURING JULY, 1934\*

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
<b>(a) Strikes and Lock-outs in Progress prior to July, 1934.</b>			
<b>LOGGING—</b> Pulpwood cutters, Strickland, Ont.....	25	100	Commenced June 8, 1934; for increased wages and recognition of camp committee; lapsed early in July, 1934; in favour of employer.
<b>MINING, ETC.—</b> Metal miners and smeltermen, Flin Flon, Man.....	1,073	6,438	Commenced June 11, 1934; for increased wages, 8-hour day, improved conditions and recognition of union; terminated July 14, 1934, compromise.
<b>MANUFACTURING—</b> <i>Fur, Leather, etc.—</i> Fur factory workers, Toronto, Ont.....	52	300	Commenced June 13, 1934; for increase in wages and for unemployment insurance; terminated July 7, 1934; in favour of workers.
Fur factory workers, (collars, cuffs, etc.), Toronto, Ont....	33	462	Commenced June 28, 1934; alleged violation of agreement re sending out work; terminated July 17, 1934; in favour of workers.
<i>Textiles, Clothing, etc.—</i> Overall factory workers, To- ronto, Ont.....	70	140	Commenced June 15, 1934; for increased wages; terminated July 3, 1934; compromise.
Knitting factory workers, To- ronto, Ont.....	25	100	Commenced June 18, 1934; alleged violation of agreement and for reinstatement of discharged worker; lapsed early in July; in favour of employer.
<i>Pulp and Paper—</i> Paper mill workers, Dolbeau, P.Q.....	40	1,000	Commenced May 23, 1934; for increased wages and recognition of union; unterminted.
<i>Other Wood Products—</i> Furniture factory workers, To- ronto, Ont.....	6	30	Commenced May 15, 1934; alleged violation of agreement; lapsed by July 7, 1934; in favour of employer.
Sawmill workers, Newcastle, N.B.....	500	1,500	Commenced June 29, 1934; for increased wages; terminated July 4, 1934; partially successful.
<i>Printing and Publishing—</i> Compositors, London, Ont....	76	1,000	Commenced Mar. 1, 1934; for renewal of union agree- ment; unterminted.
<i>Miscellaneous—</i> Spring and mattress factory workers, Toronto, Ont.....	20	200	Commenced May 15, 1934; for increased wages and reduced hours; lapsed by end of July; in favour of employer.
<b>SERVICE—</b> <i>Recreational—</i> Musicians (radio), Montreal, P.Q.....	50	450	Commenced June 11, 1934; for increased wages and employment of union members only; terminated July 11, 1934; in favour of employer.
Musicians (radio) throughout Canada.....	200	1,800	Commenced June 16, 1934; in sympathy with musicians on strike in Montreal on June 11, 1934; terminated July 11, 1934; in favour of employer.
<b>(b) Strikes and Lock-outs Commencing during July, 1934.</b>			
<b>LOGGING—</b> Pulpwood cutters, Kapuskasing, Ont.....	200	1,000	Commenced July 4, 1934; for increased wages; terminated July 12, 1934; in favour of employer.
<b>MINING, ETC.—</b> Coal miners, New Waterford, N.S.....	300	300	Commenced July 12, 1934; against suspension of workers; terminated July 12, 1934; in favour of employer.
Coal miners, Sydney Mines, N.S.	600	3,000	Commenced July 23, 1934; for contract rates instead of day wages for certain work; terminated July 28, 1934; in favour of employer.
Coal miners, Stellarton, N.S....	800	1,500	Commenced July 27, 1934; against suspension of worker; unterminted.

\*In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which working time was lost to an appreciable extent.

STRIKES AND LOCK-OUTS IN CANADA DURING JULY, 1934—*Concluded*

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
<b>(b) Strikes and Lock-outs Commencing during July, 1934—Concluded</b>			
<b>MANUFACTURING—</b>			
<i>Boots and Shoes—</i>			
Shoe factory workers, Brampton, Ont.....	95	2,000	Commenced July 4, 1934; for increased wages and recognition of union; untermi- nated.
Shoe factory workers, Mont- real, P.Q.....	12	100	Commenced July 5, 1934; against reduction in piece rates; working conditions no longer affected by end of July; in favour of employer.
Shoe factory workers, Toronto, Ont.....	6	48	Commenced July 23, 1934; for increased wages and union recognition; untermi- nated.
Shoe factory workers, New Toronto, Ont.....	23	138	Commenced July 25, 1934; for increased wages and recognition of union; untermi- nated.
<i>Fur, Leather, etc.—</i>			
Fur factory workers, Toronto, Ont.....	136	544	Commenced July 13, 1934; for increased wages and improved conditions; terminated July 17, 1934; in favour of workers.
<i>Textiles, Clothing, etc.—</i>			
Women's clothing factory workers, (Cloakmakers, etc.), Winnipeg, Man.....	400	9,000	Commenced July 5, 1934; for increased wages and union recognition; untermi- nated.
Women's clothing factory workers (cloakmakers, etc.), Toronto, Ont.....	250	4,000	Commenced July 13, 1934; sympathy with fur work- ers on strike, July 13; untermi- nated.
Women's clothing factory workers (cloakmakers, etc.) Montreal, P.Q.....	60	400	Commenced July 9, 1934; for increased wages for special work; lapsed by end of July; in favour of employer.
Women's clothing factory workers, Montreal, P.Q.....	30	45	Commenced July 9, 1934; against non-payment of extra wages for special work; terminated July 10, 1934; in favour of workers.
Women's clothing factory workers, (cloakmakers, etc.), Toronto, Ont.....	1,800	2,000	Commenced July 19, 1934; to enforce the 40-hour week and against sending out work to non-union contractors; terminated July 25, 1934; in favour of workers.
Men's clothing factory work- ers, Montreal, P.Q.....	4,000	24,000	Commenced July 25, 1934; for increased wages and improved conditions; untermi- nated.
<i>Other Wood Products—</i>			
Sash and door factory workers, Vancouver, B.C.....	12	180	Commenced July 3, 1934; for increased wages; terminated July 19, 1934; compromise.
<i>Miscellaneous—</i>			
Spring and mattress factory workers, Toronto, Ont.....	12	36	Commenced July 10, 1934; against reduction in wages; terminated July 14, 1934; in favour of workers.
Toy factory workers, Toronto, Ont.....	150	1,000	Commenced July 24, 1934; for increased wages, reduced hours and recognition of union; untermi- nated.
<b>TRADE—</b>			
Scrap iron and metal workers, Winnipeg, Man.....	7	133	Commenced July 10, 1934; for increased wages and reduced hours; untermi- nated.
<b>SERVICE—</b>			
<i>Business and Personal—</i>			
Restaurant workers, Toronto, Ont.....	10	120	Commenced July 6, 1934; for increased wages, re- duced hours and recognition of union; terminated July 19, 1934; in favour of workers.

(Continued from page 736)

from the management and the union officials is that no strike occurred and that negotiations for a settlement of the dispute were expected to be successful.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

**PULPWOOD CUTTERS, STRICKLAND, ONT.**—Employees of one contractor, variously stated to be from twenty-five to fifty-two in number, ceased work on June 8, demanding increases in piece rates. The contractor later closed the camp.

**METAL MINERS AND SMELTER WORKERS, FLIN FLON, MAN.**—The strike of employees of one company, declared June 9, was settled as a result of the mediation of the Premier of Manitoba, work being resumed between July 9 and July 14, when it was called off by the Mine Workers' Union of Canada. The strikers had demanded recognition of the union; increase in wages by cancellation of the pay deduction of 18 per cent for single employees and 15 per cent for married employees less one per cent for each child; the eight hour day with time and one-half rates of wages for overtime up to sixteen hours and double time thereafter; no discrimination for union activity, recognition of union committees in regard to various matters, including safety; and payment of wages twice per month. On June 25 the demand for recognition of the union was withdrawn. The municipal council attempted to bring about a settlement but was unsuccessful. On June 30 the miners were invited to vote on continuing the strike, but trouble between those opposed to a vote and those wishing to do so led to a disturbance and the Riot Act was read, order being finally restored by the police. A number of arrests were made following this on charges of unlawful assembly, interference with police, assault, etc. On July 6 the Premier of Manitoba at the request of the Mayor of Flin Flon proceeded to the locality and after making inquiries into conditions advised the employees to resume work and take up their grievances with the management. Operations being fully resumed within a few days, the management entered into an arrangement with a committee of employees for the election of a permanent committee to represent the employees in regard to grievances and this was approved by a vote of the employees, 96 per cent of the 1,100 at work being in favour. Half of the deduction from wages made since 1932 was cancelled. A number of those arrested were fined or released on suspended sentence, others

being acquitted, while some were released on bail pending trial.

When the strike was called off the local secretary of the Mine Workers' Union of Canada telegraphed the Minister of Labour regarding the establishment of a Board under the Industrial Disputes Investigation Act to deal with certain allegations including the dismissal of employees for union activity prior to the strike, the wage reduction made in 1932, inadequate provision for the safety and health of the employees, and discrimination against 170 employees active in the strike by refusing to re-employ them. In the reply it was pointed out that the great majority of the employees had returned to work under an arrangement resulting from the intervention of the Premier of Manitoba so that apparently those desiring a Board were a minority group who had not returned to work or had been refused re-employment by the management and that under the provisions of the statute an application could not be made by men no longer in the employ of the company affected. It was also stated that as mining came directly within the scope of the Act a Board could have been established if an application had been received prior to the strike, which had occurred in violation of the Act.

**FUR WORKERS, TORONTO, ONT.**—As reported in the LABOUR GAZETTE for July, this dispute involving nine establishments in Toronto was settled early in July. As a result of a conference, arranged by the representative of the Department of Labour, agreements were signed with the International Fur Workers' Union providing for certain wage increases. The agreement is outlined elsewhere in this issue.

**FUR WORKERS (COLLARS, CUFFS, ETC.), TORONTO, ONT.**—This dispute, affecting one establishment, caused by the alleged sending out of work to contract shops contrary to the practice under the agreement which expired at the end of May, was terminated on July 17, an agreement being reached which provided for dividing the work and also for increases in wages for some workers as in other shops.

**OVERALL FACTORY WORKERS, TORONTO, ONT.**—As stated in the LABOUR GAZETTE for July, this dispute involving two establishments in Toronto was terminated on July 3. The verbal union agreement which expired on May 14, 1934, was renewed. The workers had demanded twenty-five per cent increases in wages, restoring some of the reductions previously made, and ten per cent increases were secured.

**SAWMILL WORKERS, NEWCASTLE, N.B.**—As stated in the *LABOUR GAZETTE* for July, this dispute, involving several establishments, was settled early in July as a result of conciliation by the Premier of New Brunswick, Minister of Lands and Mines. The increase in wages to a minimum of \$2 per day of ten hours was not granted but the wages of a number of workers were increased.

**MUSICIANS, RADIO, MONTREAL, P.Q., AND THROUGHOUT CANADA.**—The dispute, commencing June 16, involving stations of the Canadian Radio Broadcasting Commission in sympathy with a strike on June 11 in four stations in Montreal, one being that of the Commission, was terminated on July 11 as stated in the *LABOUR GAZETTE* for July. The international president of the union met the Chairman of the Commission at Ottawa and it was arranged that the Commission as before would pay union rates in localities where musicians were organized, but would not restrict employment to one union, the strike to be called off, a new scale for Montreal to be negotiated.

**PULPWOOD CUTTERS, KAPUSKASING, ONT.**—A number of the employees of one company ceased work on July 4 demanding increased wages but operations were carried on by the remaining employees and by July 12 the strike was called off.

**COAL MINERS, NEW WATERFORD, N.S.**—A number of employees on one shift ceased work on July 12 in protest against the suspension of eleven miners, in accordance with the provisions of the agreement, for habitual absenteeism without good reason. The other shift, however, worked and as the suspended miners undertook to work steadily in future they were reinstated and the dispute was terminated in one day.

**COAL MINERS, SYDNEY MINES, N.S.**—Miners in one colliery ceased work from July 23 to July 28 to enforce a demand for contract rates of wages for eight men instead of day rates. The management had promised to give a decision in a week. Work was resumed after a week when the management met the miners' representatives to reach a settlement. Miners in another colliery voted against a sympathetic strike but a number of the employees remained away from work for one day.

**COAL MINERS, STELLARTON, N.S.**—A number of miners ceased work on July 27 in protest against the suspension of one miner for using offensive language to the manager after repeated refusal by the company to repair his

house. By July 30 production at two collieries ceased and the pickets attempted to keep out maintenance men. The management refused to negotiate until work was resumed. Early in August pickets came into conflict with the police, several persons being injured and property damaged.

**SHOE FACTORY WORKERS, BRAMPTON, ONT.**—Employees in one factory ceased work on July 4, demanding increases in wages and recognition of the Shoe and Leather Workers' Industrial Union of Canada. The management had offered to meet a committee of employees but refused to negotiate with union representatives. At the end of the month a settlement had not been reached.

**SHOE FACTORY WORKERS, MONTREAL, P.Q.**—A number of employees in one factory ceased work on July 5 when a new scale of piece rates was issued which was claimed by the employees to reduce wages. The representatives of the National Catholic Union of Boot and Shoe Workers attempted to negotiate a settlement but did not succeed and the strikers were replaced the same day. The dispute has, therefore, been added to the list of such disputes in a previous paragraph.

**SHOE FACTORY WORKERS, TORONTO, ONT.**—Employees in one establishment ceased work on July 23 demanding increases in wages and recognition of the Shoe and Leather Workers' Industrial Union of Canada. The employer reported that the piece rates were higher than in other factories but that work was on short time, also that the strike was the result of the dismissal of one man for unsatisfactory work. No settlement had been reached at the end of the month.

**SHOE FACTORY WORKERS, NEW TORONTO, ONT.**—A number of employees in one establishment, about half, ceased work on July 25 demanding increases in wages and recognition of the Shoe and Leather Workers' Industrial Union of Canada. A member of the Municipal Council attempted to bring about a settlement but by the end of the month none had been reached. The municipal authorities arranged that four strikers would be allowed to picket the establishment following complaints that a number of persons from Toronto were making a demonstration. The strikers were replaced by new employees instructed by operators from the factory manufacturing the machines used, and the union threatened to call out its members in all factories in Toronto using their machines unless this was stopped. Early in August twelve establishments were affected by a two hour stoppage as a demonstration.

**FUR WORKERS, TORONTO, ONT.**—Employees of fourteen firms, members of the Furriers' Council, and fifteen independent firms ceased work on July 13 to secure increases in wages and improvements in working conditions, the agreement having expired on June 1, 1934. Work was resumed on July 18, an agreement having been reached with the union involved, the International Union of Fur Workers, providing for increases of twenty per cent for those under \$25.00 per week and ten per cent for the others.

**WOMEN'S CLOTHING FACTORY WORKERS (CLOAKMAKERS, ETC.), WINNIPEG MAN.**—Employees in nine establishments ceased work on July 5 demanding increases in wages and recognition of shop committees and the Industrial Union of Needle Trades Workers, affiliated with the Workers' Unity League, also time and one-half rates for overtime after forty-four hours per week. It is reported that the skilled classes were receiving \$14 to \$30 per week and the unskilled \$8 to \$10, the work being seasonal, chiefly from July to November and February to April, with little employment at other times. Most of the employers refused to meet the union representatives. One employer reached a settlement on July 18, conceding the union demands and making wage increases of fifteen and twenty per cent. Another employer having six employees made a settlement on July 26, increasing wages ten per cent, his employees having ceased work on July 11. At the end of the month settlements had not been reached in the other establishments. Twenty-four persons had been arrested in connection with picketing and released on bail pending trial.

**WOMEN'S CLOTHING FACTORY WORKERS, CLOAKMAKERS, ETC., TORONTO, ONT.**—Employees in one establishment ceased work on July 13, in sympathy with fur workers making goods for the employer who was involved in a strike affecting several establishments. When the fur workers' dispute was settled work was not resumed as the International Ladies' Garment Workers' Union had not settled the dispute with the employer. An establishment of the same firm in Guelph and that of another firm were picketed by men from Toronto but no cessation of work is reported to have occurred. The pickets were arrested on charges of vagrancy and threatening violence and remanded for trial.

**WOMEN'S CLOTHING FACTORY WORKERS, CLOAKMAKERS, ETC., MONTREAL, P.Q.**—A number of employees in one establishment ceased work on July 9 demanding higher piece rates on work on fall samples. The employer replaced the strikers with workers paid weekly wages and refused to negotiate with the union involved, the International Ladies' Garment Workers' Union. In connection with picketing two pickets were arrested on charges of wounding and released on bail pending trial by a jury.

In another establishment the employees ceased work for part of two days when increased wage rates agreed upon for work on fall samples were not paid owing to a misunderstanding. On the following day, payment being made, work was resumed.

**WOMEN'S CLOTHING FACTORY WORKERS, CLOAKMAKERS, ETC., TORONTO, ONT.**—Employees in approximately seventy establishments ceased work on July 19 to enforce the forty hour week and against sending out of work to non-union contract shops working long hours. By July 25 the officers of the International Ladies' Garment Workers' Union stated that 1,200 out of 1,800 had returned to work having secured their demands and settlements were being made with many of the other establishments affected.

**MEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.**—Employees of seventeen firms, members of the Montreal Clothing Manufacturers' Association, ceased work on July 25 demanding a twenty per cent increase in wages, changes in working conditions, including the forty hour week and time and one-half for overtime, and agreements with the Amalgamated Clothing Workers of America. Work has been carried on since September, 1933, under verbal agreements with the union. At the end of the month no settlement had been reached.

**SASH & DOOR FACTORY WORKERS, VANCOUVER, B.C.**—Employees in one establishment ceased work on July 3 demanding an increase in wages of ten cents per hour. Work was resumed on July 20, an increase of 2½ cents per hour being granted.

**SPRING & MATTRESS FACTORY WORKERS, TORONTO, ONT.**—Following a wage reduction stated to be from twenty to thirty per cent, employees in one factory ceased work on July 10 demanding the restoration of the previous rates. This being granted, work was resumed after three days.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue of February, 1934, in the review of Strikes and Lockouts in Canada and Other Countries, 1933. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible directly from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

### Great Britain

The number of disputes beginning in June was 33, and 15 were still in effect from the previous month, making a total of 48 disputes in progress during the month, involving 14,900 workers, with a time loss of 102,000 working days during June. Of the 33 disputes beginning in June, 7 were over demands for advances in wages, 4 over proposed wage reductions, 10 over other wage questions, 5 over questions respecting the employment of particular classes or persons, 5 over questions of trade union principle and 2 over other questions. Settlements were reached in 31 disputes, of which 8 were in favour of workers, 14 in favour of employers, and 9 ended in compromises. In the case of one other dispute, work was resumed pending negotiations.

Among the principal disputes occurring in June, was one involving 2,600 coal miners at Seaham Harbour from June 25 to June 30. This dispute was due to the refusal of the workers to work with non-unionists, and before the termination of the dispute, the majority of the non-unionists had joined the union. Another coal mining dispute was in progress near Rotherham from June 26 to July 2, over the method of distributing work and other alleged grievances, and in this case work was resumed pending negotiations.

In the construction industry, a dispute involving directly and indirectly 2,000 plasterers and labourers in the principal towns of Scotland from March 1 to June 20, for an

increase in wages, was settled when work was resumed at the same rate of wages as before the stoppage, on the understanding that the wage rate should vary with the standard rates in other sections of the building trades. From June 22 to July 7, a dispute was in progress involving 3,000 asphalt workers in London and various provincial towns in England and Wales. Work was resumed with certain changes in the working conditions and with the understanding that the wages question should be referred to arbitration.

### Netherlands

The number of disputes beginning in the year 1933 was 168 and 184 were in progress during the year, involving 876 establishments and directly involving 13,300 workers, with a time loss of 533,800 working days for the year.

### Australia

The number of disputes reported for the year 1933 was 90, involving 195 establishments and directly involving 26,988 workers, with a time loss of 111,956 working days for the year.

### India

The number of disputes reported for the year 1933 was 146, involving 164,938 workers, with a time loss of 2,168,961 working days for the year. Of the 146 disputes, 95 were over wages questions, 2 over bonus, 19 over personnel, 5 over leave and hours and 25 over other questions. The results of the disputes during the year were: 20 in which the workers were successful, 23 partially successful and 96 unsuccessful, while 7 were still in progress at the end of the year.

### United States

The number of disputes beginning in April was 141 and 105 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 84,719 and the time loss 2,594,489 working days for the month.

The strike of 12,000 longshoremen and 15,000 marine workers and allied trades on the Pacific Coast, which began May 9, and which concerned the question of union recognition and the control of hiring halls and other demands, was reported in the last two issues of the LABOUR GAZETTE. Beginning July 16, a sympathetic general strike of 100,000 workers in local transportation and other industries in San Francisco and Alameda County, Cali-

fornia, was in effect, but was called off July 19. During these four days local transportation and many other industries as well were practically at a standstill. The long-shoremen and marine workers' strike continued after the general strike was called off, until, through the mediation of federal government officials, the strikers voted to submit the dispute to arbitration and to collective bargaining, and work was resumed at all ports concerned by July 31.

A strike of 15,000 textile workers in various towns in Alabama is reported to have begun

July 17, for a 30-hour week, a \$12 per week minimum wage and other demands.

In New York City, a strike of 12,000 painters and decorators began July 31, against a proposed reduction in wages from \$9 for a 7-hour day to \$8 for an 8-hour day.

A strike of 6,000 truck drivers in Minneapolis, Minnesota, began July 17. Rioting broke out July 21, when attempts were made to move food trucks under police protection. No settlement had been reached at the beginning of August.

## CONFERENCE OF DOMINION AND PROVINCIAL GOVERNMENTS ON UNEMPLOYMENT RELIEF

A CONFERENCE of the Dominion and provincial governments was held at Ottawa on July 30-31, at the call of the Prime Minister, the Right Honourable R. B. Bennett, to consider future policies in regard to direct relief of unemployment and distress throughout Canada. The Dominion Government was represented by the Prime Minister and Cabinet.

The provincial delegates were as follows:—

*Prince Edward Island.*—Honourable W. J. P. MacMillan, Premier; Honourable H. F. McPhee, Attorney-General.

*Nova Scotia.*—Honourable A. L. MacDonald, Premier; adviser—Mr. Arthur S. Barnstead, Deputy Provincial Secretary.

*New Brunswick.*—Honourable L. P. D. Tilley, Premier; Honourable W. H. Harrison, Attorney-General; Honourable D. A. Stewart, Minister of Public Works; adviser—Mr. A. W. Barbour, Deputy Minister of Public Works.

*Quebec.*—Honourable L. A. Taschereau, Premier; Honourable J. N. Francoeur, Minister of Public Works; advisers—Mr. C. Lanctot, K.C., Deputy Attorney-General; Mr. I. E. Vallée, Deputy Minister of Public Works; Mr. M. L. Guimont, Deputy Director of Unemployment Relief.

*Ontario.*—Honourable Mitchell F. Hepburn, Premier; Honourable David Croll, Minister of Public Welfare; Honourable Paul Leduc, Minister of Municipal Affairs; advisers—Mr. J. A. Ellis, Secretary Unemployment Department; Mr. James Sinton, Chief Engineer, Department of Northern Development; Mr. W. Llewellyn Lawer, Chief Accountant, Department of Northern Development.

*Manitoba.*—Honourable John Bracken, Premier; Honourable W. R. Clubb, Minister of Public Works; adviser—Mr. A. MacNamara, Deputy Minister of Labour.

*Saskatchewan.*—Honourable J. G. Gardiner, Premier; Honourable W. J. Patterson, Minister of Natural Resources; adviser—Mr. Thomas Lax, Treasury Department.

*Alberta.*—Honourable George Hoadley, Minister of Agriculture, Public Health and Railways and Telephones; advisers—Mr. James C. Thompson, Provincial Auditor; Mr. K. K. MacKenzie, chairman Unemployment Relief Commission.

*British Columbia.*—Honourable T. D. Pattullo, Premier; Honourable Gordon Sloan, Attorney-General; Honourable George Pearson, Minister of Labour; Honourable John Hart, Minister of Finance.

The Prime Minister, on behalf of the Dominion Government, submitted for consideration by the provincial representatives the following proposals:—

Commencing forthwith, and continuing until March 31, 1935, (on which date the Relief Act, 1934, will expire), the Dominion Government will make grants-in-aid, payable in monthly instalments to the several provinces, to assist them to discharge their constitutional responsibilities for the relief of necessitous unemployed persons within their areas. The amount of such grants will be arranged between the Dominion and each province, and will give recognition on the one hand to the conditions still prevailing in the various parts of Canada as regards unemployment and the ability of the provinces to meet these conditions; and on the other hand to the urgent necessity of bringing about a reduction in public expenditures for direct relief as rapidly as possible, both by the close scrutiny of relief administration on the part of local and provincial authorities, and as a result of the generally improving economic conditions throughout the Dominion.

In addition the Dominion Government proposed to undertake.

(1) To continue its present provision for single homeless unemployed men in need of relief in federally operated camps up to the authorized maximum of 28,173 men until March 31, 1935.

(2) To maintain the agreements under the Relief Act, 1933, that have been entered into with the several provinces respecting the trans-Canada highway.

(3) To carry out existing agreements in respect of the settlement of persons in need of relief upon the land.

(4) To continue the existing agreements in respect of farm placements.

(5) To take into consideration the extraordinary circumstances that may require special financial assistance to provincial governments in connection with the movement of live stock and fodder and the provision of seed grain in distressed areas.

(6) That the program for the construction of public works initiated by the Dominion Government will not be affected by the provision of the grants in aid of provincial expenditure for relief purposes contemplated.

(7) That the question of Dominion co-operation in public works undertaken by provincial governments for the relief of unemployment will be examined by the governments directly concerned in each case.

The provincial representatives undertook to give consideration to the foregoing proposals.

## UNEMPLOYMENT INSURANCE AND ASSISTANCE IN GREAT BRITAIN

THE Unemployment Act, 1934, recently passed by the British Parliament, received the Royal Assent on June 28. The provisions of the Bill as introduced in the House of Commons by the Right Hon. Sir Henry B. Betterton, Minister of Labour, were outlined in the LABOUR GAZETTE, December, 1933, page 1170. The Act amends the Unemployment Insurance Acts, 1920 to 1933, and makes "further provision for the training and assistance of persons who are capable of, and available for work, but have no work or only part-time or intermittent work." It is described as the first British measure to deal comprehensively with the whole of the able-bodied industrial unemployed. The Act embodies many of the recommendations made in the reports of the "Gregory" Commission on Unemployment Insurance, including the recommendation that the insurance and relief features of the scheme should be made separate and distinct (LABOUR GAZETTE, December, 1932, page 1308). The following outline is taken from the *Ministry of Labour Gazette*, London, July, 1934.

### PART I.—UNEMPLOYMENT INSURANCE

The provisions of the earlier Unemployment Insurance Acts are in the main continued, and there is no change in the rates of contribution for the present classes of contributors. The following are the principal changes made by Part I, which will, except where otherwise stated, come into force on Thursday, 26th July, 1934.

*Increase in Rates of Benefit.*—As from 1st July, 1934, the Act restores the rates of benefit

which were in force before the reductions made under the National Economy Act, 1931. The old rates and the new rates are set out below:—

Age	Male		Female	
	Old rate	New rate	Old rate	New rate
	s. d.	s. d.	s. d.	s. d.
16-17.....	5 6	6 0	4 6	5 0
17-18.....	8 0	9 0	6 9	7 6
18-21.....	12 6	14 0	10 9	12 0
21 and upwards.....	15 3	17 0	13 6	15 0
(or 18 and upwards if in receipt of dependants benefit).				

The weekly rate of dependants benefit for an adult dependant is increased from 8s. to 9s.; the rate for a dependant child remains at 2s.

*Period of Benefit.*—The existing provision is retained under which claimants may receive six months' benefit in their benefit year (*i.e.*, in the twelve months following the date of their claims) provided they have paid thirty contributions in the last two years and are otherwise qualified for benefit. Over and above this, however, the Act provides for the payment of additional days of benefit in certain cases. The qualification for the receipt of additional days of benefit is substantially that the insured contributor has been insured for at least five years. The number of additional days of benefit is calculated according to a ratio rule which takes into account all contributions paid and benefit received in, broadly speaking, the preceding five years.

For every five contributions paid in the last five years three additional days of benefit will be allowed, subject to a deduction of one day of benefit for every five days of benefit received in the preceding five years. Every two contributions paid for a person under 18 years of age will be reckoned as one contribution for the purpose of calculating additional days of benefit. It will be possible for a claimant with a good insurance record to receive up to 52 weeks' benefit in a year, and the provision for additional days' benefit will result in the transfer of a number of persons from transitional payments to insurance benefit.

*Juveniles under 18.*—Hitherto the minimum age for entry into unemployment insurance has been 16 years, but the Act provides that not later than 3rd September, 1934, such insurance is to begin at the school-leaving age. In the case of a juvenile above the school-leaving age but under 16 years of age employed in insurance employment, a weekly unemployment insurance contribution of 2d. each has to be paid by the juvenile contributor, by the employer, and by the Exchequer. For those juveniles under 16 years of age who voluntarily continue in whole-time education beyond the school-leaving age, provision has been made for a free credit of contributions up to a maximum of 20; but this provision does not come into force until twelve months after the age for entry into insurance is lowered.

Unemployment benefit becomes payable at the age of 16 years; previously it has not been payable at the earliest until the age of rather more than 16½ years. Parents entitled to benefit will be able to obtain dependants benefit in respect of juveniles between the ages of 14 and 16 years, not only, as at present, whenever the child is receiving full-time instruction at a day school but also whenever the child is unemployed for reasons outside his control.

Attendance at courses of instruction is made compulsory for all unemployed juveniles over the school-leaving age and under 18, unless there is some good ground for excusing attendance. Local Education Authorities are placed under an obligation to provide, with the aid of a grant, such courses of instruction as may be necessary for unemployed juveniles in their areas. In areas where the numbers do not justify the opening of Junior Instruction Centres other arrangements will be made, as far as is practicable, for the attendance of unemployed juveniles at some form of instruction class. Education Authorities are empowered to assist the Minister of Labour in obtaining the attendance of unemployed

juveniles at authorized courses, and to the same end employers may be required to notify the Minister when any persons under the age of 18 leave their employment.

*Financial Provisions.*—The Act pays careful regard to the importance of establishing the unemployment insurance scheme on a solvent and self-supporting basis. In order to provide machinery for securing the continued solvency of the scheme the Act sets up a committee, to be known as the Unemployment Insurance Statutory Committee. Immediately after the close of each calendar year the Committee must examine the finances of the scheme, and within two months must make a report to the Minister on the financial condition of the Unemployment Fund. The Committee are also required to make a report at any other time if they consider that the Fund is, or is likely to become, and is likely to continue to be, insufficient to discharge its liabilities. They may also report on the financial condition of the Fund at such other times as they think fit.

Should the report of the Committee at any time indicate that there is either an existing or prospective deficiency, or that there is and is likely to continue to be a greater surplus than is required for working purposes, the report must contain such recommendations for amendment of the Acts as will in the opinion of the Committee have the effect of restoring the balance of income and expenditure. The Committee in their report must give an estimate of the effect which the amendments they recommend will have on the financial condition of the Fund.

The matters on which the Committee may recommend amendments of the Acts cover a wide range, and include rates of contributions, rates and conditions of benefit, the duration of benefit, the waiting period, and continuous unemployment.

The Minister is required to lay the Committee's report before Parliament, together with the draft of an order, making either the amendments recommended by the Committee or other amendments which in the Minister's opinion will have the same financial effect on the condition of the Fund; but if the Committee's recommendations are not adopted, the Minister must give reasons for differing therefrom. The report and the draft order will be considered by both Houses of Parliament, and, if both Houses pass resolutions approving the proposed amendments, an order must be made in the terms of the draft and will thereupon become law.

As from 1st July, 1934, the existing borrowing powers of the Fund are repealed, but

provision is made for temporary loans to be made by the Exchequer if and when the Fund is unable to meet its immediate liabilities. Repayment of these temporary advances will be made within a limited period out of the ordinary revenue of the Fund. Should that not be possible it will be necessary to set in motion the machinery mentioned above to restore the solvency of the Fund.

The existing debt of the Unemployment Fund is funded, and is to be repaid by means of half-yearly instalments of £2,500,000 each to cover principal and interest at the rate of 3½ per cent per annum. Under this arrangement it is anticipated that the debt will be repaid within a period of about 37 years.

*Insurance and Agriculture.*—The Statutory Committee are required, as soon as may be, to make such proposals as seem to them practicable for the insurance against unemployment of persons engaged in employment in agriculture (including horticulture and forestry). Their proposals must be included in a report to the Minister, who must lay the report before Parliament. Further legislation will be necessary before such a scheme can be brought into force.

## PART II.—UNEMPLOYMENT ASSISTANCE

This part creates a new central authority, entitled the Unemployment Assistance Board, which will take over from the Public Assistance Authorities their present duties in regard to transitional payments, and also the administration of out-relief given to able-bodied persons on account of unemployment. The Board, which under the Act consists of not more than six members, will work through its own local officials, from whose decisions there is power of appeal, in appropriate cases, to local Appeal Tribunals.

The Minister of Labour will be responsible to Parliament for the general policy of the Board. Moreover he will submit to Parliament for approval the detailed Regulations governing the assessment of need by which the Board and its officials will work; the application of those regulations to individual cases will be a matter for administration by the Board.

In order that the Board may have the advantage of the help and advice of persons who have had long experience in this work the Board is empowered to set up Local Advisory Committees. Through these committees the Board will be able to link together the information and experience in the possession of the various governmental, local specialized, an voluntary services in each district.

*Scope of the Scheme.*—The scheme covers all persons between the ages of 16 and 65 whose normal occupation is employment in respect of which contributions are payable under the Widows', Orphans', and Old Age Contributory Pensions Acts, or who can show that, not having had such a normal occupation, they might have expected to have been so employed but for the industrial circumstances of the district in which they reside, and who are capable of and available for work. The scope is thus much wider than that of unemployment insurance, and the scheme will in fact embrace nearly all the unemployed able-bodied in the country, including non-manual workers with incomes when in employment below £250 a year.

Persons who are disqualified for benefit under the Unemployment Insurance Acts owing to loss of employment by reason of a stoppage of work due to a trade dispute, or who would have been so disqualified if they had been insured contributors, are excluded from the scope of the Board for the period of the disqualification.

*Finance of the Scheme.*—Subject to contributions by Local Authorities on account of the liabilities of which they will be relieved, the cost of the scheme will be borne on national funds by the Exchequer. Approximately 95 per cent of the cost of the scheme will fall on National funds.

*Co-operation with the Ministry of Labour.*—Applicants for assistance will register at the Employment Exchanges, in order that they may be kept in touch with opportunities of employment in the same way as other work-people on insurance benefit. They will also in general receive their unemployment allowances at the Exchanges.

*Assessment of Need.*—The Regulations governing the assessment of need have to be approved by Parliament. The Board is not bound by the statutory rates of unemployment benefit; it relieves all the need, other than medical need, arising in the household of an applicant, and takes into account the resources available to the household. Due regard must also be had to the personal requirements of those members of the household whose needs are taken into account. The protection for certain classes of resources—Friendly Society sick pay, National Health Insurance benefit, disability pensions, workmen's compensation, and small savings—conferred by the Determination of Need Act, 1932, is continued, and, in the case of the first three of these sources of income, extended. Special protection is also given to maternity benefit.

*Maintenance of Employability.*—One of the two main functions of the Unemployment Assistance Board will be to make provision for re-establishing and improving the employability of unemployed persons within the scope of Part II. The Board's concern is solely with persons who are in the employment market; and it is against the background of the employment market, and with the needs and potentialities of that market in view, that the Unemployment Assistance Board must carry on its work. The new service is primarily an industrial service. The Board is accordingly given power, in co-operation with the Ministry of Labour, to provide courses to enable persons under the Board to maintain or regain physical fitness and so to improve their chances of employment. In order that the course may include familiarity with actual working conditions the Board will have power to make appropriate arrangements with Local Authorities for the course to be completed by a limited spell of employment at the customary wages on work for the Authority, of a character and under conditions that will complete the training.

*Provision for Cases of Special Difficulty.*—Having regard to the wide scope of the scheme there will inevitably be a limited number of cases of special difficulty where the applicant has shown that he cannot be appropriately dealt with by the ordinary procedure described above. The Board is given power to deal with such cases, subject to the due safeguarding of the applicant's right to state his side of the case.

Where an applicant persistently breaks the conditions, or persistently refuses or neglects to maintain himself, the Board may apply to the Appeal Tribunal for the exclusion of the applicant from their jurisdiction; in such a case he cannot be properly considered as one of the ordinary industrial unemployed for whom the scheme is designed. His recourse will then be to the Public Assistance Authorities. The person concerned and the Local Authority may in such cases appeal to the Appeal Tribunal.

*The Duties of Local Authorities.*—It is a corollary to the scheme that the Local Authorities will no longer have power to give outdoor relief to persons whose needs have been met by the Board, though the duty of giving relief in cases of sudden or urgent necessity will remain upon the relieving officers. The Board will reimburse Local Authorities for any relief so given.

The Public Assistance Authorities will retain their existing powers and duties in relation to assistance for the sick, aged, and infirm. They will also be responsible for the

medical needs and institutional or clinical treatment of persons who otherwise are under the Board.

*Administration.*—The administration will be through the officers of the Board, co-operating for certain purposes with the Employment Exchanges. If and so long as arrangements for this purpose are in force, investigation into applications may be carried out on behalf of the Board by officers of the Local Authorities.

Shortly after the Act was assented to the Prime Minister announced in the House of Commons the appointment of Sir Henry Betterton as Chairman of the Unemployment Assistance Board.

The Dominion Marketing Board, provided for by the Natural Products Marketing Act passed by the Dominion Parliament at its recent session, was appointed on August 10, to consist of the following members: Dr. Horace Barton, Deputy Minister of Agriculture (Chairman); Dr. J. F. Booth, Director of the Economic Branch of the Department of Agriculture; Dr. A. K. Eaton, Department of Finance; Mr. Clive B. Davidson, of the Dominion Bureau of Statistics; and Mr. A. Gosselin, of the Department of Agriculture. The main provisions of the Bill, as it was introduced in Parliament in March, were outlined in the LABOUR GAZETTE, April, 1934, page 304. The Board will consider marketing schemes which may be submitted to it by producers, and will recommend to the Minister the adoption of approved schemes. The first scheme to be submitted will be one to regulate the export of apples.

New regulations governing the position of married women in the British Civil Service were issued recently following the recommendations on this subject contained in the recent report of a Joint Committee of official and staff representatives. The regulations maintain the rule that all female candidates for any established situation in the Civil Service shall be unmarried or widows and that women holding established situations must resign on marriage and notify their marriage to the head of their Department immediately on its taking place. The marriage bar is, however, modified by giving the authorities discretionary power to make exception on application by the woman concerned, where they are satisfied that the employment of a married woman is advisable in the light of her special qualifications or the special requirements of the Department in which she is serving.

## LABOUR LEGISLATION IN NOVA SCOTIA, NEW BRUNSWICK AND PRINCE EDWARD ISLAND IN 1934

### Nova Scotia

THE following is a brief summary of the laws of labour interest enacted by the legislature of Nova Scotia during the Session which began on March 1 and ended on May 2, 1934.

#### Workmen's Compensation Act

An amendment to the Workmen's Compensation Act provides that average earnings and earning capacity shall not be below \$10 per week in disability cases. The provision applies only to accidents happening after the passing of the amendment (May 2, 1934) and in cases where the workman's rate of remuneration is such that if he had worked six days a week his earnings would have been at least \$10 per week. In cases of total disability, however, the amount of compensation heretofore payable is not to be reduced by virtue of the amending Act. Compensation for disability is 60 per cent of average earnings or of diminution of average earnings as the case may be, so that the minimum payment in total disability cases covered by the amendment will be \$6 per week. Formerly the minimum for permanent total disablement was \$5 per week unless the average earnings of the workman were less than that amount when compensation equal to average earnings was paid.

A further amendment provides that medical aid shall not be supplied for a longer period than thirty days and that such period shall not extend beyond sixty days from the date of disability. Formerly the workman was entitled to medical aid only during the period of thirty days from the date of disability.

A new clause provides that where an objection by a person entitled to object has been made to the Board against a claim that has been filed with the Board, an inquiry shall be held at the earliest convenient date and in any case within forty-five days after the lodging of such objection.

#### Coal Mines Regulation Act

Two Acts to amend the Coal Mines Regulation Act were passed by the Legislature. The first, which will come into force on November 15, 1934, provides that no employer shall be obligated to retain or pay any sum or sums to any person designated to represent a union other than the union to which belong

the largest number of employees in or about all mines operated by such employer. The union to which the largest number of employees belong is to be determined solely by the number of written requests for the deduction from wages and payment by the employer of union dues, etc., filed with the employer before November 15 in each year, on which day an employer must permit a representative of every union to which any of his employees belong to attend at the place where the cards are filed and count them.

The second amending Act deals with the election of check-weighers. The persons qualified to vote at such an election are those employed at cutting, digging, or loading mineral who are paid according to the weight of the mineral gotten by them and who have been so employed on such terms of payment for one month next preceding the date of notice of the meeting of such qualified voters to fix the time and place of balloting. The time fixed for voting must be not less than ten days nor more than fifteen days after the date of the meeting, and the meeting is to appoint a presiding officer and a poll clerk to conduct the election. The presiding officer must, within six days, make up and post, in at least three public places at or near the mine, an alphabetical list of voters. The owner, agent or manager of the mine must furnish the presiding officer within two days after his application therefor with all information necessary for the preparation of such list. Every candidate for the office of checkweigher must be nominated in writing by two qualified voters, and the nomination papers delivered to the presiding officer between 9 a.m. and 5 p.m. on nomination day which is to be one week previous to the day fixed for the taking of the ballot. If only one candidate is nominated he is to be declared by the presiding officer to be duly elected. If a ballot is to be taken the proceedings are to be governed by the provisions of the Municipal Act relating to procedure on polling day and subsequently to conclusion of recount (if any) and declaration of election, the necessary changes being made to suit the circumstances. In case of a recount the presiding officer has all the powers of a municipal clerk. Provision is made for a checkweigher to continue to act until his successor is declared elected.

### **Nova Scotia Labour Act**

The Nova Scotia Labour Act, passed in 1933, which would have expired on May 1, 1934, was continued in force for another year. This Act forbids any person or corporation employing twenty-five or more workers to hire as a workman any person who has not been a resident of Nova Scotia for at least one year, unless the person hired produces a certificate from the government employment agent or municipal clerk in the place where he is to be employed specifying the work he is to do and stating that there are no unemployed persons in such place capable of doing and willing to do the work. A fine of \$500 may be imposed for violation of these provisions.

### **Department of Labour Act**

The section of an Act to Provide for a Department of Labour which authorized the appointment of a Secretary of Labour was replaced by a section providing for the appointment of a Deputy Minister of Labour.

### **Land Settlement Act**

The Nova Scotia Land Settlement Act was amended with respect to qualification of applicants for benefit. As formerly an applicant must be a male British subject over 21 years of age who has been a resident of Nova Scotia for at least five years. The amendment pro-

vides that he must not be over 50 years of age and that his period of residence must immediately precede the date of application. He must also have been an employee at some time since January 1, 1930, in Nova Scotia in the coal mining industry or in some manufacturing industry or transportation company doing business in the Province. Formerly the applicant was required to have been an employee in the coal mining industry or in a manufacturing industry or transportation company in Nova Scotia and, on the date of application, to be unemployed because of lack of work in such industry or company.

The Nova Scotia Old Age Pensions Act was amended to validate the regulations made under its provisions by the Lieutenant-Governor in Council on November 25, 1933.

An amendment to the Nova Scotia Marketing Act enables the Province to take advantage of Federal legislation relating to the marketing of natural products.

### **Inquiry on 8-Hour Day**

The speech from the Throne at the opening of the Legislature announced that the Department of Labour would "conduct an investigation for the purpose of ascertaining in what industries of the Province legislation for an eight-hour working day may be enacted with a view to improving the working conditions of our people without unduly injuring the industries affected."

## **New Brunswick**

The New Brunswick Legislature during its session which opened on February 8 and closed on March 27, 1934, enacted laws dealing with forest operations and woodsmen, unemployment relief and mechanics' liens.

The New Brunswick Forest Operations Commission Act provides for the establishment of a Commission of three members with power to fix minimum wages and assist in the settlement of disputes in the lumbering industry of the Province, application for the hearing of a dispute being made by the employer or the employees. The Bill was summarized in the *LABOUR GAZETTE*; May, 1934, page 418. During its passage through the Legislature the Bill was amended to include piece-workers in the definition of "employee". A further amendment provides that more than one and less than five employees of an employer may make an application, in the manner provided by the Act, for the reference of a dispute to the Commission. In such cases the Commission, before hearing such applica-

tion, is to make such investigation as it considers necessary to determine whether the application discloses a dispute of such nature that grave injustice would likely result if the application is not heard. After completing such investigation the Commission may hear or refuse to hear the application. The Bill as first introduced provided that no dispute should be referred to the Commission in which the number of employees affected numbered less than five.

The Relief Act, 1933, was amended to enable municipalities to appropriate, assess, levy, collect and pay all sums required to defray the cost of direct relief or to raise loans therefor.

An amendment to the Mechanics' Lien Act extends the time of liens from thirty to sixty days.

The revised and amended Motor Vehicle Act which replaces former legislation on this subject makes no provision for the licensing of chauffeurs as such. All drivers except those operating road or farm machinery must be

licensed. Applicants for licenses must be 18 years of age and pass a satisfactory examination.

The Automobile Insurance Act contains clauses similar to those in force in a majority of the provinces to the effect that the insurer shall not be liable under an owner's or driver's policy for any liability imposed upon the insured by any workmen's compensation law, nor, unless the coverage is expressly extended,

for any damage or loss resulting from bodily injury to or death of any employee of the insured while engaged in the operation or repair of the automobile.

The New Brunswick Marketing Act provides for the appointment of a Marketing Board of three members to promote the production, marketing and distribution of natural products and the by-products thereof.

### Prince Edward Island

The Prince Edward Island Legislature which was in session from March 6 to April 5, 1934, enacted the following laws of labour interest.

An Act respecting the Garnishment of Debts was amended with regard to the section which exempts from garnishment one-half of the wages due or accruing due to a debtor for his personal labour and service on a hiring. The amendment provides that where such debtor is a married person, a widow or widower supporting one or more children under the age of 16 years, or unable from mental or physical disability to support themselves, not less than \$10 per week of such wages shall be exempt from garnishment. The value of the board and wages, if any, supplied to the debtor by his employer is to be considered as part of the wages paid him and exempted under the Act. In the case of a debtor who appears to be in receipt of a regular wage or salary, the court or judge may make an order for the attachment of future accruing wages or salary after making the exemptions provided for in the amendment, or like exemptions in the case of persons supporting indigent brothers or sisters, parents or grandparents, or the exemptions provided for in the principal Act, as the case may be. Where the debt due from the primary debtor to the attaching creditor is for

board or lodging no exemption is allowed. These provisions are to have effect notwithstanding any Act, law or rule of court to the contrary.

An amendment to the Highway Traffic Act provides that a person whose licence has been cancelled may not be issued with a new licence until he has presented a certificate of competency signed by a member of the Royal Canadian Mounted Police or other licensed examiner. Any person driving a motor vehicle between the time the cancellation of his licence expires and his receipt of a new licence is liable for a first offence to a fine of from \$50-\$100 and imprisonment for not more than thirty days and for a subsequent offence to a fine of from \$100-\$500 and imprisonment for a term not exceeding six months.

The Prince Edward Island Old Age Pensions Act was amended to provide that notice of the granting of a pension together with a minute of judgment may be registered against the lands of a pensioner constituting a lien upon such lands in favour of the Board of Pensions Commissioners.

The Prince Edward Island Natural Products Marketing Act enables the Province to take advantage of Federal legislation relating to the marketing of natural products.

## COLLECTIVE LABOUR AGREEMENT'S EXTENSION ACT OF QUEBEC

**B**Y a notice published in the *Quebec Official Gazette* of July 21, 1934, Orders in Council have been issued approving applications for making obligatory on all employers and employees in the specified districts three agreements under the provisions of the Collective Labour Agreements Extension Act (LABOUR GAZETTE, May, 1934, page 417).

The first of these authorizes the extension of the agreement between the Association of Syndicated Longshoremen of the port of Montreal and the Shipping Federation of Canada, Incorporated, which was given in the (LABOUR GAZETTE for April, 1934, page 373).

The second approves the extension of the agreement governing the painting trade in Quebec City and District (LABOUR GAZETTE, July, 1934, page 638).

The third Order approves the extension of the agreement between the Montreal Builders' Exchange and the Council of the Construction Trades of Montreal and District (LABOUR GAZETTE, July, 1934, page 636).

The following change was made in the agreement respecting longshoremen. In the original application article 9 read as follows:

"The work of loading and unloading sailing vessels, or self-propelled or towed ships is not subject to the present agreement if such vessels or ships are of a tonnage less than three hundred (300) tons."

This is replaced by the following:

"The work of loading and unloading sailing vessels or self-propelled or towed ships is not subject to the present agreement;

(a) If the said vessels are specially destined for inland or coastal navigation;

(b) If they are not directly employed in loading or unloading ocean vessels."

This agreement extends to December 31, 1934.

The agreement governing the painting trades at Quebec expires on April 30, 1935, with notice to be given of modification or repeal by either party before March 1, 1935.

In the case of the building trades at Montreal, the date of expiration is March 31, 1935.

The Order in Council relating to the painting trades agreement and the building trades agreement states that no objections had been made against the petitions.

The *Quebec Official Gazette*, June 30, 1934, contained the text of an Order in Council, dated June 21, 1934, approving the application for making obligatory on all employers and employees in Quebec district the agreement between the National Catholic Union of Plumbers and Electricians of Quebec City and certain electrical contractors in Quebec. The text of this agreement was given in the LABOUR GAZETTE, June, 1934, page 522.

On July 21 the *Gazette* contained notice of an application for the extension of an agreement in the printing and publishing industry in Quebec and District.

## MALE MINIMUM WAGE ACT OF BRITISH COLUMBIA

### New Orders Governing Various Industries

**T**HE Board of Industrial Relations established under the Male Minimum Wage Act, 1934, of British Columbia, recently issued the following new orders. (Previous orders were given in the LABOUR GAZETTE, July, 1934, page 642, and in previous issues.)

#### ORDER No. 7.—*Respecting a Minimum Wage in the Box-manufacturing Industry*

Pursuant to the provisions of the "Male Minimum Wage Act," being chapter 47 of the Statutes of British Columbia, 1934, the Board of Industrial Relations hereby orders:—

(1) That where used in this Order the expression "box-manufacturing industry" includes all operations in or incidental to the making of wooden boxes.

(2) That, subject to the exemptions granted from time to time under section 6 of the said

Act and to section 3 of this Order, the minimum wage for every employee in the box-manufacturing industry (not included in any other Order of the Board) shall be the sum of thirty-five cents (35c.) per hour.

(3) Until further ordered, it shall be permissible for an employer to employ a percentage of employees in his plant at a rate less than that fixed in paragraph 2 of this Order, but in no case shall the rate so paid be less than twenty-five cents (25c.) per hour, nor shall the percentage of employees paid at such rate (inclusive of employees in respect of whom a permit has been obtained under said section 6 of the said Act) be in excess of twenty-five per centum (25 per cent) of the total number of employees in the plant.

(4) That, subject to the exemptions granted from time to time under said section 6 of the said Act, the minimum wage for every male person over the age of eighteen (18) and under the age of twenty-one (21) years employed

in the box-manufacturing industry shall be the sum of twenty cents (20c.) per hour.

Dated at Victoria, B.C., this 12th day of July, 1934.

*Board of Industrial Relations*

ADAM BELL, *Chairman*,  
WILLIAM ALEXANDER CARROTHERS,  
FRAUDENA EATON,  
CHRISTOPHER JOHN McDOWELL,  
JAMES THOMPSON.

**ORDER No. 8.—Respecting a Minimum Wage in the Occupation of Barbering**

Pursuant to the provisions of the "Male Minimum Wage Act," being chapter 47 of the Statutes of British Columbia, 1934, the Board of Industrial Relations hereby orders:—

(1) That where used in this Order the expression "barbering" shall have the meaning set out in section 2 of the "Barbers Act," being chapter 5 of the Statutes of British Columbia, 1924, and amendments thereto.

(2) That, subject to the exemptions granted from time to time under section 6 of the said "Male Minimum Wage Act," the minimum wage for every employee in the occupation of barbering whose week consists of forty (40) hours or more shall be the sum of fifteen dollars (\$15) per week.

(3) That subject to the exemptions granted from time to time under section 6 of the said "Male Minimum Wage Act," the minimum wage for every employee in the occupation of barbering whose week consists of less than forty (40) hours shall be the sum of forty cents (40c.) per hour.

Dated at Victoria, B.C., this 12th day of July, 1934.

*Board of Industrial Relations.*

**ORDER No. 9.—Amending Orders No. 1 and No. 2**

Pursuant to the provisions of the "Male Minimum Wage Act," being chapter 47 of the Statutes of British Columbia, 1934, the Board of Industrial Relations hereby orders:—

That paragraph 5 of Order No. 1, establishing a minimum wage in the logging industry, and paragraph 5 of Order No. 2, establishing a minimum wage in the sawmill industry, are hereby cancelled. (These paragraphs provided that the respective orders should not apply east of Cascade Mountains. The text of the orders was given in the LABOUR GAZETTE, May, 1934, page 419.)

Dated at Victoria, B.C., this 12th day of July, 1934.

*Board of Industrial Relations.*

**ORDER No. 10.—establishing a Minimum Wage in the Mercantile Industry.**

Pursuant to the provisions of the "Male Minimum Wage Act," being chapter 47 of the Statutes of British Columbia, 1934, the Board of Industrial Relations hereby orders:—

1. That where used in this Order the expression "mercantile industry" includes all establishments operated for the purpose of wholesale and (or) retail trade.

2. That, subject to the exemptions granted from time to time under section 6 of the said Act, and to the other provisions of this Order, the minimum wage for every employee in the mercantile industry (not included in any other Order of the Board) whose week consists of

forty (40) hours or more shall be the sum of fifteen dollars (\$15) per week.

3. That, subject to the exemptions granted from time to time under section 6 of the said Act, the minimum wage for every employee in the mercantile industry (not included in any other Order of the Board) whose week consists of less than forty (40) hours shall be the sum of forty cents (40c.) per hour: Provided, however, that the minimum wage for such employees in any one day shall be not less than the sum of one dollar and sixty cents (\$1.60).

4. That, subject to the exemptions granted from time to time under section 6 of the said Act, the minimum wage for every male person over the age of 18 and under the age of 21 years in the mercantile industry (not included in any other Order of the Board) whose week consists of forty (40) hours or more shall be as follows:—

\$9 per week during his first three months' employment in the said industry.

\$10 per week during his second three months' employment in the said industry.

\$11 per week during his third three months' employment in the said industry.

\$12 per week during his fourth three months' employment in the said industry.

\$12.75 per week thereafter.

5. That, subject to the exemptions granted from time to time under section 6 of the said Act, the minimum wage for every male person over the age of 18 and under the age of 21 years in the mercantile industry (not included in any other Order of the Board) whose week consists of less than forty (40) hours shall be as follows:—

25 cents per hour during his first three months' employment in the said industry.

27 cents per hour during his second three months' employment in the said industry.

30 cents per hour during his third three months' employment in the said industry.

35 cents per hour during his fourth three months' employment in the said industry.

40 cents per hour thereafter.

Provided, however, that the minimum wage for such male persons in any one day shall be not less than the sum of one dollar and twenty-five cents (\$1.25).

Dated at Victoria, B.C., this 24th day of July, 1934.

*Board of Industrial Relations*

ADAM BELL, *Chairman*.  
FRAUDENA EATON.  
CHRISTOPHER JOHN McDOWELL.  
WILLIAM ALEXANDER CARROTHERS.  
JAMES THOMPSON.

## Hours of Work Act, 1934

The following order of the Board of Industrial Relations under the Hours of Work Act, 1934, was gazetted on August 2, 1934.

### REGULATION No. 14

The occupation of barbering is hereby added to the schedule of the said Act, the approval of the Lieutenant-Governor in Council having been obtained by Order in Council dated the 24th day of July, 1934.

Made and given at Victoria, B.C., this 24th day of July, 1934,

*by Board of Industrial Relations.*

## WOMEN'S MINIMUM WAGES IN SASKATCHEWAN

### Partial Withdrawal of Reductions in Established Rates

THE following order of the Minimum Wage

Board of Saskatchewan was gazetted on July 16. The new order modifies and continues the temporary order published in the *LABOUR GAZETTE*, May, 1924, page 421, which in turn continued the operation of an Order issued last year (*LABOUR GAZETTE*, October, 1933, page 999). The earlier order provided for temporary reductions of 10 per cent for minimum wages under \$13, and of 15 per cent for minimum wages of \$13 or over; in the present order these reductions are 5 per cent and 10 per cent, respectively.

#### ORDER No. 6

1. The minimum rates of wages fixed by the Board for workers in Shops and Stores, Laundries and Factories, Mail Order Houses, Hotels, Restaurants and Refreshment Rooms, Beauty Parlours and Barber Shops, are hereby reduced by five per cent, where the rate so fixed is less than thirteen dollars (\$13) per

week and by ten per cent where the rate so fixed is thirteen dollars (\$13) per week or over:

Provided, that, where an employee is employed for twenty-four (24) hours or more in any week, but for less than full time, the reduction shall not be greater than five per cent and provided further that there shall be no reduction in the cases of an employee who is employed for less than twenty-four (24) hours in any week.

2. The rate of reductions provided for in this Order shall be determined by the gross wages, inclusive of cash and board and lodging, but shall be computed upon and deducted from cash wages only of an employee after deductions have been made for board and lodging where supplied by her employer.

3. This Order shall continue in force until the thirtieth day of September, 1934.

By order,

*The Minimum Wage Board,*

THOS. M. MOLLOY,  
Secretary.

A. J. WICKENS,  
Chairman.

## COLLECTIVE MANAGEMENT PLAN OF ROCKY MOUNTAIN FUEL COMPANY

THE industrial and social benefits of labour co-operation with industrial management as they are shown in one outstanding example are the subject of a study by Miss Mary Van Kleeck, Director of Industrial Studies of the Russell Sage Foundation, in a volume recently published by the Foundation in the Industrial Relations Series under the title "Miners and Management: a study of the collective agreement between the United Mine Workers of America and the Rocky Mountain Fuel Company, and an analysis of the problem of coal in the United States." The book sets forth the facts regarding the methods employed by the Rocky Mountain Fuel Company in Colorado since it came under the control of Miss Josephine Roche. (The adoption of the plan was noted in the *LABOUR GAZETTE*, June, 1928, page 565; August, 1929, page 898.) The first part describes the plan and its results, while the second part contrasts with the reformed conditions in the Colorado mine the insecurity and waste which are said to characterize the coal industry in other fields in the United States.

The plan is based upon a collective agreement first made in August, 1928, for a two-year period, between the company and the Colorado district organization of the U.M.W. of A. (District 15). The signers declared that

they were "seeking a new era in the industrial relations of Colorado." They welcomed this agreement, declaring their purpose to be "the establishment of industrial justice," "the substitution of reason for violence, confidence for misunderstanding, integrity and good faith for dishonest practices, and a union of effort for the chaos of the present economic warfare." They undertook to avoid those conflicts which had taken the form of "needless and wasteful strikes and lockout"; in place of this method they would seek to investigate and correct the underlying causes of strikes and lockouts; they would establish "genuine collective bargaining between mine workers and operators through free and independent organization."

Besides adopting the principle of collective bargaining the agreement provided that the two parties would undertake "to stabilize employment, production and markets through co-operative endeavour and the aid of science." The author notes that this is probably the first time that any trade union affiliated with the American Federation of Labor has gone so far as to include these broad economic policies within its scope. "This purpose," she continues, "was further elaborated in the agreement signed for the second biennial period, beginning September 1, 1930, in which

effort was made to deal with the problem of labour's share in increased productivity by adding the following words (the idea, however, is somewhat vague); 'recognizing the principle that increased productivity should be mutually shared through the application of equitable considerations to the rights of the workers and to economic conditions affecting the operations and business of the company.' The public interest was included in the statement of principles. It was declared to be a purpose of the company and the union to assure 'consumers a dependable supply of coal at reasonable and uniform prices.'

The book gives a full account of the historical antecedents of the agreement, which was adopted after protracted conflict in the industry. "It was out of the conflict of 1913-14 that impulses and purposes emerged leading towards changed attitudes of the contestants. The Colorado Fuel and Iron Company, influenced by John D. Rockefeller, Jr., established its Industrial Representation Plan in 1915. The Rocky Mountain Fuel Company, which was also involved, made no definite change in its policies at that time, but the events of that bitter strike had deeply impressed Josephine Roche, the daughter of its president, and in 1927, when she inherited her father's minority ownership of stock, she came face to face with a responsibility and an opportunity." Under the collective agreement the union accepted the existing economic system and entered into a businesslike contract for hours of work and wages and for the

regulation of such conditions as directly affected the earning power of the workers. It also provided for the day to day adjustment of grievances and the wage scale. These provisions are studied in detail in the chapter on the collective agreement. "Labour's Productivity" is the title of another chapter which describes the co-operative effort whereby the workers are brought into contact with the consumers and the interest of the men in maintaining their wage scale is tied with the success of the company in widening the market by improving the quality of its coal. This is effected by means of a differential in the wage scale in return for which the men agree to co-operate in increased efficiency in production. The increase in efficiency is provided for through joint advisory board safety committees, technicians, etc. Other chapters are devoted to the study of the arrangements in regard to marketing and prices, competition and wages, and the adjustment of grievances.

The writer claims that the effect of the joint agreement has been to assure adequate service at fair and uniform prices to the consumer; security and fair wages to the miner; and a profit to the investor as the result of sound management. "The experience of this one company," she concludes, "is most useful if it be regarded as a challenge to the people of the United States to remove the obstacles which stand in the way of substituting reason for violence and stabilizing employment, production and markets through co-operative endeavour and the aid of science."

## WELFARE WORK IN MONTREAL IN 1933

### Report of the Montreal Council of Social Agencies

THE twelfth annual year book of the Montreal Council of Social Agencies reviews welfare and relief work in Montreal during 1933 as carried on by thirty-four agencies, each dealing with some phase of the social and economic problem. Prefacing the volume is the report of the Financial Federation campaign which is conducted for the purpose of securing the funds necessary for the operations of the affiliated organizations.

Referring to the unemployment situation in Montreal the report of the Federation Board of Directors states that distress continued to increase during the year. For this reason the entry of the Government into the field of relief has not relieved the Federation of its load. "Were it not for the efforts of the Government, the situation would have been chaotic in this City. The Government, by utilizing its credit, has made available sums of money which could not have been

raised by voluntary subscription; but so great has been the wave of destitution that nearly all the agencies in the Federation have had to increase their demands on the Federation in order to help prevent sickness, demoralization and disintegration of family life, which are the certain accompaniments of conditions like the present, unless determined efforts are made to prevent them."

Special mention is made of several activities developed within the last three years "which undoubtedly played an important part in maintaining the morale of the unemployed" and which the Federation thought necessary to support. These were: the Day Shelter for Unemployed Men, the Community Garden League, the Rosemount Community Centre, and the Unemployed Boys Farm at Caledonia Springs.

The Federation's financial campaign of 1934 resulted in a total of subscriptions from all

sources of \$721,946. The campaign failed to reach its objective by some 3½ per cent which compared favourably with the average reduced objective of 15 per cent in most other cities on the continent.

Emphasizing the co-ordination of effort among the thirty-four agencies the report states: "Co-operation between agencies is one of the strongest features of the work of Federation. Through it, thirty-odd problems are treated as one. The men and women engaged in the work of one Agency automatically become interested in, and develop a sense of responsibility for all the other Agencies. Working through such organizations as the Budget Committee, the Council of Social Agencies and its various Divisions, co-operation banishes self-seeking and brings the full force of all the Agencies to bear on the problems of each one. In accomplishing this, there has not been shown any tendency to dictate policy to Agencies nor to interfere with their rights as self-governing entities. What has been accomplished in the application of improved methods, or in betterment in other ways, has been the direct result of deeper study and added interest, all due, in greater or lesser measure, to the spirit of co-operation. This spirit has done much towards smoothing the pathway of the Budget Committee, and in maintaining the confidence of the subscribing public."

The report of the Special Committee on Unemployment indicates to what extent distress was prevalent in Montreal. With reference to family relief, it states: "The great bulk of family relief continued to be administered by the Emergency Unemployment Relief Committee. During the last week in December, 1932, 4,200 families were given relief. This number rose week by week to a peak in March, 1933, of 4,910 families and then started to decline until a low point of 4,068 families was reached on September 30, 1933. Following that low point, the numbers

on relief rose again. Every week during the year the numbers on relief were materially higher than at the corresponding week the year previous. The peak of 1932 was 4,201 families. The other religious groups in the City were having a somewhat similar experience and at one time no fewer than 280,000 individuals, or 34 per cent of the population were receiving direct relief on account of unemployment."

Reports from each agency are presented in the volume, each giving details of its own particular sphere of activity. A general idea of the scope of the organization is indicated in the following four main divisions and the agencies listed under each:—

Division of Children.—Boy's Home; Children's Bureau; Day Nursery; Ladies' Benevolent Society; Protestant Infants' Home; Protestant Orphans' Home; Women's Directory.

Division of Dependency and Delinquency.—Emergency Unemployment Relief Committee; Family Welfare Association; Protestant Employment Bureau; Girls' Cottage Industrial School; Montreal Boys' Association; Prisoners' Aid and Welfare Association; Protestant Bureau for Homeless Men; Protestant Industrial Rooms; Sheltering Home; Society for the Protection of Women and Children.

Division of Education and Recreation.—Big Sister Association; Daily Vacation Schools; Griffintown Club; Iverley Settlement; Negro Community Centre; Parks and Playgrounds Association; University Settlement; Young Women's Christian Association.

Division of Health.—Brehmer Rest Preventorium; Canadian National Institute for the Blind (Quebec Div.); Child Welfare Association; Montreal Diet Dispensary; Mental Hygiene Institute; Montreal Industrial Institute; Murray Bay Convalescent Home; Victorian Order of Nurses; Westmount Social Service Association.

## YOUNG WORKERS AND VOCATIONAL TRAINING

### International Congress on Technical Education

**A**N International Congress on Technical Education was held in Barcelona, Spain, from May 17 to 19, 1934, under the auspices of the International Technical Education Office. The Congress was attended by about 600 persons from 28 countries, many of which were represented officially. On the basis of 150 reports, the Congress dealt with questions referred to it for study by the previous Congress.

Emphasizing the economic and social functions of technical education the Congress

declared that, in view of the economic and social importance of technical and vocational training, which to-day took the form of a complete occupational, civic and humane education, and in view of the fact that such education, by reason of the flexibility of its methods, the scope of its teaching, and the character, both economic and ethical of its objectives, was perfectly suited to the needs of modern life and thus formed part of the plan of development of all civilized nations, it was desirable that technical and vocational

training should be given the place its importance deserved in the national education of all countries.

*Vocational Guidance.*—The Congress urged that, in countries which had not yet brought their education laws into conformity with the decisions of the International Labour Conference in regard to the age for admission of children to employment, the technical education organization should carry on a campaign to secure the fixing of a minimum age for employment as speedily as possible. The additional years of compulsory education should be utilized both for the general culture of the child and in preparation for the choice and practice of a trade.

The Congress recommended the appointment of an international committee to study the possibility of a standard medical certificate in order to ascertain a candidate's prospects for success in certain trades. In addition it was urged that the International Technical Education Office should study the question of vocational training for persons suffering from physical or mental handicaps and should make enquiry into measures taken for this purpose in all countries.

It was considered that the bonds between technical schools and the various trades should be drawn as close as possible in all countries, with due regard for the systems of social and political organization in force; school organization and legislation should be based on the practical needs of occupational life, and labour legislation should make advanced vocational training compulsory for apprentices and young workers.

*Apprenticeship.*—The Congress considered that vocational guidance should not lead children on leaving school into blind alleys where they would have no assistance either in finding employment or by way of supervision of their personal training, and proposed that organizations should be established by each trade, with the support of the authorities, for the purpose of taking charge of children proposing to enter the trade concerned when they left school, guiding them in finding employment and exercising a benevolent guardianship over them throughout their apprenticeship.

It further declared that apprenticeship should be combined with school training, at least during the initial period and for certain trades. However important programs and methods might be, they depended on the capacity of the teacher. There appeared to be perfect agreement in recommending graduated practical work with a bias towards the production of finished goods as early as possible. Account must always be taken in teaching methods of the human factor.

It was finally recommended that the contract of apprenticeship should be a guarantee, a contract of education, and a means of regulation of vocational training, and urged that written contracts of apprenticeship should be made compulsory, and that the vocational training of the apprentice should be placed under supervision.

*Unemployment of Young Persons.*—Dealing with the unemployment of young persons, the Congress felt that it was one of the gravest dangers to civilization, and urged that all possible measures be taken to avert the many disadvantages of unemployment by means of suitable vocational training, the establishment of special workshops for vocational training, and the organization of athletic societies.

*Training of Engineers and Technicians.*—There was considerable discussion relative to the training of engineers and technicians and the possibility of establishing international co-ordination and control of higher technical education and the regulation of engineers' certificates. Recommendations were made concerning the training of engineers in a "scientifically organized college" on a graduated basis.

In view of the increasing number of certificated engineers, the unequal value of engineers' certificates and the overcrowded state of the engineering profession, the Congress urged that admission to technical colleges should be made more difficult, that the issue of certificates should be subject to strict Governmental supervision, that families should be warned of the present difficulties encountered by engineers in finding employment, that a proper proportion should be established between the number of engineers and the needs of production, and that a plan of public works should be undertaken with a view to facilitating the employment of engineers.

*Regulation of Engineers' Certificates.*—Another resolution urged that the different countries should undertake general regulation of the use of the title of certificated engineer. Such regulation should fulfil the following requirements: it should maintain the system of private technical colleges which, after receiving from the authorities the right to issue engineers' certificates, should submit to permanent inspection by the authorities as regards the conditions under which the vocational training of engineers was carried out, and should deposit with the Governments copies of the certificates issued by them; it should provide for the issue by the Governments of a special certificate for self-taught engineers who could show a sufficient number of years of practical experience in industry;

it should specify the conditions to be complied with by the certificates of foreign engineers in order to be accepted concurrently with those of national engineers; it should require persons describing themselves as

certificated engineers to indicate in all cases the name of the institution which issued their certificates; and it should protect the status of certificated engineers by means of penalties for false pretences.

## EMPLOYMENT CONDITIONS IN CANADA AT THE END OF JULY, 1934

### Reports of the Superintendents of the Employment Service

**T**he employment situation at the end of July was reported by the superintendents of the Employment Service to be as follows:—

Farmers in the Maritime Provinces were busy haying, light crops being reported in many districts, due to lack of rain. Fishing was only fair. There was continued activity in the pulpwoods with a large number of cutters employed. Coal mines in the New Glasgow area operated from four to six days per week, while those in Cape Breton and vicinity worked five, five and a half, and six days. Manufacturers of foodstuffs and soft drinks stated business was good. Oil and gas companies also noted improvement, having been affected by the holiday season and heavier auto traffic. Iron and steel industries were also busier, with idleness reported in only one department. Other industries were fair. Building construction was brighter, with more skilled tradesmen employed, some large contracts already underway, and with good chances of others to come. Road construction also continued, likewise work on transmission lines. Transportation, both freight and passenger, by land and water, was heavy. Trade was better. In the Women's Section there was a brisk demand for domestics, but a decreased call for charwomen, and no requests for commercial help.

Farming in the Province of Quebec showed improvement, also mining. Logging was active. Manufacturing was only fair, with factories in some centres working on reduced time, or at only partial capacity. The metal trades and rubber and boot and shoe factories were quiet, but paper, textiles, and meat packing establishments were quite busy. More skilled building tradesmen were employed, especially at Montreal, where carpenters and painters were in demand. This municipality also hired a number of unskilled workers for sewer construction. Building construction in other cities was quiet. Transportation by rail and water was heavy. Orders for women in domestic service were numerous, with many applicants registered, although some difficulty was experienced in obtaining suitable help for certain positions.

Haying was generally widespread throughout Ontario, with a slight increase in the call

for farm help. Men were hired for the most part on a monthly basis, with wages averaging from \$15 to \$25. Lumbering prospects for the coming season were brighter than for some time past, and there was a heavy demand for experienced pulpwood cutters, whom it was difficult to procure in many logging centres. A number of firefighters had been hired as the fire hazard was very great, owing to the extremely hot weather. Wages for these men were \$2 per day and board, with free transportation both ways. General activity prevailed in the mining districts, with very few first class miners unemployed at present. Business was better in manufacturing establishments, although some factories were closed for stock taking or had reduced staffs due to annual vacations. Food canneries, paper, textiles, sporting goods, boots and shoes, breweries, and electrical appliances were busy, but iron and steel products were quieter, as is usual in this industry at this season of the year, and prospects in this line appeared very good for increased production in the near future. More construction was under way than previously recorded, with a corresponding reduction in unemployed skilled workers in the building trades. Highway, bridge, and sewer construction continued, although due to the nearing completion of the Trans-Canada Highway, camps in the vicinity of North Bay were closed down, however, relief camps under the Department of National Defence were still open and were taking care of their quota of the unemployed. Some men were also placed on extra railway gangs. Trade was fairly brisk. The demand for hotel, restaurant, and general domestic help in the Women's Division remained steady, but experienced applicants were often difficult to obtain. Day work was somewhat slacker than usual, for many employers were out of town.

The call for farm help in the Prairie Provinces continued to increase, although it was decidedly lower than during the corresponding period a year ago. Extremely hot weather had damaged crops in some localities so that in the territory affected the yield would be very light. Lack of experienced men resulted in fewer placements in logging, where unfilled vacancies existed. Mining was very quiet, also

manufacturing. Building construction consisted chiefly of the erection of small dwellings and alterations, other work being slack. Men in relief camps were gradually decreasing in number, as apparently many who had left the camps were being absorbed on farms, where they had worked in previous years. Trade was fair. Little change was noted in the Women's Division. Wages offered were low for domestic service, but orders for hotels and restaurants were easily filled.

Crops in general were good in British Columbia, but very little extra farm help was required. Most of the fruit was still to be harvested, and plenty of applicants were

available for this work. Logging and mining showed practically no change, but sawmills for the most part were busy. At some of the mines a few additional men were being taken on. Salmon fishermen were doing well, and canneries expected to have the largest pack since 1930. Building construction was quiet, about the only activity in this line being alterations and general repair work. Relief camps continued to receive their quota of men. Drydocks and shipyards were quiet, but waterfronts were busy. Improvement was noted in the Women's Section in casual work, though the demand for city domestics was less than usual, as many families were away on holidays.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN JUNE, 1934

**T**HE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on July 1 was 8,716, the employees on their payrolls numbering 941,165 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for June was 1,702 having an aggregate membership of 159,722 persons, 18 per cent of whom

were without employment on July 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

### (1) Employment Situation at the Beginning of July, 1934 Reported by Employers

The industrial situation showed further marked improvement at the beginning of July, the increases in personnel reported to the Dominion Bureau of Statistics by 8,716 employers greatly exceeding those indicated by the firms making returns for any previous July in the thirteen years for which data are available. The establishments whose statistics were tabulated had 941,165 persons on their July 1 staffs, as compared with 899,751 on June 1, 1934; this pronounced increase of 41,414 employees during the month caused the index to rise by 4.4 points to 101.0 on the latest date, as compared with the average seasonal advance of about two points in the years 1921-1933. This upward trend is illustrated in the accompanying chart. The index,

based on the 1926 average as 100, was 96.6 on June 1, 1934, while on July 1 in the years since 1920, it was as follows:—1934, 101.0; 1933, 84.5; 1932, 88.7; 1931, 103.8; 1930, 118.9; 1929, 124.7; 1928, 117.7; 1927, 109.7; 1926, 105.0; 1925, 98.0; 1924, 97.1; 1923, 100.7; 1922, 92.2 and 1921, 88.6. The employment index at the beginning of the present month was higher than at any other date in the two and two-thirds years since November 1, 1931.

The favourable movement noted in the last three months for which statistics have been compiled has provided work for nearly 91,700 persons, besides increasing the working hours of others previously employed. The improvement compares satisfactorily with the aggregate gains of approximately 79,000,

11,000 and 38,000 employees reported in the same three months of 1933, 1932 and 1931, respectively. The second quarter of the year is normally a period of intensified industrial activity, but the general increase in employment in the last three months has considerably exceeded the average in the years since 1920. It is noteworthy that the average payroll of the 8,716 firms reporting on July 1, 1934, stood at 108, compared with an average of 97 employed by the 8,460 establishments furnishing data for January 1 of the present year, and with that of 96 indicated by the 8,125 employers co-operating for July 1, 1933.

### Employment by Economic Areas

The trend was markedly upward in all five economic areas; the largest additions to staffs were made in Quebec and Ontario. The situation generally was better than on the same date of last year or of 1932.

*Maritime Provinces.*—Statements were tabulated from 628 firms employing 71,056 workers, as against 69,580 in the preceding month. This increase brought the index to 100.4, or 10.5 points higher than at the beginning of July in 1933, but was smaller than the gain then shown over the preceding month. Construction, particularly railway and highway

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

**NOTE.**—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

Employment in manufacturing showed further improvement, contrary to the usual seasonal trend on July 1; most of the gain occurred in the food, lumber and pulp and paper groups. Mining (except of coal), communications, services, trade, transportation, logging and construction also indicated substantial advances. The greatest expansion was in highway construction, in which some 25,000 additional workers were reported, partly engaged in unemployment relief undertakings. Excluding such road workers, however, the general increase in the numbers on the reported payrolls exceeded the average gain noted in the years since 1920. A more detailed analysis of the data by industries is given later in this report.

construction, recorded substantial improvement on the date under review, when there were also gains in lumber and pulp and paper mills, and in logging, coal-mining, shipping, services and trade. On the other hand, fish-canning, chemical and iron and steel plants were slacker.

*Quebec.*—Manufacturing showed pronounced improvement in Quebec, there being large increases in animal food, lumber, pulp and paper and tobacco and beverage factories. In the non-manufacturing industries, mining, services, trade, logging and construction all reported considerably heightened activity. The general gain during the month was smaller than that reported on July 1 in 1933, but greater than on that date in any other

year of the record, being between two and three times larger than the average indicated in the last thirteen years. The forces of the 2,077 co-operating employers aggregated 256,742 persons, compared with 247,880 on June 1, or an addition of 8,862. The index on the latest date was higher than in any other month since the end of 1931.

*Ontario.*—There was a further important increase in activity in Ontario, where the 3,827 firms whose statistics were tabulated reported 416,996 employees, or 20,862 more than on June 1. Employment in previous years has frequently advanced on July 1 as compared with the preceding month, the average increase reported being under 3,000 workers; the gain noted on the date under review, therefore, was greater than at the beginning of July in any other year of the record. It was, in fact, only once exceeded in any of the months for which data are available, viz., by that noted on May 1, 1929; the percentage gains indicated on June 1, 1922 and 1923, however, were also larger. The improvement on July 1, 1934, was fairly widely distributed, food, lumber, rubber clay, glass and stone, electric current and mineral product, factories, logging, mining, transportation, trade and construction

showing large gains. The increases in construction were particularly noteworthy, occurring mainly in the highway division. On the contrary, leather, textile and iron and steel works were seasonally slacker; the losses in these groups were large, resulting in a decline in manufacturing as whole. The general index of employment, at 109.9, was higher than in any other month since November 1, 1930.

*Prairie Provinces.*—The most important expansion recorded in this area was in construction, notably on the highways, but services, transportation, communications and manufacturing also reported gains; those in the last-named were confined mainly to the food and lumber groups. Activity in coal-mining, however, was seasonally reduced and logging was also slacker. In addition to the general improvement reported in industrial employment, there have doubtless been seasonal increases in agricultural work, which, though not recorded in this survey owing to the generally small unit of production, must be an important factor in the general situation. Data were compiled from 1,287 employers with an aggregate staff of 118,059 workers on July 1, as against 112,163 in their last report. This gain of 5,896 workers was over twice as large

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

(AVERAGE CALENDAR YEAR 1926=100)

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
July 1, 1921.....	85.6	99.9	83.1	89.7	94.0	82.2

Feb. 1.....	91.4	101.3	83.5	95.3	84.7	84.1
Mar. 1.....	92.7	103.2	89.1	97.8	83.8	85.6
April 1.....	91.3	95.1	85.1	98.7	83.3	86.6
May 1.....	92.0	98.3	85.5	98.5	85.4	88.4
June 1.....	96.6	98.4	90.9	104.4	89.5	89.1
July 1.....	101.0	100.4	94.1	109.9	94.1	94.1
Relative Weight of Employment by Economic Areas as at July 1, 1934.....	100.0	7.6	27.3	44.3	12.5	8.3

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada by the firms making returns for the date under review.

as that registered on the same date of last year, and also exceeded the average increase on July 1 in the last thirteen years. The index, at 94.1 on the date under review, compared favourably with that of 85.0 on July 1, 1933.

*British Columbia.*—Continued and larger advances were made in British Columbia; the increase, which is the sixth consecutive gain recorded this year, brought the index to 94.1, the highest since November 1, 1931. A total working force of 78,312 persons was employed on the date under review by the 897 firms whose data were received and who had 73,994 on their staffs at the beginning of June. Manufacturing, particularly of food products, was seasonally busier on July 1, 1934, and communications, trade and transportation also reported considerable improvement, while the tendency was downward in coal-mining and construction.

Table I gives index numbers by economic areas.

#### Employment by Cities

Five of the eight cities for which separate tabulations are made—Montreal, Toronto, Hamilton, Winnipeg and Vancouver—showed heightened activity; the tendency was unfav-

ourable in Quebec City and Windsor and the adjacent Border Cities, while no general change was reported in Ottawa.

*Montreal.*—Employment in Montreal again advanced, there being gains in construction and trade, while manufacturing was rather slacker, mainly in textiles and iron and steel. A combined working force of 128,471 persons was indicated by the 1,207 co-operating employers, who had 127,678 workers on June 1. Larger increases had been noted on July 1, 1933, but the index then was lower, standing at 81.5 as compared with 86.7 at the latest date.

*Quebec.*—A reduction was reported in Quebec, where statements were tabulated from 162 firms with 12,483 employees, compared with 12,707 in the preceding month. Employment in services slightly increased, while manufacturing and trade were slacker. The index was lower than at the beginning of July, 1933, when an improvement had been shown.

*Toronto.*—There were further but smaller advances in employment in Toronto, where trade, construction and transportation showed improvement. On the other hand, manufacturing (chiefly of textile products) and ser-

Relative Weight of Employment by Cities as at July 1, 1934.....	13.6	1.3	12.0	1.4	3.0	1.4	3.7	2.9

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated city to the total number of all employees reported in Canada by the firms making returns for the date under review.

vices released employees. The 1,282 employers furnishing data enlarged their staffs by 347 workers to 113,357 at the beginning of July. A larger gain had been reported on the same date of last year, but the July 1, 1934, index, at 94.1, was 6.4 points higher than that for the same date in 1933.

*Ottawa.*—Statistics were received from 164 employers with 13,055 persons on their pay-lists, or the same number as in the preceding month. There were minor increases in manufacturing and trade, while construction showed curtailment. A small gain had been indicated on July 1, 1933, when the index was lower than on the date under review.

*Hamilton.*—There was a further advance in Hamilton, where employment was in greater volume than on the same date of last year; 265 workers were added to the forces of 259 firms furnishing information, bringing them to 27,836 at the beginning of July, 1934. Manufacturing reported slight improvement, and trade and construction also showed moderate gains.

*Windsor and the adjacent Border Cities.*—Reduced activity, mainly in iron and steel plants, caused a decline of 826 persons in the

staffs of the 153 reporting employers, who had 13,453 in their employ on the date under review. The index was higher than on July 1, 1933, when improvement had occurred.

*Winnipeg.*—Communications, transportation and construction registered moderate advances, while other industries showed only slight changes on the whole. An aggregate working force of 35,089 employees was reported by the 418 co-operating firms; this was 354 more than on June 1. The improvement noted on the same date of a year ago involved a larger number of persons, but the index of employment was then rather lower.

*Vancouver.*—The trend of employment in Vancouver continued favourable, according to information from 384 establishments employing 28,242 workers, as against 27,182 in the preceding month. There were increases in practically all groups, those in trade, transportation and manufacturing being most pronounced. A smaller increase had been recorded by the firms making returns for July 1, 1933, when the index was lower.

Index numbers by cities are given in Table II.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES

(AVERAGE CALENDAR YEAR 1926=100)

—	All industries	Manufacturing	Logging	Mining	Communications	Transportation	Construction	Services	Trade

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada by the firms making returns for the date under review.

## Employment in Manufacturing Industries

Employment in manufacturing showed a further increase on July 1; although this was smaller than in either the preceding month or the same month of last year, it was important in that it reversed the slight decline which the experience of the last thirteen years shows is the average change between June and July. The 5,256 establishments reporting had 468,369 employees on the date under review, as compared with 465,009 on June 1. The index rose from 93.2 in the preceding month to 93.8 on July 1, 1934, while the seasonally corrected index also showed a slight advance. An analysis of the data for July 1 shows pronounced improvement in the animal and vegetable food, lumber and pulp and paper groups, with smaller gains in beverage, clay, glass and stone, electric current, mineral product and miscellaneous manufacturing industries. On the other hand, leather footwear, textile, chemical and iron and steel

plants were slacker, the greatest losses being those of a seasonal character in the textile and iron and steel groups.

The general increase in factory employment on the date under review was the sixth successive gain since January, 1934; in this period of expansion, over 69,500 workers have been re-instated, while the index has advanced by 13.8 points. The recovery in the same six months of last year provided work for some 42,600 persons, and the index rose from 74.4 on Jan. 1 to 83.0 at the beginning of July, or by 8.6 points. The July 1, 1934, index was some 13 p.c. higher than on the same date last year. The average number of operatives per establishment, standing at 89 on July 1, 1934, compares favourably with the average of 78 indicated on Jan. 1, 1934, 83 on July 1, 1933, and 75 on Jan. 1, 1933, when the manufacturing index was at its lowest point in the depression.

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY MANUFACTURING INDUSTRIES (AVERAGE 1926=100)

Industries	Relative Weight	July 1 1934	June 1 1934	July 1 1933	July 1 1932	July 1 1931	July 1 1930	July 1 1929

Miscellaneous.....	.5	116.0	112.5	98.7	99.8	107.2	110.7	113.4

The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

*Animal Products, Edible.*—Very large additions to staffs were recorded in this group, 3,075 persons being taken on by the 289 establishments making returns, which had 24,687 in their employ. Pronounced improvement was noted in fish-canning in British Columbia, but there were losses in the same industry in the Maritime Provinces, while dairies and meat-packing plants in the other provinces afforded increased employment. The index on July 1, 1934, was rather higher than on the same date in 1933; a somewhat larger gain had then been indicated.

*Leather and Products.*—Statements were received from 259 manufacturers in this division, employing 19,264 workers, as compared with 20,108 in the preceding month. The bulk of the decrease took place in boot and shoe factories, and occurred mainly in Quebec and Ontario. The situation was slightly better than that recorded on July 1 of last year, when an increase had been reported.

*Lumber and Products.*—Rough and dressed lumber mills showed substantially heightened activity, but employment in furniture factories was quieter. Larger increases had been noted on July 1, 1933; the index then, however, stood at 63.7, as against 74.7 on July 1, 1934. A combined working force of 38,980 employees was reported by the 790 firms co-operating on the date under review; this was 2,026 more than at the beginning of June. All provinces except British Columbia shared in the upward movement, but the gains in Quebec were greatest.

*Plant Products, Edible.*—The resumption of operations in canneries caused an important advance, which decidedly exceeded that registered on July 1 of a year ago, when the index was some ten points lower. Returns were received from 406 manufacturers of vegetable foods, having 30,380 operatives, as against 27,881 in their last report. The improvement in Ontario and British Columbia was most noteworthy.

*Pulp and Paper Products.*—There was a slight decline in printing and publishing houses, and in the production of paper goods, while pulp and paper mills were considerably busier. The 564 co-operating employers in the Dominion reported 57,705 workers, compared with 56,491 on June 1. Smaller advances had been indicated in the group as a whole on July 1, 1933, and the index of employment was then much lower.

*Rubber Products.*—Curtailement was registered in rubber factories, in which employment was brisker than in the summer of last

year. Statistics were tabulated from 50 firms with 12,113 employees on the date under review, as compared with 12,274 in the preceding month.

*Textile Products.*—A further contraction, mainly in Quebec and Ontario, was reported by the 913 co-operating textile manufacturers, who employed 91,212 workers, or 1,995 fewer than at the beginning of June. The largest losses were in woollen and headwear factories, but cotton, silk and garment plants were also slacker. An advance had been indicated on the corresponding date in 1933, but the level of employment then was lower than on the date under review. The decrease was seasonal in character, the tendency having been downward on July 1 in nine of the thirteen preceding years for which statistics are available.

*Tobacco, Distilled and Malt Liquors.*—Employment in this division showed a moderate increase, according to data from 159 establishments, employing 14,267 persons, compared with 13,919 in the preceding month. The increase occurred mainly in Quebec, and in beverage factories. A gain had also been noted on the same date last year, when the index was a few points lower.

*Chemicals and Allied Products.*—There was a falling-off in activity in chemical factories; 171 firms had 9,232 employees, compared with 9,435 on June 1. The Maritime Provinces reported most of the decrease. Little general change had been shown at the beginning of July, 1933, but employment was then in smaller volume.

*Clay, Glass and Stone Products.*—Improvement was indicated in building material plants, the 186 co-operating establishments enlarging their forces by 272 persons to 8,269 on the date under review. Most of the gain was in Quebec and Ontario. The level of employment was much higher than on July 1 of a year ago, when the trend was also upward.

*Electric Current.*—A gain was registered in electric current plants, 96 of which reported a combined working force of 13,723 persons, as against 13,469 at the beginning of June. The index was practically the same as on the same date in 1933, when a decline had been indicated.

*Electrical Apparatus.*—There was a decrease of 23 in the staffs of the 107 manufacturers furnishing data, who had 11,256 employees on July 1. Firms in Ontario reported reductions, while the tendency in Quebec was favourable. The number engaged in the production of electrical apparatus was much larger than on

July 1 in the preceding year, when a small advance had taken place.

*Iron and Steel.*—For the first time since the opening of 1934, the trend in iron and steel factories was downward. The experience of the last thirteen years shows that curtailment generally occurs between June and July; an increase, however, had been indicated on July 1 of a year ago, when employment was in much smaller volume. Improvement on the date under review was noted in the general plant machinery and the foundry and machine shop groups, while the automobile and other vehicle, crude, rolled and forged, agricultural implement, tool and heating appliance division showed contractions. Returns were compiled from 809 employers whose forces aggregated 97,538 workers, as against 101,249 in the preceding month.

*Non-Ferrous Metal Products.*—A further small increase was registered in non-ferrous metal products, mainly in smelters and refineries. The 147 co-operating manufacturers employed 17,550 operatives, or 49 more than in the preceding month. A pronounced gain had been reported on the same date of last year, but the index was then decidedly lower.

*Mineral Products.*—Continued gains were shown in this division, in which the index, at 137·3, was much higher than in July, 1933. Statistics were received from 119 employers whose staffs rose from 13,607 on June 1, 1934, to 13,894 on July 1.

### Logging

There was a marked increase in logging, 3,232 persons being added to the staffs of the 264 reporting firms, who employed 23,857 on July 1. This advance was greater than that noted at the same date in 1933, and compared favourably with the reduction usually indicated at the beginning of July in the preceding twelve years. The index was higher than at the same date in any other year of the record except 1923.

### Mining

*Coal.*—There was a seasonal decrease in employment in coal-mines, 99 of which employed 21,313 men, as compared with 21,558 in their last report. There were losses in this group in the Western Provinces, while greater activity was indicated in the Maritime coal-fields. A larger decline had been noted on July 1 of last year, and employment was then in rather smaller volume.

*Metallic Ores.*—Another advance was reported in metallic ore mines; statements were tabulated from 99 operators employing 21,237

persons, or 543 more than on June 1. All but the Maritime Provinces shared in the gain. The general index, at 179·7, was nearly 38 points higher than on July 1, 1933.

*Non-Metallic Minerals, other than Coal.*—There was a further increase in the payrolls of the 77 co-operating non-metallic mineral mines, which employed 6,364 workers, or 164 more than in the preceding month. Employment was much brisker than at the beginning of July a year ago, when a larger gain had been recorded.

### Communications

Continued improvement was indicated in this group, according to the reporting companies and branches, which had 21,072 persons on their payrolls, compared with 20,529 on June 1. Employment on both telephones and telegraphs was more active. A smaller gain had been recorded on July 1, 1933; employment in this division, however, was then at a higher level.

### Transportation

*Street Railways and Cartage.*—Activity in the local transportation group showed an increase, 191 firms having 24,474 workers in their employ, as against 24,178 in the preceding month. Little general change had been noted on the same date in 1933, when the index was slightly higher.

*Steam Railways.*—Statistics tabulated from 100 companies and divisional superintendents in the steam railway operation group showed that they employed 58,148 workers at the beginning of July, or 1,316 more than in the preceding month. A larger gain had taken place on July 1 of last year, but employment was below its level at the time of writing. Ontario and the Western Provinces reported improvement on the date under review.

*Shipping and Stevedoring.*—There was an increase in employment in water transportation, 92 companies having enlarged their staffs by 975 employees, bringing them to 14,844 on July 1. The index, at 89·5, was practically the same as at the beginning of July, 1933, when a smaller gain had been indicated. On the date under review, there were general advances, those in British Columbia being largest.

### Construction and Maintenance

*Building.*—Improvement in employment was noted in building construction; the increase was rather smaller than that indicated on July 1, 1933, when activity in this group was lower. The 633 co-operating contractors employed 20,960 workers, as compared with 19,

142 in the preceding month. The expansion was mainly in Quebec and Ontario.

*Highways.*—The number of men engaged on road construction and maintenance increased on the date under review, when the 337 employers furnishing data had 114,392 employees, or 25,043 more than at the beginning of June. There were considerable advances in all provinces except British Columbia, those in Ontario being greatest. Employment in this group was decidedly brisker than on July 1, 1933, partly a result of the important program of road work and improvement being carried out in connection with unemployment relief.

*Railway.*—A combined working force of 29,115 persons was reported by the 34 contractors and divisional superintendents whose statistics were tabulated, and who had 27,716 employees on June 1. All provinces shared in the increase. Greater additions to staffs were noted on July 1 a year ago, but the index then was slightly lower than on the date under review.

### Services

Continued expansion was shown in the service group, according to returns from 417 employers with 25,319 persons on their staffs, as compared with 24,357 in the preceding month. The opening of the summer-hotel season

caused the gain, which was on a rather smaller scale than that reported on July 1, 1933, when employment was, however, in less volume. The tendency was favourable in all provinces, except Ontario, where no general change occurred, but the largest increases were in the Prairie Provinces.

### Trade

Wholesale houses showed slightly greater activity, and retail stores reported a substantial gain in personnel. The additions to staffs in the group as a whole considerably exceeded the average gain recorded on July 1 in the last thirteen years. Statements were tabulated from 1,033 firms having 91,701 employees, as against 89,693 at the beginning of June, 1934. Employment was in greater volume than on the same date last summer, when improvement had also been indicated by trading establishments.

### TABLES

Index numbers of employment by economic areas, leading cities and industries are shown in the accompanying tables, in which the columns headed "relative weight" show the proportion that the number of employees reported in the indicated areas or industry is of the total number of employees reported in Canada on the date under review.

## (2) Unemployment in Trade Unions at the Close of June, 1934

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged at work other than their own trades, or who are idle due to illness, are not considered as unemployed while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Activity among local trade union members at the close of June showed the customary midsummer seasonal increases, the percentage of idleness standing at 18.0, the most favourable that has been reported any month this year, and contrasted with 18.5 per cent in May. The percentage for June was based on the reports furnished by 1,702 labour organizations, with an aggregate of 159,722 members, 28,774 of whom were idle on the last day of the month. Considerably better employment conditions prevailed over June of last year when 21.8 per cent of the members involved

were without work. In Saskatchewan the improvement recorded from May was slightly over 2 per cent and due to increased activity in steam railway operation. British Columbia unions indicated gains in employment of lesser degree while in Nova Scotia, New Brunswick, Quebec and Manitoba the tendency was also upward, though the changes were but fractional. Ontario unions reflected the same situation as in May, minor increases and decreases in the various trades and industries offsetting each other. Alberta was the only province to show a lessening of the employment volume available from May, which was, however, very slight. All provinces with the exception of Alberta reported a better level of activity than in June a year ago, the gains in Ontario being particularly marked and of general distribution throughout the province. In New Brunswick also the improvement was noteworthy, while the increases reported from Quebec, Nova Scotia, Manitoba, Saskatchewan and British Columbia were of more moderate proportions. As in the previous comparison, activity for Alberta unions was very slightly retarded during the month reviewed.

A separate compilation is made each month of unemployment in the largest city in each province with the exception of Prince Edward Island. Of these, Halifax members were much better employed than in May, and marked advancement was noted by Saint John unions. In Regina fair-sized gains were recorded, Montreal, Toronto, Winnipeg and Vancouver showing but slightly improved conditions. Edmonton unions, however, reported some falling off in activity. In making a comparison with the returns for June of last year, Halifax and Saint John unions, as in the previous comparison, reported a decidedly more favourable

From unions in the manufacturing industries 459 reports were received during June, covering a membership of 50,363 persons, of whom 8,644 were unemployed on the last day of the month, a percentage of 17.2 contrasted with 15.6 per cent in May. Inactivity in the garment trades, particularly in Quebec was the deciding factor in this adverse change from May, pulp and papermakers, printing tradesmen, glass workers, general labourers and hat and cap workers also contributing to the total unemployment increase. On the other hand, cigarmakers and metal polishers were much busier than in May, though their membership

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

situation during the month reviewed, and improvement on a noteworthy scale was apparent also among Montreal, Toronto, Regina and Vancouver unions. In Winnipeg the gains in employment recorded were of more moderate degree. From Edmonton, however, a sharp drop in work afforded was evident from June a year ago.

The chart which accompanies this article shows the curve of unemployment by months from January, 1928, to date. The trend of the curve, which has been consistently downward since the close of January, proceeded in this better movement throughout June, attaining a midsummer level of activity more favourable than has been shown in the two preceding years.

83906-4

was small, and among textile and carpet workers noteworthy gains occurred. Conditions for brewery workers were moderately better than in May, while bakers and confectioners and iron, steel, leather and wood workers showed an upward employment tendency though the changes were quite slight. Substantial employment recovery was noted in the manufacturing industries, as a whole, from June of last year when 24.5 per cent of the members recorded were without work. Improvement embracing the largest number of members was evident in the iron and steel trades, which showed substantial gains during the month reviewed. Pronounced expansion was also apparent among leather workers, cigarmakers, wood and glass workers. Increases

in activity on a smaller scale, though noteworthy, were reflected by pulp and papermakers, and the situation also improved for brewery workers and printing tradesmen. Curtailment in employment of marked degree, however, was recorded by general labourers and fur workers from June a year ago, while declines in activity of much lesser extent were recorded by hat and cap workers, metal polishers, textile and carpet workers, and bakers and confectioners. Among garment workers the recessions noted were but nominal.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919.....	3.1	2.0	3.4	2.7	2.1	3.2	2.0	7.9	3.4
Average 1920.....	1.8	2.0	7.2	3.4	3.1	3.2	2.8	3.2	4.9

Nov. 1933.....	17.1	10.7	22.8	22.0	20.4	16.1	15.0	21.3	20.4
Dec. 1933.....	11.2	11.5	23.2	24.9	20.3	17.2	17.6	19.8	21.0
Jan. 1934.....	10.7	9.4	23.6	24.2	21.2	17.9	16.4	25.0	21.2
Feb. 1934.....	10.8	9.8	21.9	22.5	21.6	18.3	17.1	21.2	20.0
Mar. 1934.....	9.1	10.7	22.3	23.6	19.2	15.8	20.3	19.9	19.5
May 1934.....	11.8	8.1	23.6	15.9	17.8	14.2	22.4	18.4	18.5
June 1934.....	11.4	7.3	22.9	15.9	17.0	12.1	24.8	17.2	18.0

The situation in the coal mining industry varied but slightly during June from the preceding month, the tendency, however, being favourable, as indicated by the returns compiled from 53 unions with 16,133 members. Of these, 3,527, or a percentage of 21.9 were reported idle at the end of the month in contrast with 22.2 per cent in May. British Columbia miners were afforded a moderately better employment volume than in May while in Alberta activity eased off slightly, Nova Scotia unions showing practically the same situation in both months under comparison. A noteworthy drop in the volume of work available to miners was shown from June of last year when 14.6 per cent of unemployment was recorded. The most severe losses occurred in the Nova Scotia mining areas though in Alberta conditions were also somewhat curtailed. In British Columbia there was little change from June a year ago, the tendency, however, being favourable. Short time work among the miners was also prevalent during the month reviewed.

The building and construction trades during June indicated employment expansion on a noteworthy scale from May, the 200 unions making returns with a membership of 16,745 persons showing that 9,682 were idle on the last day of the month, a percentage of 57.8 as compared with 63.7 per cent in the previous month. Electrical workers were decidedly better engaged than in May, as were also hod carriers and building labourers, but the improvement noted by carpenters and joiners involved the greatest number of members. Bricklayers, masons and plasterers, and tile layers, lathers and roofers also were afforded a considerably better volume of work, and among steam shovelmen, and plumbers and steamfitters the tendency was upward, though the changes were slight. On the other hand, bridge and structural iron workers reported a large percentage drop in available employment, but their membership was slight, and declines, on a moderate scale, were reflected by painters, decorators and paperhangers. Granite and stonecutters indicated practically the same situation as in the previous month. The employment movement in the building and construction trades, as a whole, was also, more favourable than in June of last year when 62.5 per cent of the members reported were idle, bricklayers, masons and plasterers, tile layers, lathers and roofers, and hod carriers and building labourers all showing extensive increases in activity during the month reviewed. Among carpenters and joiners also, the improvement recorded was noteworthy, painters, decorators and paperhangers, plumbers and steamfitters,

TABLE II.—PERCENTAGES OF UNEMPLOYMENT IN TRADE INDUSTRIES BY GROUPS OF INDUSTRIES

and steam shovelmens indicating employment gains of more moderate proportions. Granite and stonecutters, and bridge and structural iron workers, however, suffered important losses in work afforded from June a year ago, while among electrical workers fractional declines only occurred.

Activity in the transportation industries during June tended favourably though the change from May was very slight as manifest by the reports tabulated from 748 associations with 53,216 members. Of these, 4,941 were idle at the end of the month, a percentage of 9.3 in contrast with 9.9 per cent of unemployment in May. Improvement on a larger scale, however, was noted from June of last year when 12.0 per cent of the members reported were out of work. Steam railway employees, whose returns included about 78 per cent of the entire group membership reported, showed a very slight rise in available work from May. Teamsters and chauffeurs indicated all members busy in June, compared with a fractional unemployment percentage in May, while the tendency for street and electric railway employees was also favourable though the change was very slight. Navigation workers, however, reported some falling off in employment from May. In making a comparison with the returns for June a year ago conditions for steam railway employees were moderately improved during the period under survey, and among street and electric railway employees, and teamsters and chauffeurs nominal gains were recorded. There was, however, a considerable increase in slackness among navigation workers from June last year.

The situation for retail clerks showed little variation during June from the previous month, unemployment standing at 6.2 in contrast with a percentage of 6.6 in May. The June percentage was based on the returns received from 5 associations of these workers, embracing 1,871 members. Activity was, however, retarded from June of last year when 1.4 per cent of the members reported were idle.

Civic employees registered a slight falling off of available work during June from the previous month, though conditions were better than in June of last year. This was apparent from the returns received from 74 associations covering a membership of 7,422 persons, 225 or 3.0 per cent of whom were unemployed at the end of the month in contrast with percentages of 1.8 in May and of 6.3 in June last year.

Employment in the miscellaneous group of trades remained in much the same volume during June as in the preceding month according to the reports compiled from 116 unions with a total of 3,849 members. Of these, 574, or 14.9 per cent, were reported idle at the end of the month compared with 14.7 per cent in May. A much better level of activity was shown, however, from June of last year when 23.4 per cent of the members reported were out of work. Theatre and stage employees, barbers and stationary engineers and firemen indicated little variation in conditions from May though the tendency was toward greater employment, which the slight curtailment evident among hotel and restaurant employees, and unclassified workers was just more than sufficient to offset. In contrasting with the returns for June of last year, hotel and restaurant employees were much more actively engaged during the month reviewed, and noteworthy advances were registered by stationary engineers and firemen, and theatre and stage employees. Moderate increases in available work were reflected by unclassified workers, while barbers showed slight gains from June a year ago.

Fishermen were afforded a greater volume of employment during June than in the previous month though retarded activity, on a small scale, was noted from June a year ago, the percentage of idleness for the month reviewed standing at 2.2 as compared with percentages of 4.3 in May and 1.2 in June a year ago.

The situation for lumber workers and loggers was moderately improved during June from the preceding month, expansion on a pronounced scale, however, being shown from June a year ago. This was evident from the returns tabulated from 3 unions of these workers, with a membership involving 1,373 persons, 3.0 per cent of whom were idle at the end of the month contrasted with 6.1 per cent in May and with 24.1 per cent in June, 1933.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1933 inclusive, and also the percentage of unemployment by provinces for June of each year from 1919 to 1931 inclusive, and for each month from January, 1932, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Office Reports for June, 1934

The volume of business transacted by the offices of the Employment Service of Canada for the month of June, 1934, as shown by the average daily placements effected, was nearly 12 per cent higher than that of the previous month and 45 per cent above the average daily placements effected during the corresponding month a year ago, relief work sponsored by the government, nearly all of which was on highways, being the deciding factor in both comparisons. Although only three groups, construction and maintenance, logging and farming, showed gains over May,

Service throughout Canada, computations being made semi-monthly. It will be seen from the graph that the curve of vacancies and of placements in relation to applications showed a marked upward trend during the first half of June, followed by a decline of around 2 points during the second half of the period under review. At the end of June, however, the levels attained were about 6 points higher than those recorded at the close of the corresponding period a year ago. The ratio of vacancies to each 100 applications was 68.7 during the first half and 66.1 during the

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

that registered in construction and maintenance alone was greater than the decline reported in all remaining sections, the largest of which was in services. In comparison with June last year, nearly all industrial divisions showed higher placements, those in construction and maintenance far exceeding the increases also recorded in services, logging, manufacturing and mining, losses being reported in the remaining groups, farming, transportation and trade.

The accompanying chart shows the trend of employment from January, 1932, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the

second half of June, 1934, in contrast with ratios of 59.5 and 60.4 during the corresponding periods of 1933. The ratios of placements to each 100 applications during the periods under review were 65.4 and 63.8, as compared with 56.5 and 57.3 during the corresponding month of 1933.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during June, 1934, was 1,822, as compared with 1,667 during the preceding month and with 1,269 in June a year ago.

The average number of applications for employment received daily by the offices during the month under review was 2,701, in

comparison with 2,714 in May, 1933, and with 2,116 in June last year.

The average number of placements made daily by the offices of the Service during June, 1934, was 1,745, of which 1,046 were in regular employment and 699 in work of one week's duration or less, as compared with a total daily average of 1,565 during the preceding month. Placements in June a year ago averaged 1,204 daily, consisting of 646 placements in regular and 558 in casual employment.

During the month of June, 1934, the offices of the Service referred 45,248 persons to positions and effected a total of 43,621 placements. Of these, the placements in regular employment were 26,151, of which 22,140 were of men and 4,011 of women, while placements in casual work totalled 17,470. The number of vacancies reported by employers was 37,056 for men and 8,473 for women, a total of 45,529, while applications for work numbered 67,506, of which 55,218 were from men and 12,286 from women. Reports for May, 1934, showed 43,338 positions available, 70,548 applications made and 40,688 placements effected, while in June, 1933, there were recorded 31,706 vacancies, 52,896 applications for work and 30,091 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1924, to date:—

Year	Placements		
	Regular	Casual	Totals
1924.....	247,425	118,707	366,132
1925.....	306,804	106,021	412,825
1926.....	300,226	109,929	410,155
1927.....	302,723	112,046	414,769
1928.....	334,604	135,724	470,328
1929.....	260,747	137,620	398,367
1930.....	187,872	180,807	368,679
1931.....	175,632	295,876	471,508
1932.....	153,771	198,443	352,214
1933.....	170,576	181,521	352,097
1934 (6 months).....	110,398	100,074	210,472

#### NOVA SCOTIA

There was a decrease of over 35 per cent in the number of positions offered through employment offices in Nova Scotia during June when compared with the preceding month and of nearly 34 per cent in comparison with the corresponding month of last year. Placements also were over 36 per cent less than in May and over 35 per cent below June, 1933. The decline in placements from June a year ago was due to fewer workers being sent to relief employment on highway

construction. The reduction in this division was partly offset by gains in logging and services. Changes in other groups were nominal only. Industrial divisions in which most of the placements were effected during the month were: logging, 45; construction and maintenance, 686; and services, 288, of which 201 were of household workers. Regular employment was found for 121 men and 87 women.

#### NEW BRUNSWICK

Employment opportunities, as indicated by orders received at employment offices in New Brunswick during June, were 5 per cent better than in the preceding month but nearly 14 per cent less favourable than during the corresponding month of last year. There was a gain of nearly 11 per cent in placements when compared with May and of over 13 per cent in comparison with June, 1933. A reduction in relief placements on road construction was responsible for the decline from June of last year, although there were fewer placements also in services. All other groups showed improvement, the most substantial gain being in logging. Placements by industrial divisions included: manufacturing, 23; logging, 149; transportation, 25; construction and maintenance, 250; and services, 453, of which 350 were of household workers. During the month 411 men and 63 women were placed in regular employment.

#### QUEBEC

Positions offered through employment offices in the Province of Quebec during June were nearly 26 per cent less than in the preceding month but over 7 per cent above the corresponding month of last year. There was a decline of over 22 per cent in placements when compared with May, but a gain of nearly 6 per cent in comparison with June, 1933. The largest increase in placements over June of last year was in services, although gains were also reported in logging and farming. The only declines of importance were in manufacturing and in construction and maintenance. Placements by industrial divisions included: manufacturing, 49; logging, 117; farming, 75; construction and maintenance, 353; trade, 105; and services, 1,825, of which 1,492 were of household workers. Placements in regular employment numbered 758 of men and 1,241 of women.

#### ONTARIO

There was a gain of over 20 per cent in the number of positions offered through employment offices in Ontario during June

\*85 Placements effected by offices since closed.

when compared with the preceding month and of 99 per cent in comparison with the corresponding month of last year. Placements also were over 22 per cent higher than in May and 101 per cent in excess of June, 1933. The substantial gain in placements over June of last year was due to a large increase in the number of workers sent to employment on highway construction. There were, however, gains also in services, logging, manufacturing, and mining. Placements by industrial divisions included: manufacturing, 727; logging, 1,875; farming, 1,015; mining, 86; transportation, 140; construction and maintenance, 19,938; trade, 289; and services, 4,406, of which 1,861 were of household workers. During the month 15,141 men and 1,428 women were placed in regular employment.

#### MANITOBA

The demand for workers, as indicated by orders received at employment offices in Manitoba during June, was nearly 11 per cent less than in the preceding month but 23 per cent above the corresponding month a year ago. Placements also were 12 per cent less than in May, but over 26 per cent above June, 1933. Increased placements on the highway construction were responsible for the gain over June of last year, although logging also showed improvement. There was a substantial reduction in farm placements, with smaller losses in services and trade. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 28; logging, 73; farming, 301; construction and maintenance, 1,282; and services, 660, of which 526 were of household workers. There were 1,534 men and 334 women placed in regular employment during the month.

#### SASKATCHEWAN

During June, orders received at employment offices in Saskatchewan called for 17 per cent less workers than in the preceding month and nearly 32 per cent less than during the corresponding month of last year. Similar percentages of loss were reported in placements. All industrial divisions, participated in the decline in placements from June of last year, the largest reductions being in construction and maintenance, farming, and services. Placements by industrial divisions included: manufacturing, 56; farming, 484; construction and maintenance, 398; trade, 37; and services, 646, of which 412 were of household workers. Regular employment was found for 565 men and 321 women.

#### ALBERTA

Orders received at employment offices in Alberta during June called for 12 per cent less workers than in the preceding month and nearly 8 per cent less than during the corresponding month of last year. There was a decline of nearly 11 per cent in placements when compared with May and of nearly 8 per cent in comparison with June, 1933. No important changes in placements by industrial groups were reported from June of last year, declines in farming and services being mainly responsible for the adverse change under this comparison. Industrial divisions in which most of the placements were effected during the month were: logging, 67; farming, 571; construction and maintenance, 1,218; trade, 26; and services, 445, of which 336 were of household workers. There were 1,381 men and 303 women placed in regular employment during the month.

#### BRITISH COLUMBIA

Opportunities for employment, as indicated by orders received at employment offices in British Columbia during June, were 2 per cent less favourable than in the preceding month, but over 5 per cent better than during the corresponding month of last year. There was a decline of over 1 per cent in placements when compared with May, but a gain of nearly 6 per cent in comparison with June, 1933. An increase in placements on road construction was responsible for the gain over June of last year, although minor improvement was also reported in farming and manufacturing. Of the losses in all other groups, those in transportation, services and mining were the largest. Placements by industrial divisions included: manufacturing, 40; farming, 186; construction and maintenance, 3,349; and services, 564, of which 381 were of household workers. During the month 2,229 men and 234 women were placed in regular employment.

#### Movement of Labour

During the month of June, 1934, the offices of the Employment Service of Canada effected 26,151 placements in regular employment, 13,741 of which were of persons for whom the employment found was outside the immediate vicinity of the offices at which they were registered. Of the latter, 992 were granted the Employment Service reduced transportation rate, 907 going to points within the same province as the despatching office and 85 to other provinces. The reduced transportation rate, which is 2.7 cents per mile, with a minimum fare of \$4, is granted by the rail-

way companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Transfers at the reduced rate in Quebec during June were effected by the Hull office, which assisted in the despatch of 18 bushmen to North Bay and of 5 river drivers to Pembroke. Ontario offices issued 808 reduced rate certificates during June, all to provincial centres. Of these, 742 were granted at Port Arthur, to 649 bushworkers, 54 highway construction employees, 38 mine workers and 1 restaurant kitchen girl, travelling to various points within the Port Arthur zone. From Sudbury, one construction labourer was sent to Kingston and 23 bushworkers and 3 mine workers to employment within the Sudbury zone, which zone was also the destination of 9 lumber peelers conveyed from North Bay. The North Bay office was, in addition, instrumental in transferring 11 papermill workers to Timmins. For employment within its own zone Fort William despatched 11 bushmen and 3 mill hands, the Timmins office sending 5 mine workers, also to the Fort William zone. Both the provincial and interprovincial labour movement in Manitoba during June originated at Winnipeg and included the transfer of 84 workers, 22 within the province and 62 outside. The Winnipeg zone was the destination of all workers travelling provincially, among whom were 15 farm hands, 2 hotel cooks, 3 building construction workers and 2 mine workers. Of the persons conveyed to other provinces 55 were bound for the Port Arthur zone, 43 of these being bushmen, 5 mine workers, 4 highway construc-

tion labourers and 3 cooks. In addition, the Prince Albert zone received 4 bushworkers, the Regina zone one farm hand and 1 summer resort waitress, and the Saskatoon zone one farm hand. In Saskatchewan during June only one certificate for reduced transportation was granted and this by the Saskatoon office, which was responsible for the despatch of an hotel cook to Regina. Workers taking advantage of the Employment Service reduced transportation rate in Alberta during June numbered 59, all of whom journeyed to employment within the Edmonton zone. Of these, 58 received their certificates at the Edmonton office and included 21 fish company employees, 11 bushmen, 8 mine workers, 6 farm hands, 4 hotel workers, 1 butcher, 2 cookees, 2 labourers, 1 truck driver, 1 cafe waitress and 1 railway construction cook. The one remaining transfer was of a farm housekeeper despatched by the Calgary office. Reduced transportation rate certificates granted in British Columbia during June were 17 in number, all provincial and issued at the Vancouver office. Transferred to the Pen-ticton zone were 1 mine engineer, 1 sawmill engineer and 1 mine blacksmith, to the Kamloops zone, 2 cooks, and to employment within the Vancouver zone, 9 mine workers, 2 hotel employees and 1 housekeeper.

Of the 992 workers who journeyed at the Employment Service reduced transportation rate during June, 385 were carried by the Canadian National Railways, 583 by the Canadian Pacific Railway, 13 by the Temiskaming and Northern Ontario Railway and 11 by the Pacific Great Eastern Railway.

#### (4) Building Permits Issued in Canada in June, 1934

The value of the building permits issued by 61 cities during June was \$2,364,109; this was a decrease of \$633,586 or 21.9 per cent, as compared with the May total of \$2,997,695, and of \$1,225,095 or 34.1 per cent, as compared with June, 1933, when the authorizations amounted to \$3,589,204. The record for the last fourteen years shows that the value of the building authorized in June is usually rather less than in May, the decline, on the average, being over six per cent.

Some 50 cities furnished detailed statements for June, 1934, showing that they had issued more than 240 permits for dwellings valued at nearly \$960,000 and some 1,900 permits for other buildings estimated to cost approximately \$1,145,000, while engineering projects valued at an aggregate of \$33,319 were authorized in two cities, viz., Brantford and Port Arthur. During May, authority was

given for the erection of almost 300 dwellings and some 2,200 other buildings, valued at approximately \$1,200,000 and \$1,400,000, respectively.

Improvement over May, 1934, was recorded in Nova Scotia and British Columbia, where there were gains of 7.6 per cent and 9.3 per cent, respectively. Of the declines elsewhere reported, that of \$389,253 or 44.2 per cent in Quebec was greatest.

As compared with June, 1933, there were increases in Nova Scotia, New Brunswick and Ontario, amounting to 73.7 per cent, 35.6 per cent and 28.2 per cent, respectively. The remaining provinces showed decreases, Quebec reporting the greatest loss of \$1,290,056, or 72.4 per cent.

Of the larger cities, Montreal and Winnipeg recorded reductions in the value of the permits issued as compared with May, 1934,

and also with June, 1933; Vancouver showed a gain in the first, but a decline in the second comparison, while the total value of building authorized in Toronto was higher in June, 1934, than in either the preceding month or the same month of last year. Of the other centres, Halifax, Sydney, Saint John, Sherbrooke, Guelph, Kitchener, Oshawa, Port Arthur, St. Thomas, St. Boniface, Nanaimo and Prince Rupert also reported improvement over May, 1934, and June, 1933.

*Cumulative Record for First Half-Year, 1920-1934.*—The following table gives the value of the building authorized by 61 cities during June and in the first six months of each year since 1920, as well as index numbers for the latter, based upon the total for 1926 as 100. The average index numbers of wholesale prices of building materials in the first six months of the same year are also given.

The aggregate for the first six months of this year was practically the same as in the first half of 1933, but was lower than in previous years of the record; the cost of building, as indicated by the index number

Year	Value of permits issued in June	Value of permits issued in first six months	Indexes of value of permits issued in first six months (1926=100)	Average indexes of wholesale prices of building materials in first six months (1926 average=100)
	\$	\$		
1934.....	2,364,109	10,282,641	13·1	83·5
1933.....	3,589,204	10,315,899	13·1	75·8

1920.....	14,113,794	61,754,710	78·4	144·5

of wholesale prices of building materials, while higher than in the first half of 1933 or 1932, and the same as in 1931, was lower than in other years since 1920.

## ASIATIC LABOUR CONGRESS

### New Regional Group of Trade Union Members

THE Asiatic Labour Congress, a new organization designed to promote the common interests of labour throughout Asia, held its first session at Colombo, Ceylon, on May 10. Labour representatives were present from Japan, India and Ceylon. The International Labour Office (Geneva) was represented by Dr. Pillar, director of the Indian Branch of the organization, and Dr. Ayusawa, also a member of the I.L.O. staff.

Mr. N. M. Joshi (India), one of the organizers of the Congress, outlined the circumstances which led to its formation as follows: "During my presence at the first International Labour Conference held at Washington and its next two sessions held at Geneva, some facts and experiences were often bringing home to my mind the necessity of a separate organization to bring together the workers of Asia. In the first place the inferior conditions of life and work of the workers in the Asiatic countries were considered, admittedly with good justification, as a drag upon the progress in the improvements of the labour conditions in the European countries. This was a very humiliating situation to those of us from Asiatic countries who were taking part in these conferences. Secondly, we found that

the unequal labour conditions existing in Japan, India and China created difficulties in securing improvement in these conditions in the various Asiatic countries themselves. Thirdly, we found that the delegates from Asiatic countries did not exercise much influence in the discussions and decisions of the conferences. This was the result of our weaker position in the International Organization. The number of delegates from Asiatic countries was smaller, as some of our countries being in the position of colonies and dependencies are not independent members of the International Labour Organization. Out of the countries which are members, only Japan and India were regularly represented by delegates representing workers, although the conferences are not complete unless there are delegates representing governments, employers and workers from different countries. China sent its labour delegates only twice and Siam not even once during the last fifteen years. Similarly our representation on the Government Body and on other permanent committees and in the Secretariat was also inadequate. On account of this weakness the Asiatic countries, naturally, could not exercise their due influence in the work of the International

Labour Organization. We are thus forced to think out some measures to remedy the difficulties which are in our way. So in 1925, when Mr. Bunzi Suzuki represented the workers of Japan and myself the workers of India at that year's Conference, we met together and decided upon holding an Asiatic Labour Conference wherein the representatives of the labour organizations from Asiatic countries should meet together to discuss questions of common interests. At the 1922 Conference I had attempted without success to get a resolution passed by the Conferences asking the organization to study and report on labour conditions in Asiatic countries, but the resolution was passed in 1925. As a result the organization has already published a report on conditions in Japan and a report on conditions in India is in preparation. The proposed conference of the representatives of the trade union movements could not, however, be held on account of various difficulties."

Mr. Joshi referred to the resolution adopted by the International Labour Conference in 1931 (LABOUR GAZETTE, July, 1931, page 803) in favour of holding a special conference of Asiatic countries, and expressed the hope that such a conference might be held as soon as political complications in the Far East should permit (Reference to the proposal that the

I.L.O. should hold "regional conferences" was made by the Director of the I.L.O. in his annual report, which was outlined in the last issue, page 541).

### Resolutions

Resolutions were adopted by the Congress calling for the protection of labour on the lines recommended by the World Economic Conference held at Geneva in 1927 (LABOUR GAZETTE, July, 1927, page 769), and proposing that when industry is "rationalized," working hours be reduced without reduction in rates of wages; that pending the establishment of social ownership and control of industry, together with international co-operation there should be a reduction of working hours, increase of wages, prohibition of child labour, social insurance, etc.; deprecating the overthrow of democracies in many countries; advocating the progressive elimination of imperialistic policies; protesting against the employment of police and military forces in industrial disputes for the purpose of intimidating the workers; proposing direct representation on the I.L.O. of the colonies and dependencies of member states; and assuring the International Federation of Trade Unions of its full co-operation in all matters of common interest.

## REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD APRIL TO JUNE, 1934

EMPLOYMENT conditions, as indicated by the work of the offices of the Employment Service of Canada during the quarter April to June, 1934, were much more favourable than those reported during the corresponding quarter of 1933, as there was an increase of 36 per cent in vacancies offered and of 35 per cent in placements effected in regular and casual employment. All industrial divisions, except farming, transportation communications and finance, showed gains under both comparisons, that in construction and maintenance, where government relief work was provided on highways, being almost entirely responsible for the improvement shown, although gains in placements were also recorded in services and logging: All provinces, except Nova Scotia, New Brunswick and Saskatchewan, registered more vacancies and placements than were recorded in the corresponding quarter last year, the largest increase being shown in Ontario where highway placements were highest. The accompanying table gives the vacancies and placements of the Employment Service of

Canada by industrial groups in the various provinces during the period April to June, 1934.

From the chart on page 771 which accompanies the article on the work of the Employment Offices for the month of June, it will be seen that the trend of the curves of vacancies and placements in relation to applications showed a variation of about 16 points from April to June, following an upward course throughout the quarter, except during the first half of April and the latter half of June, when a downward trend was manifested. Each curve, however, at the close of the period under review was on a considerably higher level than that recorded at the end of June, 1933. During the period April to June, 1934, there was a ratio of 61.1 vacancies and 57.6 placements for each 100 applications for employment, as compared with 57.0 vacancies and 54.1 placements during the corresponding period a year ago.

The average number of positions offered daily during the quarter under review was 1,616, of applications registered 2,646 and of

placements effected 1,524, in contrast with a daily average of 1,204 vacancies, 2,111 applications and 1,142 placements in regular and casual employment during the same quarter of 1933.

During the three months April to June, 1934, the Offices reported that they had made 119,604 references of persons to positions and

had effected a total of 114,277 placements, of which 64,604 were in regular employment and 49,673 in casual work. Of the placements in regular employment 51,941 were of men and 12,663 of women, while casual work was found for 40,401 men and 9,272 women. A comparison with the corresponding period of 1933 shows that 84,458 placements were then

made, of which 42,862 were in regular employment and 41,596 in casual work. Applications for employment during the period under review were received from 159,865 men and 38,536 women, a total of 198,401, in contrast with a registration of 156,168 persons during the same period of 1933. Employers notified the Service during the quarter April to June,

1934, of 121,154 vacancies, of which 93,081 were for men and 28,073 for women, as compared with 89,051 opportunities for work offered during the corresponding period a year ago. In another section of this issue will be found a report in detail of the transactions of the Employment Offices for the month of June, 1934.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

### Great Britain

THE British *Ministry of Labour Gazette*, July, 1934, summarized the employment situation as follows:—

The improvement in employment which has been recorded in recent months continued during June in most of the principal industries, but the general level of recorded unemployment was slightly higher, mainly owing to a seasonal decline in the coal mining industry. The industries showing the most marked improvement during the month were engineering, shipbuilding and ship repairing, iron and steel, tinplate, and electric apparatus manufacture, the brick, tile and glass industries, printing and bookbinding, certain food manufacturing industries, the transport and distributive trades, and hotel and boarding-house service.

In addition to the sharp decline in the coal mining industry, which was reflected in a marked increase between 14th May and 25th June in the number of workpeople temporarily suspended from their employment, there were also reductions in employment in most of the textile industries, the clothing trades, including boot and shoe manufacture, and the motor vehicle and pottery industries.

There was a decline in employment in the Midlands and Northeastern areas and in Wales, but in other areas there was an improvement, which was most marked in Scotland and Southwest England. In London and Southeast England employment was fairly good; in the Southwest and Midlands it was fair; in the North of England, in Scotland and in Northern Ireland it was bad; while in Wales it was very bad.

Among the workpeople, numbering approximately 12,883,000 insured against unemployment in Great Britain and Northern Ireland and working in practically every industry except agriculture and private domestic service, the percentage unemployed at 25th June, 1934 (including those temporarily stopped as well as those wholly unemployed), was 16·5, as compared with 16·3 at 14th May, 1934, and with 19·4 at 26th June, 1933. The percentage wholly unemployed at 25th June, 1934, was 13·0, as compared with 13·6 at 14th May, 1934; while the percentage temporarily stopped was 3·5, as compared with 2·7. For males alone, the percentage at 25th June, 1934, was 19·2 and for females, 9·5; at 14th May, 1934, the corresponding percentages were 19·0 and 9·2.

At 25th June, 1934, the number of persons on the Registers of Employment Exchanges in Great Britain was 1,563,432 wholly unemployed, 447,320 temporarily stopped, and 81,834 normally in casual employment, making a total of 2,092,586. This was 2,205 more than a month before, but 345,522 less than a year before. The total included 1,717,554 men, 44,383 boys, 297,316 women and 33,333 girls.

In Great Britain and Northern Ireland, the total number of persons on the Registers of Employment Exchanges at 25th June, 1934, was 2,149,632.

### United States

*Manufacturing Industries.*—Factory employment decreased 1·7 per cent and payrolls decreased 3·1 per cent from May to June.

The Bureau of Labor Statistics' general index of factory employment for June is 81·0 (preliminary), this being lower than the April and May indexes but higher than the indexes of any other month since December, 1930. The June payroll index (65·0 preliminary) is lower than the March, April, or May indexes but higher than those of any other month since August, 1931. During the preceding 15-year period, 1919-1933, inclusive, for which data are available in this Bureau, only 6 years showed gains in factory employment, from May to June, while only 7 years showed gains in payrolls.

The June, 1934, index of factory employment is 21·1 per cent higher than the June, 1933, index (66·9), and the June, 1934, payroll index is 37·7 per cent higher than the June, 1933, index (47·2). The base used in computing these indexes is the average for the 3-year period, 1923-1925, which is taken as 100. (Prior to March, 1934, the indexes of factory employment and payrolls, published by this Bureau, were not adjusted to conform with the trends shown by biennial Census reports and were based on the 12-month average of 1926 taken as 100. Computed on the old basis, the June employment index stands at 76·4 and the payroll index at 59·7.)

The indexes of factory employment and payrolls are computed from reports made by representative establishments in 90 important manufacturing industries of the country. In June, reports were received from 23,339 establishments employing 3,695,800 wage earners, whose weekly earnings during the pay period ending nearest June 15 totalled \$72,090,082. More than 50 per cent of the wage earners

in all the manufacturing industries of the country were covered in these reports.

Increases in employment in June were shown in 35 of the 90 manufacturing industries surveyed, while gains in payrolls were registered in 36 industries. The most pronounced increase in employment was a seasonal rise of 33.5 per cent in canning and preserving. The plumbers' supplies industry registered a gain of 18.9 per cent, due mainly to greater activity in several large plants. The car building and locomotives industries showed gains in employment of 11.1 and 11.0 per cent, respectively, largely because of orders placed through P.W.A. allotments. The aircraft industry registered a gain of 12.6 per cent due primarily to the settlement of a strike. Seasonal gains of 9 per cent, 8.7 per cent, and 8.2 per cent were reported in ice cream, beet sugar, and beverages, respectively, while tin cans, engines, and butter had increases of 6 per cent, 5.4 per cent, and 5.2 per cent, respectively. In 14 of the remaining 24 industries which showed increases in employment, the gains ranged from 2 to 4.9 per cent. Industries of major importance included in this group are shipbuilding, slaughtering, brick, silk and rayon goods, steam fittings, blast furnaces—steel works—rolling mills, cigars and cigarettes, and structural and ornamental ironwork.

*Non-Manufacturing Industries.*—Increases in employment from May to June were shown in 11 of the 15 non-manufacturing industries surveyed, while gains in payrolls were registered in 9. The most pronounced gains in employment and payrolls (4.4 per cent and 5.5 per cent, respectively) were in quarrying and non-metallic mining, this being the fourth successive month in which gains have been registered in this industry. Employment in the crude petroleum producing industry rose 4.3 per cent and payrolls

increased 1.0 per cent. Laundries reported gains of 2.3 per cent and 2.0 per cent in employment and payrolls, respectively. The power and light industry showed a gain of 1.1 per cent in employment, and the electric railway and motor bus operations reported a gain of 0.9 per cent. Employment in the dyeing and cleaning industry increased 0.7 per cent from May to June and the hotels and metalliferous mining industries reported gains in employment of 0.6 per cent each. The telephone and telegraph industry showed a gain of 0.3 per cent and the banks, brokerage, insurance and real estate group reported a gain of 0.2 per cent. Employment in the bituminous coal mining industry showed practically no change, the gain being less than one-tenth of 1 per cent.

Of the 4 industries showing decreases in employment, the only pronounced change was in the anthracite mining industry, in which employment declined 9.8 per cent from May to June. The corresponding loss in payrolls was 16.8 per cent. Employment in wholesale trade establishments fell off 0.6 per cent over the month interval and payrolls decreased 0.2 per cent. Reports received from 36,851 retail trade establishments showed decreases of 0.7 per cent in employment and 0.3 per cent in payrolls. The group of department stores, together with general merchandise and limited price stores and mail order houses showed a decrease of 1.9 per cent in employment and 1.0 per cent in payrolls. The combined total of the remaining 36,200 retail establishments reporting, showed practically no changes in employment and payrolls from May to June. Employment in the building construction industry declined 0.3 per cent and payrolls decreased 1.2 per cent. These percentages are based on reports supplied by 11,357 building contractors engaged in private building construction and do not include construction projects under P.W.A. Allotments.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts awarded by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government with respect to contracts "for construction, remodelling, repair or demolition of any work" is set forth in an Act of Parliament adopted on May 30, 1930, entitled

"The Fair Wages and Eight-Hour Day Act" (chapter 20-21, Geo. V). The full text of this measure appeared in the *LABOUR GAZETTE*, April, 1930, page 383. The Fair Wages and Eight-Hour Day Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repairs or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the con-

tract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or, except in cases of emergency, as may be approved by the Minister.

The Fair Wages Policy was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by Order in Council of April 9, 1924. The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wages rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of contract.

In addition to the requirements of the Fair Wages and Eight-Hour Day Act, government contracts for the construction, remodelling, repair or demolition of any work, contain a number of other provisions for the protection of the workmen employed, which are sanctioned by the foregoing Orders in Council.

It is further provided in the foregoing Orders in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings; harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees; mail bags, letter boxes, and other postal stores; and any other articles and things hereinafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions, which are referred to in the Orders in Council as "B" conditions (the Conditions of the Fair Wages Orders in Council with reference to building and construction works being designated as "A" conditions), including the following Fair Wages Clause:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract

for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

Both in the case of contracts for building and construction work, and in the "B" conditions sanctioned by Orders in Council applicable to contracts for the manufacture of certain classes of supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates and working hours.

The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and address of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages, rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefore may be filed with the Minister of the Department

with which the contract has been made and payment of such claim may be made by the latter.

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of certain classes of supplies listed in the Fair Wages Orders in Council it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any disputes which may arise.

During the past month statements were received in the Department of Labour showing that the following contracts containing fair wages conditions, have been recently executed by the Government of Canada:—

#### DEPARTMENT OF NATIONAL DEFENCE

##### *Contracts in Group "B" (Manufacture of Supplies, etc.)*

The following is a statement of contracts awarded by the Department of National Defence during the month of July, 1934, for various classes of manufactured goods, which contracts included in all cases the "B" labour conditions above referred to:—

Goods contracted for	Contractor
Reinforcing steel.....	Dominion Reinforcing Steel Co., Ottawa, Ontario.
Flatware.....	McGlashan Clarke Co., Ltd., Niagara Falls, Ont.
Concrete pipes.....	Dominion Concrete Co., Kemptville, Ont.
Kitchen equipment.....	General Steel Wares Ltd., Montreal, P.Q.
Horse rugs.....	Hugh Carson Co., Ltd., Ottawa, Ont.
Sweater jackets.....	Regent Knitting Mills, Montreal, P.Q.
Cement.....	Canada Cement Co., Montreal, P.Q.
Socks.....	Brampton Knitting Mills Ltd., Brampton, Ont.
1 battery.....	Exide Batteries of Canada, Toronto, Ont.
Fire extinguishers.....	The Garth Co., Montreal, P.Q.
Rest shoes.....	The Great West Felt Co., Elmira, Ont.
Cement.....	Canada Cement Co., Montreal, P.Q.
Boilers.....	Campbell Steel & Iron Works, Ltd., Ottawa, Ont.
Brooms.....	American Broom Co., St. Basile, P.Q.
Cement.....	Canada Cement Co., Montreal, P.Q.
Steel sash.....	Eastern Steel Products Ltd., Montreal, P.Q.
Telegraph transmitters.....	Canadian Marconi Co., Ltd., Montreal, P.Q.
Folding tables.....	Dowsell Lees & Co., Hamilton, Ont.
Steel sash.....	Metallic Roofing Co. of Can. Ltd., Toronto, Ont.
Cloth.....	Caldwell Woollen Mills Ltd., Appleton, Ont.
Mackinaw coats.....	Grant-Holden-Graham Ltd., Ottawa, Ont.
Mackinaw coats.....	Canadian Converters Co., Ltd., Montreal, P.Q.
Ankle boots.....	Tebbutt Shoe & Leather Co., Three Rivers, P.Q.
Crockery.....	Sovereign Pottery Ltd., Hamilton, Ont.
Socks.....	Caldwell Woollen Mills Ltd., Appleton, Ont.
Structural steel.....	Dominion Reinforcing Steel Co. Ltd., Montreal, P.Q.
Overall suits.....	Grant-Holden-Graham, Ltd., Ottawa, Ont.
Structural steel.....	Dominion Bridge Co., Ltd., Montreal, P.Q.
Shirts and drawers.....	Penmans Limited, Montreal, P.Q.
Trousers and shirts.....	Schofield Woollen Co., Ltd., Oshawa, Ont.
Trousers and shirts.....	Joseph Simpson Sons, Ltd., Toronto, Ont.
Structural steel.....	Dominion Bridge Co., Ltd., Toronto, Ont.
Winter caps.....	Ottawa Imperial Cap Co., Ottawa, Ont.
Trousers and shirts.....	Galt Knitting Co., Ltd., Galt, Ont.
Trousers and shirts.....	Penmans Limited, Montreal, P.Q.
Shirts and drawers.....	Zimmerkneit Ltd., Hamilton, Ont.
Trousers and shirts.....	Joseph Simpson Sons, Ltd., Toronto, Ont.
Ankle boots.....	Eudore Fournier, Plessisville, P.Q.
Ankle boots.....	A. E. Wry-Standard Ltd., Amherst, N.S.
Ankle boots.....	Tebbutt Shoe & Leather Co., Ltd., Three Rivers, P.Q.
Ankle boots.....	Tetrault Shoe Limited, Montreal, P.Q.
Drill.....	Dominion Textile Co., Ltd., Montreal, P.Q.

## DEPARTMENT OF PUBLIC WORKS

*Contracts in Group "A" (Construction,  
Remodelling, etc.)*

Reconstruction of Clothing, Provisions and General Stores Building at R.C.N. Barracks, Esquimalt, B.C. Name of contractor, Mr. A. Lockley, 1388 Esquimalt Road, Esquimalt, B.C. Date of contract, July, 1934. Amount of contract, \$3,918. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Bricklayers and masons.....	\$1 00	8
Carpenters.....	0 65	8
Cement finishers.....	0 60	8
Concrete mixer operator (gasoline).....	0 50	8
Electricians.....	0 75	8
Electricians' helpers.....	0 40	8
Labourers.....	0 40	8
Lathers—metal.....	0 75	8
Painters.....	0 62½	8
Plasterers.....	0 75	8
Plasterers' helpers.....	0 50	8
Plumbers and steamfitters.....	1 00	8
Plumbers and steamfitters' helpers.....	0 50	8
Roofers—patent.....	0 75	8
Roofers—sheet metal.....	0 87½	8
Sheet metal workers.....	0 87½	8
Sheet metal workers' helpers.....	0 40	8
Teamsters with team and wagon.....	0 85	8
Tilesetters.....	0 93½	8
Driver with horse and cart.....	0 70	8
Truck drivers.....	0 50	8

Construction of a pilework and cribwork wharf at Phinney's Green, Cumberland County, N.S. Name of contractor, Charles J. Walker, Halifax, N.S. Date of contract, June 26, 1934. Amount of contract, approximately, \$4,887.14. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Timberman or cribman (using such tools as broad-axe, saw, adze, hammer, auger).....	\$0 37½	8
Blacksmith.....	0 45	8
Labourers.....	0 30	8
Hoist operator (gas).....	0 45	8
Hoist operator (steam).....	0 55	8
Driver, horse and cart.....	0 45	8
Driver, team and wagon.....	0 55	8

Reconstruction of sections of the west pier and east revetment wall at Port Stanley, Ont. Name of contractors, Messrs. Cameron & Phin, Welland, Ont. Date of contract, July 4, 1934. Amount of contract, approxi-

mately \$8,295. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Blacksmith.....	\$0 55	8
Carpenter.....	0 60	8

Machine Works Ltd., Montreal, P.Q.....	6,209 86

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In each agreement, the rates of wages for the principal classes of labour are given, with other information of general interest.

### QUEBEC COLLECTIVE LABOUR AGREEMENTS

EXTENSION ACT.—The following agreements in the Province of Quebec outlined in previous issues have been approved by Order in Council and made binding on all employers and employees in the trade or industry in the district specified, with modifications in certain instances, and are listed on page 751 of this issue:—

Longshoremen, Montreal, outlined in the LABOUR GAZETTE, April, page 373; Plumbers and Electricians, Quebec, June, page 566; Building Trades, Montreal, July, page 637; Painters, Quebec, July, page 702.

## Manufacturing: Food, Drink and Tobacco

WINNIPEG, MANITOBA.—CERTAIN BAKERY ESTABLISHMENTS IN THE NORTHERN SECTION OF WINNIPEG, MANITOBA, AND THE FOOD WORKERS' INDUSTRIAL UNION.

Agreements signed on the occasion of a strike at one bakery (page 736 of this issue) to be in effect from July 5, 1934.

New bakery employees to be obtained through the shop committee. Only bakeries which are 75 per cent unionized to be considered union shops; other bakeries with a less percentage to be strengthened by the transfer of union members. Only union members to be employed as drivers.

Wages per week: head bakers, \$24, bakers, \$18, benchmen, \$15, helpers, \$12, bread wrappers, \$10 if under 18 years and \$12 if over 18 years; drivers, \$12 per week minimum for those selling below 1,500 loaves of bread a week, with higher rates according to weekly sales up to \$24 per week for drivers selling 3,000 loaves per week and 75 cents for every additional 100 loaves.

Master bakers to assume responsibility for all credit on the route up to an amount agreed upon.

## Manufacturing: Fur, Leather and Leather Products

TORONTO, ONTARIO.—MEMBERS OF THE FURRIERS' COUNCIL, CERTAIN OTHER FIRMS AND THE INTERNATIONAL FUR WORKERS' UNION, LOCALS NOS. 35, 40, 65, 100.

Agreement reached following strikes reported in the LABOUR GAZETTE, July, page 624, and this issue pages 739 and 741.

Agreement to be in effect from various dates in July, 1934, until July, 1936 and thereafter from year to year until notice.

The firm not to enter into any individual agreement with any employee in contravention of this agreement. Only union members or those who will join the union to be employed.

Hours: 44 per week.

Overtime only allowed between July 1 and December 30, and only to 9 p.m. on the first five days of the week and only when all furriers are working, except in cases of emergency. Overtime to be paid at rate of time and one-quarter. Employees to receive pay for the legal holidays, and if they work on these holidays are to receive time and one-quarter in addition.

The collar and cuff manufacturers agree that the union has a right to open negotiations for a 40 hour week and time and one-half for overtime.

Wages: a 20 per cent increase in wages for all workers receiving under \$25 per week and a 10 per cent increase for all workers receiving \$25 and over.

Minimum wage rates per week: cutters \$40 for first class, \$35 second class; operators and finishers—male \$30 first class and \$25 second class; operators and finishers—female \$25 first class and \$20 second class; blockers or nailers, \$23 during first four years, \$28 after four years; assistants and tapers, \$18.

No new helpers or apprentices to be employed during 1934, but in 1935 one to every 13 experienced workers may be employed, such

apprentices to assist the experienced workers but not to replace them.

No contracting or sub-contracting or piece-work to be permitted either inside or outside the factory, except with the union's consent.

The principle of equal division of work to be adhered to, work to be divided by the shop chairman.

The firms agree to pay to an unemployment fund 2 per cent of their weekly payroll which is to be applied for relief of unemployed union members in Toronto and every employed fur worker to contribute 1 per cent of his weekly wage to this fund.

No work to be done for any shop that is on strike.

Any dispute to be adjusted by the business representative of the union. No strike or lock-out to occur while the agreement is in effect, but a joint permanent conciliation committee with an impartial chairman to be appointed.

## Construction: Buildings and Structures

TORONTO, ONTARIO.—GENERAL CONTRACTORS' SECTION OF THE TORONTO BUILDING AND CONSTRUCTION ASSOCIATION AND THE BRICKLAYERS, MASONS AND PLASTERERS INTERNATIONAL UNION, LOCALS No. 2 (BRICKLAYERS) AND No. 26 (STONEMASONS).

Agreement to be in effect from July 6, 1934 to March 1, 1935, and thereafter from year to year until notice. When notice is given, the joint arbitration committee to meet and negotiate a new agreement.

Only union members to be employed and the union to give preference to the contractors association in supplying men.

Hours: 40 per week. No work on Saturday except if required for pouring concrete when straight time to be paid Saturday morning and time and one-half Saturday afternoon and evening. When three shifts are worked, and when the overtime shifts equal two-thirds of the regular shift, 8 hours pay for 7 hours work.

Overtime rates to be mutually agreed upon. Work on Sundays and holidays, double time.

Wages per hour for bricklayers and stone masons: 90 cents per hour (the same rate as paid in 1933). No member of the contractors association to pay any employee less for this class of work, nor will any union member work for any employer for less.

Wages and conditions for apprentices to be as stipulated by the Ontario Apprenticeship Board.

A joint arbitration committee to be formed and no stoppage of work to occur until a dispute has been referred to this committee for adjustment.

## Service: Hotel and Restaurant

TORONTO, ONTARIO.—CERTAIN RESTAURANTS AND THE HOTEL AND RESTAURANT EMPLOYEES AND BEVERAGE DISPENSERS INTERNATIONAL ALLIANCE, LOCAL No. 168.

Agreement to be in effect from July, 1934 to July 1, 1935.

All employees to be union members.

Hours: 60 per week, with one day off in seven. Minimum wages per week: waiters, \$10; countermen, \$12; cooks, \$15; cooks' helpers, \$10; dishwashers, \$8. All female employees to receive wages in accordance with the minimum wage act. Extra workers: cooks, \$4 per day; waiters and waitresses, \$2.50 per day.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, JULY, 1934

### Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slight, the weekly family budget in terms of retail prices being slightly higher owing mainly to the somewhat higher cost of foods, while the Dominion Bureau of Statistics index number of wholesale prices was fractionally lower.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was \$7.43 at the beginning of July as compared with \$7.38 for June; \$6.95 for July, 1933; \$10.91 for July, 1930; \$11.07 for July, 1926; \$10.96 for July, 1921; \$16.92 for June, 1920 (the post war peak); and \$7.42 for July, 1914. The prices of eggs, pork, bacon, flour and sirloin steak were higher while the prices of potatoes, mutton, lard and sugar were lower. Including the cost of fuel and rent with that of foods the total budget averaged \$15.84 at the beginning of July as compared with \$15.78 for June; \$15.48 for July, 1933; \$21.26 for July, 1930; \$21.30 for July, 1926; \$21.53 for July, 1921; \$26.92 for July, 1920 (the post war peak); and \$14.17 for July, 1914. Fuel was slightly higher due to advances in the price of anthracite coal in several cities. Rent was unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based on prices in 1926 as 100 was 72.0 for July as compared with 72.1 for June; 70.5 for July, 1933; 97.2 for July, 1929; 100.1 for July, 1926; 104.8 for July, 1921; 164.3 for May, 1920 (the post war peak); and 64.4 for July, 1914. One hundred and twenty-three prices quotations were higher, seventy-four were lower and three hundred and seventy were unchanged.

In the grouping according to chief component materials two of the eight main groups advanced while six were lower. The groups which declined were: the Animals and their Products group because of lower prices for hides, livestock, fresh meats, butter and cheese which more than offset advances in the prices of fresh fish, cured meats and eggs; the Fibres, Textiles and Textile Products group, because of lower prices for raw silk and raw wool, worsted cloth yarns and woollen cloth; the Wood, Wood Products and Paper group, due chiefly to reductions in the prices of some lines of lumber; the Iron and its Products group, due mainly to lower prices for scrap iron and steel; the Non-Ferrous Metals and their Products group, due to lower quotations

for copper, lead and zinc; and the Chemicals and Allied Products group, due to declines in the prices of copper sulphate, alum and fertilizers. The Vegetable and Vegetable Products group was higher, mainly because of advances in the prices of grains and milled products. The Non-Metallic Minerals and their Products group was also slightly higher owing chiefly to increased quotations for anthracite coal, crushed stone and asbestos pipe covering.

In the grouping according to purpose consumers' goods declined, due mainly to lower prices for foods chiefly fish, fruits, milk and milk products, and vegetables, while producers' goods advanced slightly due to higher prices for materials for the milling and other industries. In the latter group materials for the textile and clothing industries, for the fur and leather goods industries, for the metal working industries, for the chemical using industries and for the meat packing industries were lower.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of July of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located but still fairly central, without modern conveniences.

The figures as to rental are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amounts due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received,

(Continued on page 796)

**COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA**

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family

\*Prior to 1926 number of commodities was 236 and commencing in January, 1934, the number is 567.

(Continued from page 788)

includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which statistics were available when first published in the LABOUR GAZETTE in January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

## Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number for rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926, weighted according to the importance of each item in workingmen's family expenditure, and have been brought down to date each

month from data compiled by the Dominion Bureau of Statistics.

### Retail Prices

The movement in beef prices was slight, the better cuts being somewhat higher in the average and the cheaper cuts lower. Sirloin steak was up from 22·3 cents per pound in June to 22·7 cents in July, round steak from 18·2 cents per pound to 18·5 cents, while shoulder roast was down from 12·4 cents per pound to 12·2 cents. Mutton prices were considerably lower in many localities, the average being down from 21·6 cents per pound in June to 20·5 cents in July. Pork prices were again higher, fresh being up from an average of 20 cents per pound in June to 20·9 cents in July and salt from 18·3 cents per pound to 18·7 cents. The price of boiled ham was 48·1 cents per pound as compared with 46·3 cents in June and 38·4 cents at the beginning of the year. Lard was down from an average of 12·9 cents per pound in June to 12·6 cents in July.

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18%; Clothing, 18%; Sundries, 20%.

The price of eggs was seasonally higher in most localities, fresh advancing from 22·3 cents per dozen in June to 24·9 cents in July and cooking from 18·6 cents per dozen in June to 21·1 cents in July. Milk was fractionally lower at an average price of 9·7 cents per quart. Butter prices were little changed as compared with the preceding month, creamery averaging 25·2 cents per pound. The price in July last year was 23·8 cents per pound.

The price of bread was unchanged at an average of 5·8 cents per pound, while flour was fractionally higher at 3·2 cents per pound. Onions advanced in the average from 5·4 cents per pound in June to 6·3 cents in July. Prices were lower in the maritime provinces but higher in other localities. Potatoes declined from \$1.20 per ninety pounds in June to \$1.13 in July. The price in July, 1933, was \$1.16. Sugar was again slightly lower in most localities, granulated being down from 7 cents per pound in June to 6·8 cents in July and yellow from 6·8 cents per pound to 6·6 cents. The price of anthracite coal averaged \$14.82 per ton in July as compared with \$14.77 the previous month. Increases were reported from St. Hyacinthe, Brockville, Peterborough, Orillia, Toronto, Brantford and Galt. No changes were reported in rent.

Following are the prices reported for Welsh coal, domestic sizes; Halifax, \$15; Moncton, \$16; Quebec, \$14.50; Three Rivers, \$15; Sherbrooke, \$16.25; St. Hyacinthe, \$15.50; Montreal, \$15.50; Ottawa, \$16.50; Kingston, \$15.50; Belleville, \$16.50; Peterborough, \$17; Oshawa, \$14.75; Toronto, \$15; Hamilton, \$15; St. Catharines, \$15.50; Galt, \$16; Sudbury, \$17; Cobalt, \$17.75; Timmins, \$19; Port Arthur, \$16.50; Fort William, \$16; Winnipeg, \$19.50.

### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices for the most part were higher. No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, was up from an average price of 77·1 cents per bushel in June to 82 cents in July. The high price during July was 86 cents per bushel about the end of the month and the low 75½ cents per bushel at the beginning. The likelihood of lower production in nearly all leading producing countries than had been earlier estimated was mentioned as a factor in the advance. In coarse grains western oats advanced from 37·8 cents per bushel to 38·8 cents, rye from 53·4 cents per bushel to 57·9

cents and barley from 43·6 cents per bushel to 45·9 cents. In milled products flour at Montreal was 10 cents per barrel higher at \$5·80 and rolled oats at Toronto advanced from \$2·90 per ninety pound bag to \$3·05. Ceylon rubber at New York was 1 cent per pound higher in July at 14·4 cents per pound. Live stock prices were generally lower in July as compared with June, good steers at Toronto being down from \$5·57 per hundred pounds to \$5·38 and at Winnipeg from \$4·70 per hundred pounds to \$4·15. Calves at Toronto declined from \$5·56 per hundred pounds to \$4·82. Bacon hogs were little changed at Montreal and Toronto but were slightly lower at Winnipeg at \$8·27 per hundred pounds. Lambs at Montreal declined from \$8·60 per hundred pounds to \$6·87, at Toronto from \$8·88 per hundred pounds to \$7·54 and at Winnipeg from \$7·35 per hundred pounds to \$5·55. Creamery butter at Montreal was down from 22·9 cents per pound in June to 20·9 cents

in July and at Toronto from 23·7 cents per pound to 21·6 cents. Stocks in cold storage were considerably higher at the beginning of July both as compared with a year ago and as compared with the beginning of the previous month. Fresh eggs at Montreal advanced from 23·9 cents per dozen to 25·3 cents and at Vancouver from 22·5 cents per dozen to 28·1 cents. Stocks in cold storage at the beginning of the month were about 31 per cent greater than at the beginning of June. Raw cotton at New York was slightly higher averaging 12·7 cents per pound in July as compared with 12·1 cents in June, while raw silk was slightly lower at \$1·41 per pound as compared with \$1·47 the previous month. Raw wool was 1 cent per pound lower at 16·5 cents per pound. Spruce scantling declined from \$15 per thousand board feet to \$12·50, while a grade of fir lumber was \$1 per thousand board feet lower at \$25.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes afford information as to significant changes in prices in Great Britain and certain other countries. The authorities for the wholesale prices index numbers are named in all cases. The latest table showing cost of living and wholesale prices index numbers for various countries appeared in the LABOUR GAZETTE for July.

### Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1924=100, was 62·4 for June, an advance of 1·2 per cent for the month. Food prices were 3·7 per cent higher than for May, while industrial materials were 0·1 per cent lower.

The *Statist* index number, on the base 1867-1877=100, was 80·7 at the end of June, a decline of 0·5 per cent for the month. Foods on the whole were unchanged, an advance in vegetable food being offset by declines in animal food and the sugar, coffee and tea group. Industrial materials were 1·1 per cent lower, showing declines in all of the three sub-groups.

COST OF LIVING.—The British Ministry of Labour index number on the base July 1914=100, was 141 at the beginning of July, an increase of 2·2 per cent for the month due entirely to an advance of 4·3 per cent in food prices.

### France

WHOLESALE PRICES.—The General Statistical Office index number, on the base 1914=100 (gold index) was 74 for June, a decrease of

2·6 per cent for the month. The decline was general, extending to all groups and to imported as well as to national products.

### Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 97·2 for June, an advance of 1 per cent for the month. Agricultural products advanced 2·4 per cent, colonial products 2·2 per cent, industrial raw materials and semi-manufactured goods 1·3 per cent, while manufactured goods were unchanged. The most notable change was an advance of 11·7 per cent in rubber prices as compared with the May level.

COST OF LIVING.—The official index number, on the base 1913-1914=100, was 121·5 for June, an advance of 1 per cent for the month, due chiefly to an increase of 1·9 per cent in food and to slight increases in the clothing and sundries groups. On the other hand, the heat and light group declined slightly.

### Italy

WHOLESALE PRICES.—The index number of the Provincial Economic Council for Milan, on the base 1913=100, was 275·24 for April, a decrease of ·06 per cent from the March level. Decreases in textiles, chemicals products and miscellaneous industrial materials were partly offset by advances in food, vegetable products and the minerals and metals group.

### United States

**WHOLESALE PRICES.**—The Bureau of Labour Statistics index number, on the base 1926 = 100, was 74.6 for June, an advance of 1.2 per cent for the month, and is the highest point reached since April 1931. Compared with the previous month's level, the record for June shows an advance of 3.5 per cent in raw materials, and of 0.5 per cent in manufactured goods, while semi-manufactured goods were 1 per cent lower.

The *Annalist* index number, on the base 1913 = 100, was 114.4 for July, an advance

of 0.1 per cent for the month due to increases in farm products, textile products and fuels, partly offset by declines in food products, metals, building materials, chemicals and miscellaneous commodities.

**COST OF LIVING.**—The index number of the Department of Labour and Industries, Massachusetts, of the cost of living in Massachusetts, on the base 1913 = 100, was 131.9 for June, a slight increase over the May level and showing an advance of 9 per cent over the June 1933 figure.

## FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1934

**T**HE number of fatal industrial accidents (including fatalities from industrial diseases reported with fatal accidents by workmen's compensation boards, etc., as well as fatalities to persons incidental to the pursuit of their occupation) which were recorded in the Department as occurring during the second quarter of 1934 was 224, there being 54 in April, 100 in May and 70 in June.

The report for the first quarter of 1934 showing 193 fatalities, was given in the *LABOUR GAZETTE*, May, 1934, page 484. In the second quarter of 1933, 180 fatal accidents were recorded (*LABOUR GAZETTE*, August, 1933, page 866). The supplementary lists of fatal industrial accidents, not reported in time for inclusion in the reports covering the periods in which they occurred, contain 8 fatalities for the first quarter of 1934, and 2 fatalities for 1933.

In this series of reports it is the custom to record industrial accidents under the dates of their occurrence and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the Provincial Workmen's Compensation Boards, from the Board of Railway Commissioners of Canada, from certain other official sources and from the correspondents of the *LABOUR GAZETTE*. Information as to accidents is also secured from newspapers.

Classified by groups of industries, the fatalities occurring during the second quarter of 1934 were as follows: agriculture, 36; logging, 33; fishing and trapping, 13; mining, non-ferrous smelting and quarrying, 28; manufacturing, 24; construction, 22; electric light and power, 3; transportation and public utilities, 28; trade, 13; service, 24.

Of the mining accidents, 11 were in "metaliferous mining," 15 in "coal mining," and 2

in "non-metallic mineral mining and quarrying, n.e.s."

Of the accidents in manufacturing, 1 was in "vegetable foods, drink and tobacco," 1 in "animal foods," 4 in "leather, fur and products," 1 in "rubber products," 6 in "saw and planing mill products," 1 in "wood products," 2 in "pulp, paper and paper products," 4 in "iron, steel and products," and 4 in "non-metallic mineral products."

In construction there were 8 fatalities in "buildings and structures," 2 in "shipbuilding," and 12 in "highway and bridge."

In transportation and public utilities, there were 14 fatalities in "steam railways," 7 in "water transportation," 1 in "air transportation," 5 in "local transportation," and 1 in "storage."

In trade there were 3 fatalities in "wholesale," and 10 in "retail."

Of the fatalities in service, 12 were in "public administration," 4 in "custom and repair," 6 in "personal, domestic and business," and 2 in "professional establishments."

Accidents involving the loss of two or more lives were as follows:—

On April 16, two trappers were carried over falls and drowned when their motor launch stalled near New Hamburg, Ontario.

Two lobster fishermen were drowned when their boat capsized about May 1 at Port Felix, Nova Scotia. Two deep sea fishermen were drowned when their dory capsized off Lunenburg, Nova Scotia, on June 19; and another two fishermen were drowned from their punt off Queensland, Nova Scotia on June 27.

On June 18 three coal miners were killed by a rockslide which followed an explosion at Macmine, Alberta.

An Indian Department Constable and a provincial constable were murdered near

Merriitt, B.C., about May 23, while investigating a stabbing on an Indian Reserve.

On April 26 a garage salesman and mechanic were killed in a motor accident at Innisfail, Alberta.

### Supplementary Lists of Accidents

A supplementary list of accidents occurring during the first quarter of 1934 has been compiled which contains 8 fatalities, of which 1

was in logging, 1 in mining, non-ferrous smelting and quarrying, 1 in manufacturing, 4 in transportation and public utilities, and 1 in service. Two of these accidents occurred in January, 1 in February and 5 in March.

A further supplementary list of accidents occurring in 1933 has been made. This includes 2 fatalities of which 1 was in logging and 1 in fishing and trapping. Both of these accidents occurred in December.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Interpretation of Amendment to Builders' and Workmen's Act of Manitoba

An amendment of 1932 to the Builders' and Workmen's Act of Manitoba (LABOUR GAZETTE, June, 1932, page 659) provided as follows:—

"All sums received by a builder or contractor or a sub-contractor on account of the contract price shall be and constitute a trust fund in the hands of such builder or contractor, or of such sub-contractor, as the case may be, for the benefit of the proprietor, builder or contractor, sub-contractors, Workmen's Compensation Board, workmen and persons who have supplied material on account of the contract, and the builder or contractor or the sub-contractor, as the case may be, shall be the trustee of all such sums so received by him, and until all workmen and all persons who have supplied material on the contract and all sub-contractors are paid for work done or material supplied

on the contract and the Workmen's Compensation Board is paid any assessment with respect thereto, may not appropriate or convert any part thereof to his own or to any use not authorized by the trust."

An action was taken in the County Court of St. Boniface, a garnishee summons being issued against one P. Rudyk. Rudyk was said to be indebted to the contractors for this work (the defendants in this case) for \$1,325, being the balance due them for the erection of a mausoleum in a cemetery at Winnipeg. The defendants moved before Judge Roy for an order that the money or debt owing by Rudyk be discharged from the claim of the primary creditor, and for a declaration that such money or debt is a trust fund (under the above section) for the benefit of the workmen and persons who supplied ma-

terial for the building of the mausoleum. Judge Roy dismissed the application and the defendants appealed to the Manitoba Court of Appeal, which affirmed Judge Roy's order.

Chief Justice Prendergast, in the course of his judgment, said:—

"I think that the matter may be sufficiently and fully disposed of by pointing out, as the learned Judge has done, that it is the contractor that is there made a trustee and that the fund of which he is thus made a trustee is the contract price when 'received' by him. It would, of course, be most unreasonable and oppressive, as well as contrary to the usual notions of a trust, to make the contractor a trustee of the contract price before he has received it, and no less unreasonable and oppressive to make the owner a trustee of the contract price for the bare reason that he owed it. On the face of it, the amendment does not apply and I do not see that there is anything that we can do by which the respondents could avail themselves of it in any way. The case thus stands as it did before the amendment, when neither the contractor nor the men had any recourse in like circumstances. The legislature might, if it had thought proper, have declared the contractors' and the men's claims to be a first charge on the contract price still owing by the owner, but it did not do so, and the Builders' and Workmen's Act is not presently more favourable or unfavourable to the defendants than it was before 1932.

"The garnishee is then in the same position as any other garnishee as to which a motion to set aside on a particular ground has been dismissed, and I would make no other order than one dismissing the appeal. An order that the owner pay the contract price into Court would not benefit the defendants or the men. It would undoubtedly still be subject to the rival claims of the defendants and garnishing plaintiff, and that is what has already been adjudicated upon by the learned Judge and what we are now passing upon.

"The defendants' contention has been settled adversely to them, and if the labour and material men claim to have a status in the present action and other grounds for having the garnishee dismissed, they have the County Courts Act that they can avail themselves of without any order of this Court. Nor is such an order required to have the garnished money paid into Court, which is for the learned Judge to attend to. Moreover, the owner has not so far appeared in these proceedings and he should first be heard. The order of the Court should be that the appeal is dismissed with costs."

Mr. Justice Trueman and Mr. Justice Richards concurred with the Chief Justice, Mr. Justice Dennistoun and Mr. Justice Robson dissenting.

*Castelein versus Boux* (Manitoba), 1934, *Dominion Law Reports*, vol. 3, page 351.

#### **Court will not interfere with agreement for personal service**

The question arose as to the right of the Canadian National Railways to move certain locomotive engineers from outside districts to what is called Territory C, that is, the Stellarton district in Nova Scotia, in which certain engineers (the plaintiffs in this case) were employed as locomotive engineers. The latter sought, and were granted, an injunction, pending trial, restraining the Railways from action, and also "from putting into force or acting upon any rule, regulation or order providing that assignments in passenger and freight services between Halifax and Mulgrave and between Truro and Mulgrave shall be divided on a 50-50 basis between the locomotive engineers from Territory C and Territory D of the said railway; and from putting into force (in so far as they affect the plaintiffs) the provisions of certain agreements made the 15th and 21st days of September A.D. 1933 between the Canadian National Railways and the Brotherhood of Locomotive Engineers."

The Railways applied to the judge for an order to have the injunction dissolved, and this was granted, the matter being referred to the Court. The plaintiffs then asked for an injunction in the terms of the order previously granted, but only to be effective until the trial of the action.

Mr. Justice Ross, in refusing the latter application, said: "I felt at the conclusion of the argument that the application should be refused and I see no reason for changing my opinion. In the first place, I do not think it has been shown that this is a case where the parties could not be fully and amply compensated in damages. It is not a case where there will be irreparable damage, and on that ground alone the application should fail. The further objection is taken, which I think fatal, that the agreements in question are for personal services and that the Courts will not in such cases grant injunctions. There may be exceptions but this case does not fall within them. There are other objections urged by defendants which I do not think it necessary now to discuss.

"I have said nothing as to the merits of the case or whether the plaintiffs have in any event made out a *prima facie* case as would

be necessary in order to entitle them to the order for which they are applying. I think, however, it is only proper to say that, in my opinion at least, s. 34 (c) at page 113 of the constitution of the Brotherhood has no application to the agreements under review in this case, nor has it been established that there was an implied term in the plaintiffs' contract of employment that they should be promoted according to any scheme or system of seniority.

"As to the rights of the plaintiffs, members of the Brotherhood in the agreements in question, see *Young v. C.N.R.* (LABOUR GAZETTE, December, 1930, page 1472).

"The application for an injunction will be refused."

### International Survey of Legal Decisions on Labour Law

The eighth issue of the *International Survey of Legal Decisions on Labour Law, 1932*, published at Geneva by the International Labour Office, has been received recently. As in previous years the survey contains a variety of typical court cases touching nearly every phase of labour law in England, France, Germany, Italy and the United States. "From 1920 onwards," it is stated, "the International Labour Office has published in its Legislative Series the labour legislation adopted in the different countries. But mere knowledge of the clauses of a law gives no adequate idea of its actual effects, and the wish has repeatedly been expressed that information might also be published concerning the application of these laws by the competent authorities, and particularly by the Courts which deal with industrial matters. To meet this wish the International Labour Office has, since 1926, supplemented the Legislative Series by an International Survey of Legal Decisions on Labour Law". The legal decisions in various countries are arranged under the following general headings:

General principles of labour law, including contracts, scope of labour law, with regard to

persons, employers' liability (for accidents and occupational diseases) etc.

Occupational organization, including trade associations (legal status, protection of the right to organize, etc.), collective agreements, collective labour and economic disputes, arbitration and conciliation procedure.

Organization of industrial undertakings, including works councils, etc.

Conditions of employment and protection of the individual worker, including rights and obligations arising out of the contract of employment, etc.

Conditions of employment of special groups of workers, including apprentices and salaried employees, etc.

Wages and salaries, including minimum wage and protection of the wage claim, etc.

Hours of work, including the eight hour day, weekly rest, holidays with pay, overtime.

Social welfare and insurance including employment exchanges, unemployment relief, unemployment insurance, workmen's compensation, sickness insurance, invalidity and old age insurance, insurance in case of accidents in agriculture and to dockers, etc.

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**I**NDUSTRIAL employment in Canada at the beginning of August showed a moderate contraction, according to statements tabulated by the Dominion Bureau of Statistics from 8,769 firms in all lines of industry except agriculture, fishing, hunting and highly specialized business. They employed 931,429 workers, compared with 941,941 on July 1. This decrease of 10,512 workers is the second interruption in the series of advances characterizing the industrial situation since the beginning of 1934, the first reduction having been indicated on April 1, when it was of a seasonal nature. The level of employment continues considerably higher than at the opening of the year, and also than in any month of either 1933 or 1932; the index, at 99.9 on August 1, was 12.8 per cent above that of 88.6 indicated on January 1, and showed substantial improvement in comparison with the August 1, 1933, and 1932 index numbers of 87.1 and 86.3, respectively. The index (based on the average in the calendar year 1926 as 100) stood at 99.9 on August 1, 1934, compared with 101.1 in the preceding month, and with 87.1 on the same date in 1933. On August 1 of the twelve preceding years, the index was as follows: 1932, 86.3; 1931, 105.2; 1930, 118.8; 1929, 127.8; 1928, 119.3; 1927, 110.5; 1926, 105.5; 1925, 97.5; 1924, 95.8; 1923, 101.4; 1922, 94.2 and 1921, 90.0.

At the beginning of August, 1934, the unemployment percentage reported to the Department of Labour by local trade unions was 17.9, as compared with percentages of 18.0 at the beginning of July, 1934, and 21.2 at the beginning of August, 1933. The August percentage was based on the reports furnished by 1,701 labour organizations, embracing a total of 156,357 members.

Reports received by the Department of Labour from the offices of the Employment Service of Canada showed a decline in the volume of business transacted in July, 1934, as compared with that of the preceding month, but a gain over that of July, 1933, this com-

putation being based upon the average number of placements recorded daily at the offices of the Employment Service throughout Canada, while construction and maintenance was the group showing the greatest change under each comparison. During July, 1934, there were listed 35,621 vacancies, 59,727 applications, and 34,046 placements in regular and casual employment.

In retail prices the cost per week of a family budget of staple foods, fuel and lighting, and rent at the beginning of August was \$15.92 as compared with \$15.84 for July; \$15.96 for August, 1933; \$21.90 for August, 1929; \$21.32 for August, 1926; \$21.98 for August, 1921; \$26.92 for July, 1920 (the post war peak); and \$14.41 for August, 1914. The slight advance in August of this year as compared with July was due to the somewhat higher cost of foods. In wholesale prices the index number calculated by the Dominion Bureau of Statistics was slightly higher at 72.3 for August as compared with 72.0 for July. Comparative figures for certain previous dates are 69.4 for August, 1933; 98.4 for August, 1929; 99.1 for August, 1926; 106.0 for August, 1921; 164.3 for May, 1920 (the post war peak); and 66.1 for August, 1914.

In a table on page 804 are given the most recent statistics available reflecting industrial conditions in Canada. The index of the physical volume of business in July, was practically unchanged from the level of the preceding month but was about 14 per cent higher than in July, 1933. Of the chief factors included in the index those indicating mineral production, electric power output, trade employment, carloadings, imports and exports were somewhat lower in July than in June after correction where necessary for seasonal variation, while manufacturing and construction were higher. All these factors except construction were at a substantially higher level than in July last year. Information available for August shows the wholesale prices index at a higher level than in the previous month, while employment was slightly lower, both however were higher than

## MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official statistics except where noted)

	1934			1933

(1) Calculated from yields of Ontario bonds.

(2) For group figures see articles elsewhere in this issue.

(4) Figures for end of previous month.

(5) Figures for four weeks ending September 1, 1934, and corresponding previous periods.

(6) Sugar production given in periods of four weeks ending August 11, July 14, and June 16, 1934; August 12, July 15, and June 17, 1933.

(7) MacLean's Building Review.

in August last year. Carloadings and contracts awarded also showed substantial improvement both as compared with the previous month and with August, 1933.

The figures for strikes and lockouts in Canada during August, 1934, show an appreciable decrease in the number of disputes but a slight increase in the number of workers involved and a substantial increase in time loss owing to the existence of two strikes of men's and women's clothing factory workers in Montreal, P.Q., which involved large numbers of employees. The number of disputes recorded was 29, involving 11,740 workers and resulting in a time loss of 84,682 man working days, as compared with 33 disputes in July, involving 11,073 workers and 65,064 days' time loss. Fourteen disputes were carried over from July and fifteen commenced during August. Twenty out of the twenty-nine disputes were terminated during the month, eight resulting in favour of the employers, four in favour of the workers, while eight ended in compromises or were partially successful. The disputes unterminated at the end of August numbered nine and involved approximately 4,500 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or definitely terminated by the unions involved. In August, 1933, there were on record twenty-one disputes, involving 2,603 workers and resulting in a time loss of 17,285 man working days.

#### **Canadian Delegation at League of Nations Conference**

The official delegation representing Canada at the present assembly of the League of Nations at Geneva comprises Rt. Hon. R. B. Bennett, Prime Minister; Dr. O. D. Skelton, Under Secretary of State for External Affairs; Jean Desy, Counsellor of the Canadian Legation at Paris; and Dr. W. A. Riddell, permanent Canadian Adviser at Geneva. In addition there are several technical advisers with the Canadian party.

#### **Commemoration of Tolpuddle Martyrs in Canada and England**

Following the convention of the Trades and Labour Congress of Canada which was held in Toronto from September 10-15, the London Trades and Labour Council completed arrangements to commemorate the one hundredth anniversary of the sentence of transportation to Australia imposed on six farm labourers of the village of Tolpuddle in Dorsetshire, England, for their part in forming an agri-

cultural labourers' union to obtain higher wages. (The historic case of the Tolpuddle Martyrs was outlined in the *LABOUR GAZETTE* for December, 1933, page 1184.) The emigration of five of the Martyrs to Canada in 1844, after their pardon and return to England, and their settlement in Ontario near the present city of London gives Canada an interest in this significant episode in the history of the British labour movement.

Prior to its convention from September 3-8, the Trades Union Congress of Great Britain devoted four days to the commemoration in Dorchester of the heroic stand taken by these six trade unionists of rural England.

In London, addresses were given by the Honourable Arthur Roebuck, Minister of Labour and Attorney-General of Ontario, and Mr. Tom Moore, President, of the Trades and Labour Congress, at a luncheon at the University of Western Ontario. Later, a visit was made to the grave of George Loveless, leader of the Tolpuddle Martyrs, who, with his wife, is buried in the cemetery at Siloam, near London. Mr. J. Marchbank, President of the National Union of Railwaymen of Great Britain and fraternal delegate from the Trades Union Congress, scattered loam brought from Tolpuddle on the grave at Siloam. Reverend F. S. Maine, of the University of Western Ontario, conducted a memorial service.

#### **Industrial agreements in Great Britain**

The British Ministry of Labour has issued a report on Collective Agreements, between Employers and Workpeople in Great Britain and Northern Ireland, Vol. 1, covering three groups of industries: Mining and Quarrying; Engineering, Shipbuilding, Iron and Steel and Other Metal Industries; Building, Woodworking and Allied Industries. This report is issued in response to representations that information as to what may be regarded as agreed industrial by-laws should be made available to the public, and particularly in accordance with a recommendation of the Committee on Industry and Trade that the previous report on the subject issued in 1910 should be brought up to date and republished.

It is also stated that in view of recent proposals that legislation should be introduced to render the provision of collective agreements legally enforceable on all persons engaged in the various industries whether parties to such agreements or not, it was desirable to make available information as to the agreements in operation, their nature, scope, etc.

The Cotton Manufacturing Industry (Temporary Provisions) Act, 1934, made binding

on all employers and employees in the cotton industry (weaving section) the wage provisions of any agreements entered into by the "employers controlling the majority of looms." This emergency measure remains in effect until December 31, 1937.

In a prefatory note it is stated that "Collective bargaining between employers and workpeople has, for many years, been recognized in this country as the method, best adapted to the needs of industry and to the demands of the national character, for the settlement of the conditions of employment of the workpeople in industry. Although collective bargaining has thus become established as an integral part of the industrial system, it has discharged its important function, on the whole, so smoothly and efficiently and withal so unobtrusively, that the extent of its influence is apt to be, if not altogether overlooked, at least underestimated. It has produced a highly co-ordinated system of agreed working arrangements, affecting in the aggregate large numbers of workpeople and defining, often with great precision, almost every aspect of industrial relations."

The report presents an analysis of the chief provisions of each of the important agreements showing the methods of wage payment, regulation of hours of work, including overtime, the procedure for effecting changes in wage rates, the machinery of conciliation, etc.; supplemented by such references to the history and development of the agreements as are necessary to make the present position clear. The agreements include those between organizations of employers and of workmen, national district or local, and also schedules agreed upon by joint industrial councils, joint conciliation boards, arbitration boards, and, in addition, orders under the Trade Board Acts. These last are the result of action by bodies consisting of representatives of employers and employees and the public. "Shop" agreements between a particular employer and the whole of his employees or one or more classes are also dealt with to some extent.

Information as to new agreements and as to renewals of or amendments to existing agreements is given each month in the *British Ministry of Labour Gazette*.

As this edition of the **Convention of Trades and Labour Congress** goes to press, the fiftieth annual convention of Trades and Labour Congress of Canada was being held at Toronto. A complete review of the convention, including the various addresses given, the reports presented, and the

resolutions adopted will appear in the next issue of this publication.

### **Labour Day messages of Canadian labour leaders**

The general tenor of the Labour Day messages of Canadian labour leaders emphasized their insistence on reconstruction of the economic system coupled with active labour organization. In this respect, Mr. Tom Moore, president of the Trades and Labour Congress of Canada, declared:

"The rebuilding of our economic life on a sounder basis is no light task, but is one that brooks of no delay. The extent to which this will restore a measure of happiness and contentment in the homes of the victims of unemployment will depend largely upon the influence that labour can exercise in the shaping of the country's future policies. On every hand there are clear indications that wage earners realize this responsibility, and that the sure road to success is by organization."

Mr. A. R. Mosher, president of the All-Canadian Congress of Labour, after urging a reduction of working hours and an increase of wages to spread available work and provide purchasing power for the goods produced, said in part:

"The workers of Canada are becoming more and more conscious of the absurdity of privation in the midst of plenty. Through their unions they are endeavouring not only to protect their right to a decent living, but also to attain some method by which work, product and leisure may be equitably shared, and the curse of poverty be lifted forever from the masses of mankind."

Mr. P. M. Draper, secretary-treasurer of the Trades and Labour Congress, expressed himself on this point as follows:

"The lesson to be learned is that governmental regulation of industrial conditions, brought about through a public opinion which the workers themselves help to shape, is sound in its proper sphere but it is not a substitute in any sense for the properly directed activities of workers' organizations."

### **Canadian bank's analysis of unemployment insurance**

Under the heading "Risks of Unemployment in Canada and the Cost of Unemployment Insurance," the Bank of Nova Scotia in its Monthly Review for August discusses various phases of this economic problem.

The subject is analyzed under four sections, viz: (a) "changes that unemployment insurance would bring about in the Canadian labour market"; (b) "the percentage of un-

employment to be anticipated in Canada, and the necessary financial provision therefor"; (c) "methods of keeping to the minimum the numbers of unemployed"; (d) "the necessary limits upon insurance benefit."

### Re-organization of Ontario Department of Labour

Re-organization of the Ontario Department of Labour was recently announced by Hon. A. W. Roebuck, Minister of Labour and Attorney-General. The new alignment of the Department results in the appointment of Mr. J. F. Marsh, formerly organizer of the United Brotherhood of Carpenters and Joiners, to the post of Deputy Minister. He replaces Mr. A. W. Crawford, former Deputy Minister, who now becomes chairman of the Minimum Wage Board, a position formerly occupied by Mr. R. A. Stapells. The retirement of Mr. H. G. Foster, another member of the Board, was also announced as being effective from September 15.

### Industrial codes for Ontario

The establishment of industrial codes in Ontario was forecast in a recent announcement by Hon. W. A. Roebuck, Minister of Labour and Attorney-General in the Ontario Government. Speaking to trade unionists at the Canadian National Exhibition, the Hon. Mr. Roebuck amplified his previous announcements respecting the establishing of standards in industry and a new minimum wage law by stating that his objective was an inter-provincial conference in an effort to agree on Dominion-wide standardization of labour laws with every province participating in the formulation of codes. In Ontario he asserted that the plan in view was to call into conference representatives of both the employees and employers to negotiate agreements "that will bring fair decent wages, and a decent living to the worker."

Continuing the provincial Minister of Labour declared:

"Having obtained the endorsement of the majority, we propose to give it enforcement by law and force it on the unwilling employer. The greatest enemy the fair employer has is the sweatshop proprietor."

### New Minimum Wage Act for Ontario

The above announcement of the intention to establish codes in Ontario was complementary to a prior statement by Mr. James F. Marsh, recently appointed Deputy Minister of Labour, who stated that the Ontario Government was working on a new enactment

which would replace the present Minimum Wage Act and which would fix minimum wages in all industries for both men and women. In outlining the new measure, the deputy minister was reported as saying that the Province would be divided into zones within which conferences would be held between employees and employers to determine minimum wages, maximum working hours and working conditions in each industry. In event of any conference failing, he stated that the Government would have power to make a decision. He added that no effort would be made to dictate prices, and that heavy fines would be imposed on firms failing to observe the new law.

### New factors in accident causation

The annual report of the Chief Inspector of Factories (Great Britain) for the year 1933, indicated that accident totals increased in the year from 106,164 to 113,260, while fatalities increased from 602 to 688. Two reasons for these increases are suggested by the superintending inspector, the first being the improvement in trade and the consequent increase in the number of workers. The other factor that was regarded as a possible contributing cause was the return to work of employees often after long periods of enforced unemployment, and in many cases undernourished, resulting in a loss of mental and physical alertness. There was evidence also of over-exertion of strength while others required to get accustomed to normal working conditions.

### United States joins I.L.O.

Elsewhere in this issue there is given the official letter of acceptance marking the entry of the United States into the International Labour Organization. This action had its genesis at the seventeenth session of the International Labour Conference in 1933 when four observers were appointed by the United States Government to attend and report. Upon their recommendation (LABOUR GAZETTE, February, 1934, page 161) steps toward affiliation were taken.

### Analysis of relief census in United States

A statistical analysis of the unemployment relief census of October, 1933, in the United States is given in the July issue of the Monthly Labor Review of the United States Department of Labour. The salient facts disclosed by the report are: (1) the regional concentration of persons on relief; (2) the "striking differences" in the percentages of the white, negro and other races receiving aid; (3) the predominance of large families

among relief cases; (4) the heavy representation of children as compared with that of older people.

In three States approximately one-fourth of the whole population was on relief in October 1933, while the average for the United States was approximately 10 per cent and the proportion for seven States was 5 per cent or under.

Over 50 per cent of the families on relief were in eight States, and over 33 per cent in four States—Pennsylvania, New York, Illinois, and Ohio. Pennsylvania, with the greatest number of families on relief, has over 300 times as many as Wyoming, which had fewer than any other State.

The proportion of the coloured population on relief was almost double the proportion of the white population receiving such aid. It was also disclosed that the proportion of children in the relief group was considerably in excess of the percentage of children in the general population, especially in the age group 6 to 13. However, each age group up to 18 years include a large representation on relief, while the percentage of persons over 65 years of age on relief was below the proportion of all persons in that age group.

#### **Unemployment census in United States— a correction**

In the LABOUR GAZETTE for August 1934, on p. 727, appeared an item regarding a census of unemployment which was provided for in a Bill before the United States Congress. It was stated in the paragraph that provision for such a census had been made at the recent session of Congress. However, although the Bill to provide for the taking of a census of unemployment, employment and occupations as of November 12, 1934, was passed by the House of Representatives on June 7 by a vote of 218 to 145 and on the following day, June 8, placed on the Senate calendar, no further action was taken before Congress adjourned on June 18.

According to the annual report of the Chief Inspector of factories and boilers for South Australia, employment in the 46 industrial groups on the whole indicated an increase. There was an employment increase in 28 groups (of which motor body building headed the list with an increase of 79 per cent). A decrease was recorded in 17 groups, while one remained stationary. The total number of factories decreased by 2.87 per cent (confined to establishments with less than five employees), but the total number of employees increased by 2,290 or 12.25 per cent.

Recent amendments to the Fair Wage Act of Manitoba were reviewed in the LABOUR GAZETTE for June, 1934, page 519. According to the Manitoba Gazette of August 11, these amendments have now come into effect by proclamation.

The consolidation of Civil Service basic salaries and cost-of-living bonus in Great Britain took effect recently on the terms laid down by the Government last April. These terms are to be enforced in spite of the fact that the Staff side of the Whitley Council refused to agree. The lower paid workers were particularly opposed to the terms and a keen fight was put up by the Association of Officers of Taxes and the Civil Service Clerical Association. By this consolidation the sliding scale disappears and the index figure of 55 per cent above basic rates will be the basis, except for some slight improvement for persons earning under £100 a year. This consolidated figure will not be reached before the full restoration of the 1931 cuts. Half of these were restored on July 1, so that the cost-of-living index figure will be taken as 52½.

According to a recent report in the Commercial Intelligence Journal (Department of Trade and Commerce) from the Assistant Trade Commissioner in the Netherlands, there has been a decrease in unemployment in that country due mostly to seasonal factors such as the absorption of labour by market gardening and other branches of agriculture. At the end of June, 1934, 290,675 persons were registered as being completely out of work as against 398,000 at the end of January. The June figure compares unfavourably with the total of 270,966 registered at the end of June, 1933. In an effort to reduce unemployment the Government has allotted a preliminary sum of 60,000,000 florins to be spent on reclamation projects, and on the modernization of industry. It is the intention of the Government to spread this expenditure over the entire country as far as practicable.

#### **Labour Legislation in the Yukon in 1934**

The only legislation of labour interest passed by the Yukon Council during 1934 was an amendment to the Miners Protection Ordinance. This amendment adds a new rule, No. 25, which requires that in a mine where the character of the product is such that dust is caused by drilling, every drill used in stopping shall be equipped with a water jet or spray, or other appliance equally efficient to prevent the escape of dust.

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

**L**INEMEN, troublemen and truck drivers in the employ of the Toronto Transportation Commission submitted an application to the Minister of Labour at the close of August for the establishment of a Board of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act. Twenty-two employees, members of Local Union No. 636, International Brotherhood of Electrical Workers, were stated to be directly affected by the dispute, which grew out of their request for a new working agreement embodying increased wage rates, etc. The application stated that the employees had been unable to meet the officials of the Commission with reference to their demands. Upon receipt of the application the Department immediately took the matter up with the officers of the Toronto Transportation Commission with a view to bringing about a conference between the parties concerned.

The dispute between the Toronto Transportation Commissioners and their street railway employees which had been before a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act and also the Ontario Municipal Board was amicably settled on August 16, the Commission accepting the findings of the Municipal Board, which favoured continuance of the existing wage rates, including 60 cents an hour for street car motormen and conductors and 65 cents an hour for operators of one-man cars and bus and coach drivers. The report of the Board of Conciliation and Investigation which dealt with this dispute was printed in full in the July issue of the *LABOUR GAZETTE*, page 590. The recommendations of the Conciliation Board were rejected by the employees and the matter was then investigated by the Ontario Municipal Board, whose recommendations have now been put into effect.

## STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1934

**T**HE following table shows the number of disputes, workers involved and time loss for August, 1934, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Aug. 1934...	29	11,741	84,682
*July, 1934...	33	11,073	65,064
Aug. 1933...	21	2,603	17,285

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time is frequently not received until some time after its commencement.

An increase in the time loss is recorded for August as compared with July, although the number of workers involved was only slightly greater and the number of disputes was lower, as a result of the existence of two strikes of clothing workers in Montreal which together caused a time loss of approximately 50,000 working days. One of these, that involving men's clothing factory workers, was carried over from July when it caused a time loss of 24,000 days. In August, 1933, very few of the disputes involved large numbers of workers or caused much time loss.

Fourteen disputes, involving 5,943 workers, were carried over from July, including the following not reported in time for inclusion in the August issue; coal miners, Alexo, Alta.; coal miners, Saunders Creek, Alta., and women's clothing factory workers, dress-makers, Toronto, Ont. Fifteen disputes commenced during August. Of these twenty-nine disputes, twenty were terminated during the month, four being in favour of the workers involved, eight in favour of the employers concerned, while the results of eight were recorded as compromises or partially successful. At the end of August, therefore, there were nine disputes in progress recorded as strikes or lockouts, namely: coal miners, Saunders Creek, Alta.; shoe factory workers, Brampton, Ont.; women's clothing factory

workers (dressmakers), Toronto, Ont.; compositors, London, Ont.; men's clothing factory workers, Victoriaville, P.Q.; women's clothing factory workers (dressmakers), Montreal, P.Q.; women's clothing factory workers (cutters), Montreal, P.Q.; cap factory workers, Montreal, P.Q.; and chesterfield factory workers, Toronto, Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected,

but which the unions concerned have not declared terminated. Information is available as to seven such disputes, namely: photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; lithographers, Toronto, Ont., April 15, 1932, one employer; moulders, Peterborough, Ont., February 27, 1934, one employer; shoe factory workers, Montreal, P.Q., July 5, 1934, one employer; paper mill workers, Dolbeau, P.Q., May 23, 1934, one

### STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1934\*

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
<b>(a) Strikes and Lockouts in Progress prior to August, 1934</b>			
<b>MINING, ETC.—</b>			
Coal miners, Alexo, Alta. ....	11	250	Commenced June 28, 1934; against reduced wages; terminated Aug. 27, 1934; in favour of employer.
Coal miners, Saunders Creek, Alta.	41	1,000	Commenced July 6, 1934; against reduced wages; un-terminated.
Coal miners, Stellarton, N.S....	800	3,200	Commenced July 27, 1934; against suspension of worker; terminated August 4, 1934; in favour of employer.
<b>MANUFACTURING—</b>			
<i>Boots and Shoes (Leather)—</i>			
Shoe factory workers, Brampton, Ont.	95	2,400	Commenced July 4, 1934; for increased wages and recognition of union; un-terminated.
Shoe factory workers, Toronto, Ont.	6	100	Commenced July 23, 1934; for increased wages and union recognition; lapsed by end of August; in favour of employer.
Shoe factory workers, New Toronto, Ont.	29	500	Commenced July 25, 1934; for increased wages and union recognition; working conditions no longer affected by end of August; in favour of employer.
<i>Textiles, Clothing, etc.—</i>			
Women's clothing factory workers (cloakmakers, etc.), Winnipeg, Man.	400	3,000	Commenced July 5, 1934; for increased wages and union recognition; terminated August 10, 1934; partially successful.
Women's clothing factory workers (dressmakers), Toronto, Ont.	38	1,000	Commenced July 12, 1934; for increased wages; un-terminated.
Women's clothing factory workers (cloakmakers, etc.), Toronto and Guelph, Ont.	250	5,000	Commenced July 13, 1934; sympathy with fur workers on strike July 13 and removal of factory to Guelph in alleged violation of agreement; terminated August 30, 1934; compromise.
Men's clothing factory workers, Montreal, P.Q.	4,000	24,000	Commenced July 25, 1934; for increased wages and improved conditions; terminated Aug. 7, 1934; compromise.
<i>Pulp and Paper—</i>			
Paper mill workers, Dolbeau, P.Q.	40	400	Commenced May 23, 1934; for increased wages and union recognition; working conditions no longer affected by end of August; in favour of employer.
<i>Printing and Publishing—</i>			
Compositors, London, Ont....	75	1,950	Commenced Mar. 1, 1934; for renewal of union agreement; un-terminated.
<i>Miscellaneous—</i>			
Toy factory workers, Toronto, Ont.	150	2,000	Commenced July 24, 1934; for increased wages; reduced hours and union recognition; lapsed by end of August; in favour of employer.
<b>TRADE—</b>			
Scrap iron and metal workers, Winnipeg, Man.	8	44	Commenced July 10, 1934; for increased wages and reduced hours; terminated August 7, 1934; compromise.

STRIKES AND LOCK-OUTS IN CANADA DURING AUGUST, 1934\*—*Concluded*

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
<b>(b) Strikes and Lockouts commencing during August, 1934</b>			
<b>MINING, ETC.</b>			
Coal miners, Caledonia, N.S.	600	1,800	Commenced Aug. 10, 1934; for change in working conditions; terminated Aug. 20, 1934; compromise.
Coal miners, Dominion, N.S.	173	173	Commenced Aug. 16, 1934; for change in working conditions; terminated Aug. 17, 1934; compromise.
Coal miners, Coalhurst, Alta.	140	140	Commenced Aug. 29, 1934; for equal distribution of work; terminated Aug. 31, 1934; compromise.
<b>MANUFACTURING—</b>			
<i>Vegetable Foods—</i>			
Cannery workers, St. Isidore de Laprairie, P.Q.	60	120	Commenced Aug. 3, 1934; for increased wages, piece rates; terminated Aug. 6, 1934; compromise.
<i>Animal Foods—</i>			
Salmon cannery workers, Sunbury, B.C.	40	120	Commenced Aug. 2, 1934; against discharge of workers and for increased wages; terminated Aug. 4, 1934; in favour of workers.
<i>Textiles, Clothing, etc—</i>			
Textile (hosiery) factory workers, Montreal, P.Q.	125	1,000	Commenced Aug. 14, 1934; for increased wages and reduced hours; terminated Aug. 22, 1934; in favour of employer.
Men's clothing factory workers, Victoriaville, P.Q.	500	5,000	Commenced Aug. 20, 1934; for increased wages—unterminated.

<i>Other Wood Products—</i>			
Furniture factory workers, Hanover, Ont.	100	1,000	Commenced Aug. 2, 1934; against discharge of union officer for union activity; terminated Aug. 15, 1934; in favour of workers.
Chesterfield factory workers, Toronto, Ont.	300	2,000	Commenced Aug. 22, 1934; for renewal of agreement with increased wages, reduced hours, etc.; untermi-
<i>Miscellaneous—</i>			
Furniture factory workers, Montreal, P.Q.	45	15	Commenced Aug. 8, 1934; against penalization of one worker; terminated Aug. 8, 1934; in favour of workers.
<b>CONSTRUCTION—</b>			
<i>Buildings and Structures—</i>			
Carpenters, Vancouver, B.C.	100	200	Commenced Aug. 30, 1934; for increased wages; terminated Aug. 31, 1934; in favour of workers.
<b>TRANSPORTATION—</b>			
<i>Water—</i>			
Teamsters, Charlottetown, P.E.I.	15	20	Commenced Aug. 6, 1934; against change in working conditions; terminated Aug. 7, 1934; in favour of workers.

\*In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which working time was lost to an appreciable extent.

employer; and shoe factory workers, Toronto, Ont., July 25, 1934, one employer, the last two being added to the list this month.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistence for which work is performed or may be required, are not included in the

record, no relation of employer and employee being involved.

A one day strike of coal miners at Corbin, B.C., on July 19 was reported too late for inclusion in the August issue of the LABOUR GAZETTE. One of the mines was closed on account of a fire and the employer proposed

that in reducing the number of employees a preference should be given to married men and householders. The miners' union, however, demanded a division of the work available among all employees and the employer agreed to rotate the work.

A stoppage of work from August 2 to August 6 affected a number of women's cloak and suit manufacturing establishments in Montreal, P.Q., employing about 2,500 workers. An agreement between the International Ladies' Garment Workers' Union and the Association of Manufacturers of Cloaks, Suits and Ladies' Garments, providing for changes in wages and working conditions was reached at the end of July and all factories were closed by arrangement to permit some reorganization and rearrangements. This applied also to 800 employees in some small shops whose proprietors were not members of the employers' association and who desired some modifications of the terms of the agreement as applied to their establishments. Settlements are reported to have been reached in all cases.

A minor dispute involved nine out of a number of longshoremen engaged to load a steamer at Albert, N.B., on August 16. They demanded 30 cents per hour instead of 20 cents but were immediately replaced.

A minor dispute involved fourteen labourers on road construction at Willowdale, Ont., for five hours on August 7, the men ceasing work to make a protest to the municipal council against the employment of a boy to carry water when unemployed men were available.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

**COAL MINERS, ALEXO, ALTA.**—This dispute, commencing on June 28, was not reported in time for inclusion in the July and August issues of the *LABOUR GAZETTE*. A number of the miners in one colliery ceased work, when called out by the Mine Workers' Union of Canada, following a reduction in wages. Operations were carried on by the remainder. The employer reported that by August 27 some of the strikers had returned to work and the others had been replaced.

**COAL MINERS, SAUNDERS CREEK, ALTA.**—This dispute was not reported in time for inclusion in the August issue of the *LABOUR GAZETTE*. Miners employed by one company ceased work on July 6 following a wage reduction when called out by the Mine Workers' Union of Canada. At the end of August a settlement had not been reported.

**COAL MINERS, STELLARTON, N.S.**—The strike commencing July 27 of a number of the miners

employed by one company, in protest against the suspension of a miner for abusive language, was terminated on August 6 when work was resumed pending an investigation of the case. The company had refused to negotiate while men were on strike. Subsequently the suspended miner apologized and was reinstated. A number of pickets were arrested, as a result of several persons being injured and property damaged, and released on bail pending trial.

**SHOE FACTORY WORKERS, BRAMPTON, ONT.**—Negotiations between the management and a committee of the employees involved in this dispute during August did not result in a settlement, the management refusing union recognition and a general increase in wages of ten per cent although offering to increase rates of pay for girls and boys to 20 cents per hour and 30 cents for men. The town council met the parties separately but the strikers insisted on the management meeting a representative of the union, the Shoe and Leather Workers' Industrial Union, and negotiations ceased. The local president of the union thereupon resigned. In a clash between pickets and employees several persons were reported to be injured, apparently none seriously, and some property was damaged. At the end of the month no settlement had been reported.

**SHOE FACTORY WORKERS, NEW TORONTO, ONT.**—This dispute, commencing July 25, is recorded as lapsed by the end of August, employment conditions being no longer affected, the strikers, who numbered less than half of those employed, having been replaced. The union, however, has reported the strike as still in effect and continued to picket the establishment, and the dispute has, therefore, been added to the list of such strikes carried in another paragraph in this article. The municipal authorities had permitted picketing by a small number but toward the end of August when workers were interfered with by a large number of strike sympathizers it was reported that twenty-five of these were arrested, on charges of unlawful assembly, creating a disturbance and obstructing public officers. Later some were convicted and remanded for sentence.

**WOMEN'S CLOTHING FACTORY WORKERS (CLOAKMAKERS, ETC.), WINNIPEG, MAN.**—As stated in the August issue of the *LABOUR GAZETTE*, at the end of July settlements had been reached in several of the nine establishments reported to be involved, concessions being made by the employers. By August 10 other employers had partially met the demands of the union and in the remaining

establishments it was reported that the strikers had resumed work. A number of pickets were reported to have been arrested on charges of assault and unlawful assembly, some of these being convicted and sentenced to fines and imprisonment.

**WOMEN'S CLOTHING FACTORY WORKERS (DRESSMAKERS), TORONTO, ONT.**—This dispute was not reported in time for inclusion in the August issue of the *LABOUR GAZETTE*. A number of dressmakers in one women's clothing factory, members of the International Ladies' Garment Workers' Union, demanded increases in piece rates and a cessation of work from July 12 resulted, and the premises of the employer were picketed. It is reported that a committee of the Toronto Trades and Labour Council attempted to bring about a settlement but was unsuccessful. At the end of August no settlement had been reported.

**WOMEN'S CLOTHING FACTORY WORKERS (CLOAKMAKERS), TORONTO, AND GUELPH, ONT.**—The strike of cloakmakers (July 13) in one establishment in Toronto, where fur workers (collar and cuffs) were also involved, led to disturbances at Guelph. It appears that the management had some months previously opened a factory in Guelph, operated under another name, and when the strike occurred in Toronto transferred the Toronto business to Guelph. Pickets from Toronto attempted to induce the employees in both establishments in Guelph to strike also. Clashes between the pickets, supported by large numbers of sympathizers, and the police from August 21 to August 25 resulted in a number of arrests, following minor injuries to a number of persons and some damage to the windows of the building and to automobiles. The provincial Deputy Minister of Labour brought about negotiations between the parties and on August 27 a settlement was reached in the office of the Minister of Labour and Attorney General in Toronto. It was arranged that the Toronto establishment would be reopened and that the other establishment would continue in Guelph with a ten per cent wage increase.

**MEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.**—The strike of members of the Amalgamated Clothing Workers of America in seventeen men's clothing establishments operated by members of the Montreal Clothing Manufacturers' Association and about one hundred other establishments, on July 25, demanding a twenty per cent increase in wages, reduced hours and other changes, was terminated on August 7. It was agreed that time and one quarter rates of wages would be paid for overtime until October 1, 1934,

with time and one-half thereafter, the agreement to be in force until August 15, 1935, subject to renewal. It is not reported that the forty-hour week was conceded. The wage dispute was referred to an arbitration board which toward the end of the month awarded a ten per cent increase to all classes with certain exceptions. No increases were given to cutters receiving \$35 per week or more or to trimmers receiving \$31 per week or more, and the rate for presses was set at \$25 per week. It was also recommended that the employers and employees should apply for the extension of the agreement to all men's clothing factories in the province under the provincial Collective Agreements Extension Act, wages in rural localities to be ten to fifteen per cent below those in Montreal to offset the cost of transportation of goods (*LABOUR GAZETTE*, May, 1934, p. 417 and subsequent issues).

**TOY FACTORY WORKERS, TORONTO, ONT.**—Employees in one establishment ceased work on July 24 demanding a thirty per cent increase in wages, the forty-four hour week, instead of forty-nine hours with overtime, and recognition of the union, the Furniture and Woodworkers' Industrial Union. The employer closed the establishment but reopened on August 13, offering to take back former employees under the same conditions as before the dispute. This was refused and the strikers were replaced. Toward the end of the month a woman was convicted of obstructing the police in connection with picketing.

**SCRAP IRON AND METAL WORKERS, WINNIPEG, MAN.**—Employees in one establishment ceased work on July 10 demanding increases in wages from 25 cents per hour to 35 cents for some and 30 cents for others and reduction in hours from fifty-five per week to forty-four. On August 8 work was resumed, an increase in wages of five cents per hour being given, hours to be fifty per week in summer and forty-four in winter.

**COAL MINERS, CALEDONIA AND DOMINION, N.S.**—Employees in one colliery ceased work for one shift on August 10 and August 15 and for both shifts on August 16 and August 17 to secure a change in the operation of riding rakes for the transportation of miners. The management had agreed to arrange a more satisfactory system and after operations were resumed the operation of an extra riding rake an hour earlier for the night shift was tried out.

A stoppage for one shift by 173 miners in another colliery on August 16 to secure improvement in one of the working conditions was also reported, the management agreeing to make an improvement.

**COAL MINERS, COALHURST, ALTA.**—Employees in one colliery ceased work for one day, August 29, the management having proposed a reduction in the number employed in order to give steady work. The miners demanded an equal division of work among all employees but a compromise was agreed upon.

**CANNERY WORKERS (SALMON), ST. MUNGO, B.C.**—Female employees in a salmon canning factory ceased work on August 3 demanding an increase in the piece rates and the reinstatement of nine employees dismissed for making these demands. Work was resumed on August 7, an increase for some classes of work being granted, the discharged employees being reinstated. It is reported that the fishermen, members of the Fishermen and Cannery Workers' Industrial Union of Canada, refused to sell fish to the employer until a settlement was reached.

**TEXTILE (HOSIERY) FACTORY WORKERS, MONTREAL, P.Q.**—A number of employees in one department of a hosiery manufacturing establishment ceased work from August 14 to August 22, demanding a twenty per cent increase in wages and reduced hours. It was alleged that wages were below those under the Minimum Wage Act and that hours up to seventy per week in excess of those under the Industrial Establishments Act, namely 55, were worked. The employer denied these allegations. Some minor concessions are reported to have been made and some of the strikers were not re-employed.

**MEN'S CLOTHING FACTORY WORKERS, VICTORIAVILLE, P.Q.**—Employees in several establishments ceased work on August 20 to secure increases in wages. The strikers were organized to some extent by the Amalgamated Clothing Workers of America. A disturbance occurred on August 27 in connection with picketing but no serious injuries or arrests were reported. At the end of the month a settlement had not been reported.

**WOMEN'S CLOTHING FACTORY WORKERS (DRESSMAKERS AND DRESS CUTTERS), MONTREAL, P.Q.**—Employees in eighty to ninety establishments, members of the Industrial Union of Needle Trades Workers, ceased work on August 22 demanding increases in wages and reductions in hours. On August 24 members of the Montreal Dress Cutters' Union ceased work in sympathy. At the end of the month a settlement had not been reached.

**FURNITURE FACTORY WORKERS, HANOVER, ONT.**—Employees in one factory ceased work on August 2 to secure the reinstatement of the local president of the Furniture and

Woodworkers' Industrial Union who had been discharged. The secretary of the local in another factory had also been discharged but employees in that establishment did not strike. The employer stated that the president had sent out a circular to the union members considered to be provocative of a strike and a satisfactory explanation was not given. As a result of the mediation of the Mayor and certain business men a settlement was reached on August 15, the president being reinstated on condition that the union would not call a strike before January 1, 1935, if no changes in wages and working conditions were made.

**CHESTERFIELD FACTORY WORKERS, TORONTO, ONT.**—Employees in twelve establishments ceased work on August 22 to secure the renewal of an agreement with the Furniture and Woodworkers' Industrial Union signed a year previously with the Chesterfield and Furniture Workers' Industrial Union following a strike (LABOUR GAZETTE, September, 1933, page 903). The new agreement demanded was to provide for increases in wages, the forty hour week instead of forty-four, time and one-quarter rates of wages for all work after forty-four hours per week and a contribution by the employers of two per cent of the payroll to an unemployment insurance fund. It is reported that four of the employers agreed to these demands on the first day of the strike, and four others on August 27, the other establishments being still involved at the end of the month.

**FURNITURE FACTORY WORKERS, MONTREAL, P.Q.**—Employees in one establishment ceased work on August 8 for three hours, demanding the restoration of a reduction in piece rates for one worker imposed as a penalty for absenting himself from work. This was conceded and work was resumed.

**CARPENTERS, VANCOUVER, B.C.**—Carpenters, members of the Amalgamated Building Workers of Canada, employed on one building in Vancouver ceased work on August 30 demanding the union rate of 87½ cents per hour and forty hours per week instead of 50 cents per hour. This being conceded, work was resumed on the first working day in September.

**TEAMSTERS, CHARLOTTETOWN, P.E.I.**—Teamsters engaged to haul coal from a boat being unloaded at Charlottetown, P.E.I., ceased work on August 6 in protest against a reduction in the number engaged. The following day they were replaced. About ninety other workers were indirectly affected.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockout in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue of February, 1934, in the review of Strikes and Lockouts in Canada and Other Countries, 1933. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible directly from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

### Great Britain

The number of disputes beginning in July was 39 and 13 were still in effect from the previous month, making a total of 52 disputes in progress during the month, involving 21,600 workers, with a time loss of 114,000 working days for the month. Of the 39 disputes beginning in July, 6 were over demands for increases in wages, 3 over proposed wage reductions, 9 over other wage questions, 11 over questions respecting the employment of particular classes or persons, 7 over other questions as to working arrangements and 3 over questions as to trade union principle. During July, settlements were reached in 41 disputes, of which 12 were in favour of workers, 14 in favour of employers and 15 resulted in compromises. In the case of one other dispute, work was resumed pending negotiations.

A strike of 2,000 coal miners at Blaenavon against the change in grade of a certain workman was in effect for two days, July 10 and 11, when work was resumed.

Employees of a plant manufacturing sheet metal parts of motor car bodies near Oxford, were on strike from July 17 to July 28, involving for several days 2,500 workers. An agreement was reached in which strikers were granted various concessions as to piecework, overtime and night work conditions.

A strike of 3,000 asphalters in London and various provincial towns in England and Wales was in effect from June 22 and later dates to July 7, when work was resumed with

the changes in working conditions granted as demanded, and with the understanding that the question of increased wages should be referred to arbitration.

### United States

Revised figures for the year 1933, give the number of disputes beginning in the year as 1,562, involving 812,137 workers, with a time loss of 14,818,847 working days for the year. The trades or industries in which the larger number of disputes occurred were as follows: clothing with 347 disputes involving 279,835 workers, textiles with 315 disputes involving 135,000 workers, building trades with 113 disputes involving 21,556 workers, miners with 113 disputes involving 167,465 workers, metal with 91 disputes involving 15,885 workers, furniture with 57 disputes involving 10,546 workers and chauffeurs and teamsters with 40 disputes involving 26,802 workers. Of the 1,562 disputes beginning in the year, 926 were either wholly or principally concerned with wages questions and 354 either wholly or principally concerned with union questions. Of the 1,544 disputes terminated during the year, 464 were in favour of employers, 475 in favour of employees, 571 ended in compromises, and the remainder were jurisdictional, protest or not reported.

The number of disputes beginning in May, 1934, was 135 and 133 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 144,151, and the time loss 3,477,893 working days during the month.

The strike of truck drivers at Minneapolis, Minnesota, which began July 17 and was noted in the last issue of the LABOUR GAZETTE, terminated August 22, a settlement having been reached through federal government officials.

The strike of 5,000 painters in New York City, mentioned in the last issue of the LABOUR GAZETTE, which was against a proposed reduction in wages and increase in hours, was settled through the mediation of regional Labour Board officials, and it was agreed not to change the wages and hours from \$9 for a 7 hour day.

Employees of aluminum plants at New Kensington, Pennsylvania, East St. Louis, Illinois, Massena, New York, and Alcoa, Tennessee, numbering between 8,000 and 10,000, were on strike from August 11 to September 5, demanding union recognition with the

"check-off" and a uniform wage scale. Efforts to settle it were made by the National Labour Relations Board, and a settlement was reported September 5.

In the knit goods manufacturing industry in New York City, 14,000 workers were on strike from August 8 to August 18, when an agreement was made between the union and the manufacturers' association in which a 36-hour week was granted for one year and a 35-hour week the next year and classified wage scales established. Employees of independent firms remained on strike after the general settlement until agreements could be made with their employers.

In spite of the efforts of the National Labour Relations Board to bring about a settlement without a stoppage of work, a general strike in the textile industry began September 4. This industry, centred chiefly in the New England States and in Pennsylvania and New Jersey, and in the Southern states, employs, it is estimated, nearly 700,000 workers, of which between 400,000 and 500,000 are in cotton manufacturing and the remainder in silk, rayon and wool manufacturing.

Demands of the strikers in this industry were for union recognition and the re-employment of all workers discharged on account of union activity, for a 30-hour week instead of a 40-hour week with no change in minimum weekly wage rates but with a graduated scale based on skill required for various operations, for the establishment of maximum work loads to abolish the "stretch-out" system, and for the formation of an arbitration board whose decisions would be final.

The strike, which was called by the United Textile Workers of America, and endorsed by the American Federation of Labor, began September 4, and reports vary as to the numbers involved, but a newspaper survey gives the number of 370,000 as involved by September 7. Considerable violence occurred and eleven deaths are reported in the disorders during the first week of the strike. A special board was appointed by the President of the

United States to negotiate between the parties.

### Workers Educational Association

At the fifth annual meeting of the Workers Educational Association, recently held at Pickering College, Newmarket, the report of the general secretary-treasurer showed another increase in membership with an enrolment increase of 185.

Under the chairmanship of the president, Mr. George Keen, Brantford, over 50 delegates were present representing the local units at Brantford, Toronto, London, Windsor, St. Catharines, Woodstock, Kitchener, Galt, Preston, Oakville, Kingston, Peterborough and Stratford.

When the Association was formed in 1929 there were only 10 classes with a total enrolment of 125, while the past year showed 31 classes had been held in 15 cities in which 1,513 members were enrolled.

During the session addresses were delivered by Dr. S. F. Maine, of Western University, London; Mrs. Rose Henderson, a member of the Toronto Board of Education; Professor Duncan McArthur, new deputy minister of education for Ontario; Principal Jos. McCully of Pickering College, and President Keen of the Association.

The Department of Health and Public Welfare of Manitoba has recently published its Consolidated Regulations under the Public Health Act. Covering practically the entire field of public health, regulations are prescribed governing disease control, sanitation, food control, businesses and occupation. Under the last named section are divisions in which are set forth the rules applicable to: hotels, boarding houses and restaurants; summer resorts and tourists' camps; swimming pools and bathing places; industrial and construction camps, maternity homes, children's boarding homes and day nurseries, etc.; bakeries and bakeshops; laundries; bottling plants and workmen employed in mines.

## OLD AGE PENSIONS IN CANADA

### Financial Summary as at June 30, 1934

THE accompanying table gives a financial summary to June 30, 1934, of operations under the Old Age Pensions Act (Revised Statutes of Canada, 1927, Chapter 156, amended

by Statutes of 1931, Chapter 42) and under the concurrent Acts adopted by the provinces participating in the scheme.

## TRADE UNIONISM IN CANADA

### Summary of the Twenty-Third Annual Report on Labour Organization

THE Department of Labour has recently published its annual report on Labour Organization in Canada. This report compiled in the Labour Intelligence Branch covers the calendar year 1933, and is the twenty-third of a series which began in 1911. In addition to describing the various labour bodies with which Canadian organized workers are identified and giving statistical information of trade unionists in the Dominion, the report contains chapters on different phases of the trade union movement, as well as one on workers connected with non-trade union associations. The labour organizations in Canada are placed in two classes: (1) local branches of international unions having membership in Canada and the United States; (2) Unions whose membership is wholly in Canada. A brief outline of the principal types of organizations, as well as their development is given in the report.

**Branches and Membership of the Various Groups.**—The international craft union group consisted of 78 organizations, the same as in 1932, with 1,753 branches in the Dominion—a loss of 60; and a membership of 140,801—a decrease of 8,368. The One Big Union reported 46 local units in Canada, one less than the number recorded in 1932, with 23,300 members, a loss of 40. The Industrial Workers of the World showed no change from 1932, reporting 8 local branches and 3,618 members. The group of Canadian central organizations numbered 34, a gain of 5, and between them they had 748 local unions, an increase of 47, with a combined membership of 76,062, a gain over the 1932 figure of 9,069. The group of National Catholic unions reported an increase in membership of 1,894, now having 26,894 comprised in 101 syndicates and 9 study circles, a gain of 1. There were 42 independent local units, a loss of 5, with a combined membership of 15,545, an increase of 49. The grand total of branches and memberships in all bodies for 1933 is therefore 2,707 and 286,220, respectively, as compared with 2,725 branches, and 283,576 members in 1932; and with 2,847 branches and 378,047 members in 1919 when the membership was at its peak.

**Division by Classes.**—Reproduced from the report is the following table, showing the number of branches and the reported membership of the various classes of labour organizations operating in the Dominion at the

close of 1933, with the number of members of each group affiliated.

The accompanying chart indicates the fluctuations which have occurred in the standing of organized labour in the Dominion for the same period.

Classes of Labour Organizations	Number of Main Organizations	Local Branches	Memberships
Trades and Labour Congress of Canada—			
International craft organizations.....	61	1,364	109,725
Canadian central bodies.....	3	78	2,951
Directly chartered unions.....		49	5,328
	64	1,491	118,004
All-Canadian Congress of Labour—			
One Big Union (a).....	1	46	(b) 23,300
Canadian central bodies.....	10	303	28,698
Directly chartered unions.....		39	3,120
	11	388	55,118
National Catholic Unions....	1	110	26,894
Independent Local Units.....		42	15,545
Other Canadian central bodies.....	18	279	35,965
Unaffiliated international Unions—			
Railway organizations....	6	355	23,674
Industrial Workers of the World.....	1	8	3,618
(c) Other international organizations.....	11	34	7,402
	18	397	34,694
All Canadian organizations..	31	900	118,501
All international organizations (comprising international craft organizations affiliated with the Trades and Labour Congress of Canada, One Big Union, and unaffiliated international organizations).....	80	1,807	167,719
Grand Totals.....	111	2,707	286,220

(a) Has one local union in San Francisco, California, U.S.A., with 340 members.

(b) In an affidavit of the general secretary of the One Big Union presented before the Manitoba Court of Appeal (Samuel Sykes and Thomas E. Moore vs. the One Big Union *et al*) the membership of the organization was given as approximately 7,000 (*Western Weekly Reports*, 1934, Volume 1, page 655).

(c) Affiliated directly with the American Federation of Labor, but not with the Trades and Labour Congress of Canada.

**Percentage of Trade Unionists and Organized Wage Earners to Population.**—According to the latest census figures, trade unionists represent 2·7 per cent of the population, adding 90,819 members comprised in the 118 non-

## TWENTY-TWO YEARS OF TRADE UNIONISM IN CANADA

## MEMBERS

trade union associations whose names appear in the report, organized wage-earners in Canada at the close of 1933 represented 3.5 per cent of the population.

*Union Membership by Industrial and Trade Groups.*—The accompanying table shows the division of union membership among the various industries and trade groups. The membership of each central body is included in the trade group in which most of its members are employed.

Groups of Industries	Member-ship	Per-centage
Mining and Quarrying.....	23,772	8.30
Building.....	25,410	8.88
Metal.....	11,772	4.11
Printing and Paper Making.....	13,531	4.73
Clothing, Boot and Shoes.....	17,332	6.06
Railroad employees.....	74,651	26.08
Other transportation and navigation..	18,170	6.35
Public employees, Personal service and amusement.....	26,380	9.22
All other trades and general labour..	75,202	26.27

*Unions With Large Memberships.*—There were thirteen organizations in the Dominion at the close of 1933, having 5,000 or more members and among them they represent a total Canadian trade union membership of 113,339, comprised in 884 local branches, being approximately 40 per cent of the total membership and about 33 per cent of the total trade union branches.

*Trade Union Branches by Provinces.*—The division by provinces of the 2,707 branch unions of all classes in the Dominion was as follows: Ontario, 1,012; Quebec, 483; British Columbia, 274; Alberta, 272; Saskatchewan, 198; Manitoba, 186; Nova Scotia, 151; New Brunswick, 119, and Prince Edward Island, 12.

*Trade Union Membership in Canadian Cities.*—There were 28 cities in the Dominion, one less than the number recorded in 1932, which had not less than 20 local branches of the various classes of labour organizations represented in Canada. These localities contained about 55 per cent of the total number of branch unions in the Dominion and nearly 42 per cent of the total trade union membership of 286,220 as reported from headquarters of the central organizations or as secured from other reliable sources.

Montreal occupies first place in the list of cities, and including the National Catholic unions, has 198 local branches of all classes of unions, 124 of which reported 26,297 members; Toronto stands second with 158 branches, 104 of which reported 20,191 members; Winnipeg ranks third with 115 branches, 74 of which

reported 8,814 members; Vancouver is fourth with 106 branches, 88 of which reported 13,196 members, and Edmonton fifth with 75 branches, 52 of which reported 4,237 members. The remaining 23 cities in order of number of branches are: Calgary, 72 branches, 55 reporting 3,882 members; Quebec, including the National Catholic unions, had 64 branches, 45 reporting 4,659 members; Ottawa, 59 branches, 48 reporting 3,279 members; Hamilton, 56 branches, 46 reporting 3,353 members; London, 51 branches, 42 reporting 3,026 members; Regina, 42 branches, 38 reporting 1,489 members; Saint John, 41 branches, 31 reporting 2,285 members; Victoria, 40 branches, 33 reporting 1,401 members; Saskatoon, 39 branches, 35 reporting 1,630 members; Halifax, 36 branches, 31 reporting 1,785 members; Sherbrooke, including the National Catholic unions, had 32 branches, 17 reporting 488 members; Port Arthur, 31 branches, 21 reporting 2,098 members; Windsor, 31 branches, 24 reporting 1,353 members; Moose Jaw, 31 branches, 25 reporting 1,212 members; Fort William, 30 branches, 25 reporting 993 members; Moncton, 27 branches, 22 reporting 2,157 members; Lethbridge, 26 branches, 25 reporting 1,430 members; St. Thomas, 25 branches, 23 reporting 1,563 members; Stratford, 24 branches, 21 reporting 1,401 members; North Bay, 24 branches, 18 reporting 1,171 members; Brandon, 24 branches, 21 reporting 737 members; Three Rivers, including the National Catholic unions, had 23 branches, 19 reporting 1,323 members; Brantford, 21 branches, 14 reporting 399 members.

*Branch Unions With Large Memberships.*—There are 14 branch unions, out of a total of 2,080 in the Dominion which reported, with 1,000 members or more, the same number as in this class in 1932, the reporting branch with the largest following having 2,699 members.

*Trades and Labour Congress of Canada.*—This organization, which was formed in 1873, although not actually functioning until 1886, is acknowledged as the representative of organized labour in the Dominion by the American Federation of Labour, and by 60 of the more important international bodies as well as 3 Canadian central organizations, in affiliating the whole of their respective memberships and paying the regular per capita tax. The Congress also had under direct charters two provincial federations, 36 trades and labour councils, and 49 local unions, the total membership being 118,004.

*All-Canadian Congress of Labour.*—This body, organized in 1927, superseded the Cana-

dian Federation of Labour, an organization established in 1902. The Congress has in affiliation 10 Canadian central bodies; the One Big Union, clasified as an international union, having one local union in San Francisco, Calif., and 39 directly chartered unions. There are also 14 labour councils under charters from the Congress.

*One Big Union.*—This organization, commonly referred to as the O.B.U., had its inception at a conference of labour delegates in Calgary, Alta., in March, 1919. The membership in Canada at the close of 1933 as reported by the general secretary was 23,300, comprised in 46 local units. There is also a rank and file unit in the United States, as previously stated, with a membership of 340.

*Amalgamated Mine Workers of Nova Scotia.*—This organization was brought into existence on June 19, 1932, by coal miners, the majority of whom seceded from the United Mine Workers of America. The first organization of coal miners in this locality was the Provincial Workmen's Association, which was formed in 1879. Since that time, in addition to some local organizations being established, the United Mine Workers of America, the One Big Union and the Mine Workers' Union of Canada, have extended their jurisdiction into Nova Scotia. The Amalgamated Mine Workers of Nova Scotia, reported their membership at the close of 1933 as 5,363, comprised in 19 local unions.

*National Catholic Unions.*—The first of these unions were established in 1901, but it was not until 1921 that their activities were co-ordinated by the formation of the Federation of Catholic Workers of Canada. At the close of 1933 the membership of the Federation was reported at 26,894 comprised in 101 syndicates and 9 study circles, all but one syndicate and a study circle being located in the Province of Quebec.

*Industrial Workers of the World.*—This organization, commonly referred to as the I.W.W., was established in 1905, and has as its objective the abolition of the wage system. The I.W.W. had extended its jurisdiction into Canada prior to 1911, the year in which the first of these reports appeared, but not much progress was made and the Canadian section of the organization finally passed out of existence in 1915. In 1922 a branch was re-established in Vancouver but up to the present time the membership has not increased to any appreciable extent. A Canadian administration was set up in 1932 with headquarters in Port Arthur, Ont. According to

the information received from the headquarters in Chicago, Ill., the Canadian membership at the close of 1933 was 3,618 comprised in 8 local unions.

*Other Canadian Central Bodies.*—In addition to the organizations previously referred to, there are bodies included in this group whose jurisdiction is confined exclusively to the Dominion. Beside the organizations previously referred to there are 31 other central bodies, five more than the number recorded in 1932. The combined membership of these Canadian central organizations at the close of 1933 was 62,251 comprised in 641 local branches.

*Federations and Other Delegate Bodies.*—The establishment of certain delegate bodies known as federations, district councils and trades and labour councils, each of which having its own particular function, is provided for in the plan of labour organization as developed on the North American continent. These delegate organizations are composed of local branch unions affiliated with some central organizing body. In addition to contributing the funds necessary to meet the expenses of the parent organization, many local branches assist in the maintenance of a federation or district council, and in some cases to both, as well as to a trades and labour council. The non-sectarian unions have 50 federations, 48 district councils and 52 trades and labour councils, particulars of which are given in their respective chapters. The railroad employees organizations also make provision for the establishment of adjustment committees, to deal with matters affecting working conditions on the various railways on which they have members employed. In addition to these adjustment committees, four of the railroad brotherhoods have what are called legislative boards, the special duty of which is to safeguard the interests of railwaymen in legislative matters, and for which purpose representatives are maintained in Ottawa.

*Organizations of Workers Throughout the World.*—The report, besides showing the numerical standing of international and Canadian organizations, gives the strength of organized labour in 70 other countries, the aggregate membership for the 71 countries enumerated being 46,825,757. The total membership of the International Federation of Trade Unions as well as the membership of each of the affiliated organizations are also recorded. In addition to this body, mention is made of a number of other international federations. The membership and affiliates of the British Trades Union Congress is also recorded in this chapter of the report.

The chapter closes with a reference to the fifty-third annual convention of the American Federation of Labour, its membership for the past twenty years and present officers.

*Statistics.*—In the report on Labour Organization in Canada a chapter is devoted to statistics. Herein the numerical standing of every organization in Canada for which information was received is indicated and the chapter also contains the location of each individual union and the membership by localities.

*Trade Union Benefits.*—Contained in the report is a chapter dealing with the payment for benefits by labour organizations during 1933. Of the 34 Canadian central organizations, 8 reported disbursements for benefits of \$75,034 an increase of \$37,161.27 as compared with 1932. Of the 80 international organizations, with branches in Canada, 59 reported having made expenditures for benefits, payments on account of death benefits being made during 1933 by 53; strike by 30; sick and accident by 15; old age pensions by 8; unemployed and travelling by 7, and other benefits by 24.

The total expenditures for benefits in Canada and elsewhere in the jurisdiction of the respective central international organizations which reported, amounted to \$23,876,144 a decrease of \$2,076,066 as compared with the disbursements by the same number of organizations in 1932. The amounts paid out for the various benefits were as follows:

Death benefits.....	\$12,069,089
Unemployed and Travelling benefits.....	795,353
Strike benefits.....	1,043,144
Sick and accident benefits.....	6,106,838
Old age pensions and other benefits.....	3,861,720

In addition to the amounts which may have been received from the headquarters of various international organizations, 587 of the local branch unions in Canada made payments to their own members, as did also 109 branches of Canadian bodies, 23 National Catholic unions, and 17 independent units, the total disbursement for the year 1933 being \$450,686, a decrease of \$189,564 as compared with the outlay for benefits by 830 local branch unions in the previous year. The total payments by all classes of local unions on account of the benefits mentioned were as follows:—

Death benefits.....	\$ 53,712
Unemployed benefits.....	198,490
Strike benefits.....	30,254
Sick and accident benefits.....	132,277
Other benefits.....	35,953

*Labour in Politics.*—A brief account of the development of independent political action

on the part of organized labour in Canada is given in the report. Such action was first proposed at the annual convention of the Trades and Labour Congress of Canada held at Hamilton, Ont., in 1887.

A list of labour members of Parliament and of Provincial Legislatures is also shown.

*Non-Trade Union Associations.*—Besides the trade unions, whose names appear in the report, there are in Canada a number of associations of wage-earners, which, though not identified with the labour movement, are considered to be of sufficient importance to warrant their names being given a place in the present volume. The three principal groups in this class are made up of school teachers, government employees and commercial travellers, all of which have large memberships. With the explanation that these associations are not to be confused with the regularly constituted labour organizations, particulars of such known bodies, of which there are 118, the combined reported membership being 90,819, are set out in a separate chapter.

*Unemployed Workers' Organizations.*—An effort has been made, without success, to secure information concerning unemployed workers' organizations, the headquarters of which are reported to be located in Toronto.

There were 5,127 accidents reported to The Ontario Workmen's Compensation Board during August, as compared with 5,489 during July, and 3,560 during August a year ago. The death cases numbered 25, as against 27 in July, and 18 in August, 1933. The benefits awarded amounted to \$415,973.77, of which \$349,289.39 was for compensation and \$66,684.38 for medical aid.

Reference was made in the last issue of the LABOUR GAZETTE (page 722) to the official proclamation making effective the Manitoba Department of Labour Act. In completing the organization of that Department, the appointment of Mr. A. McNamara as deputy minister has been recently announced. Mr. McNamara, who was formerly deputy minister of Public Works, was also appointed a member of the Minimum Wage Board.

Regulations governing dry cleaning and dyeing establishments have recently been gazetted under the provisions of the Manitoba Factories Act. Specific rules are set forth governing construction and equipment when inflammable substance is used, the equipment when toxic substance is used, and the operation when inflammable or explosive substance is employed.

## COLLECTIVE LABOUR AGREEMENTS EXTENSION ACT OF QUEBEC

### Recently Approved Agreements and Applications

**ORDERS** in Council which were published in recent issues of the Quebec Official Gazette make obligatory on all employees and employers of the specified trades and districts and terms of four additional agreements, under the Labour Agreements Extension Act (LABOUR GAZETTE, May, 1934, page 417), namely, those concerning various building trades in Quebec City and district, electricians in Three Rivers and district, building trades in Sherbrooke and district, and male employees in the shoe manufacturing industry in the Province of Quebec. Notice of application to make compulsory the provisions of another agreement, that for bricklayers, masons and plasterers in Three Rivers and district, has also been published.

*Various Building Trades in Quebec City and District.*—The application for the extension of the agreement to all employees and employers in certain building trades in Quebec City and district was noted in the LABOUR GAZETTE, July, page 639, and its terms summarized in the same issue, page 701. This agreement was made between fifteen general contractors and bricklaying, masonry and plastering contractors, and the Building Trades Council representing various National Catholic Unions. (Clauses in the original agreement relating to other conditions and not included in the application or Order in Council are noted elsewhere in this issue). The Order in Council approved August 9, 1934, makes the conditions in the application obligatory in the district named therein, with certain agreed changes in wage rates, following objections from rural contractors. The conditions as approved by Order in Council are as follows:

I.—(a) The words “journeymen-bricklayers”, in the present agreement signify and comprise any workman who lays bricks, terra cotta, artificial stone and block gypsum.

(b) The word “mason” signifies any person who lays natural or artificial stone or granite.

(c) By “carpenters and joiners” it is meant any workman who assembles pieces of wood, does carpentry work, repairs wooden objects, executes any wood work, on construction.

(d) The words “journeymen-plasterers” designate any workman who does the work of plastering, celanite, mortar, cement, stucco, moulding or pouring of ornaments.

(e) The words “tinsmiths and roofers” signify and comprise any person who does roofing work in tile, slate, tin, copper, gravel, asphalt or tarpaper; manufactures any objects in tin, sheet-iron or copper; such as: cornices, ornamental work, ventilators, spouts, etc.

(f) The words “stationary engine men” signify mechanics in charge of an installation of motive

power, under the Stationary Engine Men’s Act (R.S.Q., 1925, C. 184 and amendments).

(g) The word “mechanics” signifies and comprises any mechanic in charge of a portable motor engine.

(h) The word “labourer” signifies any man who does unspecified classified work and is employed as a helper.

(i) Notwithstanding the foregoing definitions, any workman who holds a certificate of competence either from the Board of Examiners established under article 7, paragraph 2 of the Extension Collective Labour Agreement Act or from his own Professional Association, pursuant to Article 10 of the same Act, shall be considered as journeyman in each of the above trades.

Moreover any unclassified labourer or employee shall benefit by the Act respecting the present Collective Labour Agreement, pursuant to the provisions of Article 10 of the same Act.

II.—The territorial jurisdiction determined by the present agreement shall comprise the counties of Quebec, Levis, Montmorency, Portneuf, Beauce, Dorchester and Megantic.

III.—(a) In the city of Quebec, Levis and within a radius of 10 miles of their limits, the rate of wages shall be the following in the different trades hereinafter mentioned:

	Per hour
Bricklayers.. . . .	.70
Masons.. . . .	.70
Plasterers.. . . .	.70
Carpenters and joiners.. . . .	.50
Common labourers and helpers.. . . .	.35
Mortar makers.. . . .	.35
Celanite mixers.. . . .	.35
Plaster pourers.. . . .	.35
Hod carriers.. . . .	.35
Drillers.. . . .	.45
Lathers—wood.. . . .	.45
Lathers—metal.. . . .	.50
Stationary and mechanics Enginemen.. . . .	.50

(b) Notwithstanding the provisions of the preceding paragraph and with the exception of the City of Quebec, Levis and within a radius of ten miles of their limits, it is stipulated and agreed that in all the municipalities of the said jurisdiction, determined in paragraph (2), having a population of less than 5,000 people, according to the last census of the Dominion of Canada, where the general building contracts whereof the total cost, salaries and materials included, is less than \$10,000, the following rate of wages for the different trades hereinafter mentioned, shall be put into force, to wit:

	Per hour
Bricklayers.. . . .	.55
Masons.. . . .	.55
Plasterers.. . . .	.55
Carpenters-joiners.. . . .	.40
Common labourers and helpers.. . . .	.25
Mortar makers.. . . .	.25
Celanite mixers.. . . .	.25
Plaster pourers.. . . .	.25
Hod carrier.. . . .	.25
Drillers.. . . .	.35
Lathers—wood.. . . .	.35
Lathers—metal.. . . .	.35
Stationary and mechanics Enginemen.. . . .	.40

IV.—Any work done outside the regular hours will be paid time and a half until midnight, and double time after midnight.

V.—The hours of labour shall be in conformity with the provisions of the Order in Council No. 1496 of July 12, 1933, for the putting into force of the Act respecting the limiting of working hours (23 Geo. V. ch. 40).

VI.—Notwithstanding the provisions of paragraph 3 of the present notice, the parties signing the present agreement shall be under obligation to comply with the exigencies of the present agreement when they carry on their activities outside the territorial jurisdiction determined in paragraph (2).

VII.—The present agreement shall be in force from the date of the publication in the Quebec Official Gazette of the Order in Council approving the present request, and shall remain in force until 30th of April, 1935. It shall renew itself automatically for another year, unless one of the parties hereto have notified the other party of his intention of amending or repealing the same, at least 30 days before its expiration.

#### *Electricians in Three Rivers and District.*—

The application for the extension of the electricians' agreement in Three Rivers and district was printed in full in the LABOUR GAZETTE, July, page 638. This agreement was made between twelve electrical contractors and the National Catholic Union of Electricians of Three Rivers. By an Order in Council approved August 2, 1934, the conditions of this agreement have been made obligatory on all employees and employers in the trade in the district mentioned therein. (Clauses in the original agreement relating to other conditions and not included in the application or Order in Council are noted on page elsewhere in this issue.)

*Building Trades in Sherbrooke and District.*—The application for the extension of the agreement in the building trades in Sherbrooke and district was noted in the LABOUR GAZETTE, July, page 639, and its terms summarized in the same issue page 702. This agreement was made between the Sherbrooke Association of Building Contractors and the Central Council of National Catholic Unions of Sherbrooke. After receiving objections and reaching a new agreement by the addition of the last paragraph of the agreement below, an Order in Council was approved August 9, 1934, making the following conditions obligatory under the Act:

1. The rate of wages will be the following for each of the said trades:

Trade—	Salary per hour
Bricklayers.. . . .	.60
Plasterers.. . . .	.60
Masons.. . . .	.60
Carpenters and joiners (journeymen).. . . .	.50
Apprentices, 1st year.. . . .	.30
Apprentices, 2nd year.. . . .	.35
Apprentices, 3rd year.. . . .	.40
Apprentices, 4th year.. . . .	.45
Painters (Journeymen).. . . .	.45
Apprentices, 1st year.. . . .	.25
Apprentices, 2nd year.. . . .	.30
Apprentices, 3rd year.. . . .	.35
Apprentices, 4th year.. . . .	.40
Labourers (unclassified workmen).. . . .	.30
Painters and paper hangers.. . . .	.50

2. The hours of labour shall comply with the provisions of the Order in Council No. 1496 of July 12, 1933, for the putting into force of the Act respecting the limiting of working hours, (23 Geo. V., Ch. 40)

3. The territorial jurisdiction determined by the present agreement comprises the counties of Sherbrooke, Richmond, Wolfe, Stanstead, Compton, Frontenac, Shefford and Brome.

4. It is expressly stipulated that building contracts granted and signed before the adoption of the Order in Council approving the said request, shall not be subject to the provisions of the present agreement.

5. "The present agreement shall be in force from the date of the publication in the Quebec Official Gazette of the Order in Council approving the present request, and shall remain in force until the 30th of April, 1935. It shall renew itself automatically at the expiration of the said period of time, unless one of the parties hereto has notified the other party of his intention of amending or repealing the same, on or before the 1st of May of each year, and the said amendments and repeal shall come in force the first of May following."

In municipalities less than 5,000 souls, at the last census of the Dominion of Canada, and if, in the said municipalities, it is question of works of less than \$10,000 salaries and material comprised, the rate of salaries shall be the following for each of the said trades:

Trade—	Salary per hour
Bricklayers.. . . .	.50
Plasterers.. . . .	.50
Masons.. . . .	.50
Carpenters and Joiners (journeymen).. . . .	.40
Apprentices, 1st year.. . . .	.20
Apprentices, 2nd year.. . . .	.25
Apprentices, 3rd year.. . . .	.30
Apprentices, 4th year.. . . .	.35
Painters (journeymen).. . . .	.35
Apprentices, 1st year.. . . .	.20
Apprentices, 2nd year.. . . .	.25
Apprentices, 3rd year.. . . .	.30
Apprentices, 4th year.. . . .	.32
Labourers (unclassified workmen).. . . .	.25
Painters and paperhangers.. . . .	.40

*Shoe Manufacturing Industry in Province of Quebec.*—The application for the extension of the agreement in the shoe manufacturing industry in the Province of Quebec was printed in the *LABOUR GAZETTE*, July, page 636, and also noted on page 701 of the same issue. This agreement was made between the Quebec Shoe Manufacturers' Association, the Shoe Manufacturers' Association of Canada, Quebec Province Division, and the National Catholic Federation of Shoe Workers of Canada. (Clauses in the agreement relating to other conditions and not included in the application or Order in Council are noted elsewhere in this issue). Following objections made by rural manufacturers, changes were recommended and the Order in Council dated August 22, 1934, made the following conditions obligatory on all male employees and employers in the shoe manufacturing industry throughout the Province:

1. The minimum rates of wages for male employees engaged in the boot and shoe trade shall be fixed according to the trade classes A, B, C and D hereinafter designated and for each of the economic zones hereinafter described, wherein the boot and shoe factories above mentioned are operating. These wages shall be paid fully in cash.

Class A.—Comprises experienced operators with at least six months experience in the operations on which they are employed, and includes: assembling and lasting-room employees; lasting by hand or machine; or assembling by hand or machine; operators on Pull-Over; Nigger-Head, Side Lasting, Flat Bed, Stapling, Heel Seat Lasting, Pounding, Sole Laying (whether by McKay, Standard Screw or Cement Process) machines; Heeling, Heel Trimming, Heel Scouring, Edge Trimming, Heel Slugging, McKay Sewing, Littleway Sewing, Levelling, Wood Heel Seat Trimming, Wood Heel Fitting, Wood Heel Heel Attaching (by machine or by hand), Standard Screw, Pegging, Loose Nailing, Heel Slugging, Edge Setting, Sanding Bottoms, Naumkeag, Treeing; and classifiers of leather soles or insoles, insole channellers, channellers of McKay outsoles, and strippers of sole leather.

Including cutters of upper leather for outsoles, by hand or clicking machine, of two years' experience, if they have not served any apprenticeship in Classes B and C; if the workman has served his apprenticeship in Classes B or C, his time of apprenticeship shall count; but a minimum of apprenticeship of six months shall however be obligatory after being entered into Class A.

Including cutters of outsoles, of one year's experience if they have not served any apprenticeship in Classes B or C; if the workman has served his apprenticeship in Classes B or C, his time of apprenticeship shall count, but a minimum of apprenticeship of six months shall however be obligatory after being entered into Class A.

Including Operators employed on Welting, Rough rounding, Lockstitch, Puritan F. S. of one year's experience, if they have not served any apprenticeship in Classes B or C; if the

workman has served his apprenticeship in classes B or C, his time of apprenticeship shall count; but a minimum of apprenticeship of six months shall however be obligatory after being entered into Class A.

1. In factories situated at Montreal and within a radius of ten miles around the Island of Montreal:

Operators having served their apprenticeship: 40 cents per hour; Apprentices: 26 cents per hour.

2. In factories situated at Quebec and within a radius of ten miles around Quebec:

Operators having served their apprenticeship: 38 cents per hour; Apprentices: 25 cents per hour.

3. In factories situated in other municipalities having a population of 3,000 or more persons, Montreal and Quebec, excepted:

Operators having served their apprenticeship: 34 cents per hour; Apprentices: 22 cents per hour.

4. In factories situated in municipalities with a population less than 3,000 persons, Montreal and Quebec excepted:

Operators having served their apprenticeship: 32 cents per hour; Apprentices: 20 cents per hour.

Class B.—Comprises experienced men having at least six months' experience in the operations on which they are employed not including Class A operators, but including: Sole Laying, Stitch Separating, Goodyear Levelling, Jointing, Heel Seat Nailing, Heel Breasting, Inseam Trimming, Heel Finishing, Bottom Polishing, Recutting Blocked Shoes, Cutting Middle Soles, Tap Soles, Slip Soles, Top Pieces, Insoles, Leather Box Toes or Counters, Reducing Shanks on McKay outsoles, Channel Opening on outsoles, Soles Fitting (appareilleurs), Moulding Soles or Insoles, Rounding Insoles.

1. In factories situated at Montreal, and within a radius of ten miles around the Island of Montreal:

Operators having served their apprenticeship: 34 cents per hour; Apprentices: 21 cents per hour.

2. In factories situated at Quebec and within a radius of ten miles around Quebec:

Operators having served their apprenticeship: 32 cents per hour; Apprentices: 20 cents per hour.

3. In factories situated in other municipalities having a population of 3,000 or more persons, Montreal and Quebec excepted:

Operators having served their apprenticeship: 30 cents per hour; Apprentices: 18 cents per hour.

4. In factories situated in municipalities with a population less than 3,000 persons, Montreal and Quebec excepted:

Operators, having served their apprenticeship: 27 cents per hour; Apprentices: 17 cents per hour.

Class C.—Comprises experienced boys having six months' experience in the operations on which they are employed, not included in Class A or Class B operations, but including: Cutting of Trimmings and Linings, Sorting Out Lasts, Tacking Insoles (by machine or by hand), Pulling Out Tacks, Fastening Shanks, Bottom Filling, Pulling Out Lasts, Examining and making minor repairs, Repairing damaged shoes, Welt Beating, Upper Trimming, Welt Knife, Fudge Wheeling, Relasting, Second Relasting, Heel Breast Scouring, Heel Seat Trim-

ming, Skiving Welt Butts, Wheeling by Hand, Stamping Bottoms, Wheeling on Bottoms, Painting and Gunning Bottoms, Brushing and Cleaning Uppers, Cutting small leather pieces or cutting tongues, Back Straps, Felt Bottom Filling, Welted Shanks, Fabric Box Toes, Heel Pads, etc., Skiving Outsoles, Insoles and Shanks, Gaugers, Gemming or General Table Work:

1. In factories situated at Montreal, or within a radius of ten miles around the Island of Montreal:

Operators having served their apprenticeship: 18 cents per hour; Apprentices 15 cents per hour.

2. In factories situated at Quebec, and within a radius of ten miles around Quebec:

Operators having served their apprenticeship: 17 cents per hour; Apprentices: 14½ cents per hour.

3. In factories situated in other municipalities having a population of 3,000 or more persons, Montreal and Quebec excepted:

Operators having served their apprenticeship: 16 cents per hour; Apprentices: 14½ cents per hour.

4. In factories situated in municipalities with a population less than 3,000 persons, Montreal and Quebec excepted:

Operators having served their apprenticeship: 16 cents per hour; Apprentices: 14 cents per hour.

Class D.—Comprises helpers not including men or boys employed on any Class A, Class B, or Class C work but including: floor sweepers, messengers, boys employed as helpers or general assistants on any class of work or helpers to operators of machines or any other minor or general work of any nature, and boys employed in Chalking Lasts, Returning Lasts to Bins, Cleaning Uppers, Soles, Etc., Wetting Soles, Rubbing Down Channels, Cementing Channels, Glueing Heels, Channel Turning, Fastening Shanks, Inking Edges and Heels, etc.

The National Housing Act in the United States is intended to stimulate home building, encourage investment of private funds in construction, create jobs, and bring orders for materials to heavy industries. To assure lenders a safe investment, it provides Federal insurance on bank loans for home repairs and on mortgages for new construction; to encourage people to borrow for home building a drive is being made to reduce prices of building materials and to urge families to invest in home construction.
